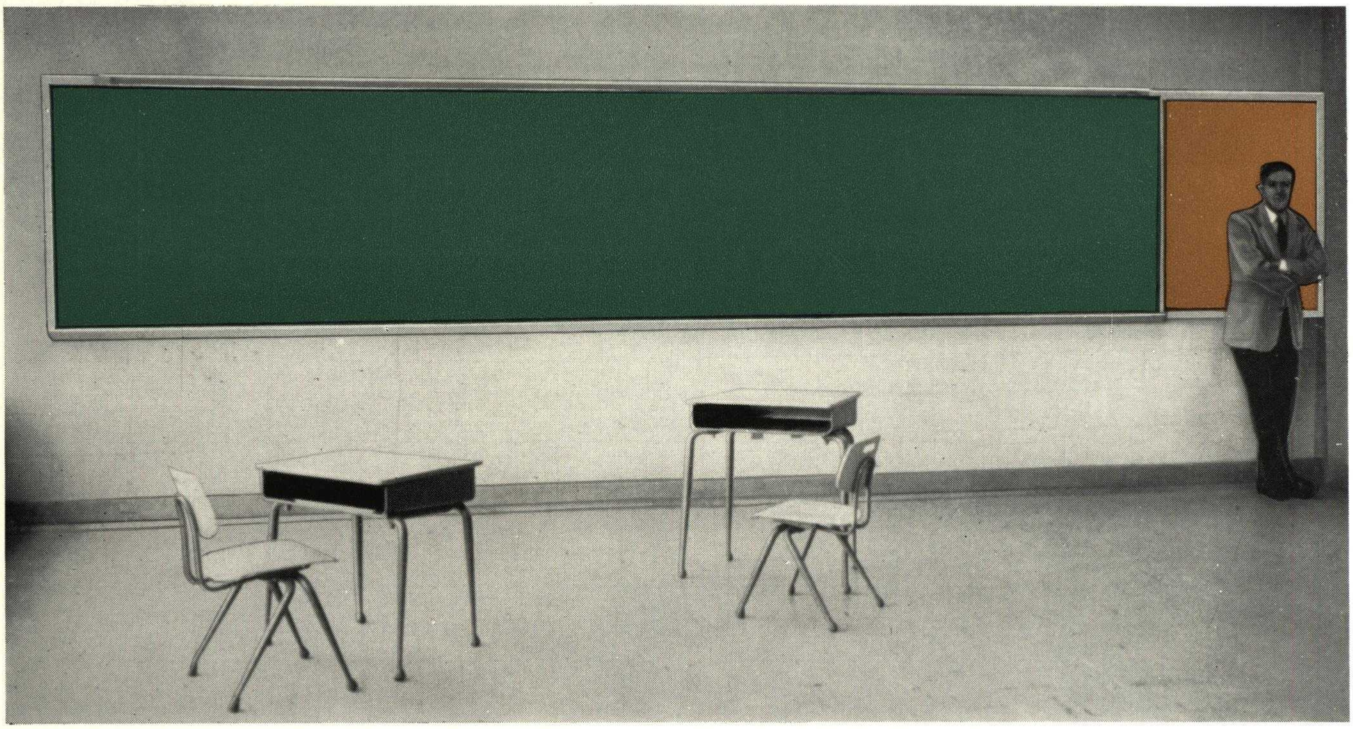
The chalkboard is recognized as a major teaching tool . . . as the most important aid to quick visual presentation. Of all classroom equipment, the chalkboard is the most heavily used. Consequently, in classrooms of all types, there is today a definite trend to *quality* chalkboards—to chalkboards that retain their writing surface . . . that are easy to erase, to wash . . . that never become slick, shiny . . . that last for the life of the building . . .

NUCITE *glass* chalkboard—because of its permanently fused abrasive surface on its smooth glass base—presents the finest writing, erasing, washing and wearing qualities available. It lasts indefinitely.

Improvements in the manufacturing process made over five years ago, have eliminated the breakage problem and make NUCITE easier to erase.

a recent NUCITE chalkboard installation . . . the new South Junior and Senior High School, Great Neck, Long Island, New York . . . architect: La Pierre, Litchfield and Partners, New York



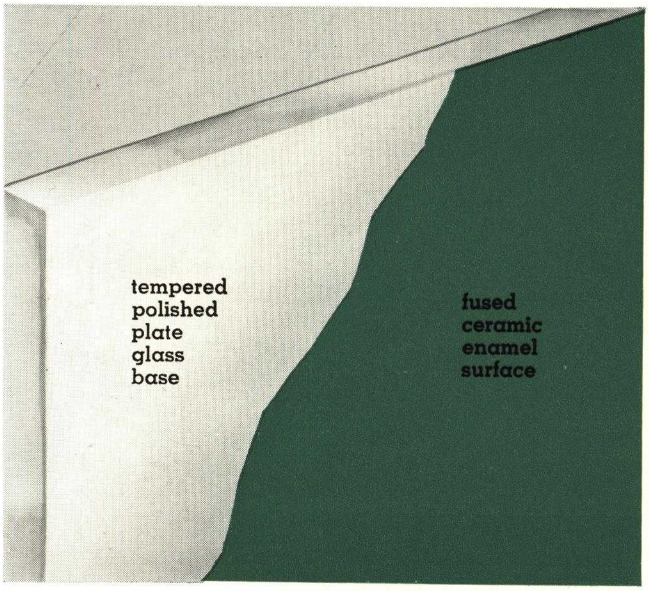
NUCITE glass chalkboard, because of its inherent attributes and its serene colors, is today appreciated by both architects and officials of elementary schools and high schools, of colleges and universities, of hospitals and office buildings. It is, we believe, the largest selling manufactured chalkboard in the United States: 800 installations last year in new schools alone from Florida to Oregon. For the model classrooms aboard the train "Schoolroom Progress USA" now touring the country, NUCITE was selected *exclusively*.

Yet NUCITE chalkboard is priced competitively with those of inferior characteristics.

NUCITE glass chalkboard 1

glass, the unsurpassed base

NUCITE is a *tempered glass* chalkboard—the only tempered glass chalkboard made in the United States. In its manufacture, polished plate glass is sprayed with a colored ceramic enamel (essentially a glass) containing an aluminum oxide abrasive. At 1150 F, this enamel is permanently fused into the surface of the softened glass. Then, under actively controlled temperatures, the glass, with its fused surface of ceramic enamel and abrasive, is given the proper amount of temper—to increase its strength to several times that of ordinary plate glass.



tempered polished plate glass base
fused ceramic enamel surface

NUCITE, under normal classroom usage, is guaranteed for the life of the building—against fading . . . against becoming slick or shiny . . . against ever wearing smooth . . . against warping. It is interesting to note that never has it been necessary to fulfill this guarantee—although there are today approximately 20,000 installations of NUCITE chalkboards in daily use, and some are 20 years old!

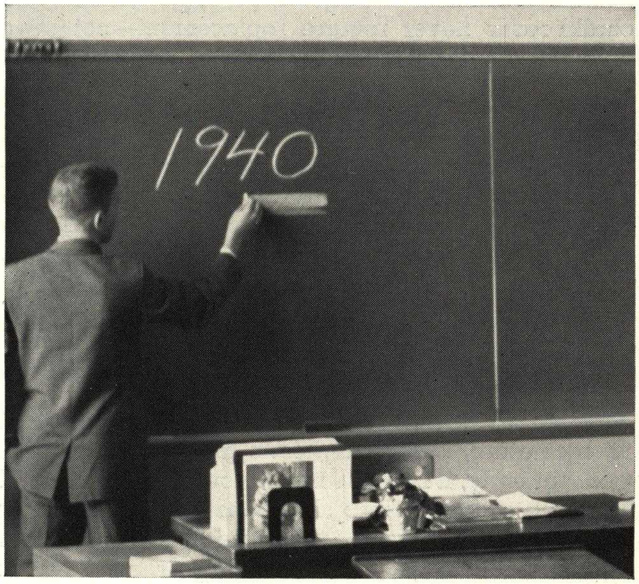
the NUCITE guarantee

The surface of NUCITE is guaranteed to last indefinitely. It is guaranteed for the life of the building against fading out or becoming slick or shiny or becoming warped under normal classroom usage. Should any NUCITE glass chalkboard become broken (outside of willful or accidental damage) within 20 years after installation, it will be replaced free of charge.

year-after-year endurance

All the attributes of NUCITE glass chalkboard—its excellent writing surface, its freedom from fading or shining or wearing smooth, its ease of maintenance, its unusual strength—are not impaired by time or usage. Every advantage is *permanent.* Thus, NUCITE chalkboards, over the years, prove the most economical to install.

an installation 20 years old . . .
North Senior High School addition,
Great Neck, Long Island, New York . . .
architect: Reginald E. Marsh, New York



The unretouched photograph above is a typical illustration of the permanence of NUCITE chalkboard—and Neatsnap aluminum framing. Installed in 1940, these NUCITE chalkboards still look new, modern. Despite 15,000 estimated erasings and frequent washings, they continue to provide an excellent writing surface with strong, sharp contrast. They retain their original color. They do not require resurfacing. On the opposite page is a recent installation in the same school district.

combination of advantages

superior writing surface

The writing surface of NUCITE is incomparable. It is close-grained—yet permits the greatest possible contrast. It "holds" the chalk, never allows it to skip. It cannot wear smooth, slick. It erases and washes easily. Day after day, even under extensive use, it retains its abrasive surface, its high readability.

low maintenance costs

Because NUCITE chalkboard is permanent, because it never becomes slick or shiny with use, it can be washed every day without ill effects. Should it become dirty, it can be scrubbed clean with soap and water. It takes ordinary chalk (the better grades, of course, erase more easily). Most important: NUCITE chalkboards never require replacement—not even refinishing or resurfacing.

strength, resistance to shock

Because NUCITE chalkboard is composed of *tempered* glass, it is inherently strong, tough—and remarkably resistant to shock. Experience in installations in all types of schools shows, conclusively, that NUCITE chalkboards are far more resistant to breakage than slate chalkboards.

non-absorbent, non-warping structure

Because the NUCITE chalkboard is basically glass, it is, by nature, both non-porous and non-absorbent. Consequently, it remains impervious to moisture and odors. It cannot absorb chalk dust. It is practically stain-proof. And NUCITE, because it is glass, offers another advantage: it cannot warp or bend out of shape.

easy, attractive installation

NUCITE chalkboard is readily installed either in conventional wood framing or in economical aluminum framing (full details in section 5). It is available in lengths up to 140 inches. On longer runs, the inconspicuous joint is filled in with a compound of the same color as the chalkboard.

excellent delivery

Due to the resources of the manufacturer, excellent delivery service on NUCITE chalkboards is assured at all times. A large stock is carried at the factory, ready for immediate shipment. To facilitate ordering, New York Silicate Book Slate Co. maintains an extensive network of distributors throughout the country—in fact, the largest in the chalkboard field.

easy-on-the-eye colors

Nucite glass chalkboard is available in the four serene colors shown below—plus black.

These colors were not selected for their appearance value alone. Other factors were taken into account: amount of light reflection . . . clearness of visual image. These colors provide sufficient contrast to the white chalk image—yet require the least possible visual effort (eye strain).

Green
Gray
Blue
Tan

Green is the most specified color (more than 80% of installations). Gray, due to recent emphasis on color dynamics, is second; it is neutral, harmonizes with any color scheme. Blue and tan are being specified for certain rooms in new schools. Black is almost identical in appearance to first-quality natural stone slate.

Because the colors are permanently fused into the glass base, they never fade. *And all colors are available at the same price.*

specifications, technical data

installation

Nucite glass chalkboard can be installed in most conventional framing systems. "Neatsnap" aluminum framing is particularly recommended. Nucite can also be installed in aluminum framing with wood grounds, wood framing and grounds, or in prefabricated units mounted on Masonite Quartrboard. Consult section 5.

Wood or fibre board blocking should be used between Nucite and the wall as noted below. Butting joints can be made smooth and filled with Seloc joint compound which matches the chalkboard in color.

sizes

minimum: 1.5 by 2 feet
maximum: 6 feet by 11 feet 8 inches
standard: *height*—3½, 4 feet
length—5, 6, 7, 8, 9 feet

weight

unboxed: 3.32 pounds per square foot
boxed: 4.5 pounds per square foot

specifications

All chalkboards shall be Nucite by the New York Silicate Book Slate Co., Inc., and shall be furnished in .... (specify color or colors: green, blue, tan, gray, black).

The chalkboards shall be made of ¼-inch tempered plate glass, onto the surface of which has been fused a colored vitreous material impregnated with an abrasive throughout its entirety. The surface shall resist wear, shall not chip, and shall retain its original color and writing and erasing qualities without fading or becoming glossy or shiny.

Continuous blocking of wood or fibre board shall be placed behind each vertical abutting joint (to keep the sections firm), and also on 2-foot centers half way between top and bottom of each piece. Blocking must not be lighter in color than the Nucite.

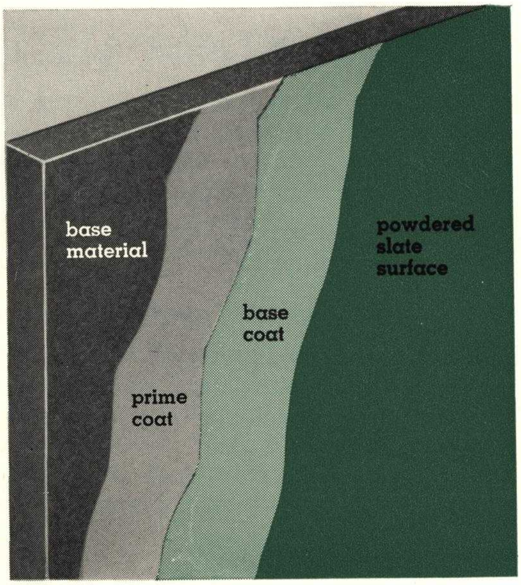
Where abutting joints occur, they shall be filled with Seloc joint compound. Where two abutting pieces of Nucite do not meet on an even plane at the joint, the low points should be built up to meet the high points. The use of spotting compounds is prohibited. After joints have thoroughly dried the boards shall be washed clean.

silicate composition chalkboard

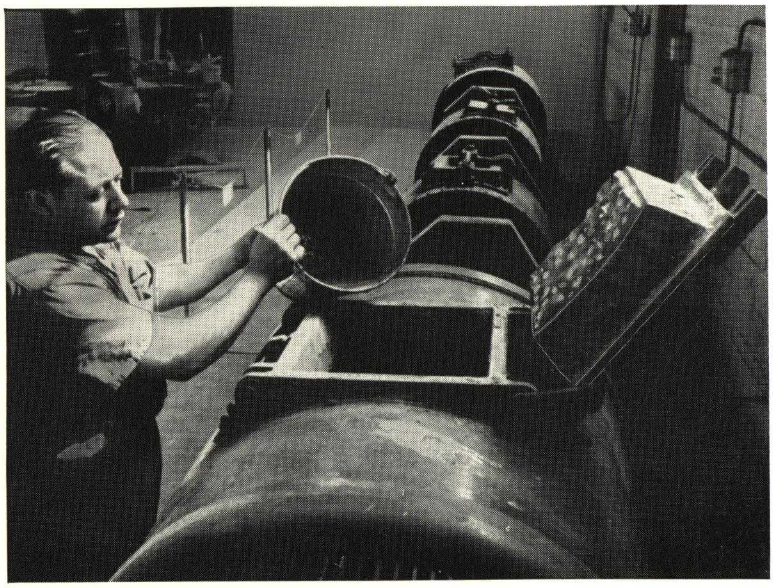
with powdered slate surface

These chalkboards have long been well known for their superior writing surface—a surface that takes the chalk easily and is easy to erase. This is natural—because New York Silicate Book Slate Co. is the oldest and largest manufacturer of chalkboards in the country—with over 25,000 square feet of its new plant devoted to producing composition chalkboards. Regal is the oldest brand name.

The secret of these chalkboards is their surface material: the world famous Diamond Brand slating compound. This compound is made in our own factory by an exclusive formulation which homogenizes pulverized stone slate particles with the other necessary ingredients. Three coats are applied to each composition chalkboard. Each application is allowed to dry for at least one day.



All silicate composition chalkboards have three carefully applied surface coats.



Even the exclusive surface material, Diamond Brand slating compound is made in our own plant.

guarantee

Under normal classroom conditions, the silicate composition chalkboards manufactured by New York Silicate Book Slate Co. are guaranteed to give satisfactory service for ten years from date of installation. This guarantee applies to materials only and does not cover cost of installation.

silicate composition chalkboard

2

type	description	advantages	sizes, ft		weight lb per sq ft
			height	length	
REGAL	Three coats of slating on the surface of 3/16 in. temper treated hardboard.	Finest low price chalkboard manufactured. Only temper treated board in its field. Manufactured continuously for 90 years.	3½, 4	to 16	1.1
PARAGON	Three coats of slating on the surface of ¼ in. temper treated hardboard. Waterproof back coating optional.	A quality composition chalkboard at low cost. Has writing and wearing qualities as fine as those of any composition chalkboard.	3½, 4	to 16	1.6
PARAGON DOUBLE	Three coats of slating on surface. Base is ½ in. consisting of 2 pieces ¼ in. temper treated hardboard laminated together. Waterproof backing standard.	Same fine quality as Paragon. With increased rigidity. Flush joint method of installation can be used with Seloc joint compound.	3½, 4	to 16	3.3
ARMOR	Three coats of slating on surface of ¼ in. Tempered Masonite Presdwood. Special high quality waterproof backcoating.	Highest quality composition chalkboard yet available at moderate cost. Cannot be broken with hammer. Guaranteed against warping or bulging under normal conditions.	3½, 4	to 16	1.7
STONE-BESTOS	Two coats alkalai resistant paint and three finished coats of slating on the surface of 3/16 in. cement asbestos sheet made from Portland cement and asbestos fibers. Special high-quality waterproof back coating.	Finest chalkboard available on cement asbestos sheet. Unlike inferior chalkboards in this field, absolutely will not bloom or blister.	3½, 4	to 12	1.2

installation

Composition boards can be installed in Neatsnap framing with steel or wood grounds or in Silco or wood framing. For details consult section 5.

Best method of installation is securing to wall with "Grippo Adhesive", or high-grade linoleum cement. (Linoleum cement does not have sufficient adhesion to hold Paragon Double and "Grippo" must be used.) Alternate installation is by hanging on nails from top wood grounds. Boards will then hang as curtain and weight will keep them straight. Holes should be drilled in board before installing to prevent cracking of surface.

If installation is in aluminum frame with clips, boards cannot be cemented to wall. In this type of installation wood blocking must be inserted between the back of board and masonry. Such blocking shall be in vertical strips not less than 2" wide and on centers of 24".

Flush joints can be made by using our Seloc joint compound or our "Writo Metal Joints" H-strips finished same as boards can be used.

standard colors

dark green, green, olive green, blue, gray, light tan, cocoa, coral, black.

Green, blue, gray and light tan match NUCITE glass chalkboard colors pictured on page 5. All standard colors are available at the same price.

specifications

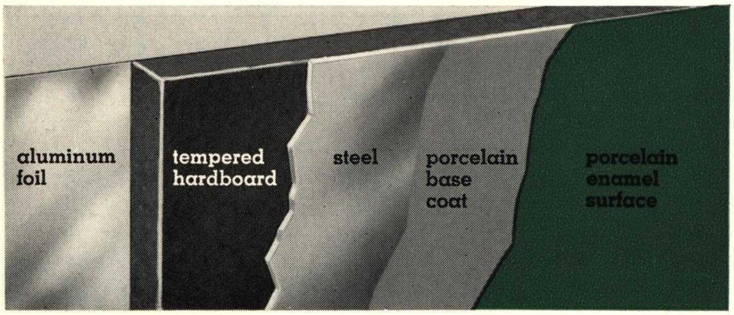
All chalkboard (blackboards) shall be .... (specify brand name) as manufactured by the New York Silicate Book Slate Company or approved equal. They shall be furnished in .... (specify color or colors; standard colors are dark green, green, blue, tan, gray, and black).

Chalkboards shall be of best quality and manufactured so as to consist of .... (*include description from table above*). All joints shall be flush and even and all chalkboards installed in accordance with the manufacturer's instructions.

other chalkboards

Nysteel chalkboards

Nysteel is a steel chalkboard with a porcelain enamel surface. Its chief advantage is its excellent writing surface. It withstands hard use for many years. It is highly resistant to chipping from impact—in fact, more resistant than other chalkboards of porcelain enamel steel. It remains free from warpage and delamination. Nysteel is manufactured in accordance with specifications recommended by the Porcelain Enamel Institute.



Nysteel is manufactured by a special, continuous process. The steel, with its porcelain enamel face, is laminated, under heat and pressure, to ¼-inch hardboard. To the back of the hardboard, a heavy aluminum foil backing is applied. Nysteel takes its place as the finest low-cost porcelain steel chalkboard on the market.

color: green, gray, blue, tan, black.

sizes: height: 3, 3.5, 4 feet; lengths: up to 10 feet

guarantee

The green Nysteel chalkboard surface is guaranteed against becoming slick or shiny and to give satisfactory service under normal classroom usage for a period of not less than twenty years after installation. The chalkboard is also guaranteed against delamination under normal conditions. Guarantee covers materials only and does not include cost of installation.

specifications

All chalkboards shall be green Nysteel as manufactured by the New York Silicate Book Slate Co., Inc., or approved equal. Facing sheet shall be enameling iron not less than .015 inch thick with nickel deposit on both sides. Surface shall consist of two coats of porcelain enamel containing proper abrasives to provide a uniform surface for chalk-taking and erasure. Each coating shall be applied in the high-temperature porcelain enamel range (approximately 1550°). Chalkboard facing shall be laminated to ¼-inch thick tempered hardboard backing by the application of neoprene base contact adhesive under heat and pressure to absolutely insure against delamination. As a moisture barrier and panel stabilizer, a .0015-inch skin of aluminum foil shall be laminated to the back of the tempered hardboard panel. Nysteel shall be installed in accordance with recommendations for composition chalkboards (page 7).

Nyco natural slate blackboard

Slate, because of its excellent writing surface, is still used extensively. In fact, first-quality natural slate and Nucite chalkboards have the finest writing surfaces of any chalkboards available. However, because slate is a mined product, there are many qualities available.

Nyco slate—the well-known brand of New York Silicate Book Slate Co.—is Pennsylvania natural slate at its top quality. It is low in lime content and has a carborundum-rubbed surface. Nyco slate is the finest quality natural slate blackboard.

color: black

sizes:

maximum: 6 by 4 feet
standard: *height:* 3, 3.5, 4 feet
length: 4, 5, 6 feet

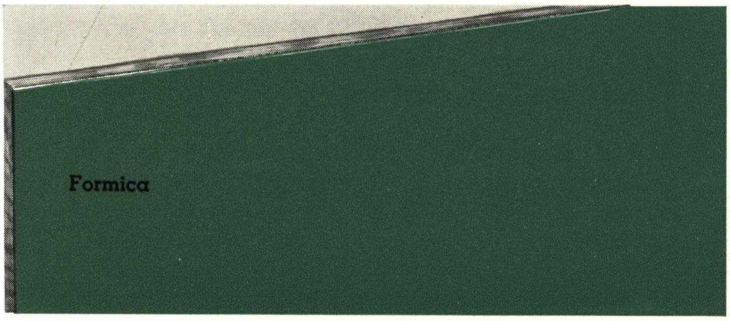
specifications

Blackboards shall be Nyco natural slate by the New York Silicate Book Co., Inc., or approved equal. Material shal be finest quality selected natural slate, even in color and texture and free from ribbons or imperfections that would impair its use or durability as a writing surface. The exposed surface shall have a satin finish in accordance with accepted standards. Slate shall be quarried in the United States and thickness shall be maintained between the limits of ¼ and ⅜ inch.

Blackboards shall be installed in accordance with manufacturer's recommendations. Joints shall be fitted to provide a continuous writing surface. After installation, all boards shall be washed clean.

Formica chalkboard

Green Formica chalkboard, the result of seven years of research and development, is a good quality chalkboard at relatively low cost. It has one of the finest writing surfaces obtainable. It takes a full, clean chalk mark with deep contrast. Erasure is quick and easy. It can be washed with water as often as necessary and is not harmed by normal cleaning solvents. It is more permanent than top-grade composition chalkboards—but costs only slightly more. Formica chalkboard is the lowest priced quality chalkboard.



The Formica sheet is a high-quality synthetic resin-base laminate, of the thermosetting type. It is cured under high temperature and extreme pressure. Ordinarily it is laminated to Quartrboard, and can be cemented or nailed in place as easily as composition chalkboards. The 3/64 inch unmounted sheet may be applied directly to finished plaster walls. Its light weight lowers shipping costs. It is distributed throughout the country by New York Silicate Book Slate Co.

types available

- 3/64-inch unmounted sheet
- sheet laminated to ¼-inch Masonite Quartrboard
- sheet laminated to ¼-inch Masonite Quartrboard with raw Formica backup sheet

color: green

sizes: *height:* 3.5 and 4 feet; *length:* 4, 5, 6, 8 and 10 feet

guarantee

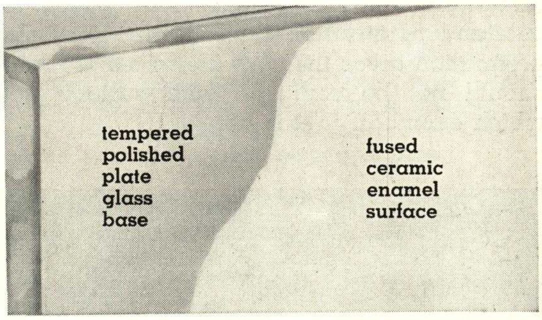
The green Formica chalkboard surface is guaranteed against becoming slick or shiny and to give satisfactory service under normal classroom usage for a period of 20 years after installation. Guarantee covers surface material only and does not include cost of installation.

specifications

The chalkboard shall be green Formica by the New York Silicate Book Slate Co., Inc. The surface shall be composed of a thermosetting synthetic resin combined with fast-action pigments placed on a phenolic impregnated paper core and cured under pressure. Chalkboards shall be installed in accordance with manufacturer's recommendations for composition chalkboards (page 7).

NURITE glass crayon board

NURITE crayon board—available in ivory only—is intended for use where color or permanence of image is desired. It is recommended for art rooms and science rooms—also for limited use in classrooms. It is particularly suited to conference rooms and airline terminals. It is often incorporated into sliding chalkboards (section 8) and can double as a projection screen.



NURITE crayon board is ¼-inch tempered, polished plate glass, to which a non-abrasive vitreous enamel is permanently fused.

Ezy-Rase water-soluble wax crayons are available in six colors for use with NURITE. Markings are easily removed with dry flannel or any damp cloth.

color: ivory

sizes: same as NUCITE (page 5)

specifications

Crayon boards shall be ivory NURITE by the New York Silicate Book Slate Co., Inc., and shall be installed by the chalkboard sub-contractor.

The crayon board shall consist of ¼-inch thick tempered plate glass with a special ivory ceramic enamel fused to its surface. The nature of this surface shall be that it retain its original ivory color, its writing and erasing qualities for the lifetime of the building in which it is installed. (Due to care and control of the ivory color occasional surface flecks may appear. These do not affect writing and shall be considered allowable variations.)

NURITE shall be installed in the same manner as NUCITE. (Section 1).

APEX cork bulletin board

plastic impregnated

Today's highly visual teaching methods require more display area, more bulletin boards. For this important part of the classroom, cork proves the most satisfactory . . . the most durable medium . . . the most economical over the years. Unlike substitute materials, cork does not disintegrate with constant use.

APEX cork bulletin board is cork in its finest form. It is a combination of pure cork, linseed oil and pigment—and contains the absolute minimum of fillers. It is burlap-backed and is a full ¼-inch thick. While hot, it is impregnated under roller pressure with U-F (urea-formaldehyde) plastic. This plastic, is added as standard at no advance in cost. The plastic impregnation gives the cork increased washability. It should not be confused with surface treatments which eventually wear off.

Ordinary cork bulletin boards absorb dirt and grime . . . are difficult to clean. Plastic impregnated APEX cork can be wiped clean with a damp cloth.

advantages

easy maintenance, washability

Because APEX cork is impregnated with U-F plastic, it is easy to clean, easy to wash. It allows dirty finger marks and messy chalk dust to be wiped off with a damp cloth . . . stubborn dirt and most pen and pencil marks to be scrubbed clean with abrasive soap and hot water. Consequently, APEX cork bulletin board is easy to maintain, easy to keep in excellent condition—even after years of hard usage.

self-healing surface

APEX is completely self-healing due to its very high content of fine cork granules. Thumb-tack holes disappear immediately from the surface. They do not cause disintegration as in substitute materials. Thus, APEX can be given rugged use day after day, year after year. It *retains* its usefulness.

uniform color surface

There is a definite reason APEX cork bulletin board has a surface of inherently uniform color—it is made *without sanding*. Thus, APEX does not have the usual speckled appearance characteristic of all other cork boards. Its surface is completely monotone, decidedly pleasing in appearance—and unusually smooth.

availability

APEX cork bulletin board, in all colors, is made ¼-inch thick. It is also available in tan ⅛-inch thick. APEX cork can be cemented to ¼-inch Masonite Quartrboard or other backing material in sizes up to 4 by 12 feet. Without backing, it can be cemented to finished white plaster in sizes up to 72 inches by 90 feet. This is the widest cork bulletin board available. It can also be obtained without plastic impregnation.

guarantee

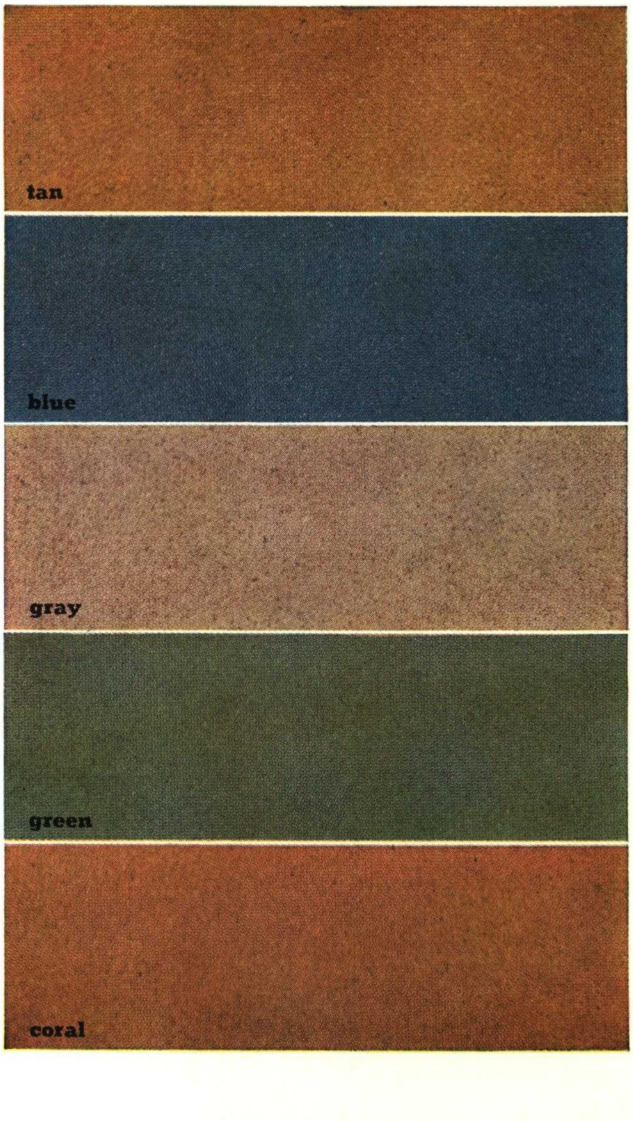
APEX cork is guaranteed to be free from manufacturing defects. The New York Silicate Book Slate Co. assumes sole responsibility for the quality of this product.

Apex cork bulletin board | 4

easy-on-the-eye colors

Apex cork bulletin board is now available in five attractive but muted colors (the widest color range on the market). All five colors have been specially selected for minimum eye strain. In addition, these colors are sufficiently muted to blend with colored chalkboards, and with the wall colors used in today's classrooms. Further, Apex colors are so soft they harmonize with themselves; two (or more) colors can be used in the same classroom.

Apex corkboards have only two color price groups: one for tan, one for all the other colors.



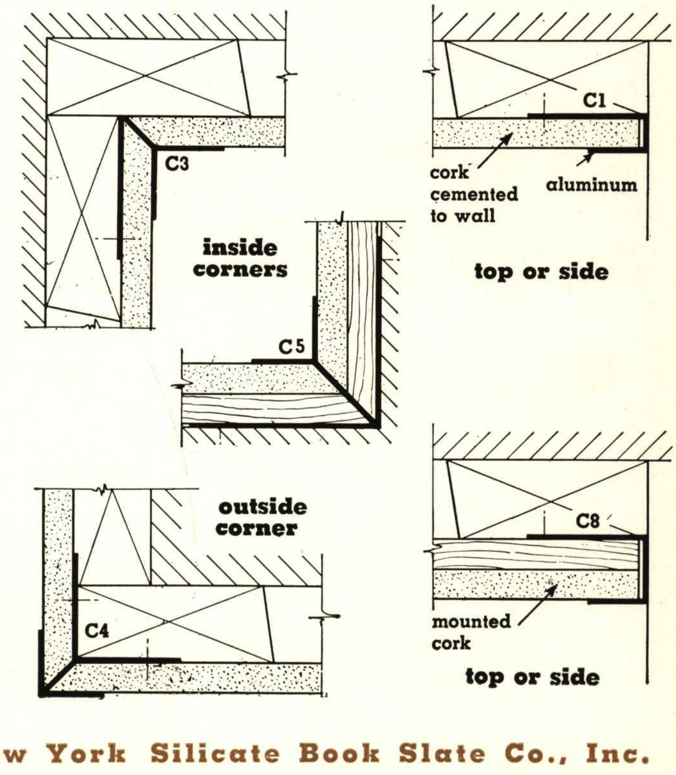
specifications

The bulletin or tack board shall be .... (insert color: tan, gray, blue, green, coral) ¼-inch Apex cork, plastic impregnated, as furnished by the New York Silicate Book Slate Co., Inc. It shall be installed according to manufacturer's recommendations and shall be thoroughly cleaned after installation.

On smooth plaster walls, the Apex corkboard shall be applied directly to a finished white coat of plaster trowelled smooth, or to a brown coat which should be steel-trowelled to a smooth finish. The adhesive shall be a first-grade linoleum cement. (Where moisture resistance is necessary or where the cork is applied to the brown coat of plaster, Grippo rubber-base adhesive shall be used.)

On unplastered walls, the Apex corkboard shall be cemented to ¼-inch thick Masonite Quartrboard, the maximum size piece being 4 by 12 feet. For longer lengths, aluminum H strips shall be used to cover the joints. (If joint strips are to be eliminated for longer lengths, the backing shall first be cemented or nailed to the wall and the cork shall be cemented to the backing.)

aluminum C-trim



aluminum framing

for chalkboards, cork bulletin boards

prefabricated **simple design, sturdy construction**

specifications

All chalkboard and corkboard framing shall be prefabricated as manufactured by the New York Silicate Book Slate Co., Inc.

Nucite Prefab glass chalkboard units (see section 1 for specification) shall be prefabricated—with exception of chalktray and top display rail which are to be precut, but installed at jobsite. Unit is to consist of continuous sheet of Quartrboard with NUCITE laminated to its face and ¼-inch plywood filler strips laminated top and bottom. Aluminum angle shall run full length of vertical edges.

Nysteel Prefab chalkboard units (see section 3 for specification) shall be prefabricated—with exception of chalktray and top display rail which are to be precut, but installed at jobsite. Aluminum angle shall run full length of vertical edges.

Chalkboard shall be secured to wall with Grippo adhesive and fastened through face at top and bottom. Chalktray and display rail shall be installed after fastening to wall, concealing mounting screws.

Apex Prefab cork bulletin boards (see section 4 for specification) shall be prefabricated. Cork shall be mounted on Quartrboard and trimmed with aluminum C8 trim. Unit shall be installed in aluminum clips previously installed on wall.

NEATSNAP

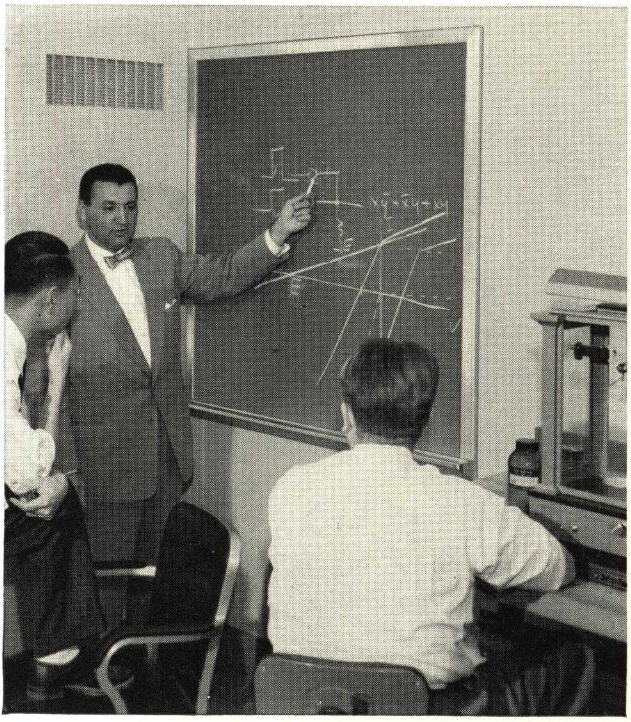
This aluminum framing has many features: it is free from visible fastenings; its corners are mitered; it is aluminited; it has a clean, distinctive appearance. Yet it costs only slightly more than wood framing—in fact, less when wood finishing and maintenance are considered.

For permanency, NEATSNAP is installed in pre-drilled galvanized steel grounds. However, it can be installed in wood grounds. It rests firmly on the grounds, rather than in tension clips.

NEATSNAP accessories, such as flag holders, are now available in extruded aluminum to match the framing. (They are the same as SILCO accessories, shown on page 17, but larger.)

Details are shown on following pages.

NEATSNAP *framing and* NUCITE *chalkboard at the International Business Machines Research Center, Poughkeepsie, New York architects: Voorhees, Walker, Smith & Smith*



specifications

chalkboard, bulletin board frames with steel gronnds

This subcontractor shall furnish and erect all chalkboard and bulletin board framing, all chalkboards and bulletin boards.

All chalkboard and tackboard framing shall be NEATSNAP as manufactured by the New York Silicate Book Slate Co., Inc., and shall be furnished in stock lengths to be cut on job to suit. All aluminum shall be in one piece, in lengths up to 21 feet. Extruded aluminum framing shall be virgin 63S alloy. It shall be given deep acid etching to produce satin finish and then alumilited.

The continuous 16-gauge galvanized grounds shall be set to dimensions specified and shall be accurately aligned with steel shims and securely fastened to rough wall. Fastenings shall be made through holes provided and shall be applied at intervals of not over 12 inches under chalkboards, and not over 20 inches elsewhere. Before manufacturing, this sub-contractor shall take field measurements and shall be responsible for fitting boards properly. The chalkboards shall rest firmly on the grounds for their entire distance.

Molding clips (secured with sheet metal screws) shall be staggered and spaced not more than 16 inches apart with extra clips at corners. Chalk tray clips shall be spaced not over 12 inches apart. After boards have been installed, extruded aluminum trim shall be snapped into place. Ends of chalk tray shall be closed by the attachment of die-cast aluminum end plates.

Map winders, flag holders, map hooks and paper clips shall be extruded aluminum and exactly match the finish of the framing. The number of each to be used shall be determined by the architect.

specifications

This sub-contractor shall furnish and erect all chalkboard and bulletin board framing, all chalkboards and bulletin boards.

All chalkboard and bulletin board framing shall be Silco as manufactured by the New York Silicate Book and Slate Co., Inc. and shall be furnished in stock lengths to be cut on the job to suit. Extruded aluminum framing shall be virgin 63S alloy. It shall be given deep acid etching to produce satin finish and then Alumilited.

Wood grounds shall be installed by others under the carpentry contract but according to these details. Before manufacturing, this sub-contractor shall take field measurements and shall be responsible for fitting boards properly.

(For installation for chalkboards and cork bulletin boards, see separate specifications.)

Aluminum trim shall be screwed onto wood grounds with Philips head cadmium-plated screws. Under bulletin boards and composition chalkboards, screws shall be 16 inches apart. Under other chalkboards, screws shall be 12 inches apart.

Map winders, flag holders, map hooks and paper clips shall be extruded aluminum and exactly match the finish of the framing. (The architect shall determine the number of each to be used.)

glass-door bulletin board

with aluminum framing (item 35)

This bulletin board is available with either single or double doors—or in multiple units. It is designed either for hanging on the wall surface or for recessing into the masonry opening. Its depth ranges from 2 to 6 inches. It can be equipped with fluorescent fixtures. The doors are ¼-inch plate glass. The case and frame are made of strong aluminum alloy with alumilite finish. The continuous piano hinges are stainless steel. The rear panel is either cork or mirror. Sliding doors are also available on all units.

surface type: hung on wall with blind hangers; no visible fastenings

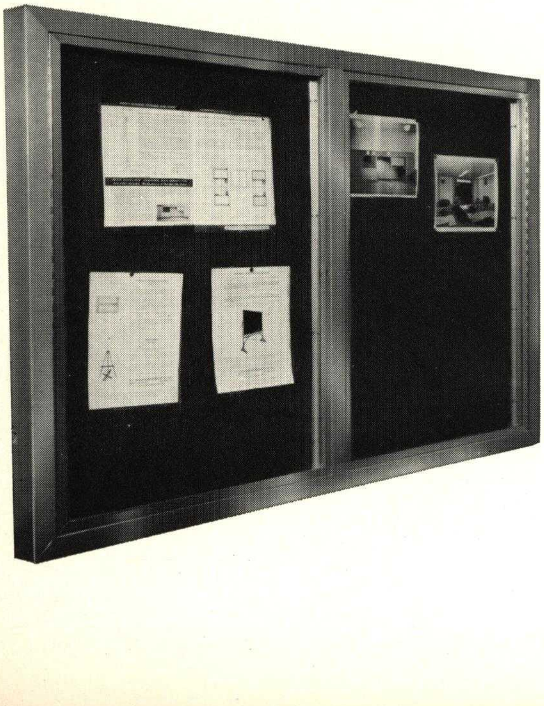
recessed type: secured to masonry through cork background

stock sizes

single door: 18x24, 20x30, 24x36, 30x42, 36x36, 36x48 inches

double door: 60x42 inches *(with or without center mullion)*

special sizes: any size up to 5x12 feet



specifications

The hollow tubing shall be virgin aluminum alloy no. 63S with alumilite finish. All other aluminum parts shall be of the same alloy and in the same finish. The continuous hinges shall be stainless steel. The framing shall be mitered true and shall be fitted and secured to make neat, durable construction. No welding shall be acceptable (as it shows spots through the alumiliting).

All aluminum and steel shall be in gauges and sizes as indicated on drawings. Depth shall be indicated. The hardware and other fittings and the entire construction of the cabinets shall be in accordance with the standards of the New York Silicate Book Slate Co., Inc.

trophy or display case

variable depth

This unit is designed for corridor or lobby use—with frame to match those of classroom chalkboards and cork boards. It is designed for recessing into the masonry opening, its depth determined by the wall thickness. Its width and height vary according to requirements. It may be either single or multiple with hinged or sliding glass doors. This unit is also available with fixed doors and rear access panel.

If desired, the adjustable brackets and glass shelves may be installed by either the hardware or glazing sub-contractor.

Specifications and full-size details on request.

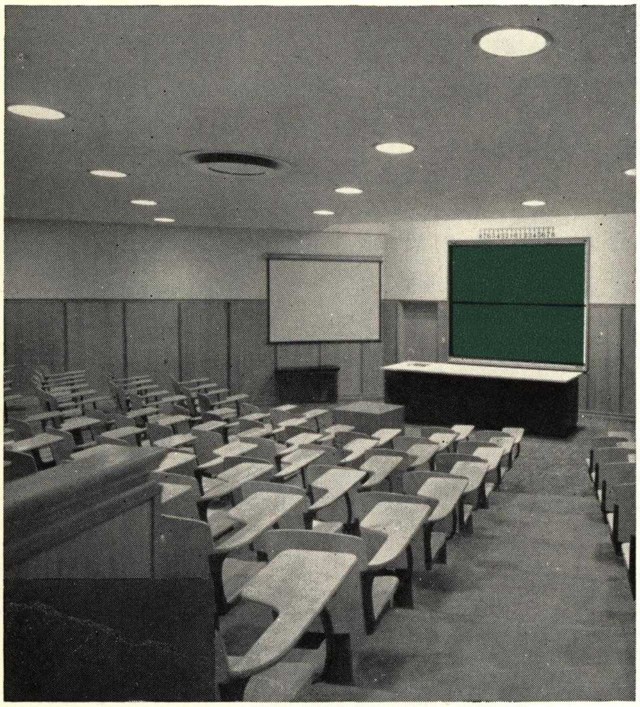
custom chalkboards and corkboards

vertical sliding

Vertical sliding boards give maximum working area at the focal point in lecture halls. They are carefully built to give years of service. They are manually operated or motor driven. NUCITE glass chalkboards should be used as they do not warp.

Sliding chalkboards can be built with one or more panels and with or without fixed rear panel. Any one of these panels can be a motion picture screen. In addition to units made of steel, we also make them entirely of alumilited aluminum or in any type of wood.



Vertical sliding chalkboards—of green NUCITE—installed in the physics lecture hall in the Fondren Hall of Science, Southern Methodist University, Dallas, Texas . . . manually operated . . . all housing made of steel . . . framing and chalk trough made of aluminum . . . balanced pulleys, roller chain, lead counterweights used . . . architect: Mark Lemmon.

scale: one-half full size

When vertical sliding chalkboard panels exceed eight feet in length, they shall be framed within aluminum tubing rather than aluminum channel.

Full-size details and specifications on request.

horizontal sliding

Horizontal sliding chalkboards give extra working area without increase in wall space.

Chalkboard, corkboard, crayon board and projection screen may be combined for best effect. A stationary back panel should be included. Horizontal units move on nylon rollers in stainless steel tracks on the principle of sliding doors.

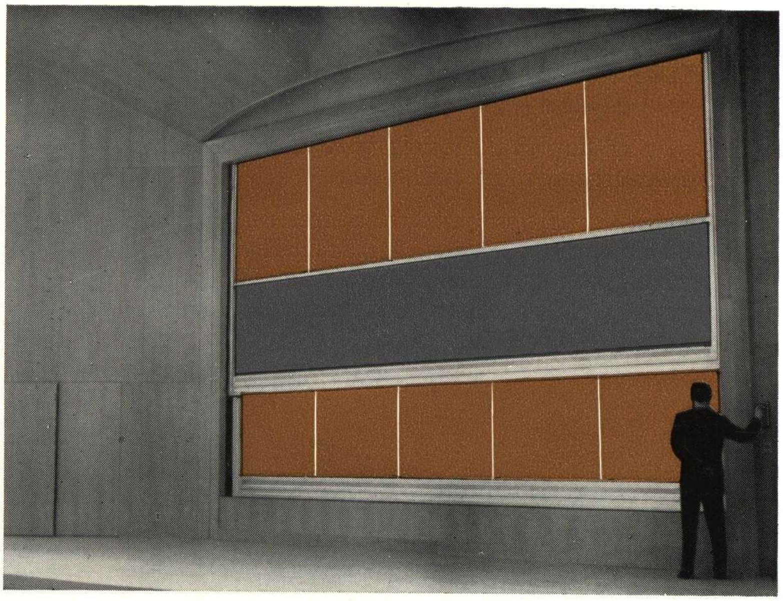
sliding and stationary

The engineering ability of New York Silicate Book Slate Co. is well illustrated by the recently completed custom installations at right:

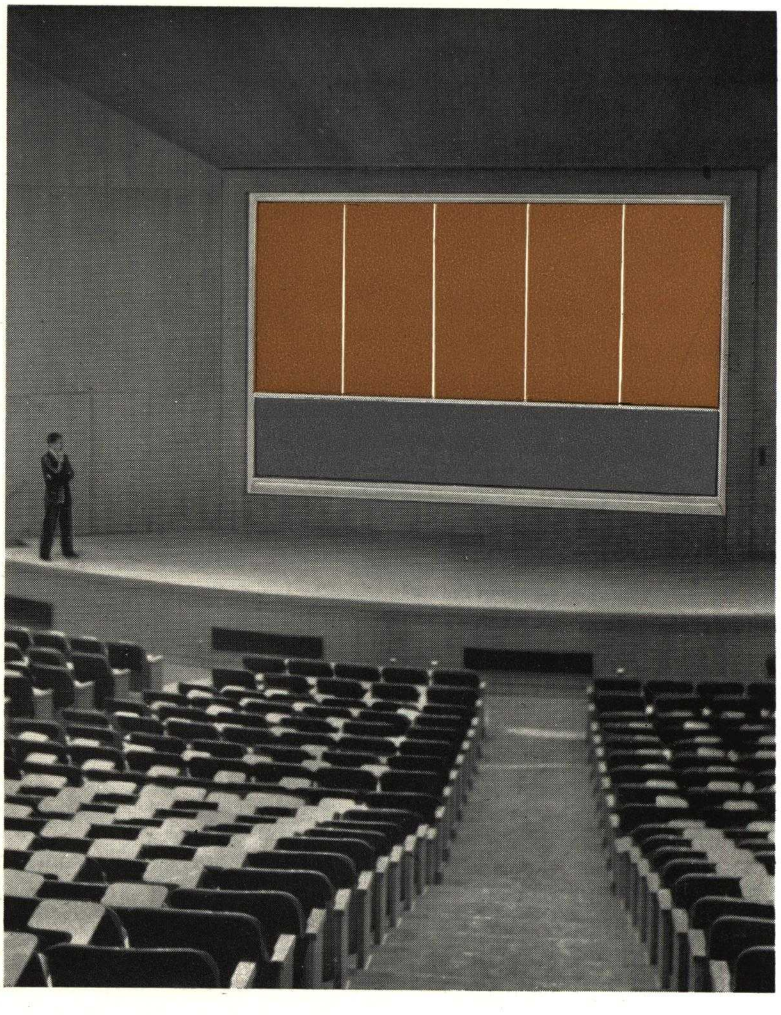


Three of these—in Thayer Hall at the United States Military Academy at West Point, New York—were the result of close cooperation with the architects, Gehron & Seltzer, and used approximately 30,000 square feet of grey Nucite chalkboard.

The fourth—in Massachusetts Institute of Technology, Cambridge, Massachusetts—was developed in cooperation with the architects, Skidmore, Owings & Merrill, New York, N. Y.

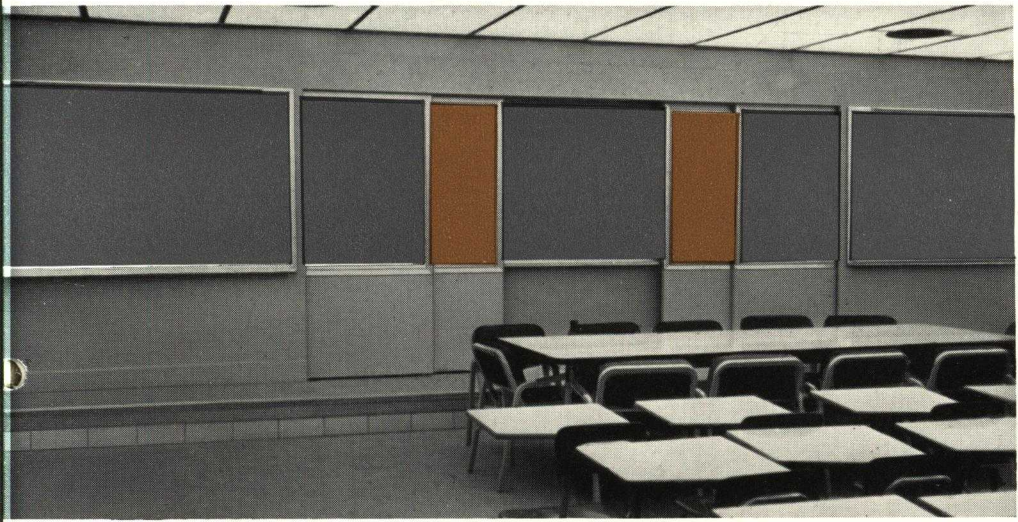
In the field of sliding chalkboards, New York Silicate Book Slate Co. has been the pioneer and consistent leader—with top engineers on the job for more than twenty-five years. Its new 90,000 square foot factory assures complete satisfaction in all types of custom fabrication and proper delivery.

Consequently, for all types of custom installations, it is suggested that New York Silicate Book Slate Co. be consulted in the early stages of the job.



auditorium sliding boards

in auditorium at Thayer Hall, West Point . . . huge sliding combination chalkboard and cork bulletin board . . . three panels, each measuring approximately 25 by 15 feet . . . each panel raised and lowered electrically



full-length sliding boards

architectural advisory service

Cooperation with architects is not new to the New York Silicate Book Slate Co., Inc. For more than a generation we have been working hand-in-glove with architects in planning their classrooms. Our staff is well trained in this field and ready to consult on any project, large or small. Our line of materials is the most complete in the chalkboard industry. Contact us for samples, price information, full size drawings and specifications. All of these services are available free of charge.

POBLOCKI and SONS COMPANY

3238 West Pierce Street Milwaukee 15, Wisconsin
Phone: MItchell 5-9300

Poblocki and Sons Company began manufacturing display, trophy and directory cases 20 years ago. The following pages represent the most complete line of cases available today.

Through the years of constant contact with architects, we have determined that the following will cover most applications.

POBLOCKI DISPLAY CASES

These cases are the same quality throughout. The DELUXE, PREMIER and ECON models are designed for proportionate door sizes. The CONTEMPORARY was designed for those who desire flat faced cases.

FEATURES

- All sections are heavy extruded aluminum, type 63S-T-5 (6061-T5).
- Door and frame are alumilited in natural color or various colors.
- Corners of doors and frames are reinforced with aluminum angles for alignment.
- Doors are furnished with tumbler locks.
- Backs of plywood, cork or grooved backgrounds for changeable letters.
- Outdoor installations have a special lip furnished to prevent water seepage into the case.
- Doors only, without frames can be furnished.

special assembly custom service

We have a complete metal fabricating shop. We furnish fabricated stainless steel, bronze, porcelain enamel or sheet metal letters, insignia, etc. as well as cast bronze or aluminum letters.

Special cases of stainless steel or bronze can be made in almost any design and consequently, are not shown on the following pages.

The details can be used in different ways, for example page 7, P-409 has Econ and Premier frame with sliding glass, this can also be used in Deluxe or Contemporary with any depth. Another example, page 6, P-414, the elbow catch can be used in any type of multiple case, recessed or surface.

Page 6, details D-313 and P-410 and E-509—This extra moulding is added for those who desire extra width. It can be used for cases with lighting on three or four sides. It is called Imperial. This is not available in Contemporary models.

All cases are made to specified sizes. Standard depths shown on pages 4 and 5. Greater depths shown on pages 6 and 7.

LIGHTING

Fluorescent lighting is available in the DELUXE, ECON, or PREMIER cases which are 4″ or deeper and the CONTEMPORARY cases 3½″ or deeper. When only the frame and door are used such as P-411, lighting is furnished separately. See ½ full size drawing P-411, page 6.

SHELVING

Standards and brackets can be furnished in the deeper cases. There are the C type standard for plywood background and T type which overlaps the cork background. Knife brackets are available only in these sizes, 4″, 5″, 6″ and all even sizes up to and including 26″. These are generally furnished in satin finish chrome.

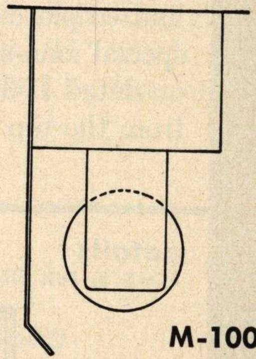
BACKGROUNDS

Grooved backgrounds for the reception of changeable letters in sizes, ¼″, ⅜″, ½″, ¾″, 1½″, and 2″. These letters are molded die cut plastic or cast aluminum available up to only 1½″.

Felt backgrounds are used for indoor installations and non-mildewing Koroseal for outdoor.

Aluminum backgrounds, with baked enamel finish are generally used in church cases. The letters are the hook on type and also are aluminum with black or white baked enamel finish.

Cork backgrounds are also available.



M-100

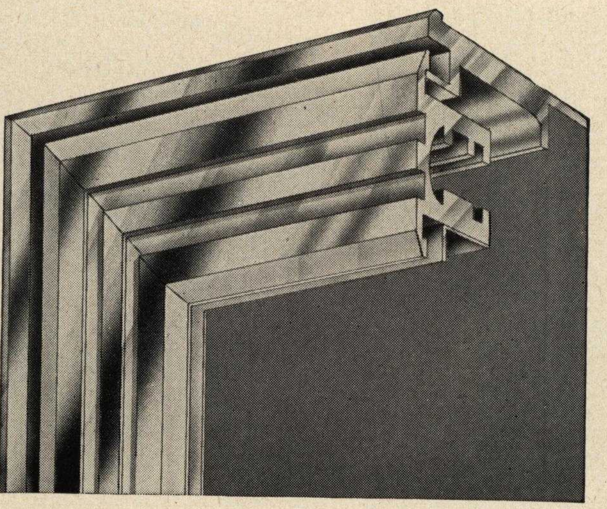
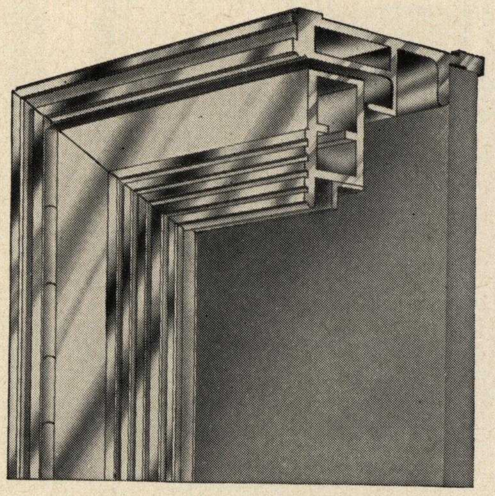
M-300

type

deluxe



premier



features

The DELUXE model is designed for extra heavy duty which affords practically unlimited plate glass openings. Equipped with special non-sag invisible hinges as shown on detail D-306, page 7. Doors can be hung from the top or side.

The PREMIER model is designed for glass openings not to exceed 40″ wide x 96″ high equipped with full door height piano hinge. This same model can be had with glass opening 40″ high x 96″ wide by installing the piano hinge, horizontally at top of door that will swing open from bottom.

specifications

1. All extrusions are of 63S-T5 (6061-T5) aluminum, alumilited for at least 30 minutes.

2. Extrusions shall be buffed before alumiliting to avoid all scratches, etc.

3. Doors shall be so constructed as not to rack and so that the glass is not used to keep door square and in line. Corners are to be braced by means of hidden aluminum angles or other like methods.

4. No screws shall be visible when door is closed.

5. All screws used throughout the case shall be plated with cadmium or like material.

6. Locks used shall be of the tumbler type and when two or more cases are provided on one job, the locks shall be keyed alike. Locks which can be opened with any object except key provided will not be accepted.

7. Glass used in door in thickness and type as specified in plans.

8. Invisible hinges are to be used in only the DELUXE cases. Continuous alumilited aluminum piano hinge with stainless steel pin to be used in all other models.

9. Frame shall be constructed as to have a continuous C shaped channel or like device behind door to prevent rain or snow from blowing into the case and to prevent light leaks.

10. Invisible venting shall be provided to prevent condensation. Cases shall be made dust tight by means of felt gasket where specified on the print. Ventilation to prevent condensation will then be provided as shown on print.

11. Frames shall be assembled by means of invisible aluminum angles, gussets or like material. No knocked down or unassembled cases will be accepted. Backs shall be exterior plywood, S1S grade.

12. Cases shall be caulked to the wall to make watertight and to close up space between frame and wall, outdoor cases shall have drip lip to prevent water from seeping into the case (when so specified).

13. Sliding door cases shall be complete with standard sliding door hardware such as Knape and Vogt or equal. A standard type of glass sliding door lock shall be provided.

14. Glass shelves shall be in thickness and type as shown on details and specifications. All visible edges shall be polished. All other edges swiped to prevent injury.

15. *Illuminated Cases:* Illumination shall be fluorescent lighting as shown on prints and specifications. All illumination shall be entirely connected together on complete cases so that all that is required is for the electrician to connect to wires provided, and install the lamps. Baffles shall be provided as shown. An extra aluminum extrusion when so indicated shall be provided on all sides to shield the light from direct view.

    All fluorescent lamps shall be provided by owners.

16. Cork backgrounds when so specified are of the bulletin board grade self-sealing standard tan color to be furnished unless otherwise specified.

17. Cases are to be of surface or recessed, illuminated or non-illuminated type as specified or as shown on prints.

Son-Nel **FIRST IN COLOR! FIRST IN QUALITY!**

SAGE GREEN

MAUVE BROWN

CORAL

SON

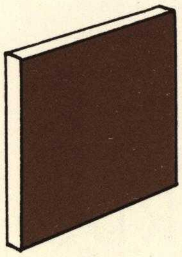
FIRST IN COLOR!

Son-Nel Products Company pioneered the use of scientific, eye-pleasing color in chalkboards, offering premium quality chalkboards in six laboratory tested shades at no extra cost. Son-Nel's colors were selected after thorough research by the School Planning Division, California State Department of Education. A glance shows how they adapt ideally to contemporary visual education techniques. The vital reflectance factor (Son-Nel guarantees a maximum of 22%!) is well within limits set by experts to assure freedom from glare. Custom workmanship produces equipment that makes Son-Nel the ***first choice*** of educational institutions everywhere.

FIRST IN QUALITY!

Son-Nel's painstaking production techniques assure an exceptionally close-grained writing surface with a ***minimum*** thickness of .007 inch. These quality finishes are permanently bonded to three different types of composition backing, for a range of selection to meet specific needs. Each backing is ***sealed with asphaltic primer*** to eliminate moisture absorption and warp. All Son-Nel chalkboards are pre-chalked, ready for immediate use. Whichever line you select, you are assured of obtaining the best in quality equipment for lifetime service.

PREMIER BOARD

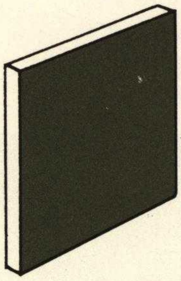


Son-Nel's finest—a virtually indestructible base of Portland cement and asbestos fibers assures a lifetime of service even in severe climatic environments. Combined with Son-Nel's velvet smooth writing surface, this makes Premier Board the ideal specification, anywhere!

SPECIFICATIONS

Writing surface—.007" minimum thickness
Backing—3/16" thick, cement asbestos sheets
Lengths—4' to 8', in full-foot increments
Widths—3', 3½', 4'
Weight—2 lbs. per sq. ft.
Shipping weight—2¼ lbs. per sq. ft.

CALSLATE



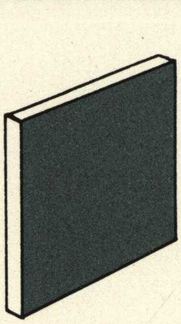
Durability and economy! Son-Nel's close grained writing surface is bonded to tough ¼" masonite-type backing (wood fiber). Extremely resistant to heat and moisture, Calslate yields long dependable service for lifetime economy.

SPECIFICATIONS

Writing surface—.007" minimum thickness
Backing —¼" thick hardboard
Lengths—4' to 12', in full-foot increments
Widths—3', 3½', 4'
Weight—1¼ lbs. per sq. ft.
Shipping weight—1½ lbs. per sq. ft.

NOTE: Also made in ½" thickness with tongue and groove joints; weight, 2½ lbs. per sq. ft.; shipping weight, 2¾ lbs. per sq. ft.

FIBRASLATE



Performance proved! Through years of rugged use, Fibraslate's economical hardboard backing of compacted wood fibers has proved its resistance to dents, cracks, tack holes, etc. The premium writing surface is identical to that on *all* Son-Nel chalkboards.

SPECIFICATIONS

Writing surface—.007" minimum thickness
Backing—.22" thick, wood fiber hardboard
Lengths—4' to 12', in full-foot increments
Widths—3', 3½', 4'
Weight—1 lb. per sq. ft.
Shipping weight—1¼ lbs. per sq. ft.

SON-NEL PORCELAIN STEEL CHALKBOARDS

Lightweight, *balanced* panels of porcelain enameled steel provide extremely durable writing surfaces that are impervious to acids, greases, solvents, and are scratch and impact resistant. Son-Nel Porcelain Steel Boards are available in *eight* fadeproof colors in units up to 16 feet long. Maximum reflectance is only 20%, well within recommended standards.

TYPICAL ARCHITECTS' SPECIFICATIONS

Chalkboard units shall be (CALSLATE, FIBRASLATE, PREMIER Board) Perma-Panels as manufactured by SON-NEL PRODUCTS CO. Colors shall be (specify color desired). The chalkboards shall be pressure laminated to hardboard or plywood backing, framed with #708 extruded aluminum channel molding, and have #4 extruded aluminum chalk and eraser tray across the bottom, as detailed. Ends of tray shall be rounded. **Tackboard units** shall be (¼-inch bulletin board cork) or (vinyl plastic); specify color desired; laminated to backing and framed with #708 aluminum molding. Chalkboard and corkboard units shall be mounted on walls with Phillips oval head wood screws @ 24 inches O.C., as detailed. On plaster and concrete walls, the general contractor will install ground strips to fit panel size. **Pegboard units** are to be ⅛-inch tempered, perforated board (specify spacing of holes) 1-inch centers are standard.

SLIDING PANELS *feather touch action*

CHALKBOARDS and/or TACKBOARDS

Son-Nel Sliding Combination Units provide efficient double-duty convenience—horizontal or vertical units that are precision engineered for smooth operation. Combinations are built to specification, featuring chalkboard, tackboard, pegboard or motion picture screen units with 1, 2, 3 or more sliding panels *in addition* to the fixed wall panel. A single area of wall can in this way provide greatly increased working potential.

Son-Nel Sliding Units are fitted with all aluminum trim; fixtures are cadmium plated. ***Horizontal Sliding Panels*** will be constructed in any size required.

Vertical Sliding Panels are available in widths up to 8-feet, with lead counterweights and roller bearing sheaves for effortless movement. Chalkboards may be Premier Board, Calslate, Fibraslate or steel; tackboards may be Son-Nel Cork or Vinyl.

SPECIAL SON-NEL T.V. UNITS are available to your specifications with non-glare anodized aluminum trim. Compact sliding units are designed for educational and closed-circuit television productions where ease of operation and high visual impact is a must.

SON-NEL ANODIZED EXTRUDED ALUMINUM TRIM—Son-Nel extruded aluminum trim features exceptionally "slim design" to avoid unnecessary bulk and to increase usable board surface. Chalktrays are rugged, actually "childproof" to withstand the weight and rough usage encountered in school rooms. Precision-made in various sizes and styles. Son-Nel trim adds the finishing touch to quality Son-Nel chalkboard installations. See detail drawings on pages 3, 4 and 5 for typical applications.

Son-Nel PERMANENT GLUED-ON INSTALLATIONS

CHALKBOARDS and TACKBOARDS

Any of the three types of Son-Nel chalkboards, or Son-Nel cork or vinyl tackboards, may be permanently installed on virtually any wall surface. Cement may be any proven waterproof type, such as the heaviest acoustical tile cement.

CHALKBOARD: Where several pieces adjoin each other, Son-Nel permanent joint strips form an inconspicuous bond. Son-Nel aluminum trim, of exceptionally light and compact design, may be installed after boards are set.

TACKBOARD: Corkboard (1/4" mat) may be applied directly to the wall with standard linoleum paste, and then aluminum trim installed. Vinyl is to be mounted on some other backing before application to wall. If supplementary backing is used (for vinyl or cork) then chalkboard mounting procedure should be followed.

TYPICAL ARCHITECTS' SPECIFICATIONS

Chalkboards shall be (CALSLATE, FIBRASLATE, PREMIER Board) as manufactured by SON-NEL PRODUCTS CO. Colors shall be (specify colors desired). All lengths to 12 feet (CALSLATE and FIBRASLATE) or to 8 feet (PREMIER Board) shall be in one piece. Longer installations shall be in two or more pieces as required, joined together with an aluminum H joint strip, colored to match the chalkboard. Chalkboards shall be spot cemented to walls with an approved waterproof adhesive. **Tackboards** shall be (1/4-inch bulletin board cork) or (vinyl plastic); specify color desired; firmly cemented to the walls. Aluminum trim and chalk tray shall be installed by the chalkboard sub-contractor. Ends of tray shall be rounded.

Where all-wood trim is specified, this wood trim shall be furnished and installed by the general contractor.

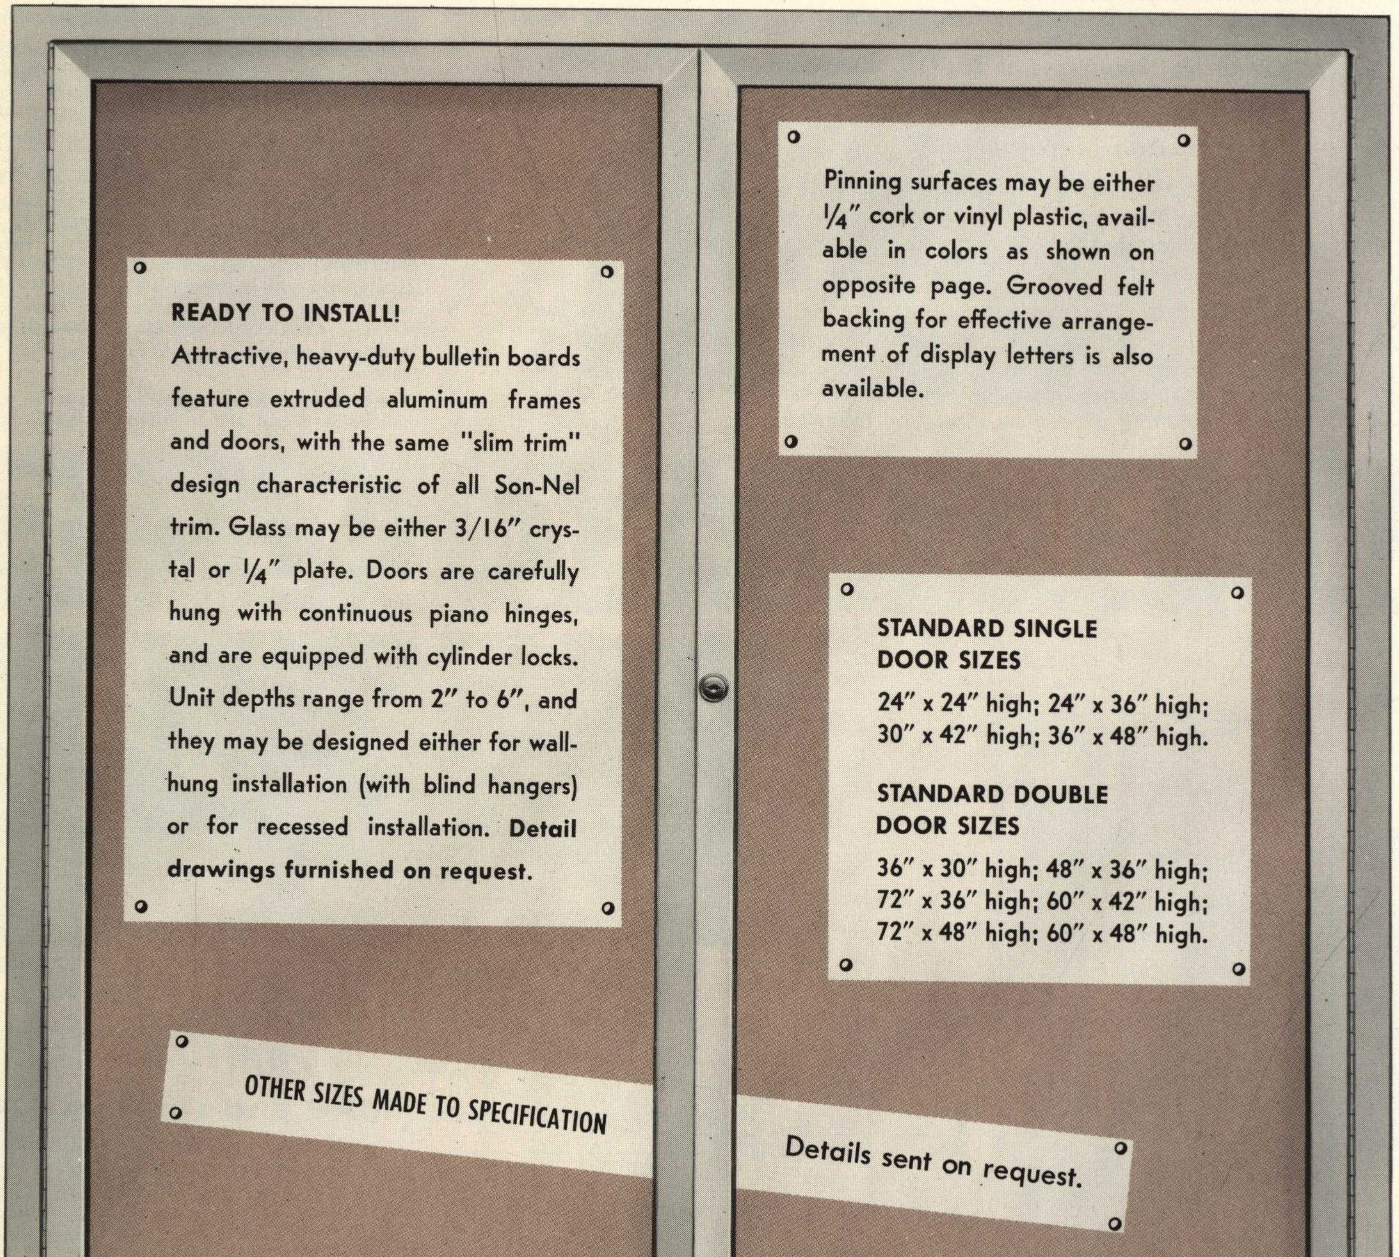
TACKBOARDS

GLASS ENCLOSED BULLETIN BOARDS



READY TO INSTALL!
Attractive, heavy-duty bulletin boards feature extruded aluminum frames and doors, with the same "slim trim" design characteristic of all Son-Nel trim. Glass may be either 3/16" crystal or 1/4" plate. Doors are carefully hung with continuous piano hinges, and are equipped with cylinder locks. Unit depths range from 2" to 6", and they may be designed either for wall-hung installation (with blind hangers) or for recessed installation. **Detail drawings furnished on request.**

Pinning surfaces may be either 1/4" cork or vinyl plastic, available in colors as shown on opposite page. Grooved felt backing for effective arrangement of display letters is also available.

STANDARD SINGLE DOOR SIZES

24" x 24" high; 24" x 36" high; 30" x 42" high; 36" x 48" high.

STANDARD DOUBLE DOOR SIZES

36" x 30" high; 48" x 36" high; 72" x 36" high; 60" x 42" high; 72" x 48" high; 60" x 48" high.

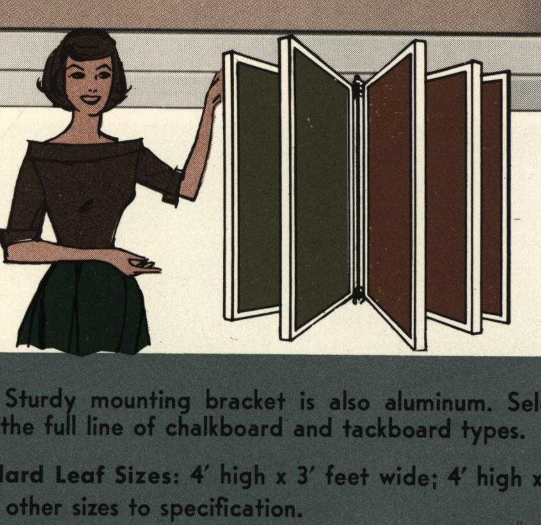
OTHER SIZES MADE TO SPECIFICATION

Details sent on request.

Son-Nel

SWING-LEAF UNITS

CHALKBOARD and/or TACKBOARD



Each carefully balanced leaf of this Son-Nel swinging unit provides a double-faced display surface for chalkboard-tackboard combinations. As many as six leaves can be mounted, each providing a "feather-touch" full 180° swing, and each framed in Son-Nel slim design extruded aluminum trim. Sturdy mounting bracket is also aluminum. Select from the full line of chalkboard and tackboard types.

Standard Leaf Sizes: 4' high x 3' feet wide; 4' high x 4' wide; other sizes to specification.

in CORK . . . . or VINYL

Son-Nel CORK

ALL SON-NEL CORKS are superior quality, resilient cork composition, made specifically for bulletin board service—with ***permanent*** resilience and softness. They may be furnished in rolls or sheets, or mounted on plywood, hardboard or soft fiberboard backing of ¼", ⅜" or ½" thickness, as specified. (For ⅛" cork, soft board backing is recommended.)

COLOR: For easy adaptation into modern classrooms Son-Nel Corks are available in the six colors indicated at right. Light reflectance is comfortably low, due to finely textured surfaces.

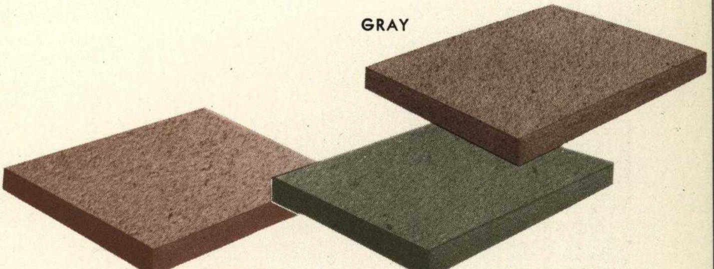
FINE GRAIN—SMOOTH SURFACE: Burlap backed, and may be mounted with either smooth or burlap side exposed. See table for size and color availability.

PEBBLE GRAIN—SMOOTH SURFACE: This is available in light tan, Son-Nel No. 1 only. Thickness, ¼" or ⅛". Maximum size, 4' x 12'. Can be mounted on hard or soft backing as specified.

AVAILABILITY CHART

Color	Width: 48"		72"	
	Thickness: ¼"	⅛"	¼"	⅛"
LIGHT TAN—B10	Yes	Yes	Yes	Yes
LIGHT GREEN—B8	Yes	Yes	Yes	Yes
GRAY—B6	Yes	No	Yes	No
CORAL—A58	Yes	No	Yes	No
GOLD—B12	Yes	No	No	No
CORAL ROSE—B18	Yes	No	No	No

All the above corks are in rolls averaging 90 ft. in length.
Average weights: ¼" cork, 1 lb./sq. ft.; ⅛" cork, ½ lb./sq. ft.



Son-Nel VINYL

Vinyl Plastic provides a pinning surface in limitless colors and patterns that will not crack, chip, peel or scratch. Son-Nel Vinyl Tackboards may be specified in virtually any color, pattern or make of vinyl on the market (i.e. Guard, Koroseal, Kalistron, Vicrotex, etc.). These fabrics are laminated to a treated pulp board backing—and are stain and fire resistant, easy to clean, maintaining their pliable and spongy texture for decades. Holes are self-sealing.

COLOR: Illustrated are six sample colors available in *Guard* Vinyl, one of many available through Son-Nel. These deep-textured patterns eliminate disturbing reflectance.

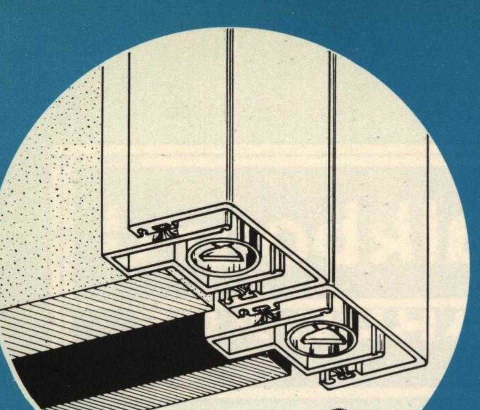
VERTICAL SLIDING CHALKBOARD HARDWARE by

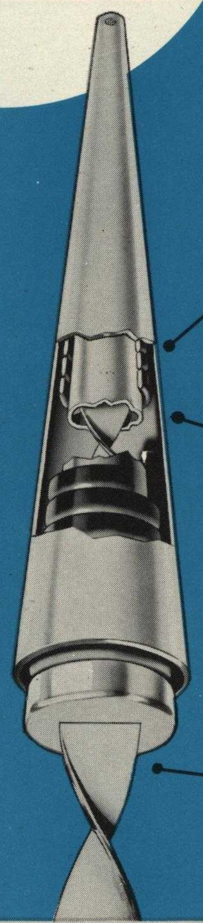
UNIQUE BALANCE DIVISION
S. H. POMEROY COMPANY
two famous names in engineered architectural products

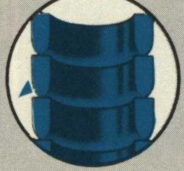
- All framing sections and supports are **ANODIZED ALUMINUM** extrusions.
- Design of panel framing section allows use of chalkboard or tackboard material of any thickness or material specification. No additional trim required.
- Balances are enclosed in the vertical supporting members.
- Panels move in non-friction guides.
- Nylon bearings of the **UNIQUE BALANCES** result in smooth, effortless operation.
- Balances are installed and adjusted for precise operation during manufacture.
- Simple to erect. Length and height can be varied to suit requirements.



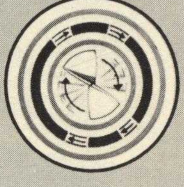
UNIQUE SPIRAL BALANCES

A specially adapted design of the famous UNIQUE BALANCE counter balances each panel section. Always silent, perfectly smooth operation assured from any position.

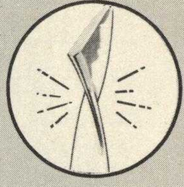




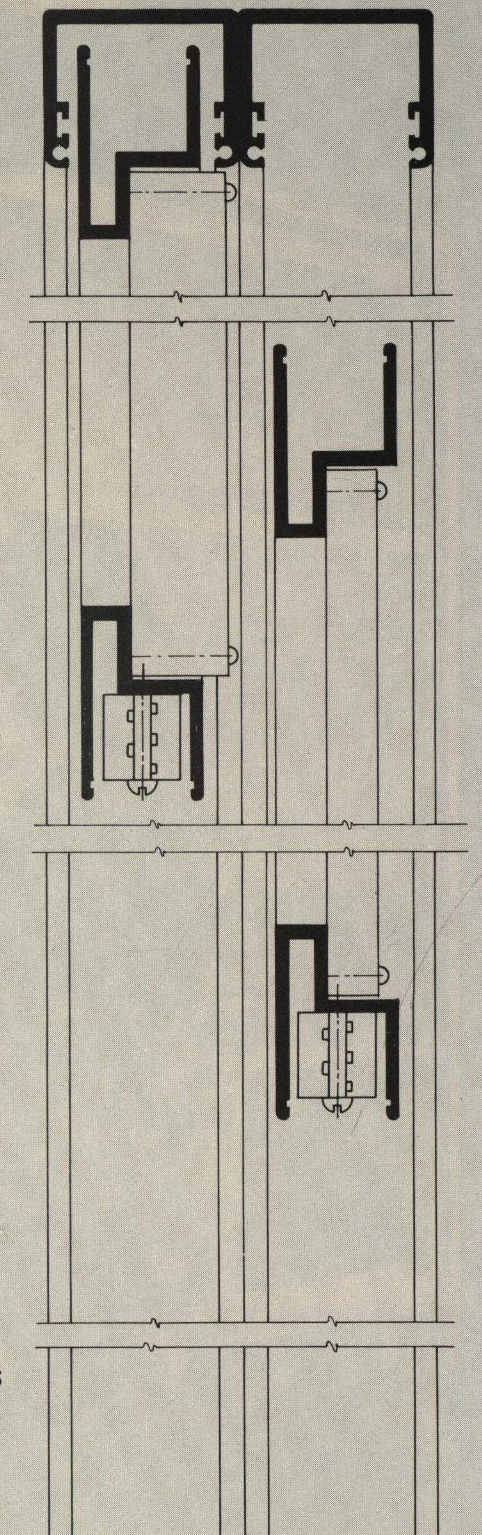
Pin-point contact on power coils for friction-free operation.

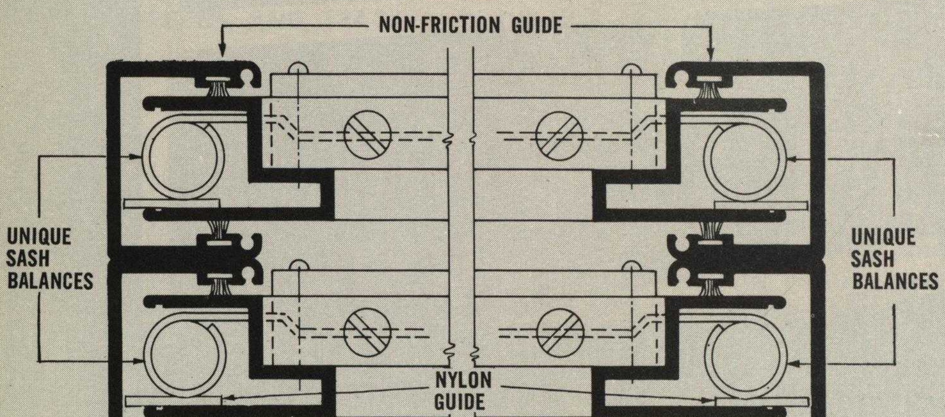


No metal to metal contact — silent, efficient operation.



Corrosion-proof, cadmium-plated accelerated spiral rod — smooth trouble-free operation.





HORIZONTAL SECTION **(Half Scale)** **VERTICAL SECTION**

UNITED STATES PLYWOOD CORPORATION

A.I.A. FILE NO. 35-B-1 JAN. 1960

Proven glare-free surface

Never needs refinishing

Combination chalkboard, bulletin board, visual aid screen

Guaranteed for the life of the building

WELDWOOD THREE COAT Chalkboard

Weldwood Three Coat Chalkboard is a unique development of serviceable chalkboard combining the desirable features of good chalkboards, but never needing maintenance or refinishing. It is guaranteed to last the life of the building.

Designed specifically to assist modern teaching methods, Weldwood Chalkboard has also been found very successful in commercial and institutional applications. Many successful installations have been made, a few typical ones are: schoolrooms, and school administration offices and assembly rooms; production and traffic departments of plants and offices; staff and instruction rooms of hospitals; dispatcher offices and maintenance headquarters for public transportation systems and public utilities; wherever instructions, schedules and records must be economically maintained and kept up to the minute.

THE SURFACE

Weldwood Three Coat Chalkboard is a special porcelain-enameled composition fired under exacting controls on 18-gauge enameling steel. This face is manufactured in accordance with the Porcelain Enamel Institute's "Standards for Architectural Porcelain." The process and the product consistently satisfy the rigid inspection and exacting wear and abrasion testing by the Electrical Testing Laboratory of New York City. (Copies of their laboratory test results are available on request.)

DOUBLES AS VISUAL AID BOARD

Weldwood Chalkboard is versatile:

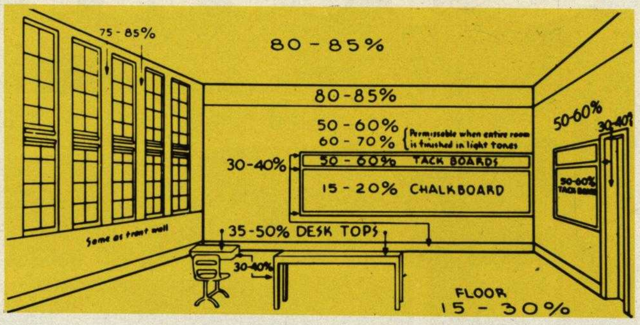
...its attraction for magnets often eliminates the need for other equipment such as projection screens, easels, bulletin boards.

...diagrams, gridlines, maps, music staffs, charts or other special designs can be permanently silkscreened or painted on the surface.

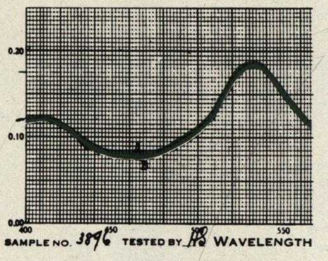
GUARANTEED FOR A LIFETIME

Under normal conditions of usage and installation, Three Coat Weldwood Chalkboards are guaranteed for the life of the building in which they are installed. This guarantee extends to replacement of the panel only and does not include the cost of removal or re-installation.

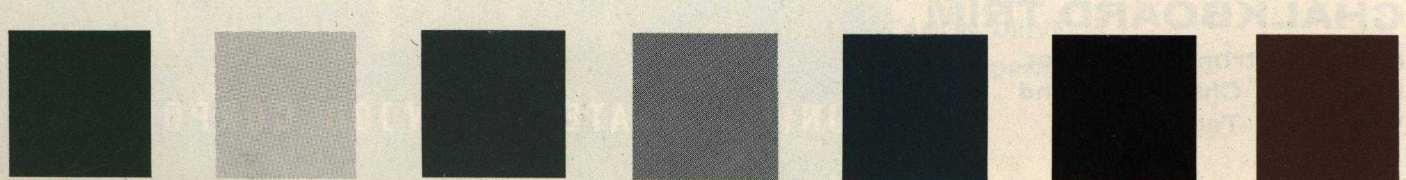
GLARE-FREE COLOR



For utmost readability (contrast with chalk's color) combined with controlled reflectance and pleasing appearance, our modern Dark Green #151 Three Coat was developed for Weldwood Chalkboard. The Reflectance Factor of the chalkboard, both new and used (chalked and unchalked) is 18.5% ... established midway between the 15%-20% reflectance factor limits recommended by the Illuminating Engineering Society and American Institute of Architects, in their report "American Standard Practice for Schools."



Weldwood Three Coat Chalkboard is also provided in six other tints: Light Green #128, Projection White #221-L (for use with the audio-visual teaching, lecturing and demonstrating equipment) (see Page 3), Gunmetal Grey #277, Grey-Blue #287, Black #380, and Brown #402.



Dark Green #151 **Projection White #221-L** **Light Green #128** **Gunmetal Grey #277** **Grey-Blue #287** **Black #380** **Brown #402**

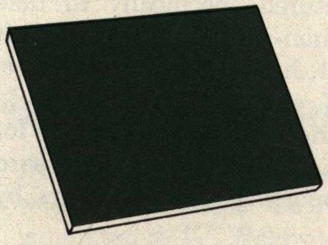
NEVER NEEDS REFINISHING EASY TO CLEAN

Weldwood Chalkboard is tough. It will not warp, buckle, shatter or break under normal impact, stress, temperature changes, concussion. It defies scratching, chipping, denting. Furthermore, the surface is non-porous so chalk is readily erased. It can be rinsed with clear water as often as the user desires without affecting the writing surface of the board.

ECONOMICAL INSTALLATION

Installation cost is less than for any similar product. Weldwood Aluminum Chalkboard Trim makes this possible, permits mounting directly to plastered walls without fixed grounds or to unfinished walls. No other finishing trim is necessary.

STANDARD OF CONSTRUCTION



SURFACE
3-coat porcelain-enameled 18 gauge enameling steel

CORE
¼" Weldwood Fir Plywood, exterior grade
(other thicknesses special)

BACKING
.015" aluminum

The core of Weldwood Chalkboard is Weldwood Fir Plywood, exterior grade, as manufactured by United States Plywood Corporation to the standards of the Douglas Fir Plywood Association.

The backing sheet is .015" aluminum sheet, but other metals and thicknesses may be used if ordered special.

Securely bonded to the core with special glues formulated expressly for Weldwood Chalkboard manufacture, the porcelain-on-steel face and metal backing sheet cannot be removed. The chalkboard will not delaminate in school-type installation and use.

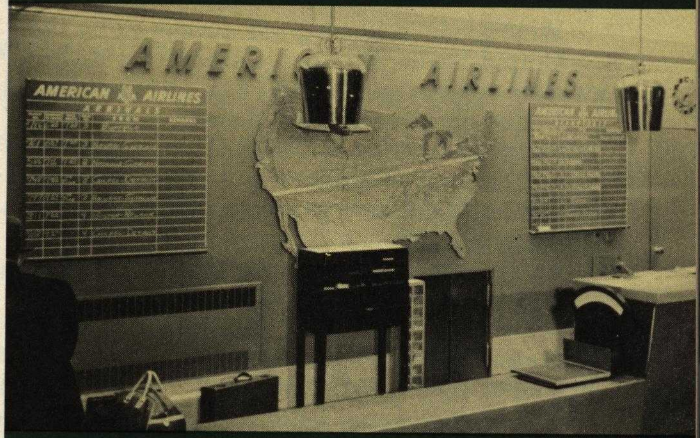
DOW-JONES STOCK AVERAGES

Weldwood Chalkboard's superior surface permits continual writing and erasures without loss of readability, a prime requisite for active stock quotation boards.



A durable Weldwood Chalkboard serves as the perfect writing surface for a busy airline schedule board. American Airlines, Rochester, N. Y.

WELDWOOD "Projection-White" CHALKBOARD

for visual aids teaching methods

Weldwood Projection-White Chalkboard (#221-L) embodies all the inherent features of design, construction, manufacture and installation as do the colored Weldwood Chalkboards, making this board the remarkable functional chalkboard-bulletin board-projection screen.

The projection-white color permits complete utilization of the board for projecting black-and-white or color slides or films. The porcelain-enameled face, identical to other Weldwood Chalkboards, permits colored chalk to be used. The attraction to magnets permits the board to serve as a bulletin board.

installation

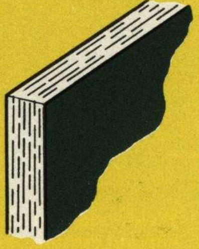
Weldwood Projection-White Chalkboard (#221-L) is installed exactly as other Weldwood Chalkboards, using the same Weldwood Aluminum Chalkboard Trim and accessories.

Installation cost is less than for any similar product. Weldwood Aluminum Chalkboard Trim makes this possible, permits mounting directly to plastered walls without fixed grounds or to unfinished walls. No other finishing trim is necessary.

Weldwood "24" SERIES CHALKBOARD

For use in some installations—educational, commercial and institutional—where the budget is limited, an alternate is available. This alternate board cannot of course, offer identical qualities of surface and long term economies as the Weldwood Three Coat Chalkboard. However, it does make available for all buildings, a perfectly satisfactory economy board for use where the requirements are not stringent.

This is a light-weight, medium price, porcelain face chalkboard on a balanced, stable construction. The writing surface quality closely approaches, but of course cannot equal, the heavy duty surface of Weldwood Three Coat Chalkboard. However, its construction is sound and it thus offers valid economies, in purchase and long life.



Available in Pale Green #1138, Charcoal #2404, Grey #2405, Brown #2406, and Blue #2407.

Weldwood TACKBOARD

Weldwood Tackboard was developed by the United States Plywood Corporation to further reduce the overall cost of Weldwood Chalkboard installation. Low in cost, Weldwood Tackboard is designed with Kalitex, a strong, sturdy vinyl surface having the color and pattern permanently fused to the underside. It can be wiped clean with a damp sponge. It resists scratching, scuffing and other action. It does not chip or crack. Weldwood Tackboard is furnished in 25 standard colors to complement the entire line of Weldwood Chalkboard.

Weldwood ALUMINUM CHALKBOARD TRIM

Weldwood Aluminum Chalkboard Trim, with architectural anodized finish, is a complete trim system designed to reduce the cost of installing chalkboards. This system includes the accessories necessary for a complete chalkboard installation. Lower in initial cost than ordinary trim, it eliminates the use of costly fixed grounds and requires only one trip to the job site to install both trim and chalkboard. Consult your Weldwood Chalkboard Distributor for complete details on this expertly engineered trim system.

WELDWOOD

Weldwood THREE COAT CHALKBOARD

All chalkboards as shown on plans shall be Weldwood Three Coat Chalkboard, porcelain-on-steel, laminated to 1/4" Exterior Grade Weldwood Fir Plywood with aluminum backing sheet, as manufactured and guaranteed by the United States Plywood Corporation.

• The porcelain writing surface shall have three coats ceramic, manufactured specifically to take chalk and erasures, in a non-glaring permanent soft finish, Dark Green #151, having a reflectance factor of not less than 15% and not more than 20%, as set forth by The American Standard Practice for School Lighting, A.I.A. 32F-28. The chalkboard must be capable of supporting display papers by means of magnets.

• The porcelain shall be manufactured in accordance with the Porcelain Institute standards for Architectural porcelain. The writing surface shall resist wear, shock, scratches, abrasions, and shall not crack, dent or shatter, and shall retain its original color and writing and erasing qualities without fading or becoming glossy or shiny.

• The porcelain enamelled steel surface shall have a ground coat of porcelain on two sides, the thickness of which shall be not less than .003" or more than .005" after firing. The writing surface shall have not less than two additional coats (each followed by a separate firing) of not less than .004" or more than .006" each after firing. All porcelain must be ground so that no more than three grams of solid matter is retained on a 200 mesh screen when 50 c.c. of thoroughly mixed and representative wet enamel is screened. All three coatings must be individually fired at not less than 1550°F. Porcelain surfaces whose abrasive action is derived by etching, abrading, addition of large particles or by a method other than from uniform control of crystal size (obtained by control of composition and firing cycle) throughout the entire thickness of finish coats are not permissable.

• The core material shall be 1/4" Weldwood Fir Plywood Exterior Grade, manufactured by United States Plywood Corporation in accordance with the standards of the Douglas Fir Plywood Association.

• The special porcelain-on-steel face and .015" aluminum backing sheet of the chalkboard shall be bonded to the Weldwood core by means of special flexible glue lines developed for this purpose with no unbonded areas. The lamination of the metal faces to the plywood shall be by mechanical or

CHALKBOARD, TACKBOARD, TRIM

Recommended Specifications

hydraulic press with a minimum pressure of 100 psi instantly and uniformly applied over the entire surface. The lamination shall be accomplished at room temperature. The face and back shall not be removable from the core without rupture of the core material, and the panel shall not delaminate under normal conditions of usage and installation.

- The chalkboards shall be installed in accordance with the architect's details and approved manufacturer's installation drawing.

Weldwood
"24" SERIES CHALKBOARD

All chalkboard, as shown on plans, shall be Weldwood Chalkboard, "24" Series, porcelain-on-steel, laminated to 1/4" Weldwood Fir Plywood with metal backing sheet, as manufactured by United States Plywood Corporation.

- The porcelain writing surface shall be ceramic, manufactured specifically to take chalk and erasures, in a non-glaring, permanent, soft green finish. (4 other standard colors available.)
- The base metal shall be suitable for the performance requirements as specified and its thickness shall be 24 Gauge which is in accordance with good enameling practice.
- The core material shall be 1/4" Weldwood Fir Plywood, as manufactured by United States Plywood Corporation in accordance with the standards of the Douglas Fir Plywood Association.
- The backing sheet shall be of a rust resistant metal of sufficient thickness to balance the construction.
- The special porcelain-on-steel face and metal backing sheet of the chalkboard shall be bonded to the Weldwood core by means of special flexible glue lines developed for this purpose with no unbonded areas. The lamination of the metal faces to the plywood shall be by mechanical or hydraulic press with a minimum pressure of 100 psi instantly and uniformly applied over the entire surface. The lamination shall be accomplished at room temperature. The face and back shall not be removable from the core without rupture of the core material, and the panel shall not delaminate under normal conditions of usage and installation.
- The chalkboards shall be installed in accordance with the architect's details and approved manufacturer's installation drawing.

Weldwood
TACKBOARD

All tackboards shown on plans shall be Weldwood Tackboard as manufactured by the United States Plywood Corporation.

- The surface of Weldwood Tackboard shall be a textured weave Kalitex with all color and design on the protected or underneath side. The unexposed surface shall be bonded to a 1/2" backing with an adhesive especially developed for this purpose.
- The backing shall be moisture, vermin, and decay resistant and shall have good tack-holding properties. The overall thickness of Weldwood Tackboard shall not be more than 9/16". On all untrimmed installations, the face sheet shall be wrapped around all four edges and stapled to the backside of the backing sheet.
- Color shall be as specified.
- Tackboard shall be installed in accordance with the architect's details and approved manufacturer's installation drawing.

Weldwood
ALUMINUM CHALKBOARD TRIM

Complete aluminum trim for all chalkboards shall be Weldwood aluminum as manufactured by United States Plywood Corporation, and shall be installed in strict accordance with the details and following specifications.

- Aluminum chalktray shall be 3/32" thick with matching end castings, plain trim 1/16" thick. [Top shall be of the C-8 or C-9 display type with cork insert. Furnish one pair roller map brackets at front of each classroom and one sliding map hook for each 5′ of display rail. (Architect note—Change quantity of display rail and accessories as required.) The vertical trim at ends should be C-6 or C-7.]
- Finish on all aluminum shall be polished and alumilited (20 minute cycle). All outside corners shall be mitred and all others butt-jointed.
- 16 ga. cadmium plated ground clips and spring clamps shall be securely installed by means of toggle bolts or lead lined rawl plugs—on 18" centers for all trim except chalktray which shall be 14 ga. on 12" centers. Where walls are plastered rawl plugs and screws shall be 1½" long so that plug has full hold in block wall. Shim with metal shims where necessary.

Weldwood VERTICAL ROLLING Chalkboard

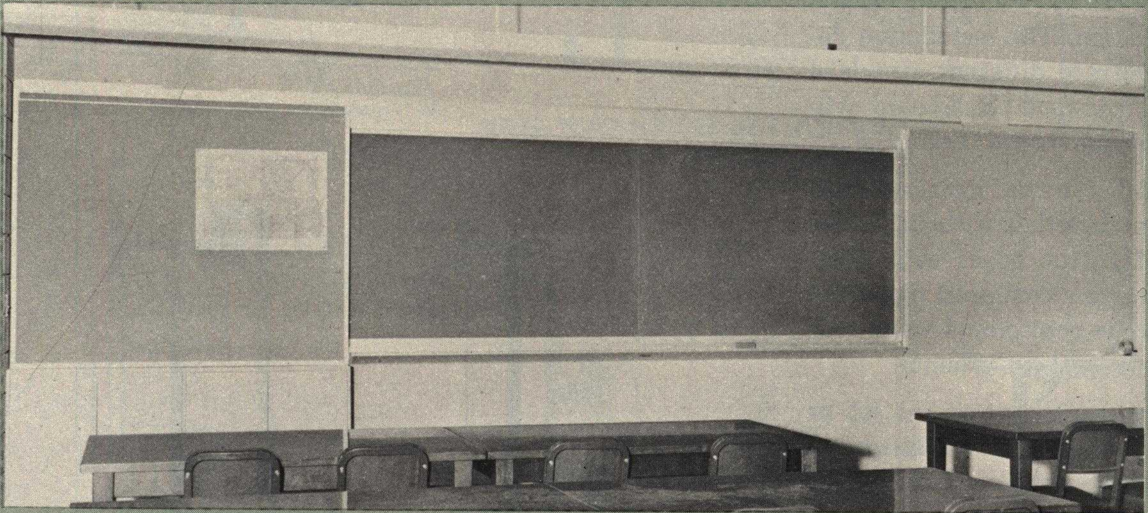
Weldwood Vertical Rolling Chalkboard in the Physics Laboratory, University of Pennsylvania in Philadelphia.

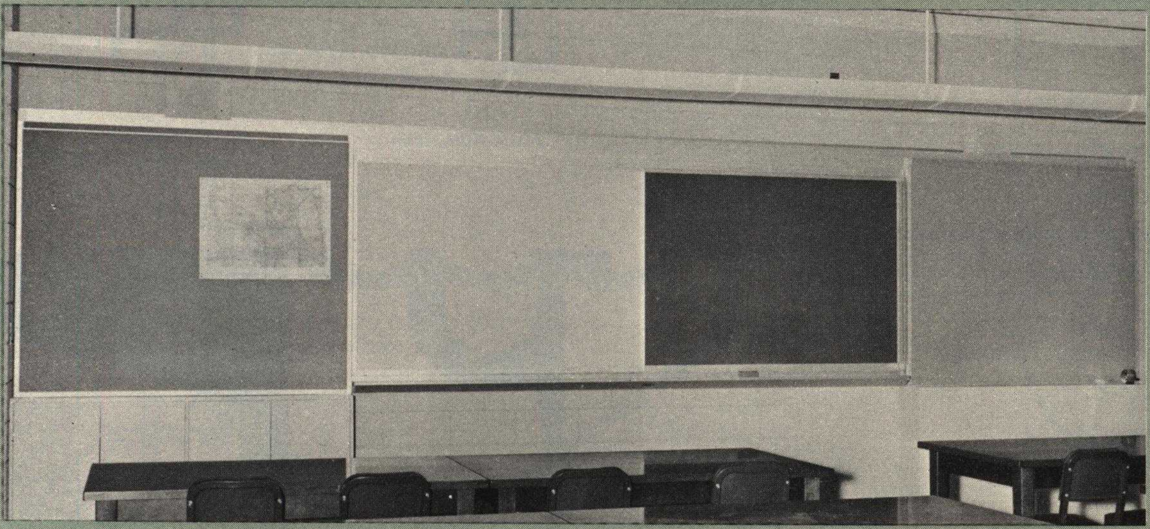
architect: James R. Edmunds, Jr.   installer: A. M. Masters & Sons

Weldwood HORIZONTAL ROLLING Chalkboard

Weldwood horizontal rolling chalkboards, tackboards, and projection screens with innumerable arrangements are comparatively inexpensive and offer many ways of increasing usable wall space and at the same time being able to conceal some panels until desired by the instructor.

All rolling panels are carried by ball-bearing hangers at the top, with guides only at the bottom so that accumulated chalk dust or other debris would not be a problem. The header carries the complete load and is reinforced at 3′ intervals. One hand operation of any board is guaranteed. Where actual wall space is limited but adjacent areas may be covered temporarily we suggest the use of end panels of the Swing-Leaf type with two faces. Swing leaf panels should be limited to 3′6″x4′ size.





One of 12 classrooms at Civil Aeronautics Administration Building, Oklahoma City Airport, Oklahoma City, Okla.

Photograph shows fixed chalkboards in center with fixed tackboard each end. Tackboards conceal three rolling chalkboards and one projection screen. Overall length of unit is 24 feet. Below, same installation, with projection screen exposed.

SPECIFICATIONS

Furnish and install Weldwood horizontal chalkboards and/or tackboards and/or screens as shown on drawings. Panels shall be:—(Here specify types of chalkboard, tackboard or screen for each panel). Panels shall be framed with steel covered by an aluminum channel. Panels shall be carried at the top by two sets of ball-bearing wheels for panels up to 4′ long and three sets of wheels for panels over 4′ long. The bottom guides shall run freely in guide channels. Header, trim, display rail, chalk tray and other exposed parts to be aluminum, anodized to match.

Where Swing-Leaf panels are used furnish approved fasteners at the full open and full closed positions.

Weldwood
ALUMINUM CHALKBOARD TRIM

Weldwood Chalkboard may be installed by any standard method as used for slate, glass and composition type boards. Distributors for this chalkboard are located in all major marketing areas and can provide details and arrangements for all types of installation. The installation details shown here illustrate different standard methods of installing Weldwood Chalkboard with Weldwood Aluminum Chalkboard Trim.

Weldwood Chalkboard can be installed over securely anchored grounds with or without plaster backing, and finished at the edges with usual trim details. However, we recommend mounting it directly to plastered or unplastered walls with through bolts or screws, without grounds.

Weldwood Chalkboard can be cut on the job or be ordered to size. Panels should be splined and caulked at all joints by the installer. Steel splines are recommended.

GLAZED DOOR BULLETIN BOARDS
and
DISPLAY CASE FRONTS

Weldwood Glazed Door Bulletin Boards and Display Case Fronts are for use in corridors and other locations where permanent bulletins or displays are to be under lock and key. Bulletin Boards are complete in every way including ¼″ plate glass doors and tackboard. Display Cases are fronts only, with millwork, shelves and other items—by others. Optional items are sliding glass doors in lieu of hinged, and fluorescent lighting (5″ Aluminum tubing required for casting of Bulletin Boards).

- Complete framing is of aluminum with hidden screws. Recessed type has exterior closure angle.

SPECIFICATIONS FOR GLAZED DOOR BULLETIN BOARDS:

Furnish and install "Weldwood" recessed or surface mounted Glazed Door Bulletin Boards as shown on drawings including ¼″ plate glass doors. Construction shall be of anodized aluminum channel frames, angles, and tubular casings, and shall be complete with plated piano hinges, locks, etc. Size of glass doors to be governed by height and width of casings.

Optional—¼″ unframed plate glass doors with finger recesses and sliding door hardware and locks may be substituted for hinged type when specified.

Optional—Concealed fluorescent lighting may be furnished in the header by specifying it in conjunction with 5″ casing.

SPECIFICATION FOR DISPLAY AND TROPHY CASE FRONTS:

Furnish and install "Weldwood" fronts for all display and trophy cases as shown on drawings. Doors shall be ¼″ plate glass with anodized aluminum frame, angles and stops with continuous plated piano hinges and locks. Glass shelving and brackets as well as all millwork shall be furnished by others.

Optional—¼″ unframed plate glass doors with finger recesses and sliding door hardware and locks may be substituted for hinged type when specified.

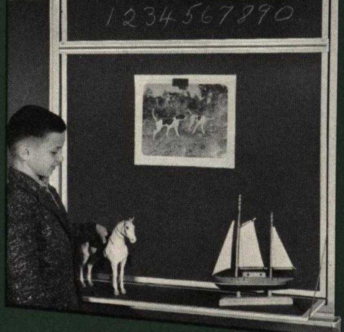
Weldwood Multi-Use Easel Boards are designed to meet the varied uses required for teaching purposes, from kindergarten to high school, without having loose panels and loose workboards to handle and store. The teacher need not remove the panel or workboard to obtain the various combinations. The front panel acts as chalkboard and backboard. The workboard disappears behind the front panel when not in use. Both are permanently hinged to the framing members.

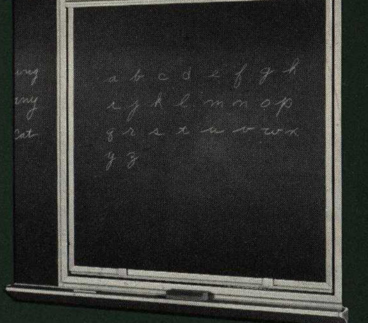
- The chalktray matches, and is continuous with that of adjacent fixed chalkboards. The top, or head member is made to align with adjacent aluminum framing —1¾″ wide. Standard panel sizes are to match 3′, 3′-6″ and 4′ heights of fixed boards and are 3′-0″ wide.

SPECIFICATIONS FOR MULTI-USE EASEL BOARDS:
Furnish and install Weldwood Multi-Use Easel Boards in single or multiple units, or adjacent to conventional chalkboards and/or tackboards as shown on the plans. Chalkboard panels shall be:—(specify type of Weldwood chalkboard). The workboards shall be of the same material and fold up behind the chalkboard panel. Both panels shall be framed in aluminum and permanently fastened to the exterior frame by means of continuous piano hinges. Panels shall be in multiples of 3′ with heights as shown.

Optional: Furnish paint tray storage cabinets as required. One (or more) per classroom at four trays per cabinet. G. C. is to leave recesses in wall to receive cabinets.



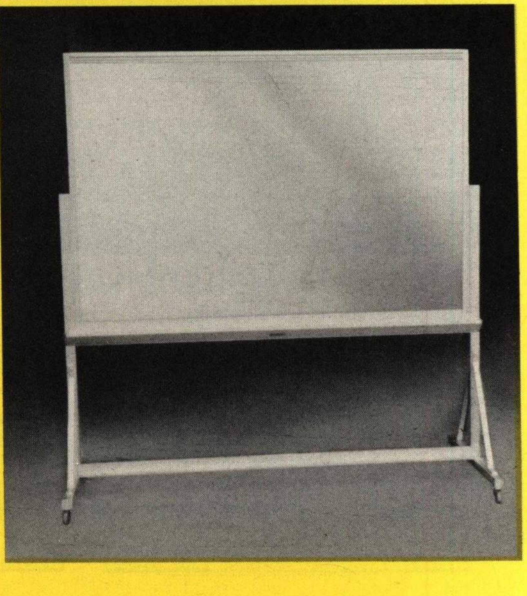
Easel type as Bulletin and Workboard



Easel type as Conventional Chalkboard

Easel type as Art Board

Weldwood PORTA UNIT



Portable chalkboards, tackboards and projection screens are an important accessory for schools, churches, industrial offices or plants where temporary use is required. Teaching by means of TV is almost impossible without units of this type.

Units may have fixed or pivoted panels, plain trim or display rail at top of one side, and panels may be of various combinations such as chalkboards both sides, chalkboard one side and tackboard other side, or tackboard both sides. No. 221-L "projection white" porcelain screen can be substituted for any one of these on one or both sides.

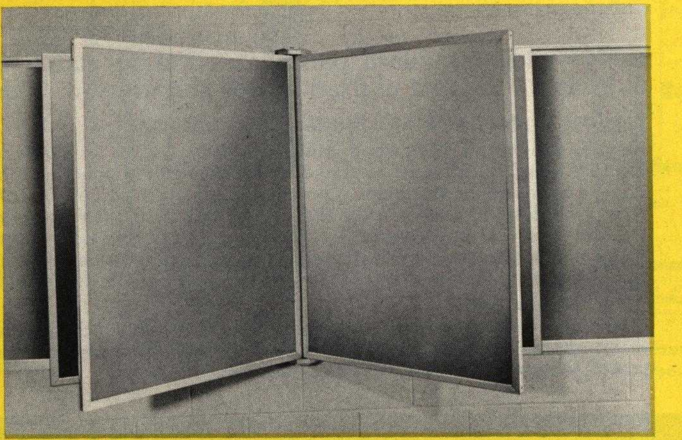
Small units with 3-6 x 4-0 panels with No. 151 Weldwood chalkboard one side and No. 221-L "projection white" other side are carried in stock for early shipment. All other sizes and combinations are built to specification. Maximum practical size panels are 4'x8' pivoted and 4'x10' not pivoted.

SPECIFICATION

Furnish Porta Units in the following sizes and combinations: *(here list sizes; type of chalkboard, tackboard or screen; pivoted or fixed)*. All units shall be constructed entirely of aluminum anodized to match. Side posts and bottoms are to be 1¾x1¾x⅛" aluminum tubing. All bracing to be angles or bars as shown. Furnish full length chalk tray and display rail with hooks and brackets on one side only. Casters to be ball-bearing type.

OPTIONAL—*Furnish one aluminum paint tray for each unit.*

Weldwood SWING LEAF BOARDS



"Weldwood" Swing Leaf Boards are invaluable where very little space is available. All exposed materials are aluminum including panel frames, pivot plates, angles and back (where required). Panels swing in full 180 degrees semi-circle. Panels may be of any combination of chalkboard, tackboard and projection screen. Standard size panels are 3'x3'6", 3'x4', and 3'6"x4' with height the larger dimension.

SPECIFICATION

Furnish and install "Weldwood" Swing Leaf Boards—4 (or 6) panels per unit as shown. Panels to be *(here specify size and combination)*. All exposed parts to be of anodized aluminum. Pivot pins to be tapped into steel reinforcement inside panel frame. Furnish 5"x¾" wall plate full height of unit with 4 anchors in bottom and 6 in top. Anchors must be through masonry wall or tapped into flush steel wall member supplied and installed by others.

WEBER COSTELLO
CHICAGO HEIGHTS, ILL. • TORONTO, ONT.

Weber Costello
CHICAGO HEIGHTS-TORONTO

WHAT YOU SHOULD KNOW ABOUT WEBER COSTELLO PRODUCTS

1. Since 1896

With Weber Costello the production of genuinely fine chalkboards is a business—not a sideline. For nearly three-quarters of a century research and production know-how have kept pace with current chalkboard trends, consistently setting standards of chalkboard excellence.

2. Guarantee

Weber Costello chalkboard is guaranteed to be free from defective material and imperfect workmanship for its normal lifetime—a guarantee that assumes real significance because it is backed by Weber Costello's reputation for consistent quality and supported by well-established local distributors.

3. Distribution

Weber Costello chalkboards are sold thru qualified stocking distributors, well-established firms well-known to architects, contractors and school men. Our field force of factory trained chalkboard engineers is available for consultation and service.

4. Samples

Write for samples. Weber Costello samples are cut from production runs. This is important for hand-made "sales samples" may or may not be representative of the chalkboard that will be delivered to the job.

5. The Right Chalkboard

For Every Requirement

There is a Weber Costello chalkboard for every requirement and to fit every budget. The Weber Costello name is your assurance that each is the finest chalkboard of its type.

Litetrim Aluminum Trim

Beauty of design: Litetrim provides beauty for the chalkboard setting coupled with classroom utility. Only expertly designed, extruded aluminum can provide the architectural excellence and clean, graceful lines found in Litetrim.

Structural Strength: Litetrim is made of heavy .093 extruded primary aluminum alloy and is designed to withstand stress and strain. Curved chalk trough holds erasers out of the chalk dust — helps keep them clean.

Specifications and Detail Drawings: See page 7.

ODULAR MULTI-UNITS

CHALKBOARDS — BULLETIN BOARDS

READY-TO-HANG EASY-TO-MOVE

EDUCATIONALLY CORRECT FOR MODERN CLASSROOMS

Chalkboard and bulletin board units attractively framed in heavy, .093 gauge aluminum. Installation problems are eliminated. No backings are required. Units adjust outward 11 inches at bottom.

Flexibility: As enrollments vary from year-to-year Modular Multi-Units may be moved from room to room, into temporary classrooms or from school to school. By providing alternate hangers the units may be moved from place to place to serve various centers of interest.

BOARD STRUCTURE	Hyloprest Chalkboard has layer of long-fibre pulpboard laminated to treated hardboard. Excellent writing surface. Total thickness .290 inches.				1/8″ layer of fine grained cork laminated to Wood-Kor backing.		Heavy layer of textured fabric laminated to wood fibre backing.	
FRAMES	Extruded from durable primary aluminum, minimum .093 gauge. Attractive anodized finish.							
INSTALLATION	Suspend from two hangers provided with each unit. Attach hangers with lead shield anchors provided. Install striker plate at bottom to engage magnetic power latch. Magnetic locking device permits removal of unit from wall or the unit may be swung outward at bottom to provide inclined working surface.							
SPECIFICATION	All chalkboard Units shall be Weber Costello Modular Multi-Units 4 x 8′ (or 4 x 4′) with map rail (or plain molding) at top and chalk trough the full length of unit.				All Bulletin Board Units shall be Weber Costello Modular Multi-Units of cork (or plastic bulletin board) 4 x 8′ (or 4 x 4′).			

WEBCO EASY-MOUNT (CHALKBOARDS) UNITS (BULLETIN BOARDS)

READY FRAMED EASY-TO-HANG

EASY-TO-MOVE TO ALTERNATE LOCATIONS

Durable, factory built chalkboards and bulletin boards. Prefabricated and delivered to the job ready to hang on the wall. Engineered to add flexibility to both new classrooms and renovation programs. No backing or special wall preparation is required. Installation costs are virtually eliminated and units may easily be moved to other locations, as required from year to year. Heavy-gauge, continuous aluminum channel molding has turned corners to eliminate sharp edges. Concealed hangers. Although Webco Easy-Mounts do not have some of the deluxe features of the Modular Multi-Units described above, they are truly the finest units available where both preframed construction and economy are desired.

CHALKBOARD: Two sliding chalkboard panels with full length back panel fixed permanently to the wall.

Unit	Height	Lengths	Depth	Sliding Panel Size	Available Combinations	Locking Assembly
Chalkboard	4 Ft.	6 Ft.	1 13/16"	4 x 3 Ft.	Sterling or Vitoprest Chalkboards; Webtex Corks; Glass Doors	Optional On All Units
Corkboard		8 Ft.		4 x 4 Ft.		
Display Case Facing		10 Ft.		4 x 5 Ft.		

SPECIFICATIONS: Chalkboards (or Bulletin Boards), (or Display Case Facing) shall be Webco Sliding Units, height 4 ft., overall length 6, 8 or 10 ft., as manufactured by Weber Costello Company and installed according to the manufacturer's instructions.

ASSEMBLY AND INSTALLATION

Assembly: Assemble units on the job or order factory assembled.

Installation: Attach mounting brackets at top and bottom of unit. Fix back panel of cork or chalkboard permanently to the wall. Lock unit frame to wall brackets with concealed set screws.

Display Case Facing: Attach unit frame to display cabinet—either recessed or built out from wall. Two sliding glass panels are completely framed. Glass for doors is supplied with unit or may be obtained from local source.

FEATURES

Frames: Heavy gauge, anodized aluminum, smartly styled with clean lines to add beauty and facilitate ease of maintenance.

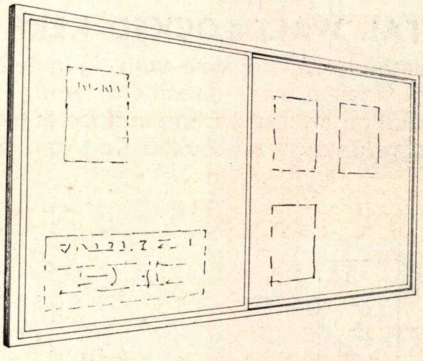
Sliding Mechanism: Panels glide quietly on nylon wheel assemblies rolling on raised aluminum track. Track is removable for easy cleaning. Rubber bumpers in each end of frame.

Die-Cast Mitre Brackets: Insure securely locked, tight fitting frame and mitres.

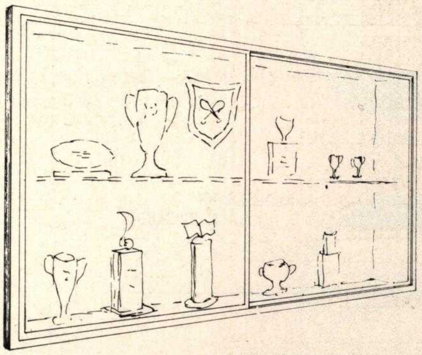
Interchangeable Panels: Sliding panels may be easily interchanged (chalkboard panel replaced by cork, etc.) or removed for easy cleaning and maintenance.

Chalkboard: World's finest chalkboard surface for smooth writing and easy erasing. In eye-restful green or conventional jet black.

Webtex Corkboard: In Nu-Tan or Soft Green (See page 2)



CORK BULLETIN BOARD: Two sliding panels with full length back panel. Combined with chalkboard or glass doors in any desired combination.



DISPLAY CASE FACING: Two sliding glass doors. Attach to face of display case. Locking device is optional.

LARGE WALL CHALKBOARDS

For Temporary Classrooms

Finest quality chalkboards in a variety of sizes to serve many needs. Completely framed and ready to hang on the wall. Large sizes are ideal for classrooms, churches training programs, office or factory use. Genuine Hyloplate Chalkboard in Black or Litesite, the refreshing green chalkboard designed for better seeing. Litesite brings beauty and pleasing color to any surroundings.

Style AE—Aluminum Frame: A truly attractive chalkboard with heavy-duty anodized aluminum frame and chalk trough. Frame is equipped with hangers. Choice of Jet Black or Litesite green.

Style E—Wood Frame: Ponderosa frame is unfinished so that it can be painted or varnished to match other woodwork. Choice of Jet Black or Litesite Green. Specify Color.

SPECIFICATIONS

NOTE: Under Section C1 use only the paragraph applicable to the Weber Costello chalkboard you are specifying.

(A) Carpentry Work

(A1) Chalkboards shall be furnished and set by the contractor. He shall be entirely responsible for their good condition after delivery: (List chalkboards required).

(A2) Provide accurately set backings surrounding all chalkboards and moldings in accordance with the detailed drawings supplied by the architect.

(A3) When chalkboards are installed on masonry, the masonry shall be given two coats of moisture-proof paint.

(B) Painting (Omit if Aluminum Trim is used)

(B1) All chalkboard trim (except inner loose tack mold) shall be completely finished before chalkboards are set.

(B2) The inner loose tack mold of chalkboard trim shall be finished up to the last coat before installation.

(C) Materials

(C1) Chalkboards — Chalkboards shall be: (Here insert one of the following specifications or specify Modular Multi-Units, Webco Easy-Mount Units, or Webco sliding units (see pages 4 and 5).

HYLOPLATE Litesite Green (or Jet Black Hyloplate) as manufactured by Weber Costello Co., Chicago Heights, Ill. Any other board which the contractor may consider shall be submitted for approval and if the cost of such board is less than that of Hyloplate the contractor shall refund the difference to the owner, or if a board costing more is approved the owner will reimburse the contractor.

STERLING Litesite Green (or Jet Black Sterling) as manufactured by Weber Costello Co., Chicago Heights, Ill. Any other board which the contractor may consider shall be submitted for approval and if the cost of such board is less than that of Sterling the contractor shall refund the difference to the owner, or if a board costing more is approved, the owner will accordingly reimburse the contractor.

HYLOPREST Litesite Green (or Jet Black) as manufactured by Weber Costello Co. The backing shall be hardboard, treated and sealed by Weber Costello methods against moisture. To the backing shall be applied one lamination of spruce fibre board to provide the cushioned Hyloplate-type writing surface. Total thickness .290 inches.

CROWN LightGreen (or Black) as manufactured by Weber Costello Co. The backing shall be processed hardboard, ¼" thick.

VITOPREST (Specify color) as manufactured by Weber Costello Co. The backing shall be processed hardboard, ¼" thick.

VITOBEST LightGreen (or Black) as manufactured by Weber Costello Co. The backing shall be cement-asbestos, 5/32" thick, specially treated and sealed against moisture.

METALSITE Green (or Black) as manufactured by Weber Costello Co., with writing surface applied to 18 gauge steel with no backing required.

All chalkboards shall have surfaces perfectly true and uniform, and free from defects. Joint edges shall make angles of 90 degrees with top or hanging edge. Bottom edge shall be parallel with the top edge.

(C2) Cement — Cement for erecting chalkboard and bulletin boards (not un-mounted cork) shall be Weber Costello's Webco No. 50 Cement.

(C3) Metal Chalkboard Joints — Chalkboard joints shall be made with W. C. Rustproof Metal Joints, slated finish.

(C4) Chalkboard Molding — Moldings shall be Litetrim Aluminum Moldings as manufactured by Weber Costello Co. (or wood moldings) according to detailed drawings supplied by the architect.

(C5) Display Rail — Display rail shall be Webco Map and Display Rail as manufactured by Weber Costello Company.

(C6) Bulletin Boards — Bulletin boards shall be: (Here specify one of the corks listed on pages 2 and 3) . . . as manufactured by Weber Costello Company.

(D) Chalkboard Sizes and Lengths

(D1) Widths — All widths shall be as shown on architect's drawings (3½ ft. or 4 ft.).

(D2) Lengths — All sections shall be in multiples of manufactured lengths: (Hyloplate, Hyloprest, Vitoprest, and Crown—6, 8, 10 and 12 ft., Sterling, Vitobest, Metalsite — 6 and 8 ft.)

(E) Chalkboard Setting

(E1) Chalkboard erection shall be in accordance with Weber Costello's installation directions, details of which are furnished with each shipment. Wall backing, of whatever material, shall be thoroughly dry. (E2 does not apply if aluminum trim is used).

(E2) No chalkboard shall be set until the final coat of finish has been applied and has dried on the chalkboard woodwork trim (except loose tack mold).

(F) Cleaning and Breaking in Chalkboard Surfaces

Upon completion, the contractor shall clean and properly break in all chalkboard surfaces and leave these surfaces in perfect, ready-to-use condition.

(G) Direction Plates

In each room fasten permanently, where directed by architect, the instruction plate furnished by Weber Costello bearing directions for breaking in and care of chalkboard.

TO BETTER SERVE YOU

The Weber Costello chalkboard program is designed to provide total service to architects, contractors, School Administrators and the ultimate classroom user thru: (1) top quality chalkboard products (2) stocked and sold thru reliable, well-established distributors, plus (3) competent, factory-trained chalkboard experts to assist in any problems of installation and maintenance.

- **14 FACTORY DIRECTED CHALKBOARD ENGINEERS**
- **OVER 75 STOCKING DISTRIBUTORS**

AMES

STEEL LIBRARY EQUIPMENT

FREESTANDING STEEL SHELVING

23f
Am

Ames Freestanding Shelving provides convenient, economical book storage facilities adaptable to any library floor plan. Consisting of a simple skeleton frame which supports cantilevered "bracket-type" shelving, it is simple to install and rigidly constructed to withstand the heaviest book loads. Rearrangement or relocation is quickly accomplished. Existing installations are easily expanded to meet growing needs.

Ranges are made up of one or more 3-foot units, and may be lengthened or shortened at any time by adding or removing these units. The initial unit for each range has two uprights. Additional units used to extend the range require only one upright since they are added to the initial unit. Base supports are equipped with leveling screws, eliminating any need for shims. To harmonize with the library interior, Ames offers a wide range of finish colors at no extra cost.

SPECIFICATIONS for Freestanding Bracket-Type Steel Library Shelving

NOTE: This specification is intended as a convenience for architects and others specifying *standard* steel bookstack equipment. Special equipment should be specified in detail. Specifications are available for all library equipment and accessories.

GENERAL DESCRIPTION: The shelving shall be Bracket-Type Freestanding Steel Library Shelving. Ranges shall be held upright without the use of transverse bracing between ranges and shall be composed of sectional units so that one or more compartments of a range may be removed without affecting the stability of the remaining compartments.

SHELVING: All book shelves shall be 18-ga. steel formed to a ¾" deep open box section at front and back edges. Brackets for book shelves shall be 16-ga. steel with front and top edges rolled outward, approximately ¼". The front upper corner shall be rounded to a generous radius. The back edge shall have two hooks for support and one lug to maintain alignment and to prevent accidental dislodgment of brackets. Brackets shall be joined to shelves without fastenings. The bracket shall have a smooth, continuous hem into which the shelf end nests, leaving no raw edge or visible lugs. Brackets shall remain upright when shelves are removed, for ease in relocating. The complete assembly of shelf and bracket, when hung on uprights, shall be capable of supporting a uniformly distributed load of 40 lbs. per sq. ft. with no permanent distortion.

The space below bottom shelves shall be closed by means of kick plates installed below bottom shelf.

Each single-faced section shall be equipped with one bottom shelf and six adjustable shelves. It is important that these shelves be identical in construction and all contain the rolled outward flange to prevent knifing of books at any level. Base shelf should be 10" (or 12") deep to provide maximum stability. Adjustable shelves should be 8", or as specified by architect or librarian.

UPRIGHTS: The uprights shall be of tubular construction of no less than 18-ga. steel and shall be perforated to receive hooks of shelf brackets for adjustability at 1" centers. At least every sixth slot shall be distinctively shaped for easy shelf leveling. This upright shall be of welded construction and not rely on fastenings to hold the halves together. The column base shall consist of a channel-shaped member having an offset pocket into which the column is inserted and to which it is bolted in position. The base shall be designed to prevent damage to floor covering by maximum distribution of load and elimination of sharp edges bearing on floor. Base member shall extend the full depth of shelving and shall have a leveling screw at the outer ends to compensate for irregularities in the floor surface. Leveling screws shall bear on the flange of kick plate, affording complete protection of floor covering. Longitudinal stability shall be provided by diagonal sway braces for double-faced units and by suitable wall clips for single-faced units.

FINISHED END PANELS: Where indicated on plans, 18-ga. steel panels shall be installed at the ends of ranges. Panels shall be triple flanged at vertical edges. The front vertical corner shall be formed to ¾" radius. Panels shall be of sufficient width so that base shelf does not project beyond panel edge.

ACCESSORIES: As specified by architect or librarian.

FINISH: All material shall be thoroughly cleaned before painting. All parts shall be finished in Alkyd-Urea type enamel, baked on with the proper temperature-time relationship to insure thorough curing and a tough, durable finish. The paint shall be applied by the electrostatic method to insure thorough coverage and uniform thickness and density.

The finish color shall be selected by the owner from 18 color samples submitted by the manufacturer, or as designated by architect or owner.

INFORMATION WHEN ORDERING

Ames' *sectional* construction means that additional 3-ft. units may be added to a range at any time. It is important in ordering to distinguish between an *initial* unit which requires two columns and an *additional* unit which requires but one column and associated shelves and hardware. To place an order for standard equipment, the following information is necessary:

1. Number of ranges.
2. Number of 3' units per range
3. Type of range: single or double-faced
4. Type of end closure: end panel or plain
5. Depth of base shelf: 10" or 12"
6. Number of adjustable shelves
7. Depth of adjustable shelves: 8", 10" and 12"
8. Accessories required, such as: range index holders, shelf label holders, card frames, book supports.
9. Color desired.

Children's height (5' 0") shelving and counter height (3' 6") shelving are available as standard equipment. Shelving of any other height is available on request . All heights can be supplied single or double-faced.

STOR-MOR BOOK DRAWERS

(Trade Mark)

Compact Storage Adaptable to All Libraries

DOUBLE YOUR STORAGE CAPACITY

Ames' library equipment engineers have designed Stor-Mor Book Drawers* to provide the most efficient use of available floor space. By utilizing every other range aisle in the stack area, Stor-Mor Book Drawers permit the storage of up to twice as many books as regular shelving occupying the same amount of floor space, without decreasing the aisle width.

EASILY INSTALLED IN PRESENT LIBRARIES

Installations of freestanding or multi-tier shelving are readily converted to compact storage. Existing uprights serve as the supports for Stor-Mor Drawers which span the aisle between ranges of conventional bracket-type bookstacks of either freestanding or multi-tier construction. Drawer assemblies, with uprights if required, may be purchased for one or more sections of a range progressively, or complete conversion can be made immediately.

IDEAL FOR NEW CONSTRUCTION

The space-saving features of Stor-Mor Book Drawers make possible major economies in the building of new libraries. With less floor area required for book storage, the size of the building may be reduced, or additional space made available for other activities.

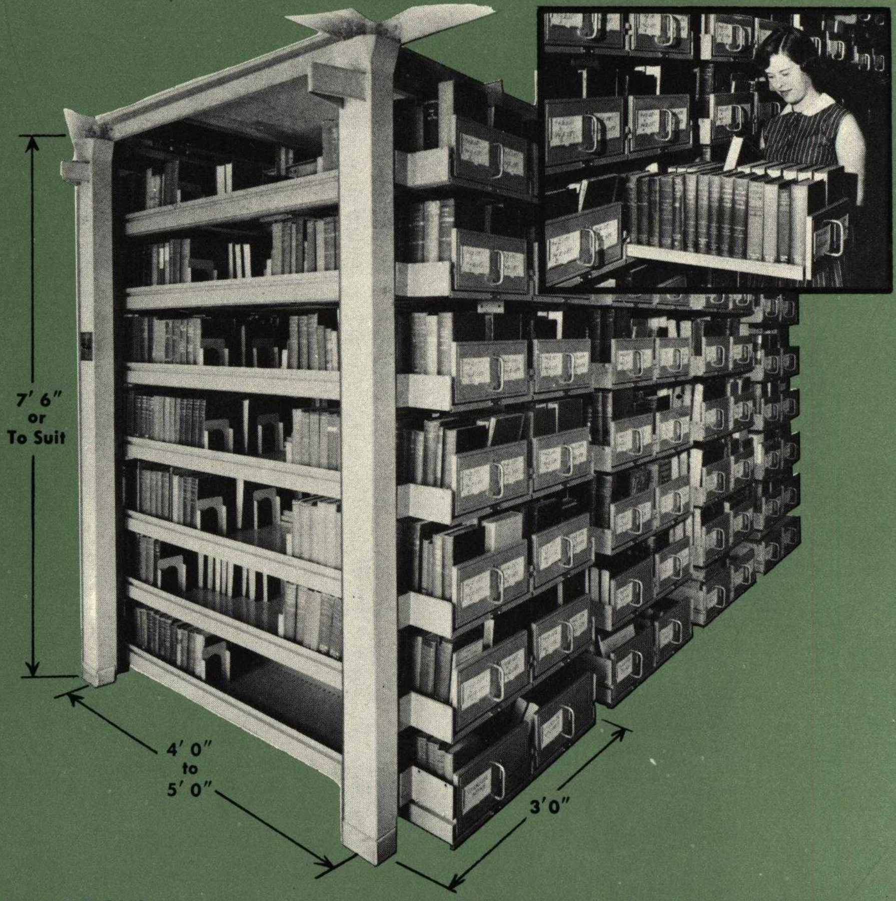
DRAWERS INTERCHANGE WITH SHELVES

Stor-Mor Book Drawers are interchangeable with regular shelving at will. At any time they may be moved to other similar uprights. The shelves they replace are shifted to the uprights vacated by the drawers.

EFFORTLESS, TROUBLE-FREE OPERATION

Running lightly on ball-bearing rollers, the all-steel Stor-Mor Drawers open and close easily and quietly with less than 3-pounds pull. Drawers are held securely in the closed position by a positive-locking catch. Books are held in place by adjustable book supports which hook into drawer. To accommodate volumes of varying sizes, drawers are adjustable to any desired height on the supporting columns.

Smooth-operating Stor-Mor Drawers roll open with an easy three-pound pull.



SPECIFICATIONS for Stor-Mor Book Drawers

SCOPE OF WORK: Furnish all material, labor, and equipment necessary to provide a complete installation of Compact Book Storage for: (A or B)

A. New Installation: The compact storage book drawers shall be supported by slotted tubular uprights together with all necessary base plates, spacers and bracing as ordinarily used for conventional bracket-type bookstack construction, either multi-tier or single-tier as shown on plans or as otherwise specified below.

B. Adaptation to Existing Installation: The compact storage book drawers shall be supported by existing bookstack uprights. All drawer loads shall be transmitted to existing uprights and no additional loads shall be imposed on stack floors except at existing uprights.

DRAWER ASSEMBLY—General Description of Function: The intent of this specification is to describe a drawer assembly which can be supported on bracket-type bookstack uprights spaced in the same manner required for the support of conventional shelving. It is intended that the supporting structure provided for drawer assemblies be identical to that required for conventional shelves and that there be ready interchangeability between compact storage drawers and conventional shelves. The drawer assembly shall be of sufficient length to span the distance between ranges and provide maximum storage in a pattern of uprights designed for conventional shelving. Two rows of drawers shall occupy the horizontal space between uprights in a standard 3-ft. section. The contents of each drawer shall be readily accessible by rolling the drawer to the open position so that one-half of the length of the drawer is fully exposed in the range aisle. Drawer suspension shall be so designed that a maximum force of 3 pounds is required to overcome the inertia of a 250-pound book load from either the open or closed position.

FINISH: All material shall be thoroughly cleaned before painting. All parts shall be finished in Alkyd-Urea type enamel, baked on with the proper temperature-time relationship to insure thorough curing and a tough, durable finish. The paint shall be applied by the electrostatic method to insure thorough coverage and uniform thickness and density. The finish color shall be selected by the owner from 18 color samples submitted by the manufacturer, or as designated by architect or owner.

INSTALLATION: Drawer assemblies shall be installed by properly qualified personnel familiar with the requirements of bookstack erection. Drawers shall be hung level with uniform vertical spacing. Each 3-ft. section shall have two rows of 7 drawers in height, making a total of 14 drawers per section, unless otherwise noted on plans or in specifications.

GUARANTEE: The entire installation shall be guaranteed against faulty materials or workmanship for a period of one year. This structure is covered by U. S. Patent No. 2,872,048.

INFORMATION WHEN ORDERING

For any type of Stor-Mor installation, the only preliminary information required is the space available and the number and length of ranges desired.

MULTI-TIER BOOKSTACKS

Designed and Erected to Meet Your Requirements

BOOKSTACK COMPONENTS

The structural parts of the multi-tier bookstack include the steel columns which support the shelves or drawers, the floors, and the stairs, all of which must be specially designed and manufactured for each individual project. Shelves, brackets, book supports and miscellaneous accessories are standard for all installations. Sound construction, efficient use of space, convenience for librarians and borrowers, and protection for books govern our design of these installations.

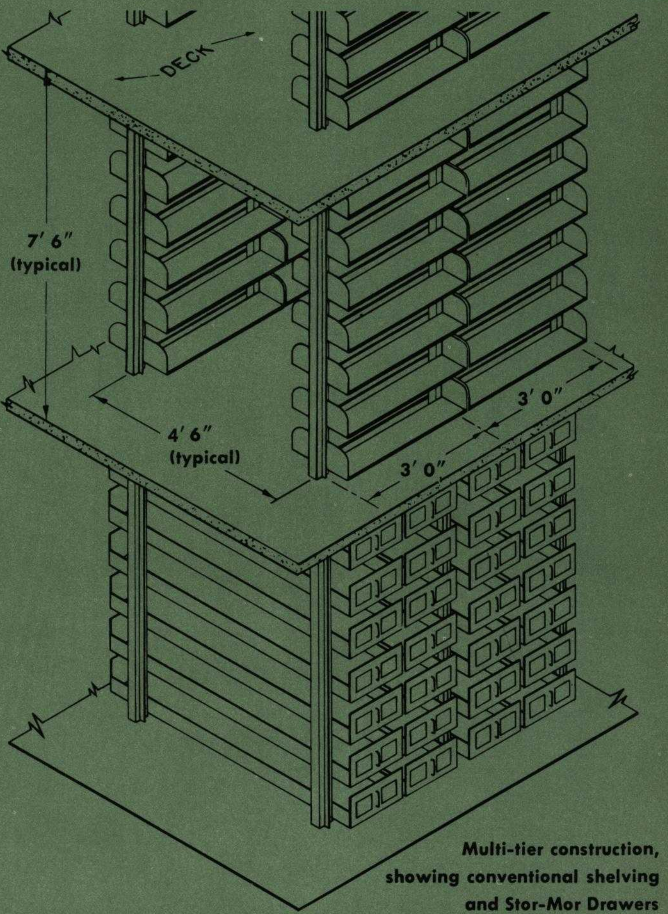
PLANNING SERVICE

If you will provide us with preliminary sketches or a description of the library building, we are prepared to submit the following information for your consideration:

1. Details of stack columns together with details of related parts such as footing plates and floor bearing members. These details will be selected for their suitability for the requirements of the job involved. Details will also be provided of the three types of decks which we are prepared to install. These decks are: (a) concrete; (b) cellular steel, flush both sides; (c) cellular steel with exposed cells on underside forming the ceiling.
2. Information on bookstack loads and column design.
3. Cost estimates.

Our services extend from the inception to the completion of the bookstack, and are offered to all those concerned with the design, construction and use of such equipment. A thorough knowledge of library requirements, an understanding of architectural and engineering problems involved, and complete manufacturing facilities are our credentials to library planners and builders.

Consultation is offered free and entails no obligation. We urge you to request this service during the early planning stage of the library.



Multi-tier construction, showing conventional shelving and Stor-Mor Drawers

This typical two-tier stack, adjacent to the reading room, was fabricated and installed, including the stairs and railing, by Ames. The attractive steel end panels are finished to harmonize with the library interior.

The undersides of the steel decks may be plastered, as shown in this multi-tier installation. All electrical wiring is inside the columns and decks (UL approved) for neat appearance. No conduit is required.

BOOKSTACK EQUIPMENT AND ACCESSORIES

Ames offers a complete line of library equipment and accessories. Consult us regarding your specific requirements.

DIVIDED SHELVES for Vertical Filing

Ames Divided Shelves provide a low-cost, time- and space-saving system for the upright filing and storing of folders, phonograph records, periodicals, etc., which will not stand alone vertically on standard shelving. Interchangeable with practically all makes of bracket-type book shelving. Shelves available in 10", 12" and 14" depths.

DIVIDED SHELVES are instantly adjustable *vertically* and Shelf Dividers are adjustable *horizontally*, both on 1" centers.

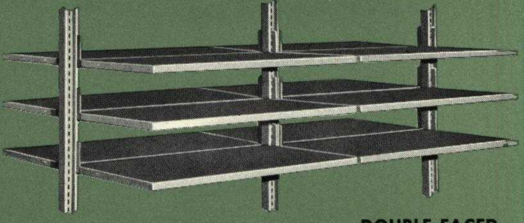
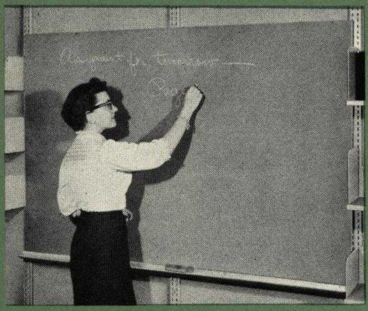
Standard depth 20". Special construction to permit close spacing. Shelf surface unobstructed for full length of range.



DOUBLE-FACED

SPECIFY No. NP



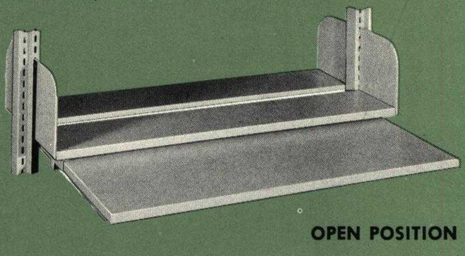
WALL-HUNG EQUIPMENT

for classrooms, libraries, offices

This simple, low cost Ames shelving system uses slotted steel columns which are easily fastened to any wall. Installed at 36" intervals, the columns support any standard bracket-type shelving and other equipment such as sloping display shelves, coat-rack shelves, lightweight desks, and bracket-equipped chalkboards, tackboards and pegboards. Equipment is quickly adjusted, rearranged or removed. Savings of approximately 50% in cost over adjustable wood shelving of similar quality. Details on request.

SLIDING REFERENCE SHELF for Double-Faced Ranges Only

Permits brief reference to books and convenient writing surface. Shelf can be pulled out from either side of double-faced range. Safety stop prevents accidental dislodgment. Shelf guides are attached to underside of any depth bookshelf, without tools.



OPEN POSITION

SPECIFY No. SR

AMES STEEL LIBRARY EQUIPMENT is ideal for all types of libraries, including public libraries, schools, colleges, institutions, offices and industrial libraries. Without obligation, Ames' experienced library equipment engineers will help you plan for the equipment which meets your particular needs.

Art Metal

distinctive equipment for LIBRARIES

Libraries all over America ranging from some of the nation's outstanding institutions to many hundreds of smaller libraries are Art Metal equipped. Art Metal's contribution can range from a bookcase, file or an occasional table to a complete installation for a million volume library including multi-tier bookstacks with deck floors, stairs, railings, booklifts, carrels, tables, desks, chairs, files and other items to provide convenient access and protection for the library collection.

A complete Library Planning and Engineering Department is maintained for consultation, layout and designing of library equipment. Art Metal offers service and production facilities based upon more than 70 years' experience in the library field.

ART METAL CONSTRUCTION COMPANY • Jamestown, New York

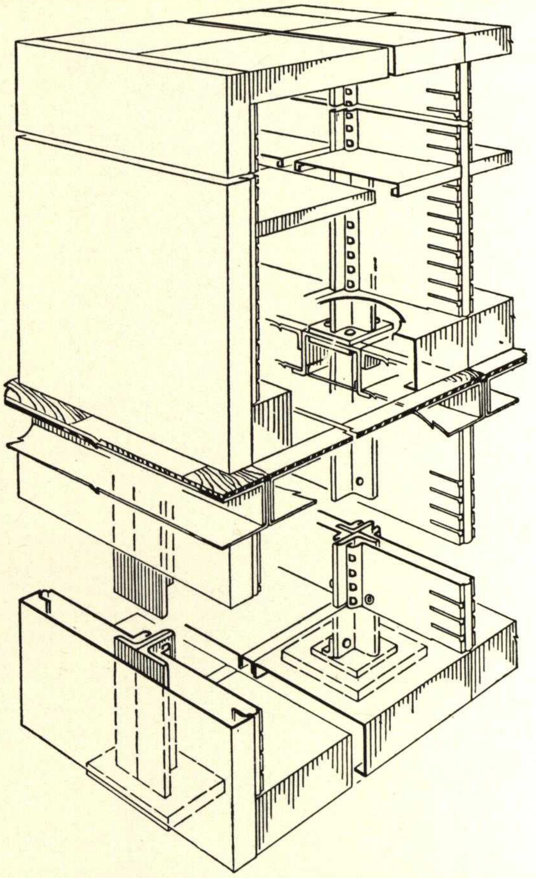
Art Metal library stacks

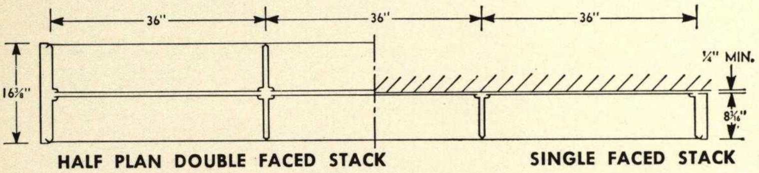
standard type bookstacks multi-tier and single tier

Art Metal Standard Type Stacks are constructed with full-depth shelf supports. Shelves are adjustable to 1″ on centers, and are easy to install from the front. A shelf lock feature prevents accidental dis-engaging of shelves.

Multi - Tier Standard Type Stacks combined with deck floor construction provide an ideal stack room for convenience and appearance.

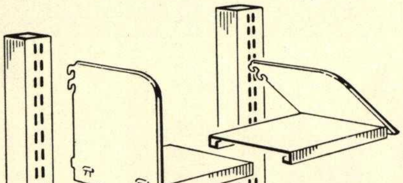
Single - Tier Standard Type Stacks are especially adapted for reading rooms, industrial reference libraries, law collections and other similar installations. A typical Art Metal Standard Type Double Faced Stack is shown at the left.



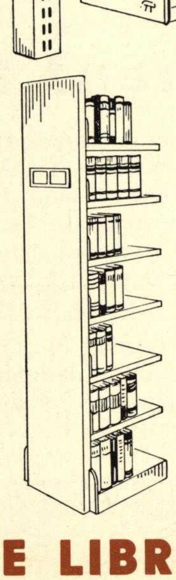


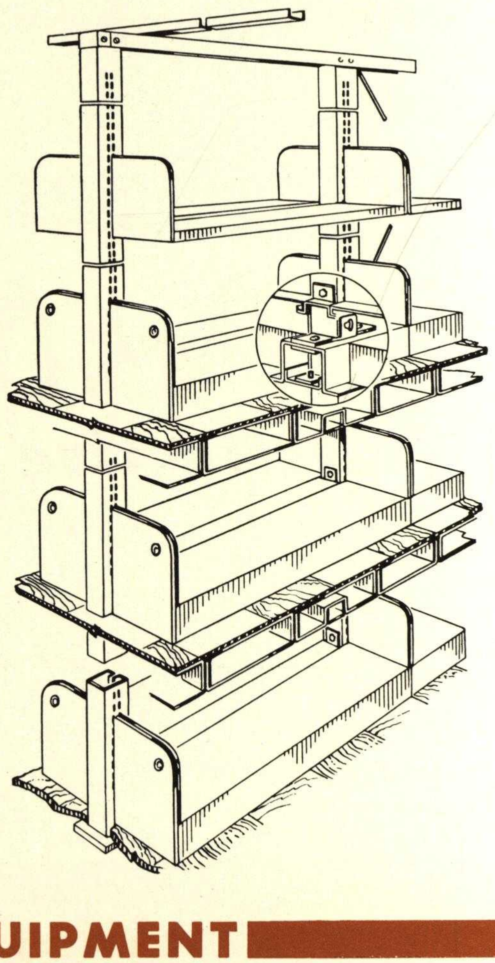
bracket type multi-tier bookstack

Art Metal Bracket Type Multi-Tier Stacks consist of tubular columns which support the loads and receive the shelves, cantilever fashion. Columns have slots 1″ on centers for shelf adjustment. Shelves are generally 8″ deep and columns are spaced 36″ in centers. Multi-Tier stacks are 90″ high. Range end finished panels available.



Patented self-hinged folding shelf brackets permit easy installation or removal without tools. Storage of extra shelves is compact as brackets are pre-assembled.





Diagonal tie-rods provide sway bracing and form a rigid stack.

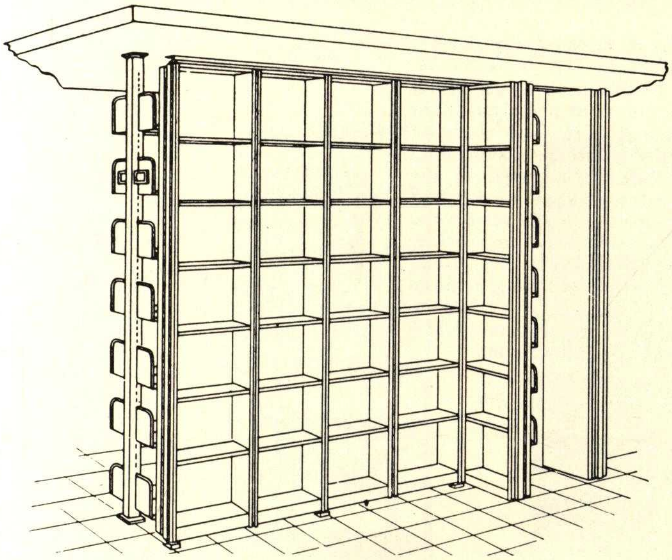
Finished end panel with label holder shown at left available for both single and double faced stacks.

Light switches located on tubular columns or end panels if desired. U-L approved raceways in columns and floors carry all the wiring.

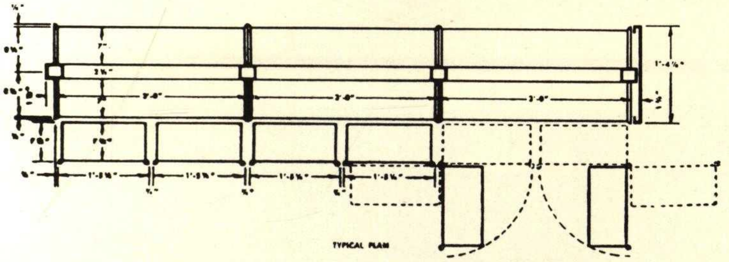
DISTINCTIVE LIBRARY EQUIPMENT

com-pac-case book storage units

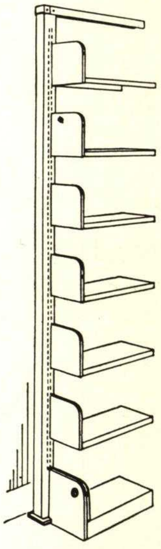
Art Metal
Jamestown, New York
U.S.A.



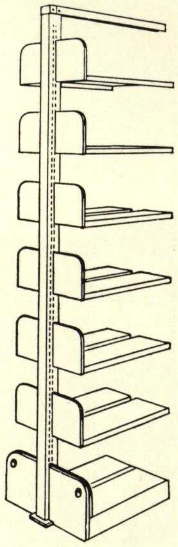
Art Metal Com-Pac-Case Book Storage Units increase by 90% the book capacity of any existing library stack when used on both sides of a double faced range. Even greater capacities may be achieved if these units are provided for in the plans of new libraries. The units are hung on pivot hinges secured in the ceiling and floor so that they swing nearly 180° permitting easy access to the shelves directly behind the unit. A catch at the top holds the unit from swinging into the aisle involuntarily.



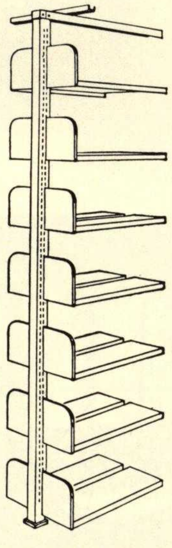
single tier bracket stack



SINGLE FACED FREE STANDING STYLE



DOUBLE FACED FREE STANDING STYLE



DOUBLE FACED TOP BRACED STYLE

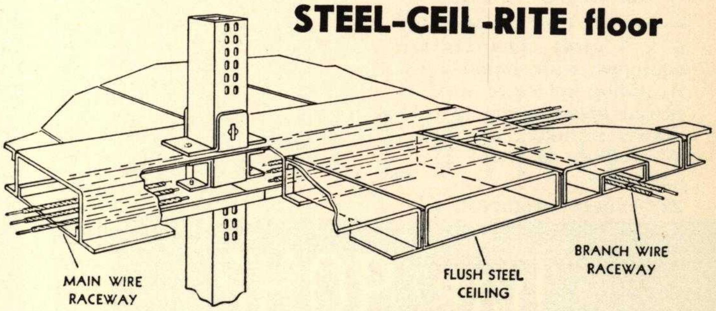
Art Metal Single Tier Bracket Bookstacks may be either free-standing or top-braced. Free-standing styles have rigid cross-bracing provided by extended bases which permit use of these stacks without fastening to floor or walls under normal loads and service.

Top-braced stacks are firmly secured to building walls and to each other. They permit complete freedom of adjustment and interchange of all shelves.

deck floors • ceilings

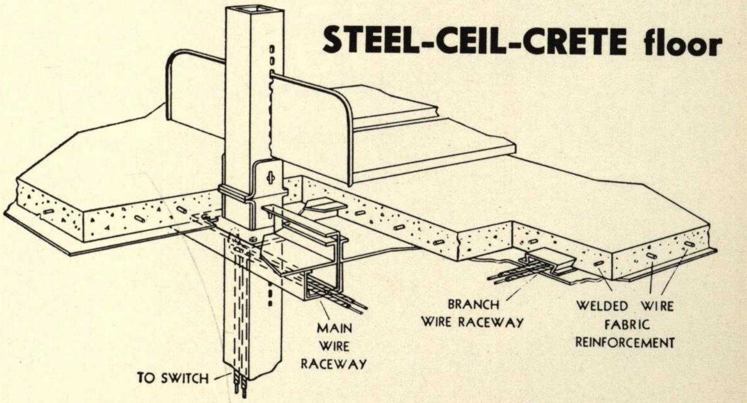
Floors and ceilings for Art Metal Multi-tier Bookstacks are available in two general types: Cellular steel with either flush or beamed ceiling, or concrete poured in either temporary forms and painted or in permanent steel forms, providing a flush steel, baked enamel finish ceiling for the desk below. The two flush ceiling types are illustrated below.

STEEL-CEIL-RITE floor



Art Metal "Steel-Ceil-Rite" Deck Floors consist of formed steel floor and ceiling members integrated into rigid planks. A flush factory-finished ceiling for the tier below is provided as well as a completely smooth firm base for linoleum, asphalt tile or any other floor coverings. Raceways for all wiring are integral with the floor construction.

STEEL-CEIL-CRETE floor



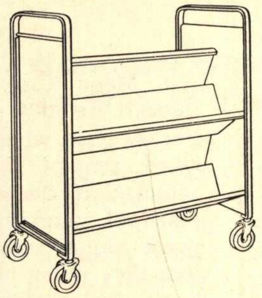
Art Metal Steel-Ceil-Crete Deck Floors consist of concrete cast in permanent factory-finished steel forms. The smooth, baked enamel finish of the flush steel ceiling provides high light reflectancy without glare and reduces maintenance problems to a minimum.

ART METAL library equipment

ART METAL BOOK TRUCK

TYPE "C"

— is double faced with two sloped shelves for books on each side. Large rubber-tired casters. Size: 30" W. x 35" H. x 15" D. Three other styles available in a variety of dimensions.

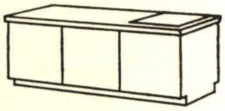


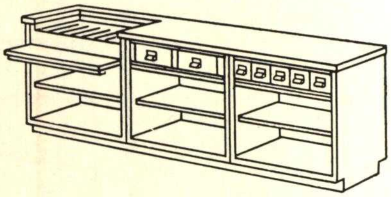
ART METAL UNITYPE CARREL DESKS

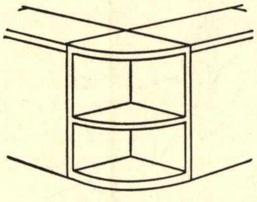
— are single or double faced with one book shelf with 5 adjustable dividers on each face. Desk top is linoleum covered with a rolled edge and aluminum binding. Available with drawer if desired.

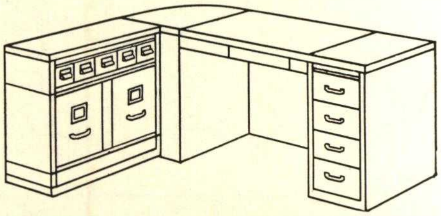
ART METAL CHARGING DESKS

Desk at right is assembled from standard units 35" W. x 39" H. x 27" D., fitted with Art Metal Widesections to make any combination of files. The charging section has card trays and book-slip receptacle recessed in the top, and a pullout work shelf which also forms a cover for the card tray well. The desk below is assembled from Art Metal El-Units combined with a round corner unit having display shelves. Adapted to small libraries and reference rooms.









ART METAL CARD CATALOG CABINET

—has 30 card drawers for 5 x 3 cards. Drawers are equipped with round rods. A sliding reference shelf is placed between the two 15 drawer sections. Size: 32¾" W. x 46¼" H. x 18" D. Capacity:

28,590 heavyweight cards,
51,330 lightweight cards.

CUSTOM CABINETS

Custom cabinets are built to individual requirements. They can be furnished with closed base sections and offset toe space if desired.

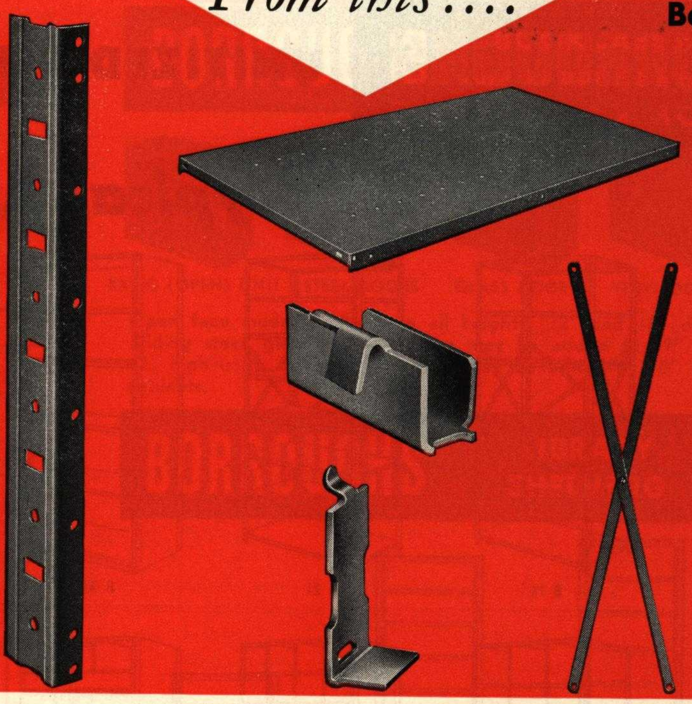
Steel Shelving

LASTING QUALITY, ECONOMY, SATISFACTION.

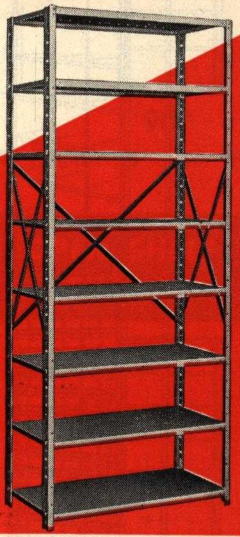
Borroughs shelving provides rigidity and strength through its shaped-post. The post design affords the feature of 'unitized' construction not found in some other types. Less time is required for erection and for adjusting the shelves and dividers. The advantage of being able to move a complete unit at any time without disturbing the adjacent units or their stock will reflect savings whenever a layout change is encountered.

Amazingly simple to erect. Assembly time held to a minimum by the 'unitized' feature, by the simplified shelf support bracket and by the welcome absence of countless nuts and bolts. Borroughs shelf support brackets permit the shelves to be tilted into place without use of tools. (Only two nuts and bolts are required in any basic unit.) Closed sides are of one-piece construction. Many of the accessory items such as dividers and bin fronts are secured without the aid of nuts and bolts. Ease and speed of erection mean direct savings to the purchaser of Borroughs 'unitized-flexi' steel shelving.

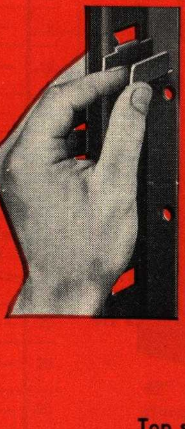
From this....



You get this....

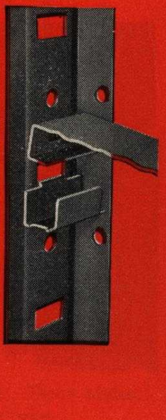


By doing this



1
INSERT SHELF SUPPORT BRACKET — no fumbling with studs, bolts, nuts, lock washers.

2
TILT SHELF INTO SUPPORT BRACKET — and you're finished. Shelf is ready for loading.



Top shelf only is bolted at front posts, requiring only two bolts. Back of shelf hangs on support brackets. No bolts required for bottom or intermediate shelves.

If you desire to lock shelf, insert shelf lock into position and tap lightly with hammer.

Standard finishes: Dark Green, Gray, Brown, Fall Tan, Spring Green, White.

BORROUGHS
OF KALAMAZOO

WORK BENCHES

Borroughs workbenches combine an extremely strong arc welded leg design with a sturdy top surface. The legs are formed of compound steel channels that provide extreme ruggedness. Similar channels are used to reinforce the top, creating an unusual reduction in drum effect.

A wide variety of bench styles can be accomplished by adding many standard accessories. These include shelf, drawers, guards, footrest, ledge, portable fittings, pressed wood top coverings or solid rock-maple tops.

Benches over 6 ft. long may be built up by using add-on benches that require only a single leg assembly.

Three lengths of bench are available, 48", 60", 72". Two depths, 28" and 34". Available in two heights — 29½" for sitting height — and 34" for standing height.

Standard colors: Gray or Green.

COMPONENTS

TOP 14 gage steel reinforced with three 16 gage box channels and 14 gage end pieces. Overall thickness 1¾ inches. Side and back faces pierced for joining tops end to end or back to back.

LEGS Sturdy and neat appearing — no unsightly rows of holes. 16 gage legs welded to 14 ga. horizontals.

SHELF 15 inch deep with 1" flange at rear. Formed at front to provide lips.

BACK AND END GUARDS 11 gage steel 3" high above bench top, used to prevent material from rolling off.

LEDGE Use one or more to keep material, tool boxes, etc. off working area. Can be tiered.

SINGLE DRAWER Used when single drawer is required below bench top or tool stands. Furnished with padlock, attachment, cylinder lock available.

TIER DRAWER Used when multiple drawers are to hang below bench top or tool stand. Each drawer with a complete case. Can be stacked from floor up. No hanger kit required.

Base available for stacking. Provisions for padlock. Cylinder lock available.

BACKSTOP 5" high. Hooks to bench shelf. Keeps material from sliding off.

FOOTREST Extremely strong. Bolted to cross rail of legs.

STEEL TOP PRESSED-WOOD COVERING Applied at factory. Useful for sound deadening and resiliency. 3/16" thick covering applied to standard top.

END PANELS Fits flush with outside of leg. Provides desk-like appearance.

BACK PANELS Provides closure for kneespace, improves bench appearance.

SEMI PORTABLE KIT Wheel assembly bolts to legs on one end of bench. Telescoping handles bolt to legs on other end of bench.

PORTABLE BENCH KIT 4 casters with threaded stems bolt easily into foot plates in bench legs. Complete mobility provided for any Borroughs bench.

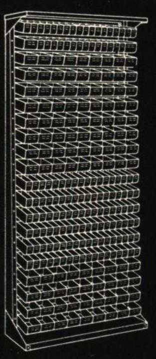
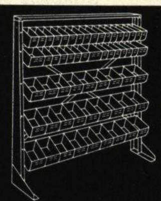
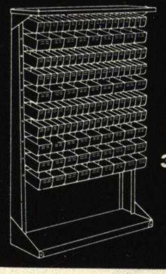
"Handee Andee" SMALL PARTS BINS



Unit 84-360

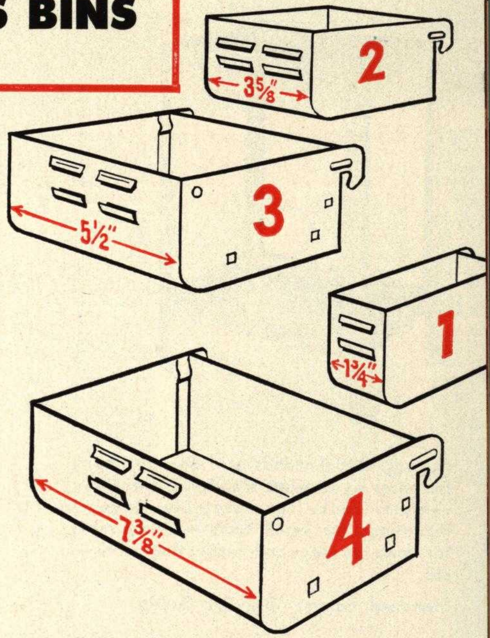


Unit 56-180



Unit 32-90

Here are small parts bins that give you every advantage. They're sturdily constructed for long, hard use; attractively styled for effective point-of-purchase merchandising; compactly designed for maximum space saving. And with their easy-to-see, easy-to-reach, easy-to-arrange features, it's easy to keep small parts in apple pie order all the time. HANDEE ANDEE small parts bins are available in 3 sizes and are designed to hold 4 sizes of bin boxes in any arrangement you wish to make. Bin boxes can be removed or replaced in a wink — just slip them on or off. They have large label holders for speedy identification, curved bottoms for fast, smooth removal of parts, and their forward tilt provides instant visibility of the contents.



All Boxes are 2⅝" Deep x 6⅛" Long

BORROUGHS
OF KALAMAZOO

FLEXI-BINS

With Borroughs FLEXI BINS valuable time is saved when rearranging shelves, dividers and trays. Shelves slide on 1½" centers, are adjustable without tools and may be relocated even when fully loaded. All dividers are completely movable anywhere on the shelf to form openings of any desired size. There are NO screws, nuts, or bolts needed to rearrange a flexi bin and only a few are needed to set up the completely enclosed frame.

5 Harmonizing Colors to choose from: Olive Green, Cascade Green, Snow White, Buff or Gray.

DELUXE

colorful, modern products for the library

DELUXE METAL PRODUCTS COMPANY, WARREN, PA. • A Division of Royal Metal Manufacturing Company

a case for color:

DELUXE . . .

The bright, beautifully styled line of Deluxe library products combines functional design with appearance and sturdy construction to provide the finest library shelving and accessories, study carrels and book stacks obtainable.

Building a new library? . . . modernizing the old one? . . . adding new shelf space? Use color harmonics . . . choose Deluxe Library Shelving in pastel colors . . . and those somber library stacks will come to life!

With Deluxe there is flexibility in color selection and arrangement—the four standard finishes—canyon coral—mist green—sandalwood—grey—142 other plain colors to specification at slight extra cost.

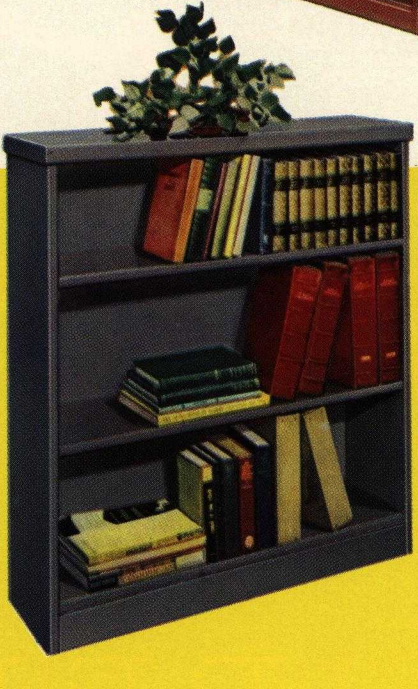
Deluxe shelving with clean, modern lines provides the ideal setting for today's library.

Deluxe, the original manufacturer of boltless steel shelving, provides library shelving that is easily erected without the use of tools. Shelves are adjusted in a matter of seconds, and additional sections can be added without disturbing existing shelving.

All Deluxe products are quality made of heavy gauge steel. Completely fabricated of furniture quality. No rough unfinished raw steel edges. Also, Deluxe provides quick assembly, ease of adjustment and strong construction.

For added rigidity, every shelf ties into the upright members for greater sectional stability.

Deluxe Library Shelving installations include Cornell University, Sisters of Holy Cross School, Battelle Memorial Institute, Duquesne University, De Paul University, San Francisco State College, Johns Hopkins Institute, and many other libraries.



For offices, reception rooms or in school, this Deluxe bookcase provides modern, handsome, convenient storage space for reference books, personal volumes or magazines.

10 styles to

OPEN OR CLOSED BACKS

. . . WIDE RANGE OF COLOR

Deluxe library shelving with shelves adjustable on 1″ increments is available in three heights: 42″ (three openings), 78″ (six openings) and 90″ (seven openings) in single or double faced units with or without closed backs. All models are available as starter sections and as additional add-on sections, except the bookcase, which is supplied only as a single unit.

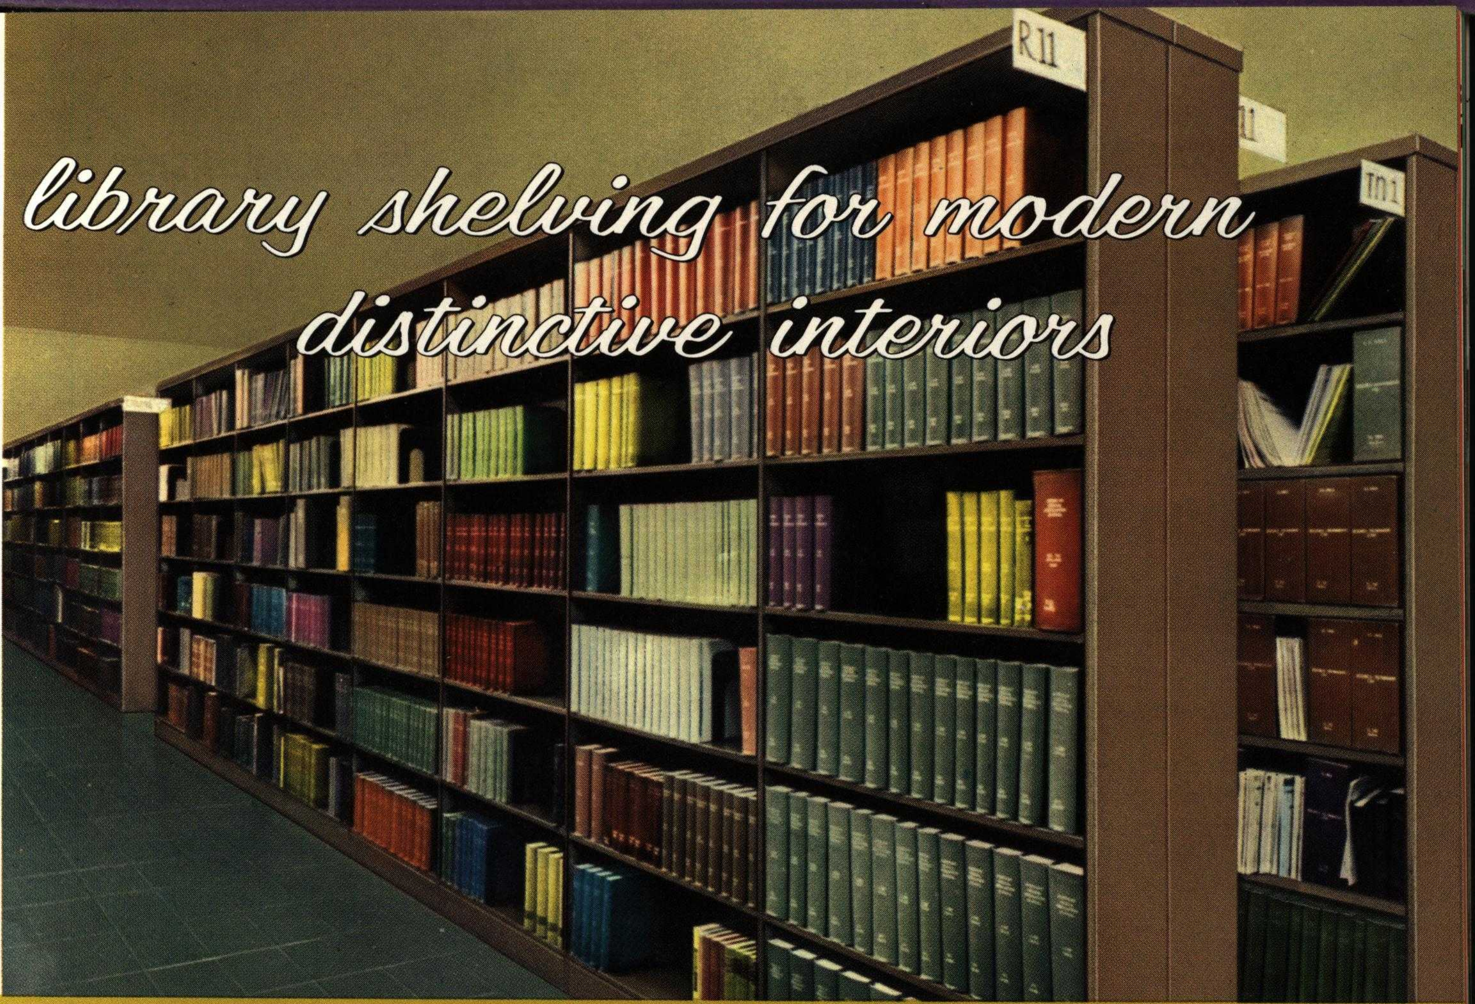
COLOR GUIDE

FOR ALL DELUXE LIBRARY PRODUCTS

These four standard baked enamel Plastelle colors, applied over Chem-A-Cote bonderizing to insure lasting beauty, are provided for all Deluxe library products.

NO. 8921 SANDALWOOD

library shelving for modern distinctive interiors



choose from: 3 heights

Note: All starter sections have two finished end panels. Additional sections have intermediate end panel only, so that by simple exchange, a combination assembly forming a range will always have finished outside end panels.

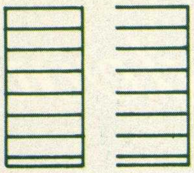
A choice of 142 other plain colors are also available at slight extra cost.

how to order



SHELVING

The shelving order number is composed of the letter L (for library) together with the figure dimensions of the unit. For example, a library unit 36″ x 42″ x 10″ would be designated as L364210, followed by the letter S for starter section or the letter A for additional section. If a closed back is desired the letter B follows the S or A. For example, L364210SB or L364210AB. Refer to Table 1 for all choices. PLEASE SPECIFY COLOR DESIRED.

All sections are complete with uprights, shelves, brackets, tops, closed bases, and either backs or braces as specified.

DELUXE ACCESSORIES

All the accessories are designed to fit standard 36″ width Deluxe Library Shelving. Order by number.

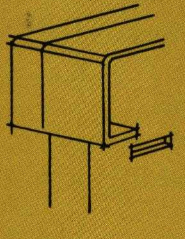
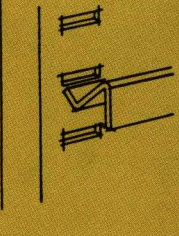
construction features of DELUXE library shelving



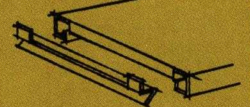
CORNICE TOP

The cornice top overhangs the shelving ⅜″ to provide that finished look. Top ends are removable in order that additional sections can be added to maintain a continuous top.



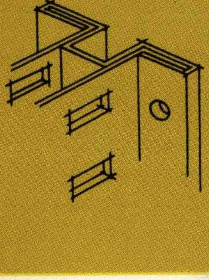
BOLTLESS BRACKET

Shelf bracket if formed with lug at each end to insert into slots (on 1″ centers) in uprights.



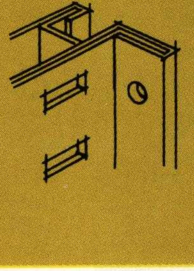
SHELVES

Unit assembly is more stable due to end flanges on shelves engaging slots in shelf brackets. Each shelf acts as a tie shelf holding vertical uprights in perfect alignment.



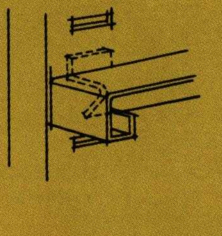
INTERMEDIATE UPRIGHT

Formed from a single sheet of heavy gauge steel and flanged at the rear (illustrated). A spreader is folded over these flanges to provide rounded edges.



END UPRIGHT

Formed of heavy gauge steel, exposed face is unblemished; no finished end panels required. (Rear flanges illustrated).



SHELF AND BRACKET

Picture shows the shelf in place over the bracket (broken lines). Notice the absence of raw edges on Deluxe Shelving. Front and rear flanges formed with three 90° bends.

COLOR GUIDE

FOR ALL DELUXE LIBRARY PRODUCTS

These four standard baked enamel Plastelle colors, applied over Chem-A-Cote bonderizing to insure lasting beauty, are provided for all Deluxe library products.

NO. 8921 SANDALWOOD

Deluxe shelving accessories

Librarian simply lifts magazine shelf for access to hidden back-issue storage compartment.

- MAGAZINE SHELF
- NEWSPAPER RACK
- BOOK SUPPORT
- LABEL HOLDER
- CARD HOLDER
- RANGE FINDER

The new Deluxe magazine shelf and newspaper rack are inexpensive accessories that can be assembled into standard Deluxe Library Shelving.

It's not necessary to purchase expensive special cabinets: the Deluxe magazine shelf and newspaper rack convert regular shelving to these purposes easily and quickly.

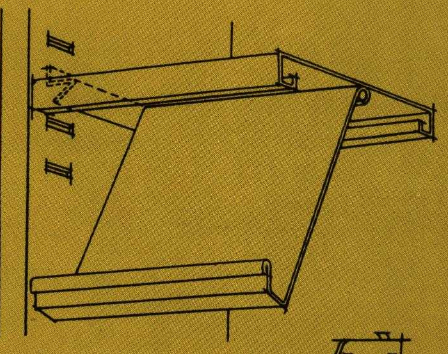
The magazine shelf displays current magazines, and lifts up for hidden but accessible back-issue storage . . . double-duty service.

The newspaper rack is the ultimate in simplicity at very modest cost. It consists of a pair of brackets and cups that attach easily, without tools, into a standard section of Deluxe Library Shelving. Holds six to eleven newspaper rods. A section of Deluxe Library Shelving has room for three magazine shelves or up to twenty-two newspaper rods. Or they can be combined as shown.

In addition Deluxe provides book supports, label and card holders and range finders for use with Deluxe Library Shelving.

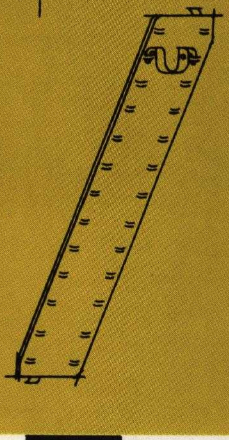
MAGAZINE SHELF ASSEMBLY

The magazine shelf is supplied with a pair of notched shelf brackets which carry the hinge attachment of the shelf. Assembly is rapidly made without use of tools.



NEWSPAPER RACK ASSEMBLY

Consisting of a pair of slotted metal brackets and U-shaped cups, the newspaper rack attaches into the slotted upright member of a library shelving section.



NO. 8924 CANYON CORAL

NO. 8923 MIST GREEN

NO. 8988 OFFICE GREY

A choice of 142 other plain colors are also available at slight extra cost.

DELUXE book stacks for

single-tier applications

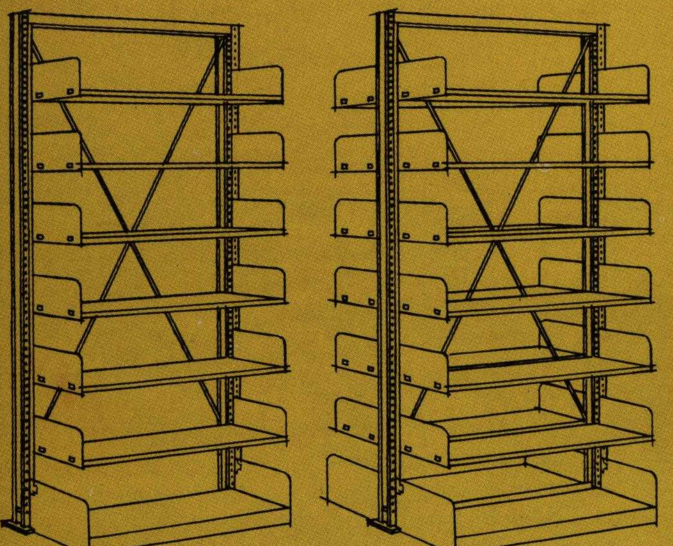
Designed especially to suit the storage requirements of the modern library, the all-steel Deluxe single-tier book stack with boltless shelves adjustable on 1″ centers is supplied in single faced wall units, or free-standing double faced units, with or without finished end panels.

The Deluxe book stack is sturdy and durable, Diagonal bracing is included to prevent sway. All parts are quality-made and carefully finished with exclusive Deluxe Chem-A-Cote bonded finishes as described below.

Shelves are positively locked in to the shelf brackets, which in turn engage the upright members. This design prevents shelves from being accidentally bumped or pulled loose. A selection of various shelf depths are available to suit the most varied requirements.

The single faced unit, which must be attached to wall, is 90″ high, 36″ wide and has total base depths of 13¼″ or 14¼″. It has seven shelves. The double faced free-standing style Deluxe book stack is 90″ high, 36″ wide and has total base depths of 24½″ or 26½″. It has fourteen shelves. Shelves for both single and double faced units are provided in four depths: 8″, 9″, 10″ or 12″.

Finished end panels for single faced units are 90″ high and 13$\frac{5}{16}$″ or 14$\frac{5}{16}$″ wide; for double faced units, 90″ high and 24⅝″ or 26⅝″ wide.



COLOR GUIDE

FOR ALL DELUXE LIBRARY PRODUCTS

These four standard baked enamel Plastelle colors, applied over Chem-A-Cote bonderizing to insure lasting beauty, are provided for all Deluxe library products.

NO. 8921 SANDALWOOD

economical storage

multi-tier applications

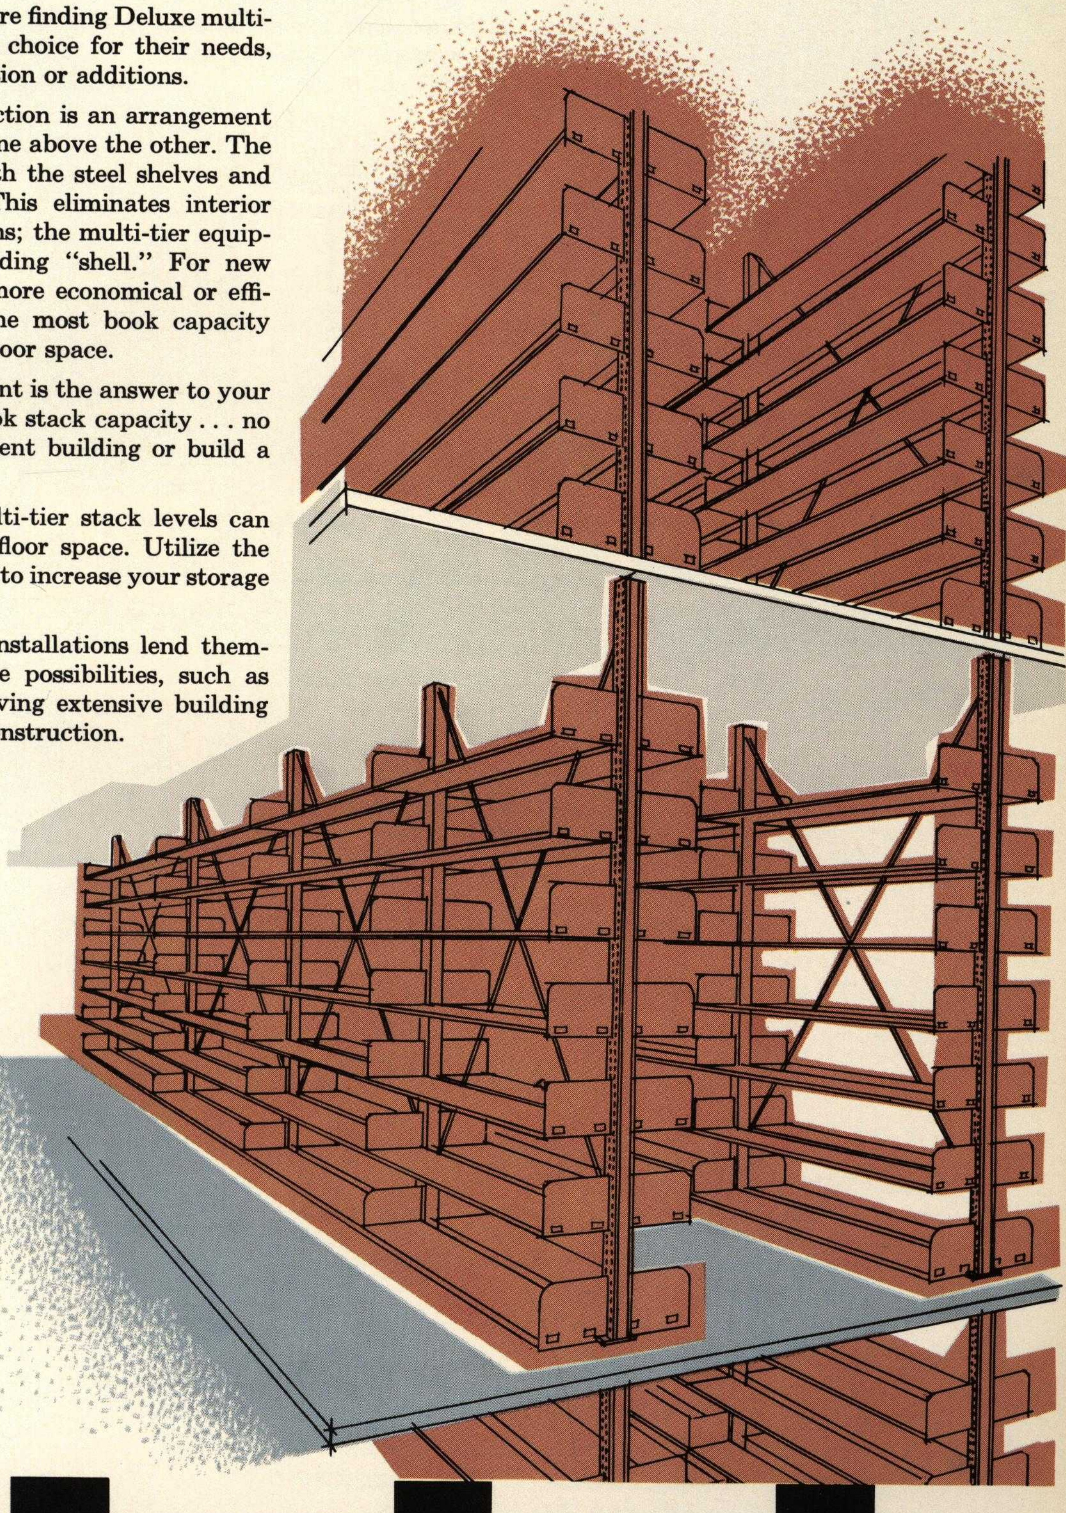
Architects and librarians are finding Deluxe multi-tier installations the best choice for their needs, whether for new construction or additions.

Deluxe multi-tier construction is an arrangement of levels of book stacks, one above the other. The steel uprights support both the steel shelves and the steel decks above. This eliminates interior building floors and columns; the multi-tier equipment fits inside the building "shell." For new construction there is no more economical or efficient means of getting the most book capacity into the least amount of floor space.

Deluxe multi-tier equipment is the answer to your requirements for more book stack capacity . . . no need to expand your present building or build a new one.

Two or three Deluxe multi-tier stack levels can be fitted into very little floor space. Utilize the maximum of the cube area to increase your storage capacity.

These Deluxe multi-tier installations lend themselves to many decorative possibilities, such as magazine installations, saving extensive building alterations or expensive construction.



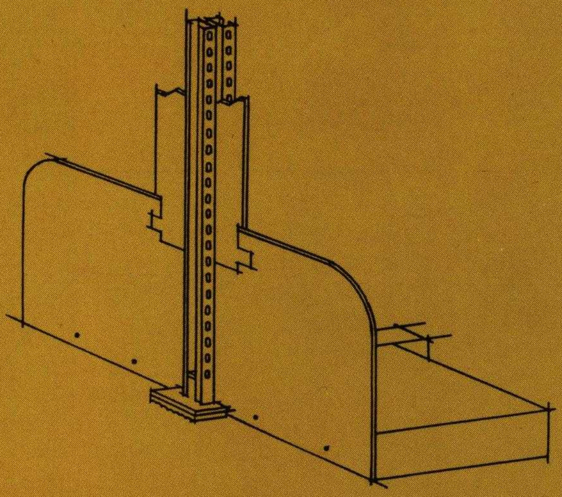
NO. 8924 CANYON CORAL

NO. 8923 MIST GREEN

NO. 8988 OFFICE GREY

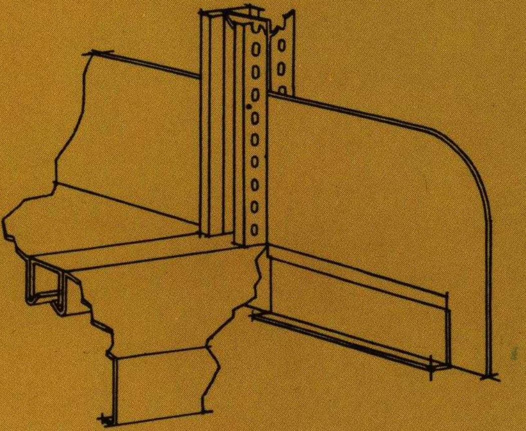
A choice of 142 other plain colors are also available at slight extra cost.

features of Deluxe book stacks



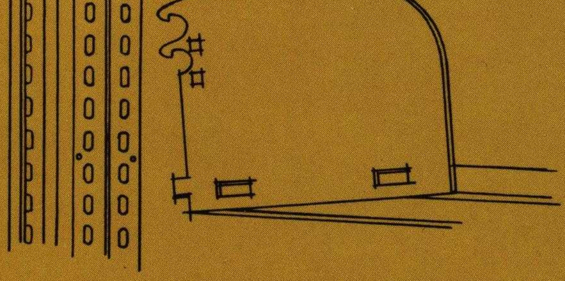
STURDY BASE

Rigid construction consists of heavy 11-gauge footing, 13-gauge base supports and uprights and 18-gauge base spreader and bottom shelf, all strongly interlocked.



ADJUSTABLE BOTTOM SHELF SUPPORT

To compensate for uneven flooring, the Deluxe book stack has this adjustable support, which easily levels the stack upon assembly.



EASY SHELF ADJUSTMENT

Slots in heavy gauge steel uprights on 1″ centers provide for maximum adjustability of intermediate shelves. Double hooking prongs on shelf bracket hold shelf loads securely.

ENGINEERING DESIGN SERVICE

Deluxe provides complete planning and engineering service for book stack installations. The Deluxe Engineering Department personnel aid in organization and layout of book stacks to meet individual requirements. For more details on our Engineering Design Service, please write: There is no obligation.

Deluxe library products

- Library Shelving

- Carrel Desk (free standing)
- Carrel Desk (folding)
- Book Stack (single tier)
- Book Stack (multi-tier)

DELUXE study carrel is modern-convertible, too!

Here is the most beautifully proportioned Carrel ever made. Tapered, pewter-finished steel legs, gracefully angled, support the desk at just the right height for writing ease. Desk top provides ample room for study and reference purposes. Choice of steel, linoleum or plastic laminate top.

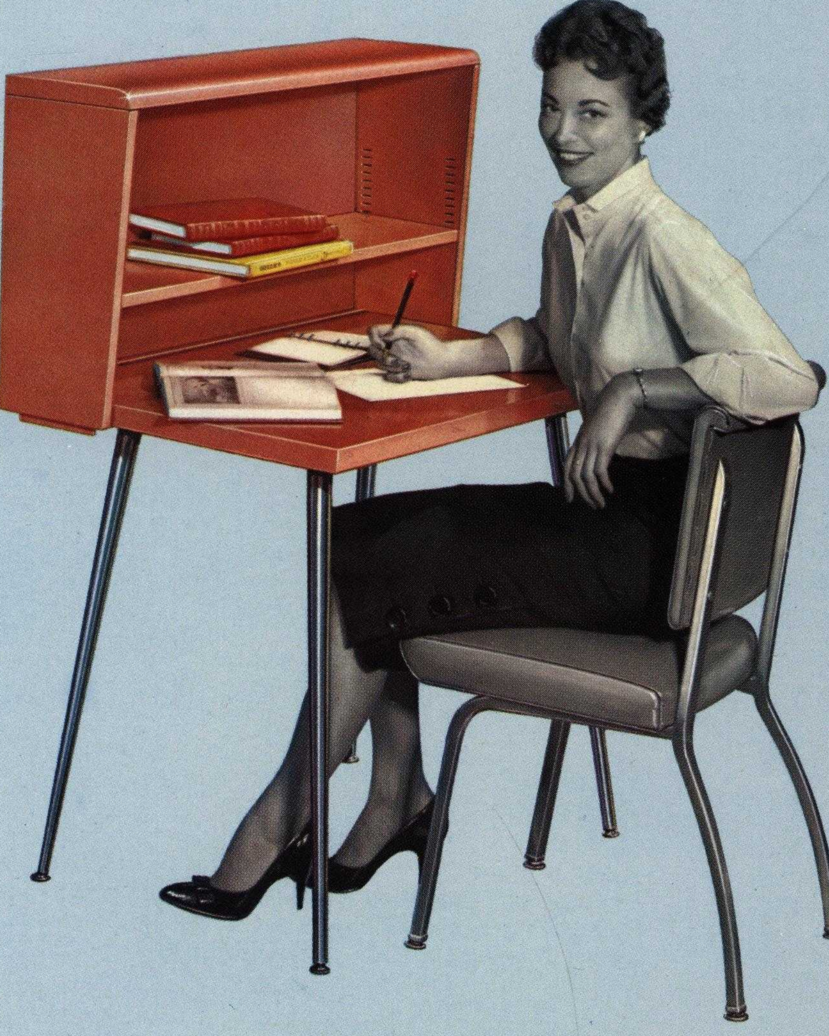
Bookcase at rear of desk has intermediate shelf which may be adjusted to suit storage needs on ½ inch increments. A built-in fluorescent light fixture is also available as optional equipment.

Deluxe's Carrel is adaptable, too. It's convertible! The tapered legs can be easily and quickly removed and the desk inserted into a standard section of Deluxe Library Shelving.

If space is at a premium, this convertible unit is the answer: a full size study Carrel desk that folds out of the way when not in use.

All corners and edges of Deluxe Study Carrels are completely rounded, to prevent injury or damage. Parts are finished with exclusive Deluxe Chem-A-Cote bonded baked enamel. Color choices are given below.

The Deluxe Carrel Desk is 46″ high overall by 36″ wide. Desk top is 28″ high, and 24″ deep by 33½″ wide. The bookcase is 9½″ maximum width, 18″ high and 36″ wide.



NO. 8924 CANYON CORAL

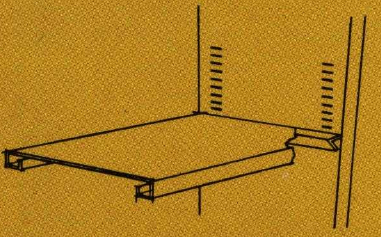
NO. 8923 MIST GREEN

NO. 8988 OFFICE GREY

A choice of 142 other plain colors are also available at slight extra cost.

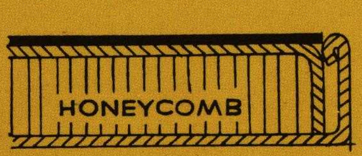
The convertible Deluxe Carrel Desk assembled into a section of Deluxe Library Shelving can readily be folded down to clear an aisle or otherwise conserve space when not in use.

Carrel features and details



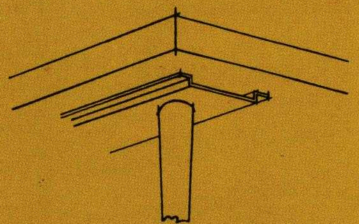
ADJUSTABLE SHELF

Simple shelf brackets provide for easy adjustment of the carrel desk shelf to suit user's needs.



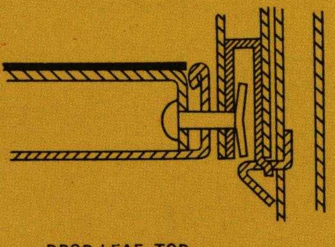
DURABLE DESK SURFACE

Desk has a sound-deadening honeycomb sandwiched in steel and topped with wear-resistant linoleum or plastic laminate.



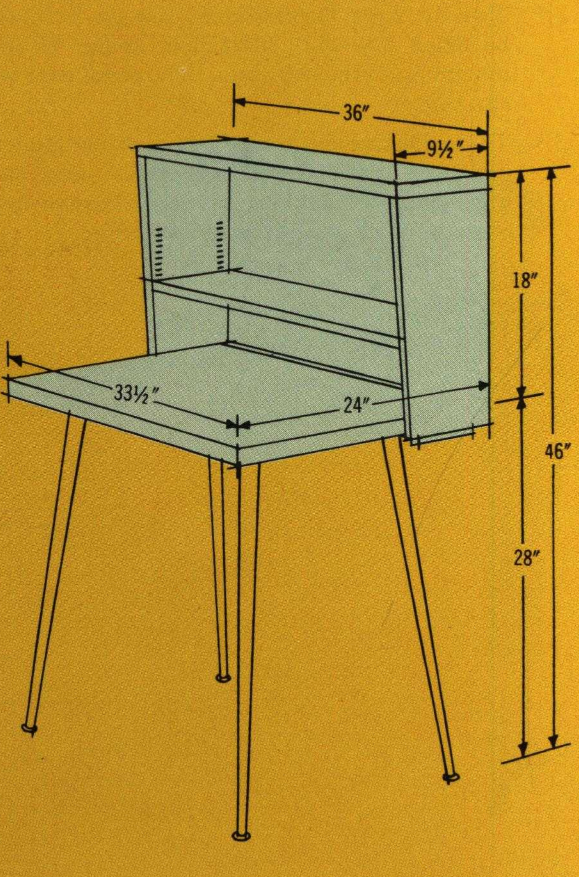
RUGGED CONSTRUCTION

Heavy 11-gauge channels, and 22-gauge steel top make the Deluxe carrel rugged for extra long service.



DROP-LEAF TOP

When used with Deluxe shelving, the hinge arrangement permits easv folding of carrel desk top.



HOW TO ORDER

Order by number and specify color desired.

ESTEY LIBRARY EQUIPMENT

Library Planning Service

Estey Corporation is in a position to offer competent assistance to the Architect or Owner in the planning and engineering of steel bookstack equipment. Whether it be a million volume library, a relatively small public or school library or a special library, the services of Estey's Library Planning specialists and engineers are offered to you without cost or obligation.

The completed library with a stack area properly located, attractive in appearance and functional in operation is invariably the result of careful, thorough planning on the part of the Architect in coordination with the staff of the manufacturer of the bookstack equipment.

COLORS

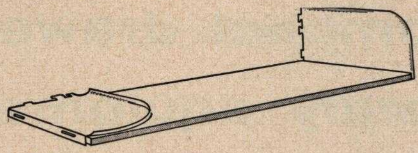
Estey has been responsible for the introduction of modern, decorator colors in the stack areas of many libraries. These color installations have been so enthusiastically received by architects and librarians that color is now being included in the plans for most library projects.

CONSTRUCTION FEATURES

Estey has within the past months completely redesigned and re-engineered its bracket type shelving. Many authorities agree that this equipment is now superior to any other shelving on the market.

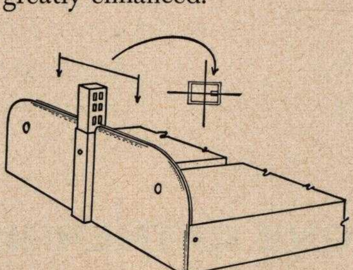
Estey shelves are now available with either the conventional snap-on brackets or with hinged brackets. The use of hinged bracket shelves greatly reduces the cost of installation, and unused shelves can be stored without the possibility of losing or misplacing end brackets.

Our hinged bracket shelves have a special feature which keeps brackets upright while the shelf is being adjusted as to height. This is exclusive with Estey.

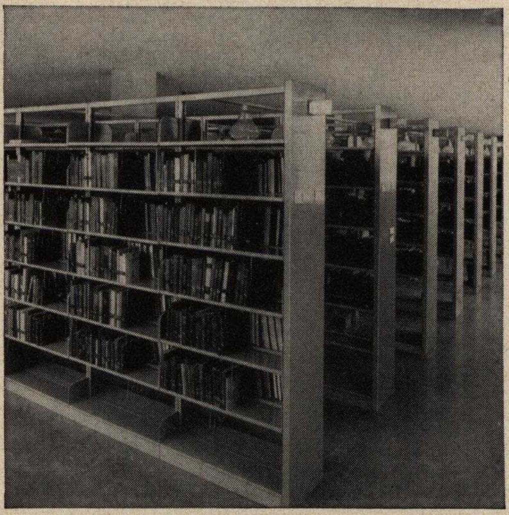


The two most important features of Estey shelving are the closed tube upright and extra strong base member. The upright column is of heavy gauge steel, no less than 16 gauge. It is of box type construction, 2″ x 2½″ in cross section—this closed tube eliminates unsightly flanges which interfere with shelf brackets, and there are no open areas in the post construction to damage books and collect dirt. In addition to providing a stronger, more rigid column, the appearance is greatly enhanced.

Our base firmly grips the upright to provide maximum support, greater rigidity, and enhanced safety factor. There is no better type of base construction available. A practical, positive leveling device is provided.

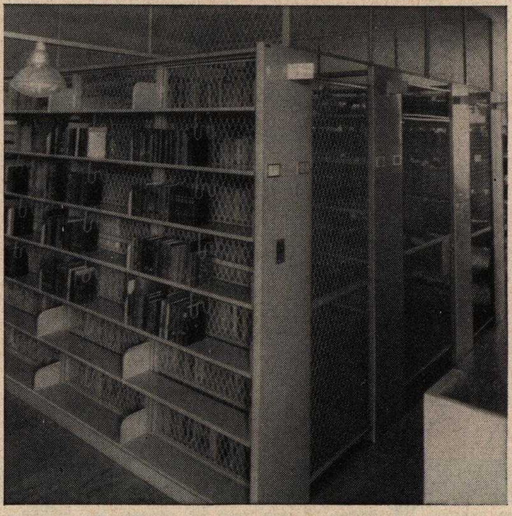


INSTALLATIONS



Free-Standing Stacks

Compact Drawer Shelving

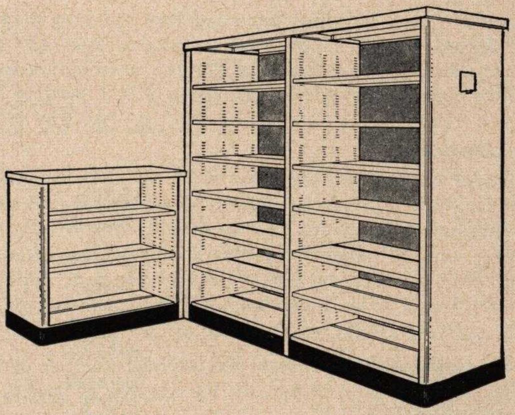


Special Conditions

BOOKSTACKS

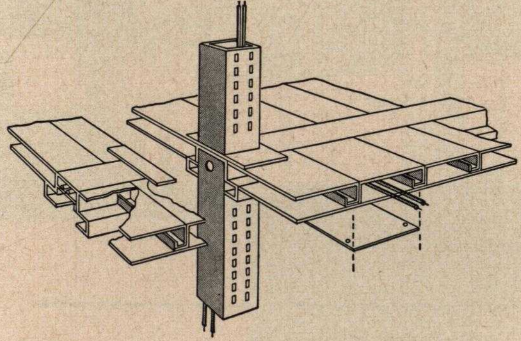
case type

Case type shelving with full depth uprights can be utilized for any bookstack requirement. However, since these are furnished complete with tops and finished end panels, they are particularly well suited for those areas normally seen by the public. The uprights are slotted on ½″ centers to provide maximum adjustability of shelves, and the shelves lock into the uprights to preclude accidental removal. Case type shelving is standard in 42″, 60″ and 82″ heights, but other heights can be furnished. The standard depths are 8″, 10″ and 12″. Case type shelving can be furnished in either the conventional free-standing type or as multi-tier shelving. In the case of multi-tier installations, this shelving is reinforced sufficiently to support the additional floors and uprights.

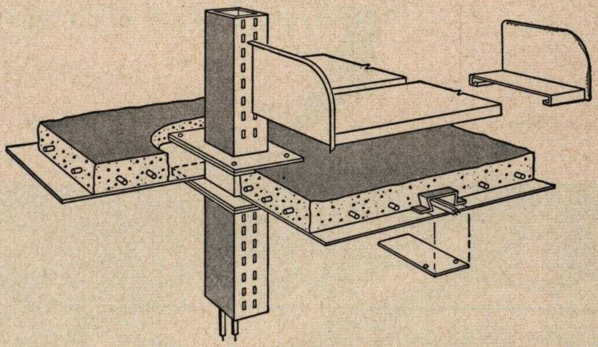


multi-tier bracket type

Multi-tier stacks can be engineered to meet the requirements of either new or existing buildings. By eliminating the need for building floors in the stack area, multi-tier construction can materially reduce the over-all cost of library construction.



This shows details of a conventional floor deck of cellular steel members: other types of steel floors are available.

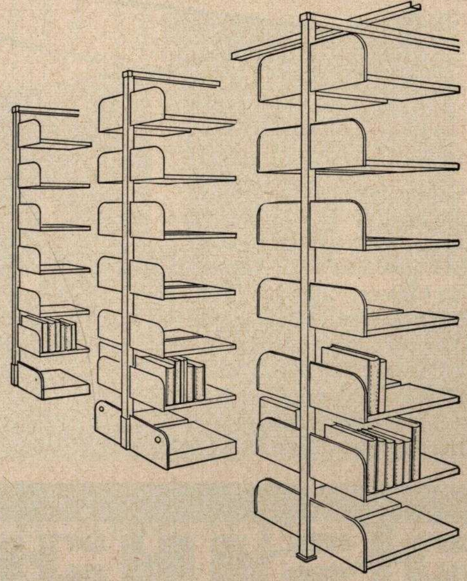


This shows a typical reinforced concrete deck utilizing light weight steel pans as forms for the concrete. This type can also be poured over removable forms.

bracket type

Estey's bracket type book shelving provides maximum flexibility. The double-faced, free-standing type is entirely independent of walls and can be easily relocated to meet changing conditions within the library. To be free-standing, the base shelf must be 2″ deeper than the adjustable shelves. If all shelves, including the base shelf, are to be of one depth, overhead tie struts are furnished. The struts fasten the ranges to each other and to the wall. Diagonal sway braces are furnished for all double-faced ranges.

The illustration to the right shows from left to right the single-faced, free-standing type; the double-faced, free-standing type and the double-faced, non free-standing type.



ESTEY ENGINEERING DATA

General

Height: Free-standing shelving is standard in 42″, 60″ and 90″ heights. Multiple tier shelving is usually 90″ from top to top of decks. The heights are very flexible in both types of shelving.

Aisle width: Where building floors and free standing stacks are used, aisles are very flexible. Main aisles of at least 42″ width and range aisles of 3′ are desirable. Modern architecture is making extensive use of module design and a 9′ x 9′ module works out very well in multi-tier stacks, to provide aisles of 38″ and 36″ respectively.

Length of Ranges: Any multiple of 3′, but preferably not over 24′.

Weight of Books: Approximately 25 lbs. per cu. ft.

Weight of Stacks: Approximately 8 lbs. per cu. ft. of range, not of entire floors.

shelf capacity

Book shelves are standard in depths of 8″, 10″ and 12″ and with a usable length of 35¼″. In the interest of lower cost, less unused shelf depth and wider aisles, shelves should have as little depth as possible and still allow for proper shelving of material. The average library needs about 90% of the shelving in 8″ depth, and 10% in 10″ depth. If back numbers of newspapers are retained, 2% of the shelving should be either 12″ or 18″ depth.

The table to the right represents the average number of books of various classifications stored on the shelves of general and special libraries.

classification	volumes per lineal ft.	volumes per 3′ single-faced section	recommended depth of shelf

Library Planning

The well-administered, smoothly functioning public or private library is a direct result of thorough, careful, scientific planning combined with an appreciative understanding of the individual conditions and problems of each installation.

Whether the problem involves planning, building and equipping a completely new library, or the expansion, remodeling or modernization of the present library, Globe-Wernicke's library engineers are available to aid in solving library planning and layout problems. There is no obligation in calling upon the G/W library engineering staff in this advisory capacity.

design factors

No definite rules can be laid down regarding the width of shelves required as much depends on the method of classification, space available and use to which the library is put. Where economy and compactness of storage are important, 8-inch shelving is recommended for book stacks in general. Most books are six inches or less in depth and it is well to bear in mind that waste space back of books collects dirt and is objectionable while the same space added to the width of the aisles becomes valuable.

The number of volumes that can be stored per lineal foot of shelving depends on the character of the books. The table at right has been prepared by averaging the data collected from various general and special libraries, for convenience in computing the amount of stack necessary, the capacity being based on stacks 7½ ft. high with seven rows of shelves in the height.

The figures are for solidly packed books without any allowance for working space or expansion.

shelf requirements

	Vols. per ft. of shelf	Vols. per linl. ft. of single-faced range	Vols. per 3 ft. of single-faced range	Recommended width of shelves

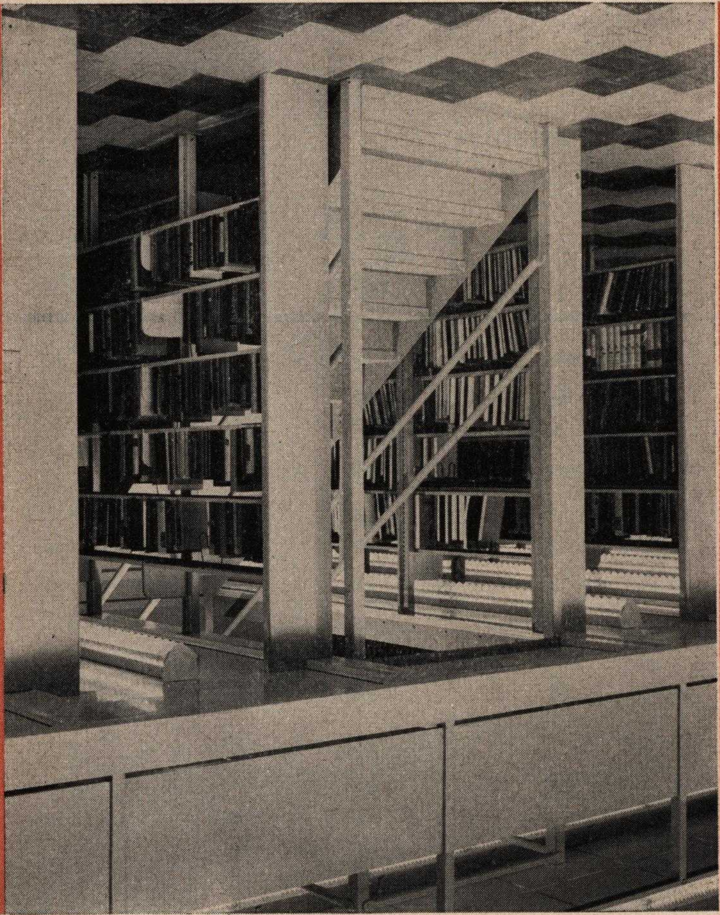
8	14564	17151	9321
9	16556	19424	10564
10	18548	21697	11807
11	20540	23970	13050
12	22532	26243	14293

A—Typical aisle end support.
B—Typical intermediate support.
C—Typical wall end support.

multi-tier stack construction



Floor space, costing what it does, requires large volume book storage to go vertical. Book transportation is much simpler in the vertical than in the horizontal. The multi-tier stack, structurally supports not only the book load, but also supports the floor decks and the roof. This construction is only suited to space permanently allocated to book storage. The close spacing of supporting columns permits the use of thin slab concrete or cellular steel floors. There is no more practical and efficient system for permanent book storage with maximum utilization of space.

standard dimensions

MULTI-TIER INSTALLATIONS

HEIGHT — 7 ft. 6 in. to 8 ft., measuring from top surface of deck floor to top surface of next deck floor.

AISLES — Main, 3 ft. to 4 ft. Range, 2 ft. 6 in., to 3 ft.

RANGES — Lengths as required preferably not over 21 ft.

SHELVES — Lengths, as required, standard 3 ft. Depths, 8, 9, 10 and 12 in. for books. 18 in. for newspapers. (Note — Shelf depth is measured from centerline of Range to outside edge of shelf.)

STAIRS — Straight type, well length 9 ft. 2 in. to 10-ft., width 3 ft. Return type, well length 7 ft., width 5 ft.

DECK FLOOR — May be one of two types: Reinforced concrete slab 3½ in. thick without plaster or floor covering. Cellular steel type construction with formed beams. (For weight and loading factors see page 3.)

The specifications for Multi-tier for book stack construction on page 6, covers in separate paragraphs, the Reinforced Concrete deck construction as illustrated at the left, and the Cellular Steel Construction as illustrated on page 5. Globe-Wernicke can furnish either construction. In writing specifications, Architects should select and include either paragraph.

Architects are invited to consult Globe-Wernicke library engineers for design assistance and specific recommendations for Multi-tier library installations.

TREADS — #14 ga. steel w/concrete fill or slate.
RISERS — #14 ga. steel.
LANDINGS — concrete or slate.
RAILINGS — 1¼″ I.D. pipe.
NEWEL CAPS — standard type, cast design.

specifications for multi-tier book stack construction

scope

Set forth are the specifications for a high-quality book-stack installation, as manufactured by The Globe-Wernicke Co. Anything not listed in the specifications but shown on the drawings, and vice versa, shall be supplied.

type of stack

All specifications are based on the bracket type of book stack construction as detailed in the BOOK STACK COLUMNS paragraph.

materials

Sheet steel parts shall be best grade (metal furniture) stock, open hearth, cold rolled, annealed, pickled and U. S. standard gauge. Structural steel members shall conform to the A.S.T.M. building specifications standard.

workmanship

The highest workmanship standard of the metal furniture trade shall prevail through all phases of fabrication, assembly and erection. Exposed surfaces, edges, nuts, heads of bolts and rivets shall be smooth. Fastenings shall be secure, alignments shall be true.

stack columns

Shall support the adjustable shelves and the decks (decks are the floors under and over the book stacks). It shall be possible to vary the position of the shelves by hooking them in slots in the stack columns; the slots shall be at 1″ intervals along the entire column length; any three consecutive slots shall differ in shape to facilitate aligning and leveling of the shelves.

column design

Shall be based on these minimum considerations: Live load for columns over aisles, 50 lb./sq. ft.; stack construction, 8 lb./ cu. ft.; book load, 25 lb./cu. ft. The stack columns shall carry all dead and live loads (decks, shelves, book trucks, paper, etc.) without noticeable deflection and vibration, and shall have a safety factor provided by the formula of the American Institute of Steel Construction:

$$\text{Allowable stress/sq. in. of steel} = 17000 - 0.485\,\frac{L^2}{R^2}$$

L—Length in inches; R — Radius of gyration; $\frac{L}{R}$ not to exceed 120.

stack compartments

Shall be measured from center to center of supports, as shown on drawings (usually 36″); each compartment shall have 7 adjustable shelves. Standard shelves shall be 8″ (nominal) in depth as measured from the outer edge of the shelf to the center line of the stack columns; this size shall be 85%, 10″ (nominal) depth — 10% and 12″ (nominal) depth — 5% of total shelf order.

adjustable shelves — solid plate design

The solid plate shelves shall have 16-gauge end brackets that shall engage the slots of the stack columns. These brackets shall have three hooks at top rear and a lug at lower rear, to engage the column slots and to prevent lateral movement. The shelf shall be not less than 18-gauge steel, triple flanged along the front and back edges and shall be able to withstand a load of 40 lb./sq. ft. with a maximum deflection of 3/16″.

deck construction — reinforced concrete

The floor beneath the book stacks — the deck — shall be reinforced concrete, using rods, angle iron, T bars, beams, channels, plates and other shapes as required. A live load of 50 lb./sq. ft. of aisle area shall be used in calculating the strength of steel floor members. No structural member shall be subjected to stress of more than 18,000 lb./sq. in. The steel deck framing shall be secured to the stack columns, building walls, etc. Where this framing is not required, the reinforcing rods shall be held in place and supported by channel stirrups 3½″ in depth and secured to the stack columns below, and forming a base for the stack above.

deck construction — cellular steel

Flooring shall consist of cellular steel shapes, firmly attached to the steel framing system, presenting a continuous smooth surface over the entire floor and ceiling. Resilient floor covering may be installed. Individual floor sections shall be formed of sheet steel, approximately 9″ wide, with maximum unsupported area not to exceed 4½″. Steel shall not be less than 16 gauge with overall thickness of each section determined by design conditions approved by the architect. Sound deadening material shall be used between all points of metal contact. Sections shall be firmly arc-welded at each end to supporting members. Outlets for lighting fixtures as shown on electrical drawing, using cells as underfloor raceways, will be provided. All exposed sections shall have factory baked enamel finish. Ceiling portion shall be light color as selected.

Electrical columns, decks, and beams shall carry proper Underwriters label.

stairs

Shall be of standard book stack construction, with stringers of 3/16″ steel plate, reinforced with moulding or J & L stair stringer channels, closed type steel tread and risers with integrally formed nosing of not less than 14-gauge steel. The treads shall be filled with cement and finished to receive asphalt tile. The newels shall be not less than 2½″ square steel tubing with rounded corners and not less than 3/16″ thickness. The railings shall be a double line of 1¼″ inside diameter iron pipe attached to the newels.

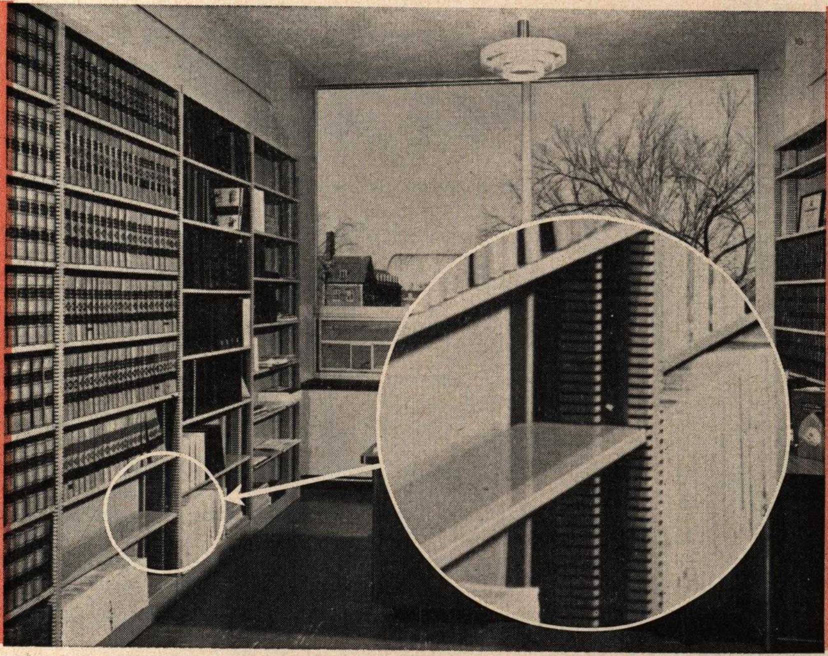
finish

Wherever possible, all book stack parts except structural steel shall be factory finished in baked-on enamel of a color selected by the architect and/or owner. The enamel shall be applied with great care after thorough cleaning of parts in phosphate, trichlorethylene or equal; coating and baking at the temperature and time specified by the paint manufacturer.

drawings

The successful bidder shall submit to the architect for approval triplicate prints of fully detailed shop and field drawings before starting any work.

standard type



The Standard Stack has full depth hollow metal division panels between compartments and at stack ends. A compartment of standard type stack is composed of fixed base, top, and six adjustable shelves. The end uprights, full depth, are slotted to provide ½-inch shelf adjustments. Either single- or double-faced stacks, with or without backs, are available. Standard height is 7′6″. Shelves and corresponding uprights can be furnished in 8-, 10-, and 12-inch depths. Sloping periodical shelves are available in 10- and 12-inch depths.

Photo by Hube Henry, Hedrich-Blessing

specifications for standard free standing book stacks

scope

Set forth here are the specifications for a high-quality bookstack installation, as manufactured by The Globe-Wernicke Co. Anything not listed in the specifications but shown on the drawings, and vice versa, shall be supplied.

type of stack

Stacks are made up of compartments consisting of adjustable shelves supported in slots of uprights.

materials

Sheet steel parts shall be best grade (metal furniture) stock, U. S. standard gauge. Structural steel members shall conform to the A.S.T.M. building specifications standard.

workmanship

Highest workmanship standard of metal furniture trade shall prevail through all phases of fabrication, assembly and erection. Exposed surfaces and edges shall be smooth: fastenings shall be secure; alignment shall be true.

stack compartments

Shall be 7′6″ high, 36″ O.C. wide and 8″-10″-12″ deep single-faced, 16″-20″-24″ deep double-faced.

uprights

Shall be 18-gauge steel, slotted at ½″ intervals, every fifth slot front to be marked to facilitate aligning of shelves.

top plates

Shall be 20-gauge steel, have channel formed sides 1-7/16″ high front and back, 1⅜″ high sides.

adjustable shelves

Shall be 18-gauge steel, triple-flanged ¾″ along front and back edges: designed for a 40 lb./sq. ft load with 3/16″ maximum deflection and with an accidental pull-out prevention lock.

bottom spreaders

Bottom shelves shall have 16-gauge spreaders, 4″ high, extending full length and width of compartments and flanged on all sides. Single-faced stacks shall have spreaders front and back.

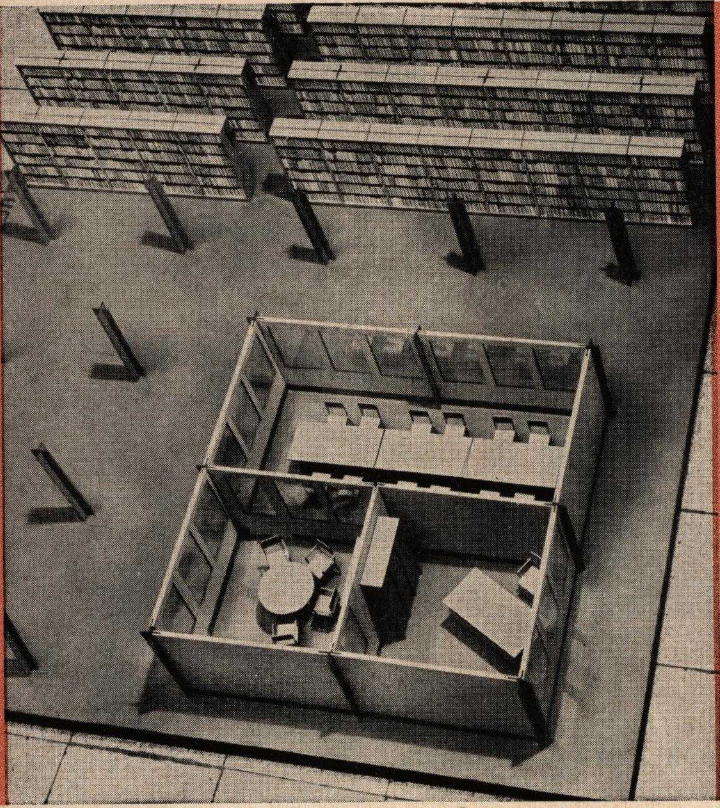
end panels and backs

End panels shall be 18-gauge steel, have ¾″ wide channel formation front and back, reinforced with 2 20-gauge, 2¾″ wide channels. Backs shall be 20-gauge steel, flanged top and bottom.

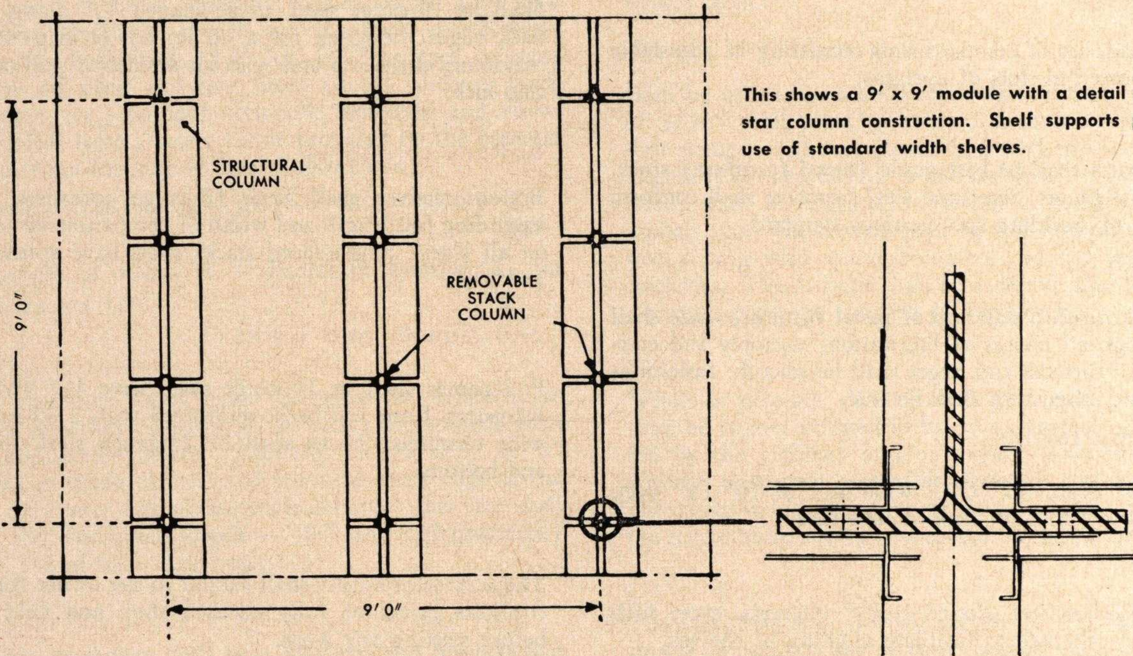
drawings

The successful bidder shall submit to the owner for approval triplicate prints of fully detailed shop and field drawings before starting any work.

convertible stack construction



In planning the modern library, more emphasis is being placed on including small areas for reading, staff work, carrels, offices, seminars, and audio-visual use. This problem can be most economically solved by the use of Snead convertible construction, wherein the columns supporting the deck floors are spaced on a nine-by-nine-foot module. This module permits the use of much thinner and less expensive floor slabs than is possible with conventional construction. Intermediate stack columns are removable so that areas nine-by-nine-feet may be converted to reading areas or for other uses.



This shows a 9′ x 9′ module with a detail of the star column construction. Shelf supports permit use of standard width shelves.

specifications for convertible (modular) book stacks

scope

Set forth here are the specifications for a high-quality modular book-stack installation, as manufactured by The Globe-Wernicke Co. Anything not listed in the specifications but shown on the drawings, and vice versa, shall be supplied.

type of stack

Stacks are compartments consisting of adjustable shelves supported between and by upright columns, as detailed in the STACK COLUMNS and ADJUSTABLE SHELVES paragraphs.

a. Work included in the Library Stack Contract, to be furnished and installed:

(1) ....tiers of structural columns.

(2) All concrete slabs, supported by stack columns, including necessary reinforcing, framing, shoring and form work.

(3) Non-structural book stack columns, shelves and accessories as indicated on plans and hereinafter specified.

(4) Straight type stairs (or return type) and railing from tier 1 to tier ......

(5) Metal enclosure for stairs, (Elevator, booklift, ducts, etc.)

(6) Carrel partitions and desks.

(7) Insulated partitions and doors.

(8) Wire mesh partition and doors.

(9) Newspaper shelves.

(10) Book stack accessories.

(11) Provisions to receive electrical work as specified.

materials

Sheet steel parts shall be best grade (metal furniture) stock, open hearth, cold rolled, annealed, pickled and U. S. standard gauge.

Structural steel members shall conform to the A.S.T.M. building specifications standard.

workmanship

The highest workmanship standard of the metal furniture trade shall prevail through all phases of fabrication, assembly and erection. Exposed surfaces, edges, nuts, heads of bolts and rivets shall be smooth. Fastenings shall be secure, alignments shall be true.

stack columns

The column shall be not less than 16-gauge tubular steel, its single-tier length slotted at 1″ intervals; any 3 consecutive slots differing in shape to facilitate aligning and leveling of the adjustable shelves.

structural columns

This column shall be designed to support all dead and live loads, the live load being 120 lb./sq. ft. minimum; the shape may be T, angle or other. Spacing of the columns is shown on the drawings (usually 9′0″ x 9′0″). Structural columns shall be drilled to receive shelf supports and can be supplied in multi-tier lengths.

adjustable shelves

The shelves shall be not less than 18-gauge steel, triple-flanged along the front and back edges, single-flanged along the two ends.

End brackets of shelves shall be not less than 16-gauge steel, extend 6′ above the shelf surface, and formed with 5/16″ outward flanges along the front and top edges. These brackets shall have hooks and a lug to engage the column slots.

Stack compartments shall measure 3′0″ between column centers. Each compartment shall contain 7 shelves.

Shelf depth shall be 8″ (nominal) for 85%, 10″ (nominal) for 10% and 12″ (nominal) for 5% of total shelf order. Periodical, newspaper, record storage and other types of shelf shall be as shown on the drawings.

end panels

The end panels of each stack range shall be not less than 18-gauge steel, full height and width of stack, triple-flanged on the vertical edges to a depth of not less than 1-3/16″, and trimmed at the top with 16-gauge steel bands.

closed ends

Closed stack ends shall be full depth of both single and double faced bottom shelves and of 18-gauge steel, reinforced to maximum strength to provide for rigid installation. Corners shall be formed to a ¾-inch radius and double flanged.

stairs and metal enclosures

The stairs shall be standard book-stack construction, designed for a live load of 50 lb./sq. ft., and of the extent shown on the drawings. Risers shall be not less than 14-gauge steel.

Treads shall be non-slip metal, such as Bronzalum, without perforation.

A continuous pipe and bracket handrail shall be provided for one side of the stairs; doors shall be hollow, insulated metal.

The stairwell, elevator shaft and duct shall be enclosed in not less than 18-gauge steel, reinforced to prevent buckling, noise and vibration.

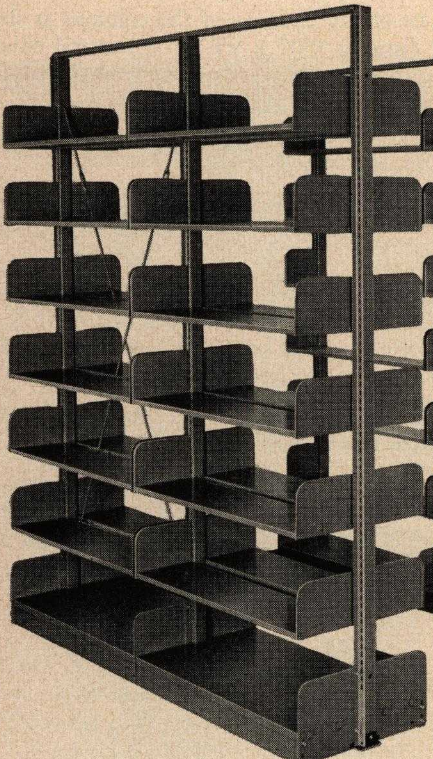
accessories (optional)

The exposed end panels shall be equipped with a V-shaped range indicator, formed to hold 3″ x 5″ cards on both surfaces. Each adjustable shelf shall have 1 snap-in label holder. Each adjustable shelf shall have ...... book support(s).

drawings

The successful bidder shall submit to the architect for approval triplicate prints of fully detailed shop and field drawings before starting any work.

free standing / non-free standing stacks



free-standing stacks single- and double-faced

Free-standing stacks are so designed as to be entirely self-supporting and requiring no tie-in with adjacent walls or structures. Each compartment is equipped with one fixed bottom and six adjustable shelves and has a closed base. Compartments are regularly 7'6" high and 3' wide on centers. Ten-inch bottom shelves are furnished with 8- and 10-inch deep adjustable shelving; 12-inch bottom shelves, with 12-inch deep adjustable shelving. 12-inch base shelves are available for units with 8-inch and 10-inch adjustable shelves if desired.

SINGLE FACE	INITIAL UNIT STOCK NUMBERS	ADDITIONAL UNIT STOCK NUMBERS
With 8-inch adjustable shelves and 10-inch fixed base shelf	S 30810	S 30810-A
With 10-inch adjustable shelves and 10-inch fixed base shelf	S 31010	S 31010-A
With 10-inch adjustable shelves and 12-inch fixed base shelf	S 31012	S 31012-A
With 12-inch adjustable shelves and 12-inch fixed base shelf	S 31212	S 31212-A

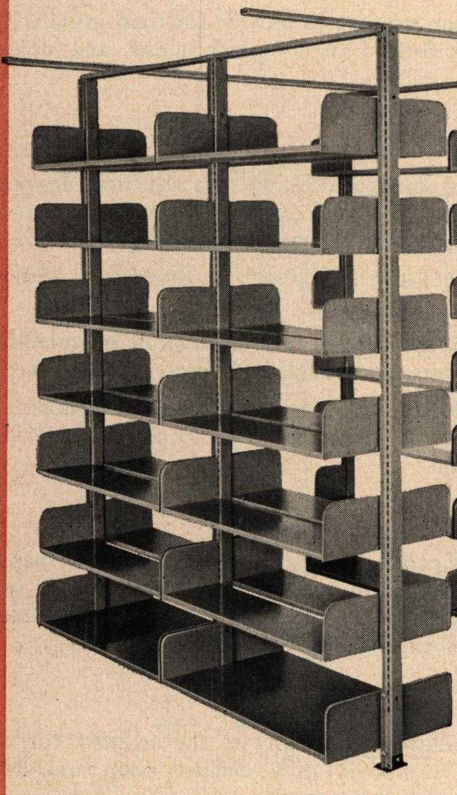
With 10-inch adjustable shelves and 10-inch fixed base shelf	D 31010	D 31010-A
With 10-inch adjustable shelves and 12-inch fixed base shelf	D 31012	D 31012-A
With 12-inch adjustable shelves and 12-inch fixed base shelf	D 31212	D 31212-A
With 18-inch adjustable Newspaper shelves	D 318	D 318-A



non-free standing stacks single- and double-faced

Non-free-standing stacks eliminate bottom brackets, fixed bottom shelf, and base strips. Columns must be anchored to the floor with base clips. Ranges are supported by means of overhead struts spaced at proper intervals to maintain rigidity. Plans or drawings must be included showing stack arrangement so stack struts can be furnished in proper quantity and length. Compartments are regularly 7'6" high and 3' wide on centers. Each compartment is equipped with seven adjustable shelves.

specifications for free-standing (bracket type) book stack construction

scope

Set forth here are the specifications for a high-quality book stack installation, as manufactured by The Globe-Wernicke Co. Anything not listed in the specifications but shown on the drawings, and vice versa, shall be supplied.

type of stack

All specifications are based on the bracket type of book stack construction: Shelf supporting members consist of columns, spaced 36″ O.C., holding the adjustable shelves in cantilever fashion. Double-faced stacks shall be free standing without floor anchorage or lateral bracing; and so constructed that any one compartment in a range can be removed without disturbing adjacent compartments. Single-faced stacks shall be anchored to walls with concealed angles attached at the columns. Double-faced stacks shall be braced diagonally approx. every third compartment with 5/16″ diameter rod.

guarantee

The contractor shall guarantee the installation against defective material and workmanship for one year after acceptance of work and receipt of final payment. The contractor shall replace defective work as soon as notified in writing, without expense to the owner, provided such defect in workmanship and material is the fault of the contractor.

materials

Sheet steel parts shall be best grade (metal furniture) stock, open hearth, cold rolled, annealed, pickled and U. S. standard gauge.

workmanship

The highest workmanship standard of the metal furniture trade shall prevail through all phases of fabrication, assembly and erection. Exposed surfaces, edges, nuts, heads of bolts and rivets shall be smooth. Fastenings shall be secure, alignments shall be true.

stack columns

Shall be 7′6″ high, unless otherwise specified, and consist of 2 16-gauge channels flanged outwardly, electrically spot welded together and spaced for maximum strength. Slots shall be punched on the opposing sides of the column. These slots shall be at 1″ intervals along the column length; any 3 consecutive slots shall differ in shape to facilitate aligning and leveling of the shelves.

column base clips

Column base clips shall be 11-guage steel with provision for bolting to column and floor. Clip shall have composition pad to prevent damage to floor covering.

adjustable shelves

Shall be not less than 18-gauge steel, triple flanged along front and back edges to a depth of ¾″. They shall withstand a load of 40 lb./sq. ft. with maximum deflection of 3/16″. A snap-on locking device shall link them with the brackets. Shelf depth shall be 8″ (nominal) for 85%, 10″ (nominal) for 10% and 12″ (nominal) for 5% of total shelf order. Shelf brackets of 16-gauge steel shall engage in column slots and permit easy adjustment without use of tools. Brackets shall have 3 hooks and a safety lug for engaging the column. Hooks shall be blistered to provide a snug fit; bracket edges shall be formed to prevent damage to books.

base shelves

Base shelves shall be 18-gauge steel, with ¾″ front edge, flanged and folded. Ends shall be flanged to engage bottom bracket clips. Depth of double-faced shelves shall be continuous. A formed, 18-gauge steel kick plate shall serve as closure between bottom shelf and floor, and so designed as to accommodate floor irregularities. Bottom brackets of 11-gauge steel shall bolt to the columns.

top ties

14-gauge, top tie U channels shall be bolted to the tops of the columns of each stack, with flanged side down.

finish

All metal parts shall be neatly finished in baked enamel in accordance with the best practices of the steel furniture trade.

closed ends

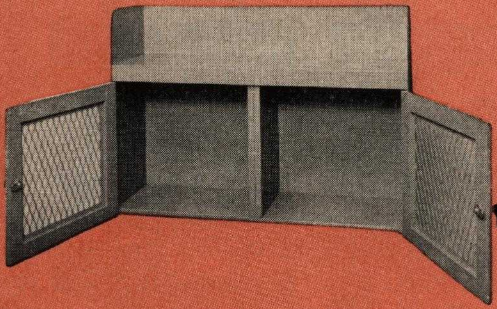
Closed stack ends shall be full depth of both single and double faced bottom shelves and of 18-gauge steel, reinforced to maximum strength to provide for rigid installation. Corners shall be formed to a ¾-inch radius and double flanged.

drawings

The successful bidder shall submit to the architect for approval triplicate prints of fully detailed shop and field drawings before starting any work.

details and accessories

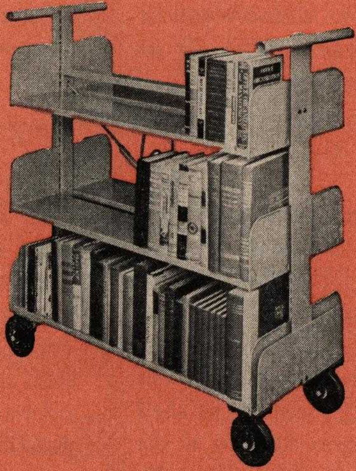
book lockers



fabricated of steel, they are advantageously used in stack area or with carrels in carrel area. Have variety of uses including rare book and manuscript storage where free access is not desirable; individual student use for storage of research materials, etc. All lockers are equipped with locks.

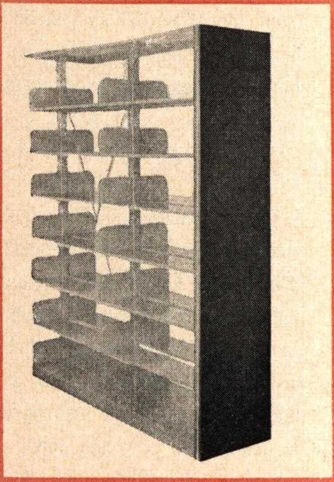
book trucks

Stock Nos. — BT-608, BT-610, BT-612



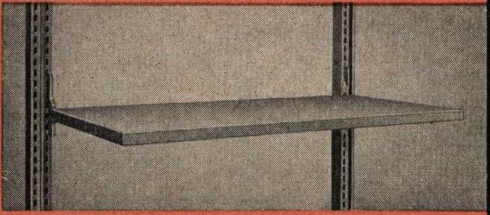
made of steel, they are designed for efficient, quiet operation. They are equipped with rubber-tired wheels and silent, friction-free ball bearings. Truck will accommodate bracket-type bookshelves.

closed end panels



provide an attractive and finished appearance for the stacks. Ends are available for both single- and double-faced stacks in all depths.

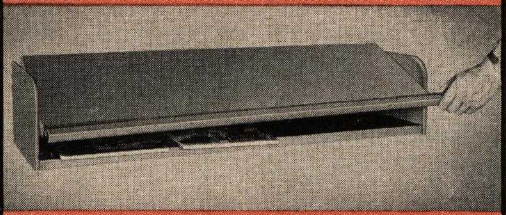
newspaper shelves



equipped with flush type supporting brackets, are 18" deep. Continuous shelving the length of a stack range is possible.

Stock No. NS-18

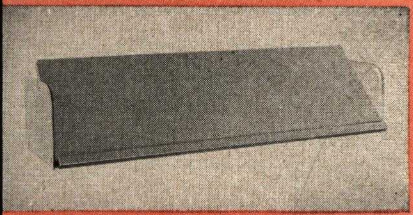
hinged periodical display shelf



permits full-view display. This shelf is pivoted so that when the front is lifted a storage space for back issues is exposed.

Stock No. HPS-12

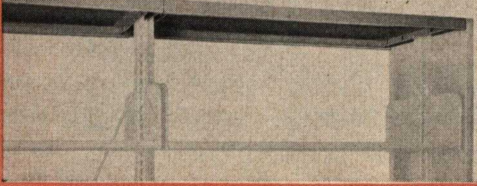
fixed periodical shelf



is also a sloping shelf for displaying periodicals. A flat shelf with flush brackets may be placed directly below this shelf to house back issues.

Stock No. FPS-12

top covers



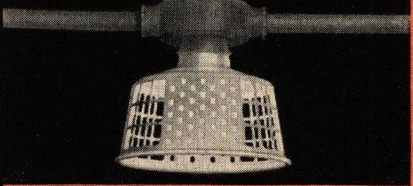
are available for both single- and double-faced stacks. They enhance the appearance of the stacks and provide protection from dust.

study carrels

are supported by stack columns. Edges of the linoleum tops have stainless steel binding.

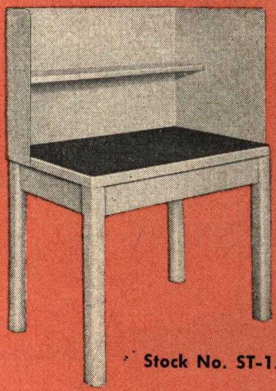
Stock No. SCD-36 without drawer
Stock No. SCDD-36-1 with drawer

aisle light reflector

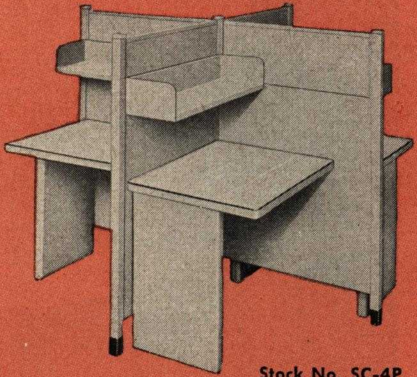


is scientifically designed especially for narrow aisle illumination. The heavy gauge, satin finish aluminum is punched to give uniform light distribution. Baffles facing the aisle axis shield against glare. Stock No. SALR-5203.

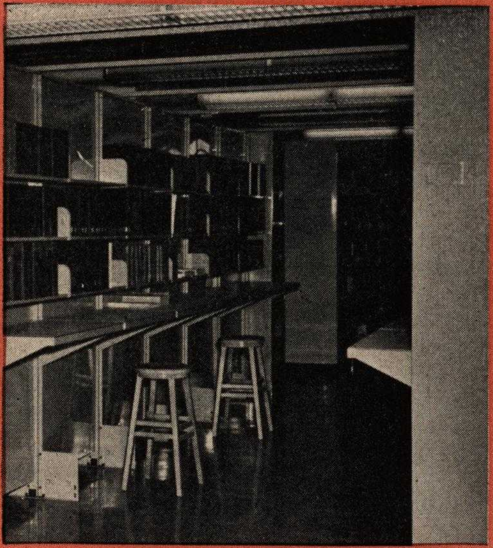
free-standing study carrels



Stock No. ST-1A

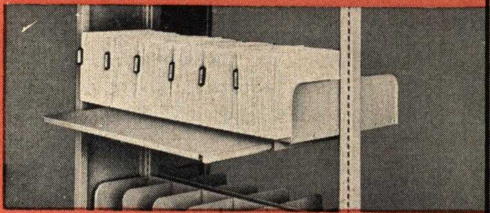


Stock No. SC-4P



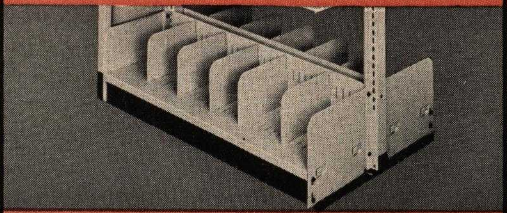
Globe-Wernicke has specially designed free-standing study carrels that provide the greatest degree of flexibility possible for library areas. Made up of standard components, these carrels may be assembled in a great number of arrangements to suit individual requirements. They may also be disassembled and then re-assembled into other combinations at any time when needs might change. Provision has been made for electrical wiring so that individual fluorescent lights, dictating machines or electrical calculators may be connected directly in outlets on the carrel. Free-standing table and "hook in" type carrels are also available.

sliding reference shelf



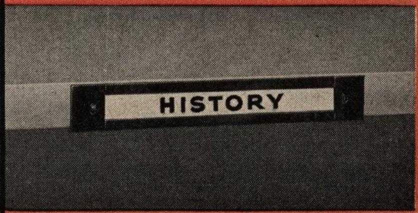
expedites easy reference. Used only with double faced sections without sway braces or back panels. Available for 10- and 12-inch shelves. Stock Nos. SRS-10; SRS-12

pamphlet filing



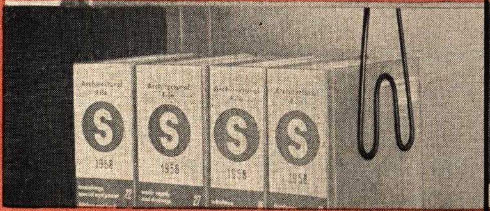
Pamphlet shelves offer the ideal solution for storage of pamphlets or folders. Vertical metal dividers engage in slots — easily adjustable and removable. Indexed guides are available for use with pamphlet filing shelves.

snap-on label holders



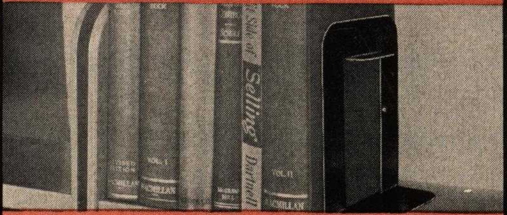
finished in black, snap easily into place on the front of the shelf.

wire book supports



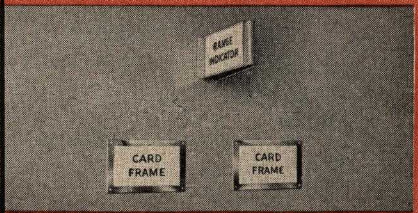
made of heavy gauge wire, engage in the shelf above, are readily removed or adjusted. Supports are available for 8-, 10-, or 12-inch shelf depths. Stock Nos. WS-8; WS-10; WS-12

plate book supports



so designed that they can not become lost between books. Available in two heights.
Stock No. BE-9 . . . 9″ high
Stock No. BE-1 . . . 5¼″ high

range indicators

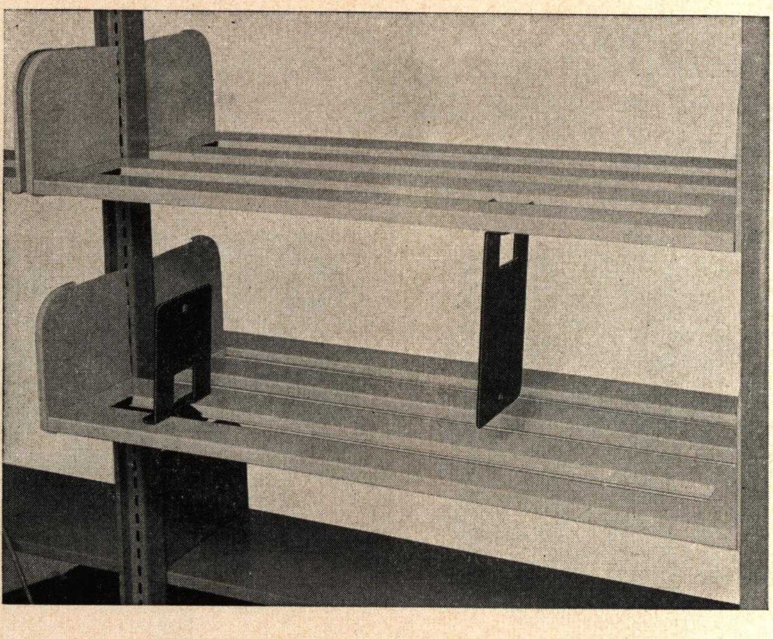


and card frames, for use on closed panel ends, accomodate 3″ x 5″ cards. Indicators may also be attached to end column.
Card Frame, No. CFH-35
Range Indicator, No. RI-6

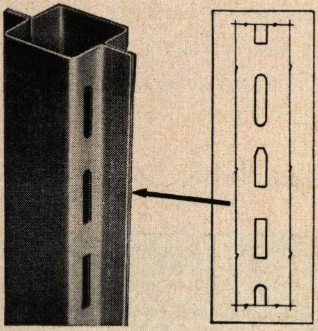
details and accessories

"trac-shelf" and support

"Trac-Shelf" is made from 18 gauge steel. Furnished with "one track" book support, 6″ high. Support can be hung, if desired, from shelf above. Holds firmly, locked in place. 9″ high "Trac" book support is available as optional extra.



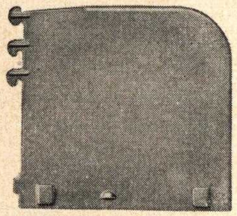
column construction — guided shelf adjustment



Book stack columns are constructed of heavy gauge steel of at least 16-gauge. Each free-standing column is made up of two half sections which are securely welded together to form an extremely strong and rigid member. Multi-tier columns vary in gauge and section according to the load which must be accommodated.

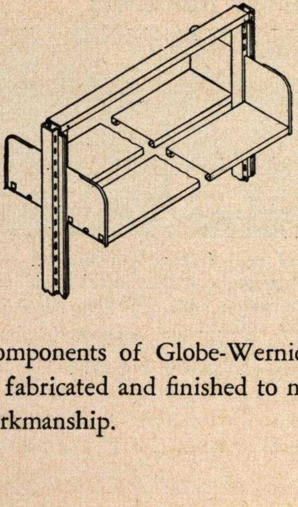
G/W Snead guided shelf adjustment solves the problem of levelling shelves when installing or moving them. Adjusting slots are of three different shapes; are so arranged that slots of any one shape are at the same level throughout the stack. This is a time- and labor-saver for the library staff.

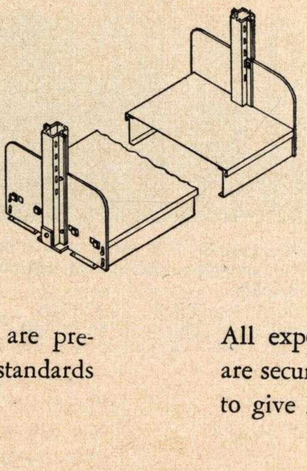
book shelf brackets

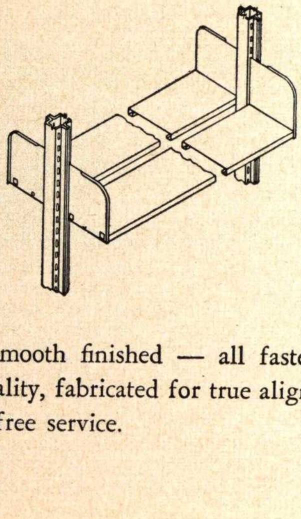


Shelf brackets are formed of heavy 16-gauge steel with all exposed edges smoothly rounded to prevent damage to books. These hooks, providing maximum support, are blistered so as to make a snug fit in column slots. A safety feature requires that the front of the shelf be lifted before the shelf can be removed from the stack.

shelf details





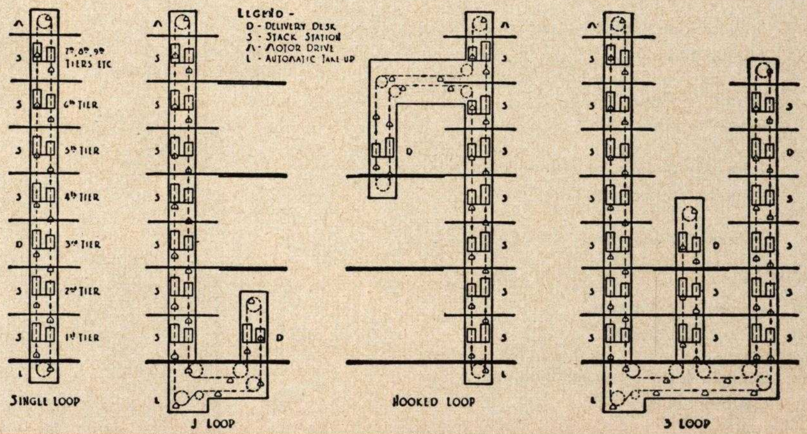


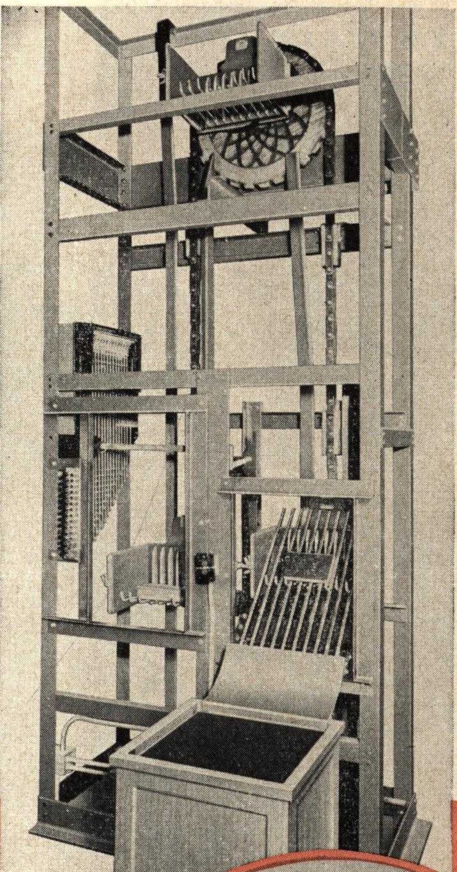
All components of Globe-Wernicke Bookshelves are precision fabricated and finished to meet the highest standards of workmanship.

All exposed edges are smooth finished — all fastenings are secure and of best quality, fabricated for true alignment to give lifetime, trouble-free service.

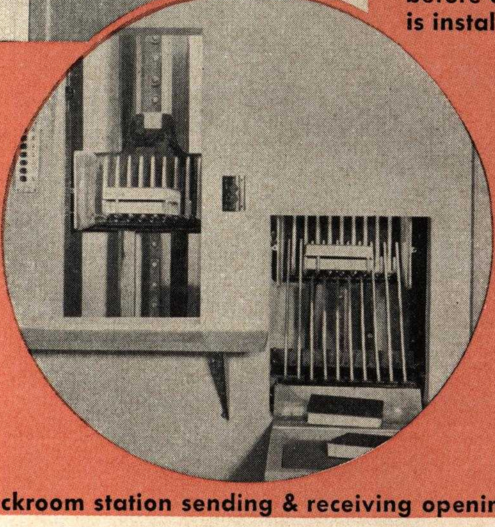
Globe-Wernicke (SNEAD) automatic conveyor

The Snead Conveyor is designed to serve the delivery desk or desks with the material needed from the book stacks. It also simultaneously takes material back again for reshelving. Such a conveyor is economical and efficient. The conveyor consists of an endless chain from which the carriers are suspended. The conveyor operates in one plane and runs both horizontally and vertically to serve as many stations as may be desired. Its use makes it possible to store books remotely from the delivery desk and still give quick, efficient and economical service. The necessity for the attendants to use stairs and elevators for getting books is eliminated. The saving of time is beneficial both to the staff and readers. The Snead conveyor has also been used with success and economy in office buildings for the distribution of mail and the inter-floor delivery of correspondence and files.

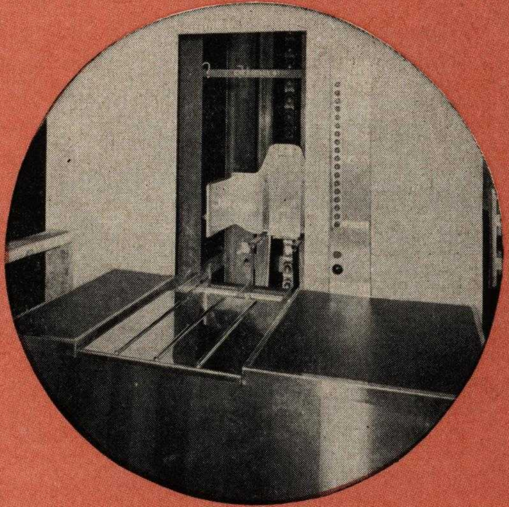




typical stackroom station before ornamental enclosure is installed.



stackroom station sending & receiving openings



SNEAD automatic loading device station

operation

To start the conveyor, the attendant merely has to push a button and the cars begin to move after a short pause and a warning buzzer. Pressing another button will stop the conveyor and there are emergency stops at each loading opening to prevent improperly loaded material from going through the shaft.

The conveyor operates at a speed of from 60 to 100 feet per minute continuously and by pressing one of a series of push-buttons, the material loaded on a car will be automatically discharged at the desired station. Safety devices are simple and effective.

Snead automatic loading device

First used in United Nations Secretariat Building is the new Snead Automatic Loading Device with the Snead Conveyor. (Illustrations and diagrams above.) Simple automatic loading and unloading operation. Operator places material in loading recess on a counter-top and pushes button for desired destination. First empty carrier to reach station automatically picks up material; carries it to desired station and unloads automatically. Material rests upon receiving slide until picked up. Light signals its arrival. When many loads are going to one station, repeat button is pushed, and operator feeds material into loading areas.

Method of wiring finished end when separate control of aisle lights is required.

LIBRARY BUREAU bracket stack is a true unit type of stack, possessing exclusive advantages and improvements. Each section of this stack is an integral component, consisting of shelves, an upright, an individual tie channel and bottom spreader.

STEEL BRACKET STACK ADVANTAGES—Bracket stacks weigh less than other types; this reduction in weight saves on the cost of special construction to support the stacks as well as on the cost of transportation.

Bracket stack shelves are easily adjusted in height without removing the books from the shelf.

Bracket stacks are the only type of stacks where 8″, 10″ or 12″ shelves can be used interchangeably at any time, anywhere in the stacks, without disturbing the uprights or using any special tools. Canopy Tops and End Panels are available.

SPECIFICATIONS—Standard stack heights are 7′6″, 5′6″, and 3′6″. Shelves are 8″, 10″ or 12″ deep as ordered. Units are 3′ long on centers.

FINISH—Baked enamel colors of **Gray-Rite,** Gray Mist, Surf Green or Heather Beige are applied by electrostatic process assuring an even coating.

◀ Single-tier freestanding unit type wall and double section bracket stacks, 8″ shelves and 10″ base.

The fixed base bracket extends through the center of the upright from face to face of the range, providing a gusset to assure transverse stability. From the top of the base bracket to a point 55¼″ in height, there will be a tapered web reinforcement passing through the upright assuring a minimum radius of gyration.

STACK WEIGHTS—Assuming that the ranges are spaced 4′6″ apart on centers, with only 3′ wide aisles, the weight per square foot of the gross area of the room for #75266D stacks, having shelves 8″ deep is 63½ pounds, which also includes the dead load of books.

The live load, for persons in stack aisles, is 40 pounds per square foot of the gross area.

Single-tier double-faced bookstacks loaded with books have a concentrated load of 900 pounds at the base of an intermediate stack column, and 450 pounds at the base of an end stack column.

A—typical aisle end upright B—typical intermediate upright
C—typical wall end upright plan

Multi-tier Bookstacks with concrete or cellular steel decks are entirely self-supporting. They should be erected after the building walls are in place.

As far as possible, range lengths should be multiples of 3′ on centers of uprights. For depth of ranges across the ends allow 9¼″, 11¼″ and 13¼″ for wall stacks—16½″, 20½″ and 24½″ for double-faced stacks—for 8″, 10″ and 12″ depth shelves respectively.

Standard stack tiers are 7′6″ high, measuring from top to top of deck floors.

CELLULAR STEEL DECKS—Cellular Steel Decks are 2″ in thickness. This minimum thickness is important where headroom is to be gained and over-all height saved. They are especially advantageous for placing multi-tier stacks in existing buildings or where weight must be eliminated. Metal raceways conceal the wiring in a method approved by Underwriters' Laboratories Inc.

CONCRETE DECKS — Deck floors of reinforced concrete are 3½″ minimum thickness. All reinforcing electric conduits, etc., are concealed within the concrete and approved by the Underwriters' Laboratories, Inc.

For complete information, phone your nearest Remington Rand office or write to us.

◄

STACK WEIGHTS—Shelf load, including books, shelves, brackets, and uprights, averages 30 lbs. per cubic foot.

Floor loads, including weight of floor framing: Reinforced concrete floors (3½ in. thickness)—44 lbs. per square foot, gross area. Same with floor covering—47 lbs. per square foot, gross area. Cellular steel floors—12 lbs. per square foot, gross area.

For column loads, assume 60 lbs. per square foot of aisle area for live load, and reduce the figure 5% for each deck below the top deck.

The table of loads below is for **Library Bureau** 8 in. double-faced bracket stacks, spaced 4 ft. 6 in. apart on centers, and signifies total loads at the bases of the uprights for stacks (7 ft. 6 in. high, floor to floor) with a reduction of 5% for each floor from top down. Weights include bookstacks, books, floors (dead load) and live load.

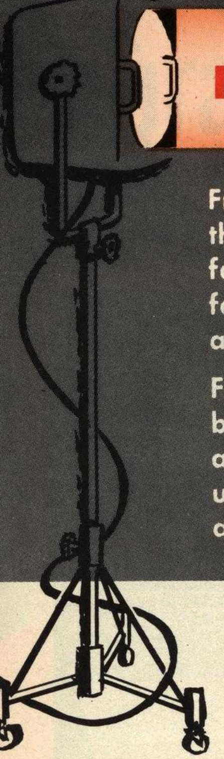
add to the color, life and beauty of theaters, school and college auditoriums, public buildings and other institutions

FRANK ADAM
STAGE LIGHTING
CONTROL SYSTEMS



MODERN STAGE LIGHTING CONTROL

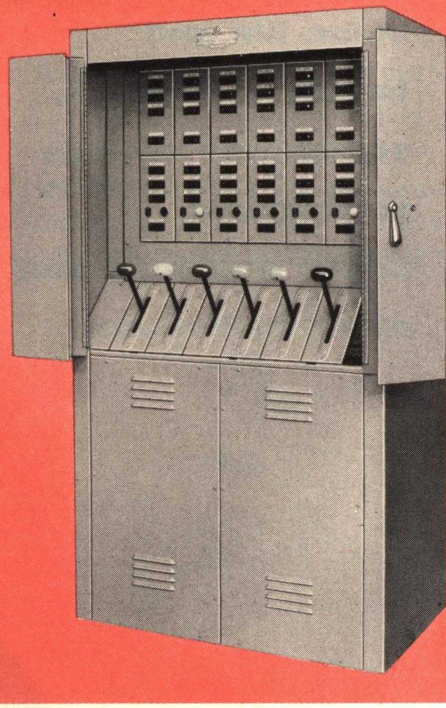
Frank Adam Electric Company is one of the country's oldest and foremost manufacturers of Stage Lighting Control Boards for schools, colleges, theaters, municipal auditoriums, and other institutions.

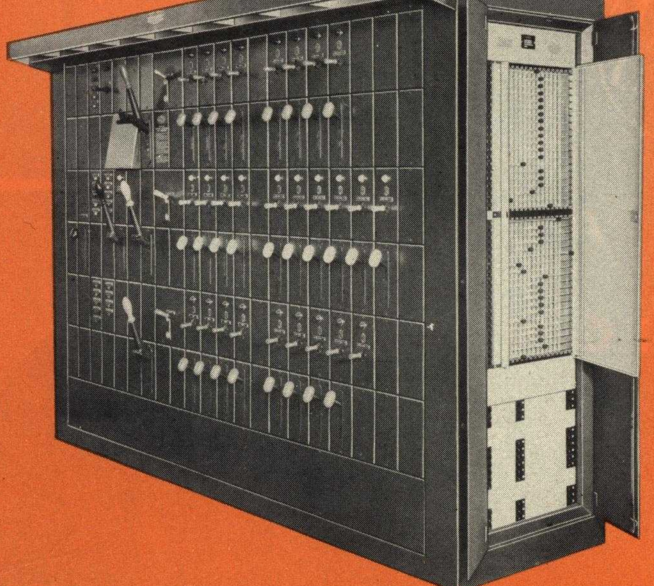
For more than 65 years this company has been producing lighting controls that have added substantially to the color, beauty, usefulness and enjoyment of all types of auditoriums - - small or large - - modern equipment that embodies all the latest features in design and construction.

Four basic types of stage control boards are manufactured by Frank Adam - - - manual control, modified pre-set remote control, multiple pre-set switching and dimming remote control, and mobile color lighting control. Dimmer Boards are of the auto-transformer and reactor types.

MANUAL DIMMING STAGEBOARD

Completely self-contained, this free-standing dimmer control board is ideal for small auditoriums. Dimmers are of auto-transformer type with each dimmer controlling all circuits of a color group. Circuit Breakers used in dimmer control provide overload protection and a means for disconnecting dimmers. Branch circuit breakers on each dimmer control may be used for circuit switching. Boards can be furnished with or without doors and with interlocking shaft for master control. Front-connected and completely accessible from the front, these boards can be placed against the wall, thereby requiring less space.





MANUAL SWITCHING AND DIMMING

Self-contained and free-standing. Dimmers are of the manual auto-transformer type and are readily accessible from the rear. Doors can be provided over the front and rear of board. Manual switching may be direct or set-up on group master control. Group master switches may be further set-up for stage master switching. Switches are of the silent operating type. Interlocking dimmers on group master shafts, which can be vertically interlocked for grand master control.

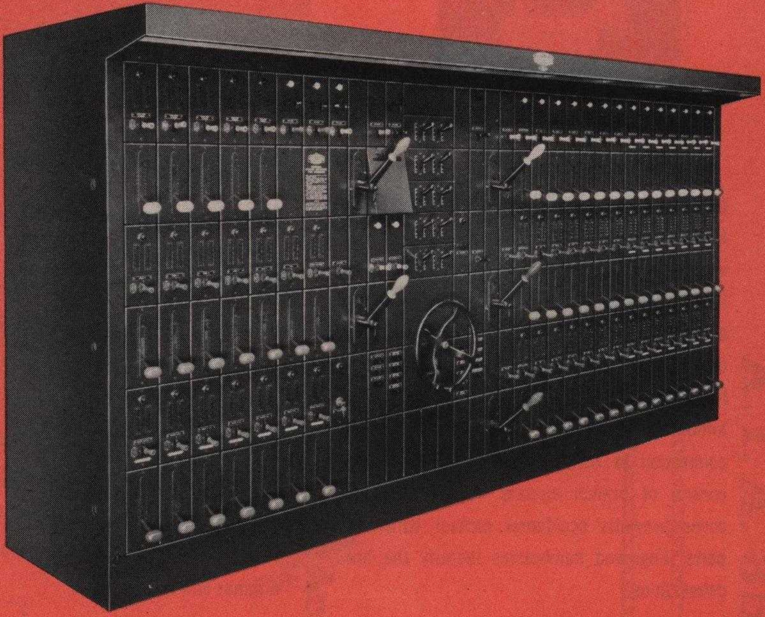
for theaters, schools and other auditoriums

Outstanding features of FA lighting control boards

- Unit construction of switching and dimming control units facilitating future expansion.
- Formed sheet steel construction.
- All switching and dimming components mounted on switchboard framing independent of cover plates.
- Dead front and rear — no live parts exposed.
- All internal wiring made at factory, terminating on conveniently located terminal strips.
- All control boards tailored to meet specific requirements.
- Specially designed dimmer operating lever handles, which indicate at a glance whether operating handle is in position for individual operation of dimmer or interlocked for group or master control.
- Specially designed slot closers, *completely* enclosing slot in dimmer control plate, through which dimmer handles operate.

REMOTE SWITCHING MANUAL DIMMING

Complete system includes stageboard and a remote board off stage. System is available with modified remote switching or full remote switching; the latter being available with multi-scene pre-selective switching. Also available with interlocking dimmers on a group master shaft which can be vertically interlocked for grand master control. Color master levers can be further interlocked on a slow motion wheel drive for operation of a large group of controls. Also for cross control, which means that certain groups of dimmers may be raised (brightened) simultaneously while other groups are lowered (dimmed). Dimmers are easily accessible from the rear of the board.

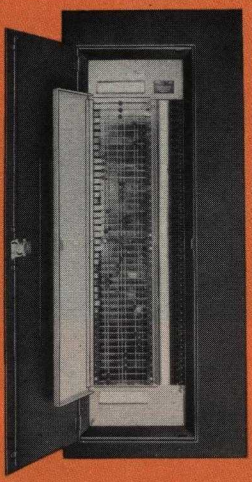


REMOTE SWITCHING and REMOTE DIMMING

Illustration shows a console pilot board for a remote switching and dimming system on which magnetic amplifier type dimmers were used. However, motor driven or auto-transformer types are also available. Advantages of system include pre-set dimming and switching for an unlimited number of scenes. Also permits proportional dimming, scene to scene fading at any desired speed and super-imposing of one scene on another. Miniature low voltage intensity selectors provide accurate intensity control plus smooth operation. Because they are miniature, the pilot board requires a minimum of space. Also enables location of dimming equipment off stage, and if desired, can be divided and located at two separate places. Dimming control may be extended to one or more stations or an additional pilot board.

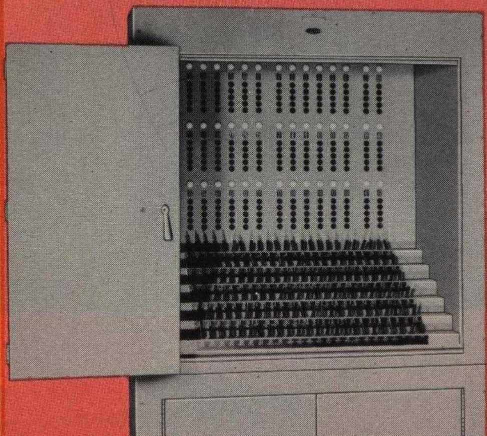
CROSS CONNECTION PANELS

Increase use and flexibility of ANY stageboard. Stage lighting circuits are arranged to be selectively connected either individually or in groups and at any time re-connected to control units either dimmed or undimmed, thus permitting a maximum of lighting circuits to be used with a given number of dimmers. Several types of cross connection panels are available. These panels can be built as an integral part of the stageboard or mounted separately away from the stageboard.



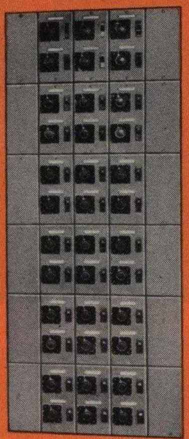
SLIDING PLUG AND BAR TYPE

Consist of horizontal bus bars connected to the branch circuits through a circuit breaker providing overload protection and switching control along with vertical bars connected to the dimmer control unit on switchboard or to an undimmed control unit. Slider plugs on the horizontal bars are furnished with insulated knobs which provide means for tightening connection to vertical bars permitting group control of branch circuits. A slotted lucite cover prevents accidental contact with live parts. Engraved nameplates identify the bus connections.



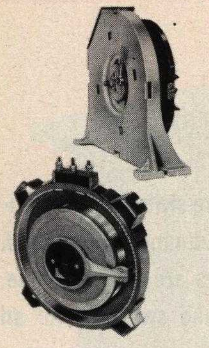
PLUG AND JACK TYPE

Consist of retractable cords and plugs for branch circuit connections and plugin jacks for dimmed or undimmed control units. The cords and plugs are connected to the branch circuits through circuit breakers, providing overload protection and switching control. The jacks are connected in groups of two or more to the dimmed or undimmed control units. Two or more cords and plugs can be plugged onto the control unit jacks for group control of branch circuits. Lights can be provided to indicate when plugin jacks are energized. Engraved nameplates identify dimmer and load circuits.



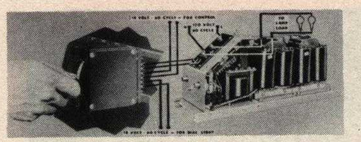
ROTARY SELECTOR SWITCH TYPE

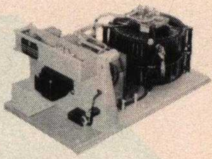
Cross connecting panels consist of heavy duty rotary selector switches, of the load break type operable under load. These rotary-selector switches can be furnished to provide from 2 to 12 positions. Each branch circuit is provided with its individual rotary selector switch connected through a circuit breaker to provide overload protection and switching control. The selector position contacts are connected to the dimmed or undimmed control unit. Engraved nameplates identify the positions on the selector switches and the branch circuit connections.



AUTO-TRANSFORMER DIMMER

This is the most popular type. Consists of an insulated copper conductor wound around a circular core of laminated transformer iron. Sliding contact is made with the winding to permit contact with each turn of the winding, resulting in flickerless dimming. Any load from a few watts to the full rated capacity of the dimmer can be controlled. Loads can be added to or taken from dimmers without affecting dimming characteristics. These dimmers are available in capacities of 2500, 6000, 6600, and 8000 watts and are adaptable for manual or motor-driven control.





MAGNETIC AMPLIFIER DIMMER

This dimmer consists of static core and coil transformers and reactors; dry disc rectifiers and resistors. There are no electronic tubes, no relays or moving parts. Speed of response is practically instantaneous. The dimmer is controlled by small indicating controllers. The load range for incandescent lamp loads is 30-1 ratio.

ARE YOU ON THE RIGHT TRACK?

SUGGESTED SPECIFICATIONS FOR CURTAIN TRACKS

TRACK AND CARRIER ASSEMBLY	AUTOMATIC DEVICES COMPANY:	APP. TRACK SHAPE SIZE	SELECTOR GUIDE
	**CURVIT-SURE Model 350 (or 340) Curtain Tracks** Curtain Tracks shall be of 12 gauge aluminum I-channel construction, with inverted L-shaped flanges on each side of center beam to assure channel rigidity and provide two separate parallel treads for carrier wheels and runways for cord. Each curtain carrier shall be of nylon-coated steel construction and shall include two neoprene-tired ball bearing wheels. Each curtain carrier shall consist of a free-moving plated swivel to accommodate curtain snap hook. End pulley blocks shall be equipped with special noise-proof fibre ball bearing wheels to include brass retaining ring for locking ball bearing to wheel. The manufacturer shall furnish an adjustable floor pulley for increasing or decreasing cord tension. Operating cord shall be of ¼″ diameter, extra quality yarn with wire-center. Model 350 (or 340) as manufactured by Automatic Devices Company of Allentown, Pa.	2¼″ x 2¼″	Minimum Radius: 6′. For all lengths with medium-to-heavy weight curtains. Sketches reflecting radius of curve must be submitted. Obtainable as single (Model 340) or double-sectioned (Model 350) unit.
	**SILENT-STEEL Model 280 Curtain Tracks** Curtain Tracks shall be of 14 gauge full steel construction, entirely enclosed except for slot in bottom, each half to be in one continuous piece. Each curtain carrier shall be supported on a ball-bearing by two special composition rubber wheels held to ball-bearing by rustproof nickel plated rivet, such wheels rolling on two separate parallel treads. Each curtain carrier shall consist of a free-moving plated swivel and sufficient trim chain to accommodate curtain snap hook. End pulley blocks shall be adjustable and shall be equipped with steel ball-bearing wheels adequately guarded. Rubber bumpers shall be inserted between each curtain carrier to function as noise eliminators. The manufacturer shall furnish two end stops for placement at each track end and an adjustable floor pulley for increasing or decreasing cord tension. Stretch-resistant operating cord shall have fiberglas center and shall be of ⅜″ diameter, extra quality yarn. Model 280 as manufactured by Automatic Devices Company of Allentown, Pa.	3″ x 3″	For all lengths with any weight curtains. Special models available to produce quietest possible curtain movement.
	**BESTEEL Model 170 (or FENESTEEL 260) Curtain Tracks** Curtain Tracks shall be of 14 gauge full steel construction, entirely enclosed, except for slot in bottom, each half to be one continuous piece. Each curtain carrier shall be of plated steel construction, supported on self-lubricating bearings by two special composition rubber wheels held to block by rust-proof nickel plated rivet, such wheels rolling on two separate parallel treads. Each curtain carrier shall consist of a free-moving plated swivel to accommodate curtain snap hook. End pulley blocks shall be adjustable and shall be equipped with steel ball bearing wheels adequately guarded. The manufacturer shall furnish two end stops for placement at each track end and an adjustable floor pulley for increasing or decreasing cord tension. Stretch-resistant operating cord shall have fiberglas center and shall be of ¼″ diameter, extra quality yarn. Model 170 (or Fenesteel 260) as manufactured by Automatic Devices Company of Allentown, Pa.	2″ x 2″	For lengths up to 36′ with light and medium weight curtains. Model 170 double-sectioned unit; Model 260 single-sectioned unit. Special models available to produce quietest possible curtain movement.
	**RIG-I-FLEX Model 140 Curtain Tracks** Curtain Tracks shall be of 11 gauge aluminum I-Beam construction. Each curtain carrier shall be of steel construction and shall include two neoprene-tired ball bearing wheels rolling on two separate parallel treads. Each curtain carrier shall consist of a free-moving plated swivel to accommodate curtain snap hook. End pulley blocks shall be equipped with steel ball-bearing wheels adequately guarded. The manufacturer shall furnish an adjustable floor pulley for increasing or decreasing cord tension. Track shall be rigidly supported from ceiling clamps or hanging clamps. Stretch-resistant operating cord shall have fiberglas center and shall be of ¼″ diameter, extra quality yarn. Model 140, as manufactured by Automatic Devices Company of Allentown, Pa., shall function as a "bend-it-yourself" curved track with special ball-bearing idler brackets and ball-bearing spindles obtainable from the manufacturer. Model 141, as manufactured by Automatic Devices Company of Allentown, Pa., shall function as a straight track.	2½″ x 1″	Minimum radius: 6″. For all lengths with medium-weight curtains. Curved on-the-job. "Walk-along" unit (Model 142) also available.
	**FLEX-I-TRAC Model 130 Curtain Tracks** Curtain Tracks shall be of 13 gauge aluminum I-Beam construction. Each curtain carrier shall be of stiff wire construction supported on two self-lubricating nylon wheels rolling on two parallel treads. Curtains shall be "walked along" and shall traverse curves formed on-the-job. Track shall be rigidly supported from hanging clamps or ceiling brackets. Model 130 as manufactured by Automatic Devices Company of Allentown, Pa.	1½″ x ¾″	For short-to-medium lengths with light-to-medium weight cyclorama curtains. Curved on-the-job.
	**ADC DRAPERY TRACK CORPORATION:** **TRAK-EZE Model 210 Drapery Tracks** Curtain Tracks shall be of aluminum construction, entirely enclosed except for slot in bottom, and in one continuous piece. Each curtain carrier shall be of plated steel construction consisting of nylon wheel with polyethylene tread, and shall roll along two separate raceways in a single track. Track design shall permit unlimited center overlap. End pulley blocks shall be equipped with nylon ball bearing wheels adequately guarded. Stretch-resistant operating cord shall have fiberglas center and shall be of 3/16″ diameter, extra quality yarn. All moving parts shall be concealed inside the track. Model 210 as manufactured by ADC Drapery Track Corporation of Allentown, Pa.	1½″ x 2″	For lengths up to 30′ with medium-weight curtains. Cord-concealed track installed as single-sectioned unit.
	**SPANOTRAC Model 104 (or 105) Drapery Tracks** Curtain Tracks shall be of aluminum construction, entirely enclosed, except for slot in bottom, and in one continuous piece. Each curtain carrier shall be of plated steel construction supported on self-lubricating bearings by two special composition rubber wheels, rolling on two separate parallel treads. Each curtain carrier shall consist of a free-moving plated swivel to accommodate curtain snap hook. End pulley blocks shall be adjustable and shall be equipped with nylon wheels adequately guarded. The manufacturer shall furnish a floor pulley for hand operation. Stretch-resistant operating cord shall have fiberglas center and shall be of ⅛″ diameter, extra quality yarn. Model 104 (or 105) as manufactured by ADC Drapery Track Corporation of Allentown, Pa.	1″ x 1″	For lengths up to 20′ with light-to-medium weight curtains. Obtainable as single (Model 104) or double-sectioned (Model 105) unit.

FOR INFORMATION ON HOSPITAL CUBICLE TRACKS AND FOR COMPLETE DETAILS AND ILLUSTRATIONS ON ALL ADC PRODUCTS WRITE FOR OUR NEW TWO-COLOR CATALOG AND OTHER DESCRIPTIVE LITERATURE.

STAGE HARDWARE

The smooth and effortless performance of stage curtains is of utmost importance in bringing out the full dramatic value of a stage presentation. In addition to curtain tracks ADC has a diversified line of stage hardware accessories to assure maximum effectiveness of the staging.

ROTODRAPER pivotal fixtures are used for changing the position of curtains. They are easily manipulated to any degree turn and yet provide sufficient tension so that curtain stays anchored in desired position. Carriers are composed of large diameter high strength, high impact plastic wheels which prevent climbing in track channel. ROTODRAPERS obtainable for 280, 170 and 140 tracks and for pipe suspension.

Other ADC Stage Hardware include Adjustable Beam Clamps, Detachable Floor Blocks (see p-4), Clews (see p-4), Spring Snaps, Oval Pipe, S-Hooks, Jack Chain, Eye Bolts, Turnbuckles, etc.

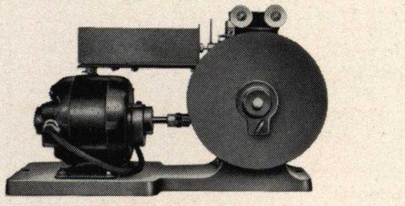
CURTAIN MACHINES

Only automatic control operation can accomplish a smooth, uniform opening and closing of a curtain—at just the right moment and at a constant speed—by the mere flip of a switch. ADC curtain machines are designed to provide all essential curtain movements by remote pushbutton control in a manner surprisingly simple to install and unusually reliable in operation.

A complete line of curtain machinery is obtainable—from 1/35 HP motors up to 5 HP. The TOM THUMB line offers diminutive controllers for opening and closing draperies in homes, offices, funeral homes, etc. while AUTODRAPE, SILVER SERVICE AND HERCULES units are designed for stage spans.

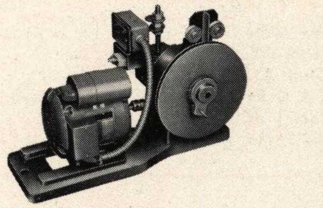
FOR COMPLETE DETAILS AND SUGGESTED SPECIFICATIONS FOR EACH MACHINE WRITE FOR OUR NEW TWO-COLOR CATALOG AND OTHER DESCRIPTIVE LITERATURE.

SELECTOR GUIDE	Recommendations
HERCULES models in 650 and 700 Series have ¾ and 1 HP motors, respectively, 60 cycles, 230 volts, 3 phase (available in other voltages, cycles or currents).	With all ADC tracks of any length.
SILVER SERVICE models in 290 Series have ½ HP motor, 60 cycles, 230 volts, single phase (available in other voltages, cycles or currents).	With all ADC tracks up to 80 ft.
AUTODRAPE models in 93 Series have ¼ HP motor, 60 cycles, 115 volts, single phase (available in other voltages, cycles or currents).	With all ADC tracks up to 36 ft.
AUTODRAPE models in 145 Series have ⅓ HP motor, 60 cycles, 115 volts, single phase (available in other voltages, cycles or currents).	With all ADC tracks up to 50 ft.
TOM THUMB models have 1/35, 1/12 or 1/6 HP motor, 60 cycles, 115 volts, single phase. Machines available for automatic or non-automatic operations; instantly reversible at any point along travel.	With Spanotrac, Trak-Eze, Fenesteel, and Besteel tracks.

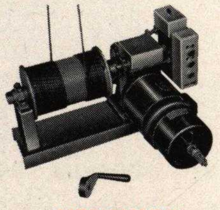


AUTODRAPE
Standard Model 93
¼ HP motor for drawing medium-weight stage curtains. Also available in ⅓ and ½ HP models. App. 20″ x 10″ x 14″.

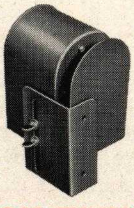
AUTODRAPE
Three Button Stop, Start, Reverse Model 1455
⅓ HP motor for drawing medium-to-heavy-weight stage curtains. Also available in ¼, ½ and ¾ HP models. App. 21″ x 18″ x 13″.



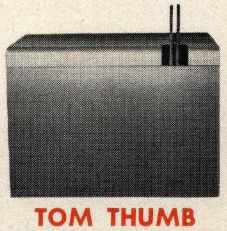
SILVER SERVICE
Standard Stop, Start, Reverse Model 2911
½ HP motor for drawing heavy-weight stage curtains. Also available in ¼, ⅓ and ½ HP models. App. 22″ x 12″ x 11″.



HERCULES
Lift-Brake Model 6507
¾ HP motor for lifting heavy-weight stage curtains. Also available in ½ and 1 HP models. App. 25″ x 25″ x 20″.

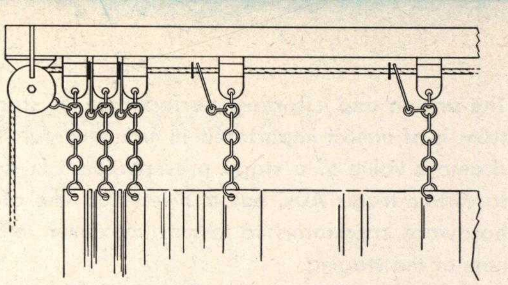


TOM THUMB
Non-Automatic Stop, Start, Reverse Model 67
1/35 HP motor for drawing light-weight commercial and residential draperies. Also available in 1/6 HP model. App. 5″ x 6″ x 7″.



TOM THUMB
Standard Stop, Start, Reverse Model 1001
1/6 HP motor for drawing light-to-medium commercial and residential draperies. Also available in 1/35 and 1/12 HP models. App. 12″ x 8″ x 9″ (incl. Casing).

THER PRODUCTS



Back-Pack effect with Model 280 track

CURTAIN TRACKS: Many distinctive track accessories are manufactured by ADC. BACK-PACK Guides, for example, enhance the presentation through a unique effect which prevents the curtain from accumulating in gathers until track ends are reached. Ball-bearing-wheeled carriers are available with nearly every ADC track as optional equipment. Most end sheaves are of underhanging type and are anchorable to any position under track without drilling. SPACE SAVERS can be used in place of carriers and reduce curtain stacking area. Operating cord is of finest quality available anywhere.

STAGE HARDWARE: Detachable floor blocks (see p-3) are useful when track is to be "flyed." Beam clamps (see p-3) are connected to I-beams for support of track. Spring snaps are more versatile than ordinary snap hooks for attaching track carriers to curtain grommets. Clews are a means of grouping two or more lines into one line for appropriate manual or electric lifting operations.

CURTAIN MACHINES: Other electrical ADC products include machines equipped with chain and sprockets to assure positive drive; track-mounted (Flying) units; Multi-Stop mechanisms with pre-set intermediate stops; and sliding chalkboard operators which motivate horizontal and vertical chalkboards. Also obtainable are electric timers which operate as alarm clocks to open and close draperies at pre-set times as well as key switches which keep machinery under lock and key to prevent mishandling when not being used.

OUR CREDO

Since 1919 the name "ADC" has been synonymous with quality products, smooth and efficient operation, and prompt and courteous service. Each job is custom-made and is therefore given individual attention. Our products are sold only through dealers and we are proud to be associated with this closely-knit family. Their continuing loyalty to "ADC" is probably the biggest single reason why we today enjoy the position of being the nation's leading manufacturer of stage and drapery hardware.

stages... design service and equipment

When designing a new stage or remodeling an old one, theatre executives, architects and contractors should consider the latest developments in stage design and equipment; they should have a complete advance plan with blueprints that show in every detail the entire layout of the stage, detailed architectural specifications, a full record of all required equipment and supplies, and the approximate costs of all items.

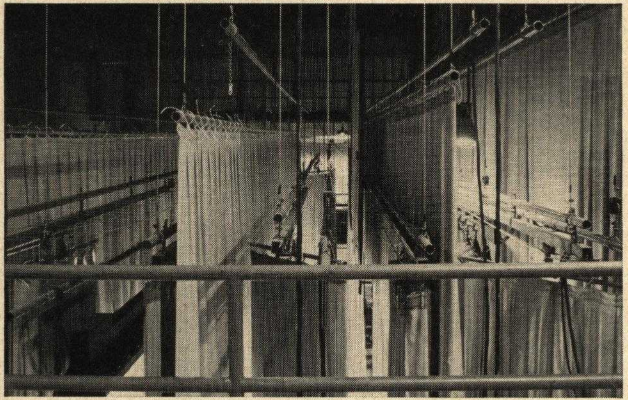
It is always preferable, in new construction, that matters pertaining to the stage be considered even before the steel is detailed for the building. Clancy engineers, frequently, have been able to suggest modifications which have provided a better working stage layout, oftentimes at no greater cost. Clancy suggestions, made early enough, have saved large sums in changes which eventually would have been imperative to a smooth and satisfactory operating stage.

Clancy's SceneControl represents the first practical use of modern technology in handling scenery. The result of 75 years of J. R. Clancy research and experience, SceneControl makes the back stage area safer, cleaner and more efficient for the artist and technician. See description on page 3.

complete planning service available

The Clancy Engineering Department, because of its long experience, can and will furnish such a plan. A Clancy plan will show a stage laid out in keeping with your requirements, and including all other data required. Such a stage, when planned by Clancy Engineers, will guarantee the most complete, modern and practical stage at the lowest possible cost. It will be a stage that is not only low in first cost but also most economical in operating and maintenance cost.

custom-built equipment



Linton High School, Schenectady, New York (a Progressive Architecture Award-winning school)
architects: Perkins & Will, Chicago, Illinois
stage equipment contractor: J. R. Clancy, Inc.

J. R. Clancy, Inc. is able to design and fabricate custom-built equipment to fit the needs of any job. This arrangement was custom designed by the architect so that the operator of the sets could face the rigging. This arrangement is particularly good for high schools because the set operator is almost always inexperienced and seeing the rigging gives him confidence.

This job also involved unusually large head blocks and a trip-type asbestos curtain.

based on your requirements

To properly plan a stage, so many details must be considered that we have prepared the questionnaire on the inside pages of this folder for the convenience of our patrons. This data will serve two purposes—first: remind you of important details; second: enable you to furnish us the information necessary to lay out a modern, efficient and economical stage.

Clancy equipment is Clancy-built

Clancy stage rigging and equipment is produced in our own complete, modern plant equipped with all the machinery and tools necessary to turn out this material on an economical basis. We carry on hand at all times a complete stock of all items in general use and can furnish complete equipment or replacement parts for any stage promptly.

We also carry on hand a complete supply of unfinished material from which any special units or equipment can be turned out on short notice. All work is done in our own plant. It is supervised by experienced executives with a thorough knowledge of the exacting requirements of the stage.

features of Clancy equipment

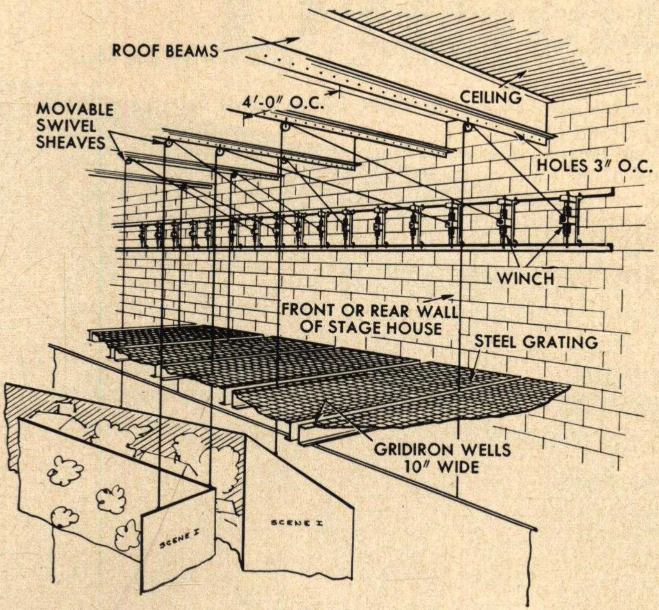
- *head blocks have Timken roller bearings with inner and outer races operating independently of shaft or hub.*
- *loft blocks are correctly sized to fit the cables; steel cross spaces positively prevent fouling.*
- *counterweight carriages have heavy tops of alloy metal with cast in eyes that do not cut cables; heavy steel side rods with lock nuts hold weights in place.*
- *floor blocks are noiseless; they have self-lubricating bearings that require no oil and wear a lifetime.*
- *rope locks are heavy cast one-piece construction with extra strong cams and locking levers and dependable safety lock; they are adjustable to all rope sizes and work equally well with old ropes as new ropes.*
- *cables are made to Clancy specifications with a safety factor of 2½; will last the lifetime of the stage when used in Clancy sheaves.*
- *hand lines are first grade Manila fibre, free of slivers and foreign matter.*

accept no substitutes

The great preference for Clancy stage equipment and the confidence in the Clancy name have brought about attempts to supply substitute equipment. When a substitution of this nature is attempted, the reason for it is obvious to any thinking person. To protect you against this substitution, every Clancy item is labeled with the Clancy trade-mark. Look for this trade-mark on the equipment you buy.

SceneControl

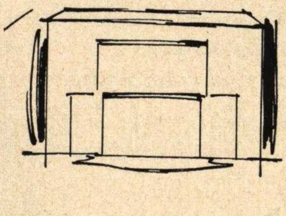
the most significant advance in stage equipment in over 2,000 years

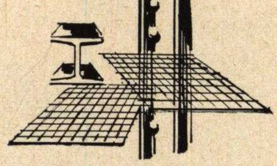


Electric powered winches mounted near roof on front and rear walls of stage house take the place of conventional counterweight rigging. Winches are synchronized through a variable speed drive and electrically controlled by means of a portable pushbutton console (photo of console on cover). Lines from winches are run through sheeves located as desired over stage in holes 3 inches in tee beams 4 feet on centers perpendicular to procenium.

saves 20% to 40% of stage house cubage

Standard theater equipment extends top roof line over full area of wings — Clancy SceneControl doesn't use this space for rigging.



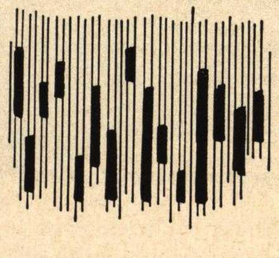


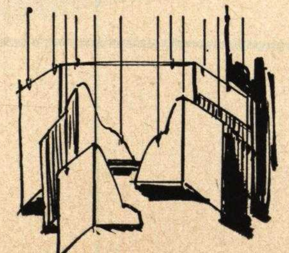
cuts steel requirements

Eliminates separate "grid" structure . . . cuts load requirements on roof steel.

eliminates pin-rail and fly gallery

All lines and rigging are loft height . . . side walls freed from rigging and counterweights are available for other useful purposes.

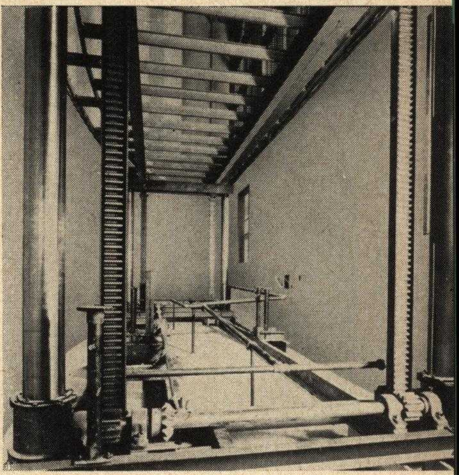




enables new concepts stage design

Without conventional rigging, the set designer does not have to fit his scenery to parallel rows of battens. Lines are spotted to handle the scenery, instead of the design matching the available rigging.

ORCHESTRA LIFT



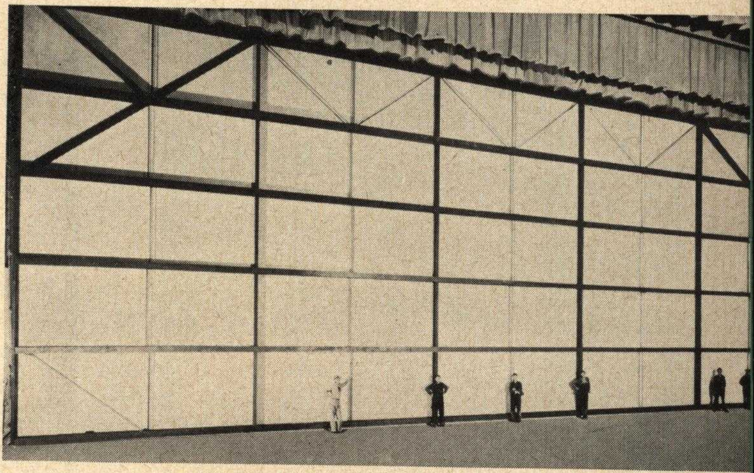
Purdue University Music Hall,
Lafayette, Indiana
architects: Walter P. Scholer
stage equipment consultant:
J. R. Clancy, Inc.
stage equipment contractor:
J. R. Clancy, Inc.

Orchestra lifts also greatly increase the flexibility of a stage and help create that certain indefinable air of magic. Each lift must be custom designed to exactly fit the needs of the installation. Each lift must be absolutely reliable and safe.

Clancy is the leading manufacturer of oil hydraulic orchestra lifts in the country; a few Clancy installations are as follows: Purdue University has 2, University of Wichita has 1, Dade County Auditorium in Florida has 1, Syracuse War Memorial Auditorium has 1, University of Indiana has 1, and State Teachers College, Greely, Colorado has 1 and Alice Statler Auditorium at Cornell University has 1.

This orchestra lift at Purdue University is large enough to accommodate a 100 piece symphony orchestra. It can bring a capacity load from the basement to the flush level of the stage in less than 75 seconds.

ASBESTOS CURTAINS



Purdue University Music Hall, Lafayette, Indiana (same job as above)

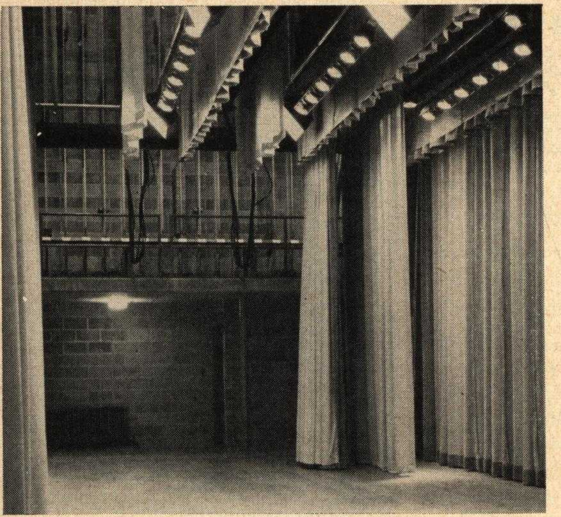
This fire curtain is 39′-6″ high and 103′-6″ wide. It weighs 19¾ tons. The weight and size of asbestos curtains demand that they be considered in the original structural design of the building.

Asbestos curtains are equipped with an electric motor for raising and lowering and an emergency lowering feature in case of fire. The danger inherent in these operations are apparent. Clancy asbestos curtains are safe, fool-proof in operation and meet the most rigid provision of fire codes.

Asbestos curtains are extremely expensive, potentially dangerous, potentially difficult to incorporate into the building but definitely required by building codes for auditoriums of a certain size (requirements for various areas differ). It is certainly prudent for the architect to get the best possible design and engineering service as early in the design stages as possible.

CLANCY STAGE EQUIPMENT

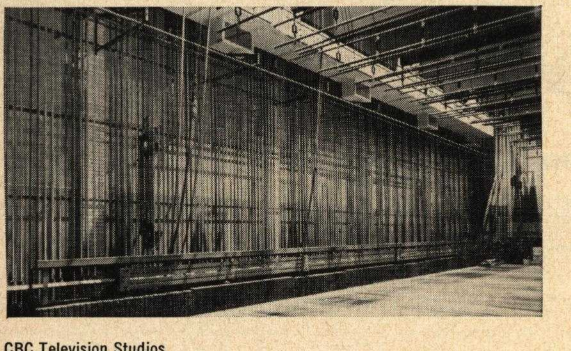
MULTIPLE SPEED SETS



The Pontificial College Josephenium, Worthington, Ohio (one of the three Roman Catholic Pontificial institutions in the United States)
architects: Karlsberger, McClellan & Gallogly, Columbus, Ohio
stage equipment contractor: Janson Industries Inc., Canton, Ohio

This installation is not extremely large but it is a very good, compact, safe and efficient arrangement. A fly floor with multiple speed sets was used. This arrangement is frequently used in small colleges because the floor space can be used for other necessary purposes, such as storage space, exit doors, etc.

CBC TELEVISION STUDIOS



CBC Television Studios
Canadian Broadcasting Company, Toronto, Canada
stage equipment consultant: J. R. Clancy, Inc.
stage equipment contractor: Canadian Contract Sales Ltd., Montreal, Quebec

The illustration shows a typical TV application of Tee-Bar guide counterweight sets. This installation provides for over 100 sets. With Clancy's engineering assistance this studio was provided with an extremely versatile arrangement of sets.

Clancy fabricated special troughs to follow the sets up and down and collect the power cables for the lights. This device prevented the cables from fouling and from cluttering critical sight lines. The neat and orderly appearance of the job is an indication of the workmanship.

suggested planning procedure

new construction

The following are items that should be established before designing the stage of any auditorium. A representative of J. R. Clancy will be happy to discuss and give you advice on them:

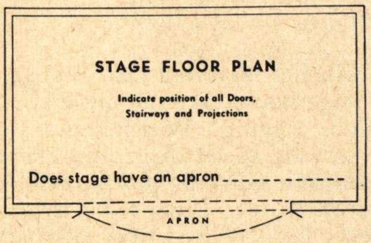
1. Size and shape of the stage area.
2. Location and amount of off stage areas for scene storage and scene changing.
3. Height of the gridiron or loft block beams. This determines the height of the fly loft.
4. Weight and location of stage equipment. This determines the structural steel of the building itself.
5. Location of counterweight guides, whether it be Wire or Tee-Bar Guide System, and also the proximity of either system with the stage side wall.
6. Location of head block beam; this beam is heavily loaded and the structural steel of the building must be designed to support it. It must be precisely located for the proper operation of the counterweight sets.

remodeling or when stage has been partially equipped

J. R. Clancy, Inc. can make a complete stage layout based on your requirements if you will supply the following information:

stage dimensions

Length: Side wall to side wall..
Depth: Proscenium to rear wall..
Height: Stage floor to top of gridiron..
Gridiron to roof..
(plan from back cover)



STAGE FLOOR PLAN
Indicate position of all Doors, Stairways and Projections
Does stage have an apron ____________
APRON

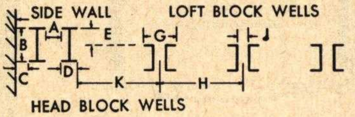
proscenium opening

Width..............................Height center..................Height sides.............

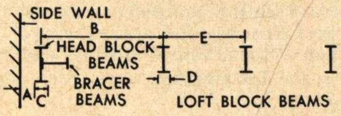
---

gridiron

UPRIGHT TYPE GRIDIRON



UNDERHUNG TYPE GRIDIRON



Is gridiron upright........................Is gridiron underhung..............................

fly loft

Yes....................No....................Height....................Width...............
Is there a locking rail............................Pin rail..............................
Length..........................
if blueprints are submitted, they should show in detail—stage floor plan, stage elevation, and gridiron plan

general information

On which side of stage is head block well (looking toward audience)................................
Is space underneath clear for counterweight sets......................................
Are there any doors, entrances or stairs to conflict................(Indicate on floor plan)
Is asbestos curtain required..
Height—auditorium floor to stage floor..
Distance—proscenium opening to first row of seats......................................
Will auditorium have projection booth..
Picture screen....................Will auditorium have a balcony..........................
Will sound horn equipment be used..
Approximate number of counterweight sets desired ....

Brunswick SERVES YOU ACROSS THE NATION

FOLDING STAGE SPECIFICATIONS

1. GENERAL SCOPE:

A. Folding Stage shown in Architect's plans and specifications shall be as manufactured by the Brunswick-Balke-Collender Company, Kalamazoo, Michigan, or equal.

B. Folding Stage shall be delivered to Purchaser fully assembled. Uncrating of Stage shall be by Purchaser. Stage shall be guaranteed against faulty materials, workmanship and operation for a period of one (1) year from date of delivery.

2. EQUIPMENT REQUIREMENTS:

A. The manufacturer will furnish the following quantities of Folding Stages:

__________Units,__________'__________" Wide by
__________'__________" Deep by__________" High.

B. ACCESSORIES:

1. PORTABLE STEPS 36" in width shall be furnished with Folding Stage Units. Portable step units for 18" and 24" high Stages are non-folding type. Portable step units for 30", 36", 42" and 48" high Stages are folding type. Folding step units shall contain 3" diameter composition rubber wheels for mobility.

2. SIDE RAILS AND BACK RAILS shall be furnished with Folding Stage Units. Railings shall be fabricated of 1¼" diameter tubing rigidly anchored to Folding Stage floor boards by means of flush key hole plates and screw down mechanisms.

3. OPERATION:

A. Folding Stage shall be equipped with cylinder lock to prevent unauthorized operation.

B. Folding Stage shall extend and fold in a continuous action. Each section shall individually and automatically lock open. Folding and extending actions shall be accomplished by precision folding arms.

C. Folding Stage shall be completely mobile in both extended and folded positions. Stage shall be equipped with adjustable floor stops with rubber feet to anchor Stage in position for use.

4. DESIGN:

A. Folding Stage shall be designed and constructed to support a live load of 150 pounds per square foot.

B. Vertical support columns shall be steel tubing joined laterally at bottom by steel angles.

C. Folding Stage floor boards shall be supported at center hinge point by steel channel supports from which load shall be transmitted diagonally to support columns.

D. Each support column shall be fitted at the base with a 2" diameter composition rubber caster. Caster wheel shall include "OILITE" bushing requiring no additional lubricant.

5. CONSTRUCTION:

A. Manufacturer shall fabricate steel understructure and all wood members in his factories.

B. Electric arc welding shall be utilized on all steel members. All welding shall be done by certified welders.

C. All faceboards, floorboards and tailboards shall be vertical grain Douglas Fir fabricated from selected kiln dried lumber. Pitch pockets, knots, shake, wane and other defects will not be permitted. All floorboards shall be of a nominal ¾" x 11" dimension.

Floorboards shall consist of seven (7) or more individual rails edge laminated under pressure to prevent warping and to insure perfect alignment. Lamination shall be accomplished through use of electronic glue machines.

6. FINISH:

A. All steel understructure shall be bonderized before finishing. Metal parts shall be finished in DuPont Olive Green enamel No. 4458.

B. All wood parts shall be drum sanded, edges eased and final hand sanded before finishing. Finish shall consist of two (2) coats of Urea Based Synthetic finish on all finished sides of boards hand sanded between coats. The finish shall be dried under controlled temperatures. Paste wax shall be applied at Factory for maximum protection.

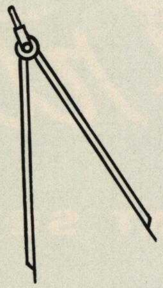
Everything FOR THE STAGE BUT THE PLAYERS!

Whether you are planning to equip a civic auditorium, a high school stage, or a theater, ours is the experience, the training, the professional know-how that bring your plans and ideas to vivid life. With the most modern stage equipment studios in the nation, we offer a complete service from preparation of original drawings and specifications, with fabrication of components in exact accordance, to final installation.

Hundreds of theater and auditorium installations throughout the United States testify to the ability of Knoxville Scenic Studios to create a stage of beauty and brilliance. Installations are draped and lighted to technical perfection within budget cost, by sensitive craftsmen, with artistry that sets the stage—complete with everything but the players!



A CONSULTANT SERVICE FOR THE ARCHITECT

Our highly skilled engineering department, with many years of experience in all types of stage installations, will gladly assist you in the more technical phases of your planning . . . whether your project is a modest school, an elaborate college, municipal auditorium, or an ocean liner.

Three factors are paramount in approaching the problem: the space available, the desired function, the budget allocated.

Knowing these, we can determine the most feasible and practical use of the space, and make suggestive layouts that will best fit the dramatics needs of your client. Our recommendations can cover any or all phases of stage equipment, as requested . . . rigging, lighting, fabrics, asbestos curtains, scenery, stage properties, etc.

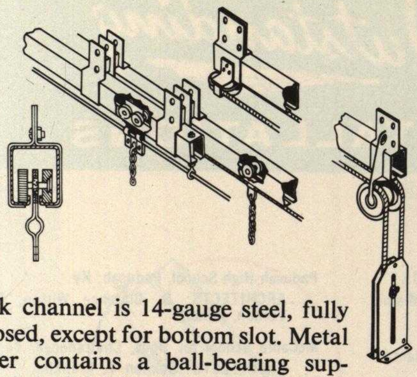
All suggestions are keyed for the greatest flexibility possible, to answer not only existing requirements but future needs as they might develop.

On those projects demanding highly technical settings, it is our usual procedure to have one of our consultants visit you for a discussion of problems involved, after preliminary layouts have been submitted for consideration.

This consultant engineering service can be of invaluable assistance to you in your planning, and can assure your client of the utmost satisfaction from the finest stage equipment, engineered for trouble-free service, fabricated for long life.

TRAVERSE TRACKS

NO. 400 HEAVY DUTY STEEL TRACK



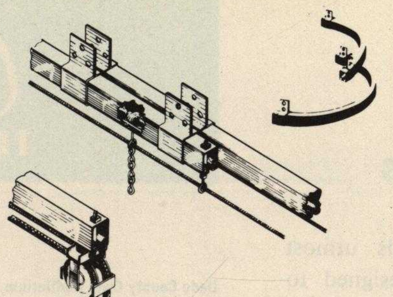
Track channel is 14-gauge steel, fully enclosed, except for bottom slot. Metal carrier contains a ball-bearing supported shaft with rubber composition wheels. Curtain suspended from two wheels rolling on parallel tracks. Rubber spacers between carriers.

NO. 300 MEDIUM DUTY STEEL TRACK

Basically the same as No. 400, but smaller in size; recommended for curtains up to 36 ft. in width.

CYCLORAMA TRACKS

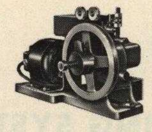
NO. 250 STEEL AND WOOD TRACK



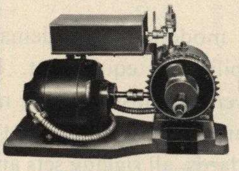
Available in both straight and curved effects. The formed steel channel supports two impregnated hardwood runners; carriers are specially treated, long-life wood balls. Straight track operated by ropes and pulleys from one point of control. Curved unit is "walk-around" track adapted to curved cyclorama settings.

Additional tracks, adaptable to specific uses, are also available. Write for information and recommendations on functional applications.

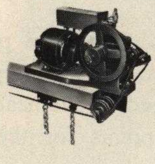
MOTOR CONTROLS



Standard Model



Sprocket Model



Flying Model

Motor controls only can pull stage curtains at precisely the right time, at exactly the right speed. Shown here are the three basic types of motor controls, long proved essential to satisfactory stage curtain operation.

Designed and developed to accomplish all necessary curtain operations by push-button control; easily installed, reliable in operation. Many variations of the basic models are available for specific functions; write for complete information.

COUNTERWEIGHTED

RIGGING SYSTEMS

The modern stage demands utmost flexibility of equipment. Designed to answer the most exacting needs, manufactured in our own plant under rigid standards, all rigging sets are engineered for flawless operation and long life usage.

When no gridiron is present over the stage area, underhang type sheaves may be attached to overhead beams as suspension points for the counterweight system.

Multiple hoist units or winch sets are recommended if overhead height is insufficient for a counterweight system.

THE PROBLEM:
Provide easy access to stock area, optimum utilization of storage area, faster palletized loading of vehicles by fork-lift trucks.

THE SOLUTION:
Three 18-ft. diameter Macton Turntables.

Macton TURNTABLES TURNTABLES

ANY SIZE—ANY SERVICE

Vehicle Positioning • Materials Handling
Product Display • Theatrical Motion

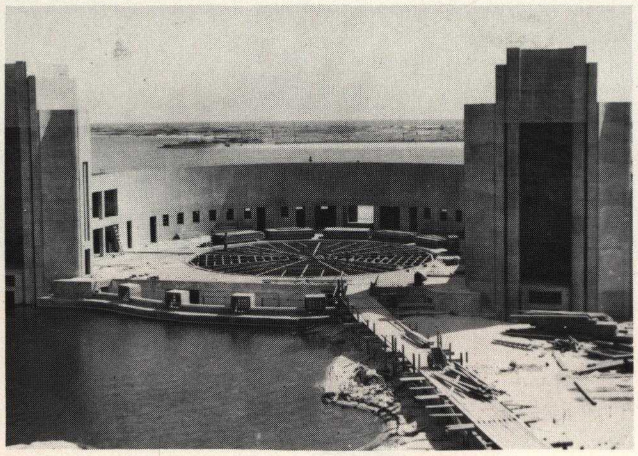
MACTON MACHINERY COMPANY, INC.

Macton TURNTABLES

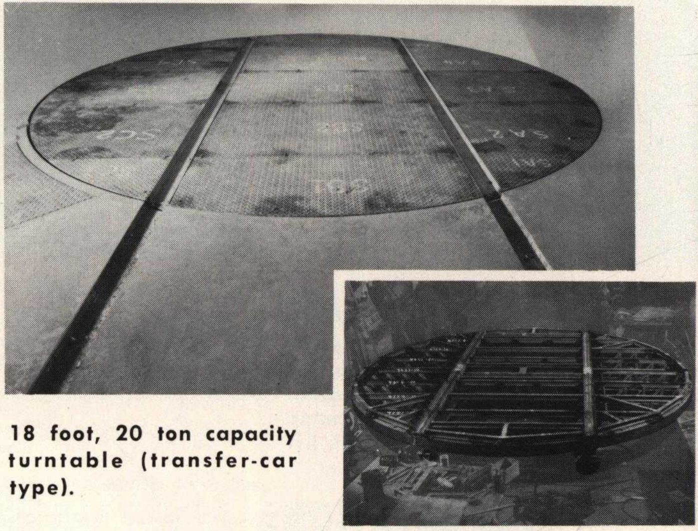
Macton Machinery devotes its collective experience, skills, and facilities to one basic product: turntables. Turntables are not a sideline with *Macton* —turntables are its specialty.

Hundreds of *Macton* turntables are giving continuing dependable service throughout the world today. And with numerous large and small, technically-complicated custom installations a matter of record, *Macton* can design and produce special turntables to your most exacting specifications with guaranteed dependability.

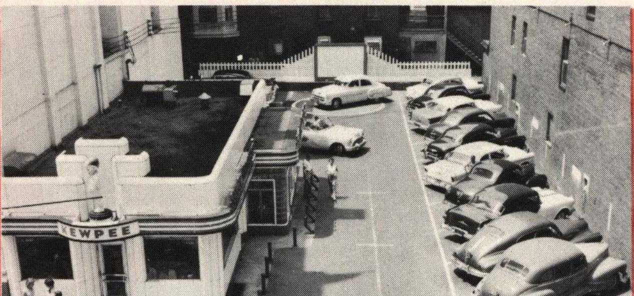
Truly engineered, with efficient mechanical and electrical designs, all *Macton* turntables are simple and economical to operate, and carry a full year's guarantee.



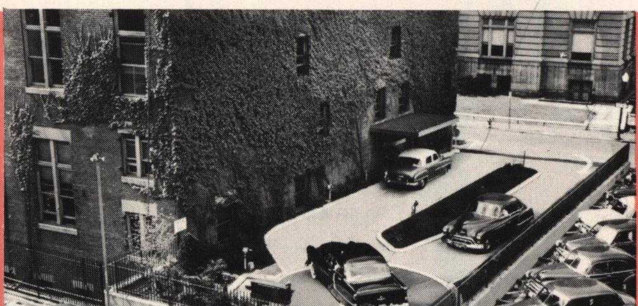
76 foot stage turntable—250 ton design load for State Park Commission, Marine Stadium, Jones Beach, L. I., N. Y.



18 foot, 20 ton capacity turntable (transfer-car type).



16 foot diameter drive-in parking turntable, Kewpee Hotels, Lima, Ohio.



Electronically-controlled 22 foot automobile turntable for drive-in bank, Waterbury, Conn.

MACTON MACHINERY COMPANY, INC.

TURNTABLE VERSATILITY

The advantages of turntables for dramatic display and flexible stage design have long been recognized. In recent years, however, architects, designers and engineers have come to recognize turntables as an efficient space-saving element wherever there are problems of traffic congestion, materials handling bottlenecks or work positioning difficulties.

For increasing effective floor space or display area, improving efficiency of factory processes or warehouse operations, turntables are often the perfect solution.

Don't overlook these valuable devices for new or existing installations. Macton's broad experience in this area is at your disposal.

MACTON DESIGNS

Macton has been the leader in the design and fabrication of turntable systems. No design problem is too difficult or complex for its turntable engineering and production specialists. Because of their specialized experience, the Macton group can design a turntable to meet your specifications for any size—to hold any weight—to revolve at any speed, continuously or intermittently.

In addition, Macton has several stock models which are available for immediate delivery. These range in size from the one-foot diameter model 200 for small displays to the model 5000 Paravane for the display of automobiles.

Dozens of standard designs have been developed for a wide variety of display and industrial applications. These can be used as is, or with modifications to conform to your precise requirements.

Swift
Swift
NO PARKING

24 foot turntable for maneuvering cars and trucks at a loading platform, Life and Casualty Building, Nashville, Tenn.

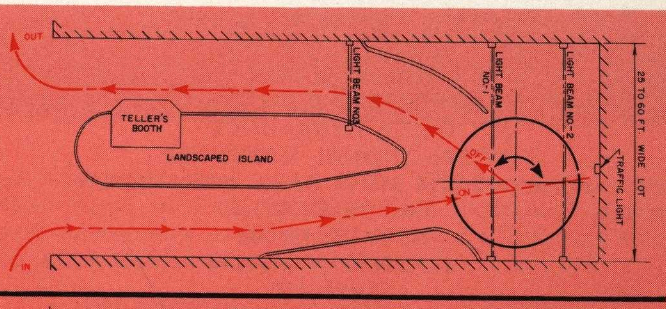
20 foot diameter multiple-set theatrical turntable.

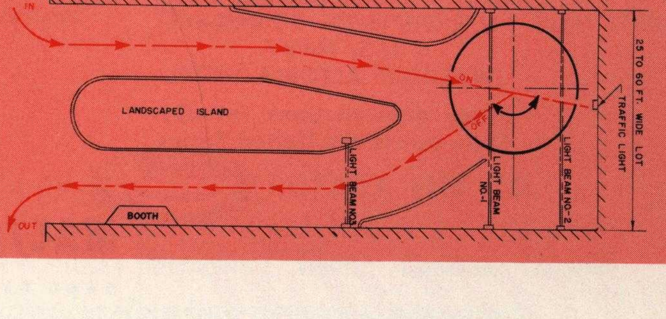
DRIVE-IN INSTALLATIONS

Typical use of Macton turntables to make optimum use of limited space are the many drive-in installations which Macton has made. Many banks and restaurants, faced with the lack of desirable drive-in facilities because of limited adjacent space, have installed a space-stretching Macton turntable system.

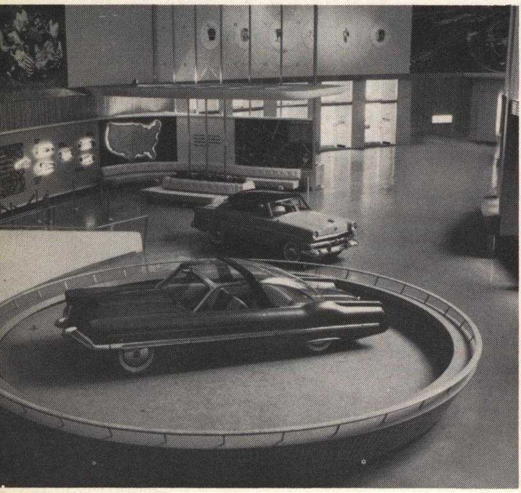
To these people, Macton has provided a complete system—safe, foolproof, and trouble-free—including the entire turntable mechanism, all photoelectric equipment, traffic lights, electrical control panels, foundation drawings, and instructions for installation and operation.

Macton can provide the same helpful solution to you for your banking, parking, loading, or other service problem.





OTHER TYPICAL INSTALLATIONS



24 foot sloping automobile turntable, Ford Rotunda, Dearborn, Mich.

6 foot, 6000 pound turntable; integral part of multiple-door elevator.

9 foot movable industrial turntable —variable speed drive, Belmont Smelting & Refining, N. Y.

TYPICAL USERS

Macton turntables are providing dependable service to a wide variety of users throughout the world from Hawaii to Turkey, Canada to Peru. A few of these are:

ALLIS-CHALMERS • AUSTIN MOTOR CO.
BELMONT SMELTING & REFINING
CBS TELEVISION
CHRYSLER CORP.
CINCINNATI MILLING MACHINE
FEDERAL TELEPHONE & RADIO
FORD MOTOR CO.
FRUEHAUF TRAILER CO.

REPUBLIC AVIATION
SEVEN-UP
STUDEBAKER-PACKARD CORP.
U.S. DEPT. OF COMMERCE
U.S. NAVY
WALDORF-ASTORIA HOTEL

Many drive-in bank installations across the United States.

YOUR TURNTABLE APPLICATION

If you have a problem involving vehicle positioning, materials handling, product display, or theatrical motion, let us suggest an appropriate standard, modified, or custom turntable system.

Our applications engineers will be happy to assist you without obligation, if you will send us data as to your requirements:

a) Weight of load to be rotated

b) Dimensions of load

c) Nature of load—whether permanently on turntable, placed on by hand or by overhead crane, rolled on (such as on car rails), etc.

d) Type of service — (How fast — how far — how often must the load be rotated?)

e) Size of turntable if known — otherwise we can make determination from data furnished.

f) Power characteristics available.

g) Any other data pertinent to the installation.

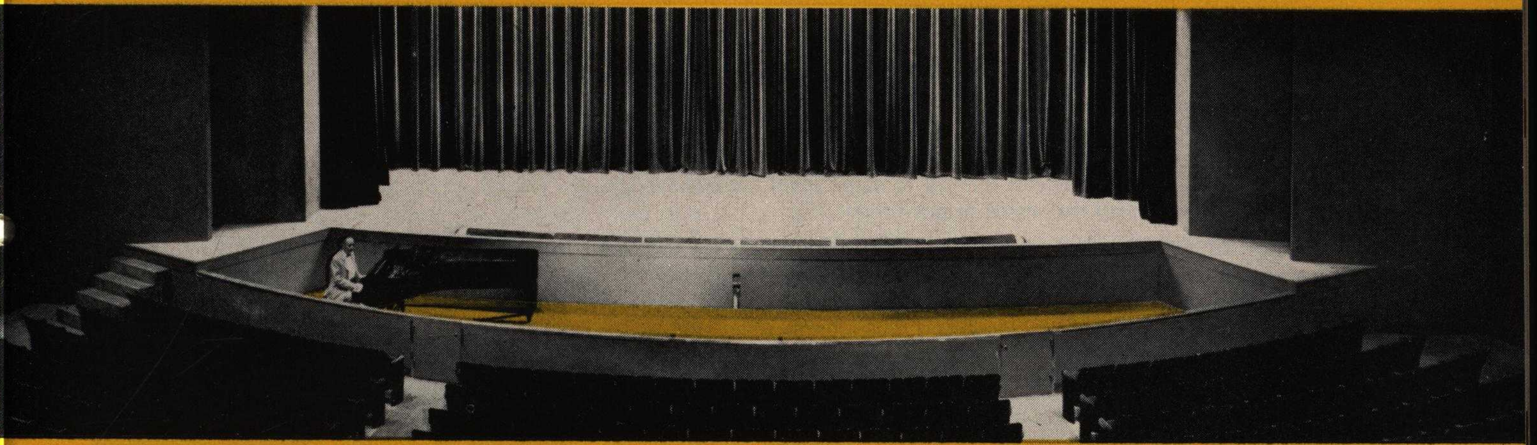
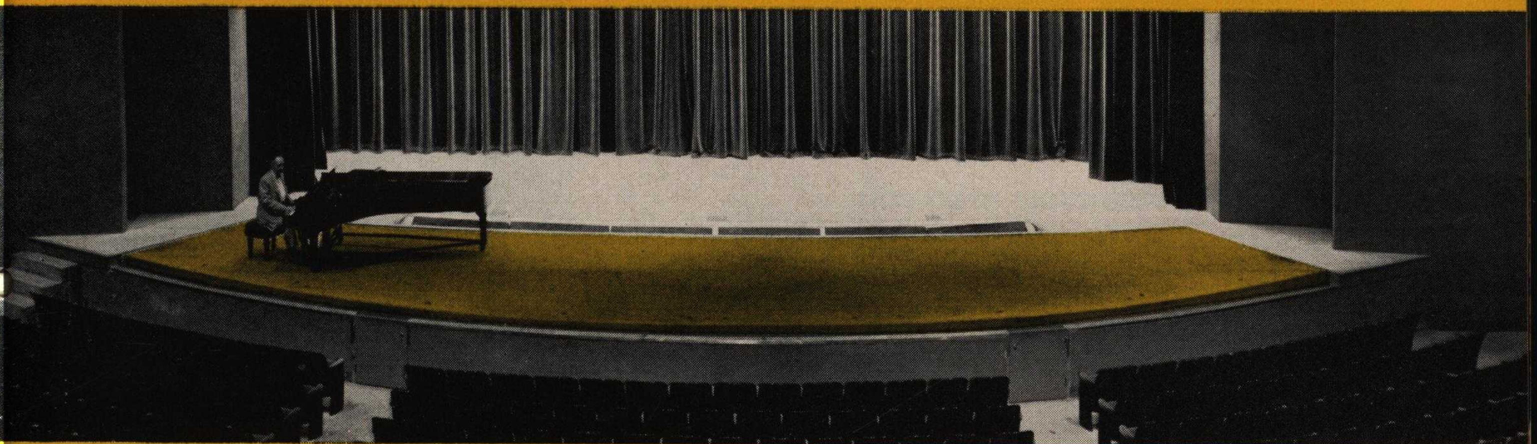
Rotary®

RISING STAGES



Rotary Rising Stage in Houston Music Hall shown at orchestra pit level (above) and raised to full height (below). This stage descends to basement level for bringing performers into view of audience.



Rotary Rising Stages take many forms . . . orchestra lifts, stage sections and complete stages which move vertically on dependable Oildraulic® pistons. They are used to produce elaborate and dramatic theatrical effects, save valuable floor space, and permit design of multi-use halls.

RECOMMENDED FOR

Auditoriums • Schools • Theaters • Music Halls • Night Clubs

Designed and built by Rotary® **ROTARY LIFT CO.**

Division of Dover Corporation 1053-A Kentucky, Memphis 2, Tenn. - Chatham, Ontario
Specialists in oil-hydraulic elevating devices—passenger and freight elevators—auto lifts

© 1958, Rotary Lift Co.

Printed in U.S.A.

Rotary®

RISING STAGES

Hydraulic lifts which combine utility with dramatic effect

Rotary Rising Stages consist, basically, of one or more hydraulic pistons on which a platform is mounted. By extending the pistons, the platform is raised.

Applications are many. A familiar example is the orchestra pit lift. The orchestra assembles on the lift at basement level and is raised to audience view. This type of Rotary Rising Stage is commonly designed so that it also can extend to stage level, providing added stage area when an orchestra is not used.

Other uses of the Rotary Rising Stage are limited only by the imagination. For spectacularly dramatic effects, several Rotary Rising Stages may be recessed into the stage surface to bring sets and performers majestically into view and carry them above stage level in stairstep arrangements. In such an installation, the Rising Stages may be operated individually or locked together to provide one big unit capable of lifting large sets or many performers.

SIZES AND CAPACITIES

There are practically no limitations on sizes and capacities of Rotary Rising Stages. They are ideal for use as simple organ console lifts or in installations where an entire stage rises to varying elevations for creation of spectacularly dramatic effects. One or any number of oil-hydraulic cylinders may be used, depending upon the individual requirements.

SMOOTH, QUIET, DEPENDABLE OPERATION

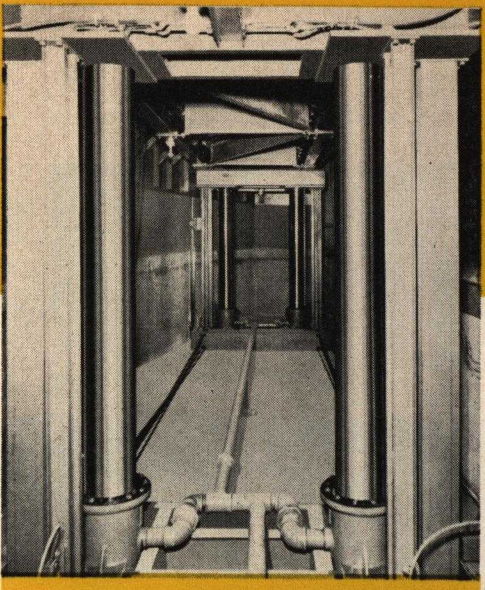
The Oildraulic principle, used successfully by Rotary Lift Co. in thousands of elevators and industrial lifts, provides dependable, efficient operation. Pushbutton controls, located wherever convenient, actuate an electric pumping unit which raises and lowers the Rising Stage. The unit moves smoothly and quietly on its oil-hydraulic piston. Elevator-type guide shoes and rails provide positive stability. Installations requiring more than one piston are designed with a mechanical equalizing mechanism that assures synchronized travel of all pistons, and a level platform regardless of position of load.

ECONOMICAL TO INSTALL AND OPERATE

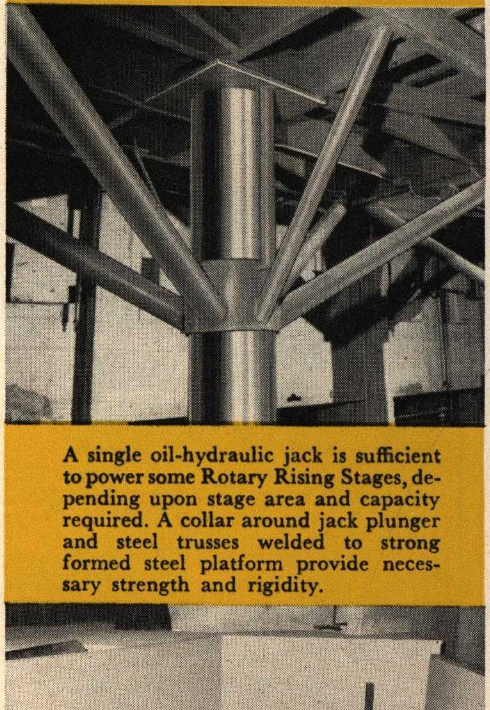
The pit required for a Rotary Rising Stage is uncomplicated in design and construction. Installation of the stage itself is more economical than any other type of stage lift due to the simplicity of the equipment and advanced design developed through many years of experience in engineering Rotary Rising Stages for many uses. The unit requires practically no maintenance.

DESIGN, ENGINEERING AND INSTALLATION SERVICE

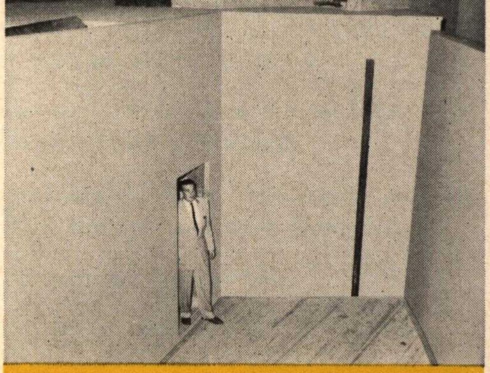
All Rotary Rising Stages are engineered to the specific requirements of the installation. Expert layout and specification assistance is available on request. Installation service is provided by a nation-wide organization of independent contractors with many years of experience with oil-hydraulic elevating devices of all types.



Pit view of Rising Stage in Charlotte, N. C., Auditorium-Coliseum shows rugged under-platform construction with four oil-hydraulic jacks. Guide shoes and rails assure smooth travel; cable equalizing system keeps platform level at all times, regardless of load.



A single oil-hydraulic jack is sufficient to power some Rotary Rising Stages, depending upon stage area and capacity required. A collar around jack plunger and steel trusses welded to strong formed steel platform provide necessary strength and rigidity.

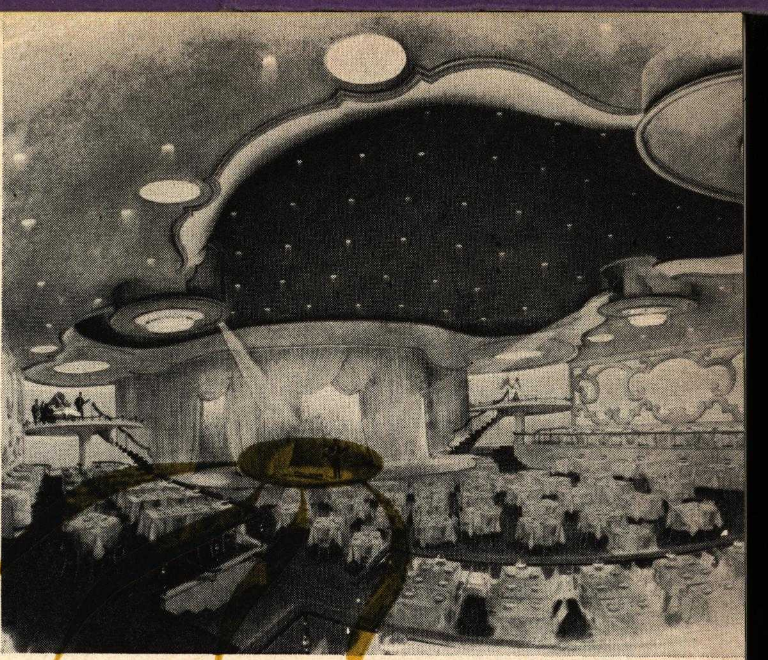


Rising Stage at basement level, showing doorway providing access for entertainers, out of view of audience. Stage area can be almost any size and shape. Power unit and controls can be located in any convenient place. Operation is extremely economical.

Rotary RISING STAGES

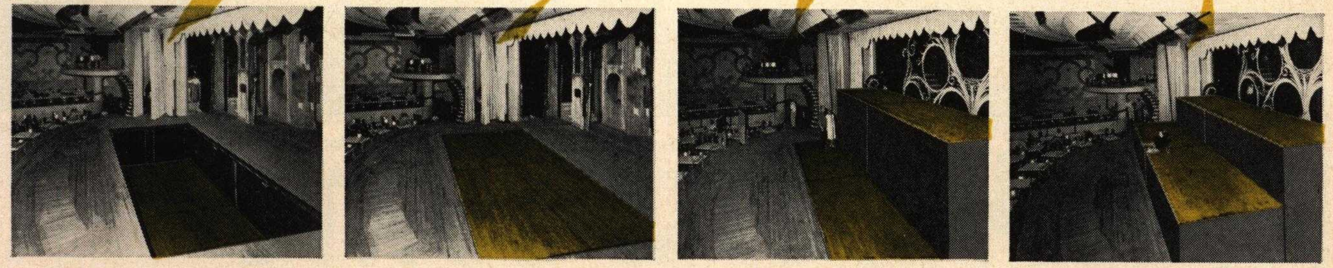
. . . create "The most advanced theater stage in the American entertainment world"

Utilizing six Rotary Rising Stages, designers of the Cafe Continental of Las Vegas' new Stardust Hotel made possible an infinite variety of spectacular theatrical effects. Ascending from basement level with performers and colorful sets, these Rotary Rising Stages can be operated independently and stopped at various levels to create majestic stair-step effects above the surrounding stage area. Four 7½′ x 15′ Rising Stages in one cluster can be locked together automatically to move as a single 15′ x 30′ unit. Similarly, two 15′ square Rising Stages rise independently or in unison. An important feature of these Rising Stages is the absolute quiet which distinguishes their operation. They glide smoothly up and down in absolute silence, creating an atmosphere of mystery and glamor.



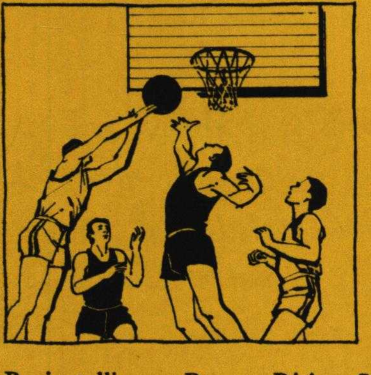
Interiors of Cafe Continental designed by Office of Jac Lessman, New York City.

STARDUST HOTEL in Las Vegas, world's largest resort hotel, features a dining room-theater equipped with six Rotary Rising Stages.

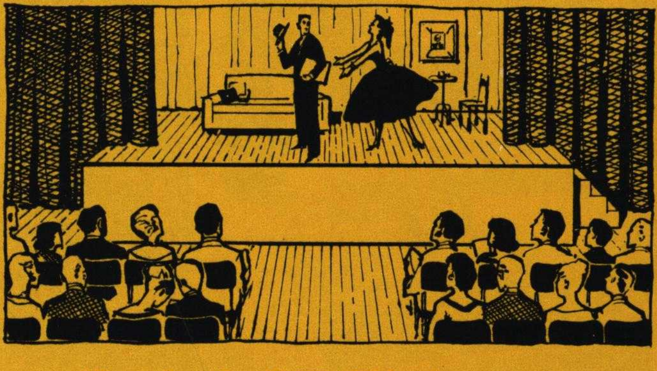


Cluster of four Rising Stages in Stardust Hotel shown at various levels.

Rotary Rising Stages for multi-purpose school buildings



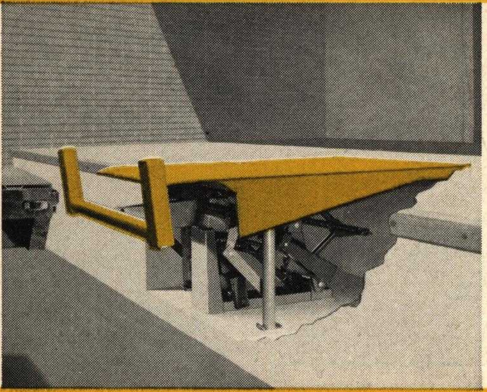
Gym in
the afternoon
- - - converts to
auditorium
by night



By installing a Rotary Rising Stage in one end of a school gymnasium or cafeteria, the room can be converted easily and quickly into an auditorium. Normally, the Rising Stage rests on concrete bumpers and is absolutely flush with the floor. To convert the room into an assembly hall or auditorium, it is raised the desired height, curtains are released from housings and portable seating placed. The Rising Stage is completely safe with tamper-proof controls and operating mechanism. It provides the most economical solution to the problem of providing auditorium facilities on a restricted budget in today's schools. Where budget is no problem, the Rotary Rising Stage is a worthwhile extra feature, adding to building flexibility.

Ask your Rotary Lift representative for additional information

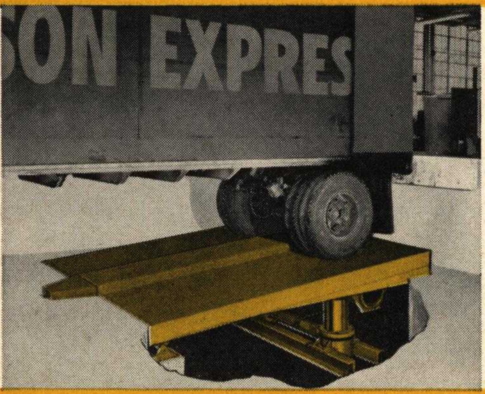
Loading dock equipment and industrial lifts



Automatic dock ramp

Truck-actuated, completely automatic ramp

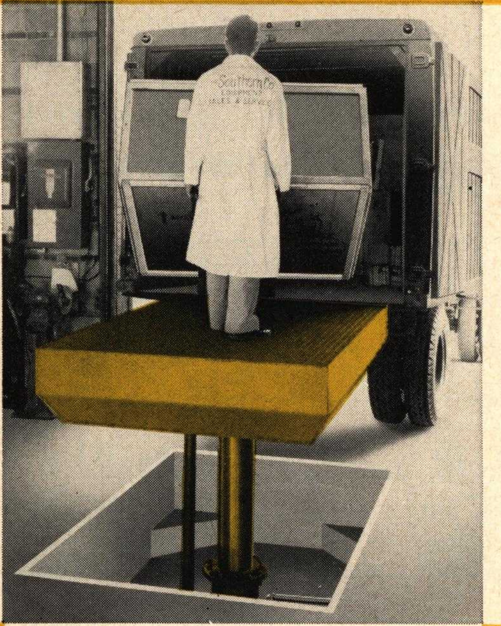
This all-new ramp positions automatically to bridge the gap between dock and truck bed for faster loading and unloading . . . with complete safety. It is powered by the pressure of the truck bed on the ramp bumpers, employing an exclusive spring compensator for smooth, controlled action. Has automatic safety lock, self-aligning bumper and other exclusive features. Easily installed at new or existing docks. Requires no maintenance. Write for catalog RE-404.



Truck leveler

Raises or lowers trailer to dock level

Recessed into the pavement in front of the loading dock, the Rotary Truck Leveler eliminates the need for ramps and dockboards and saves the space they require. Dual oil-hydraulic jacks with 40,000 lbs. capacity raise or lower the truck or trailer to bring the bed level with the loading dock, permitting materials handling equipment to move in and out with maximum speed and safety. Easily installed at new or existing docks. Dependable, economical maintenance-free operation. Write for Catalog RE-800-A.



Levelator® lifts

These simple, rugged platform lifts are used for a variety of purposes . . . loading carriers from plant floor level, feeding machines, bridging stepped floor levels, and lifting and lowering heavy loads in many other ways. Operation is by economical, dependable Oildraulic power. Available in standard models and special lifts in almost any size and capacity. Write for Catalog RE-203.

A complete description of the above equipment and other Rotary Oildraulic devices for materials handling is cataloged under 16*B*/*Ro in the Industrial Construction File.*

Rotary Oildraulic Equipment is sold, installed and serviced by a nationwide distributor organization working closely with Rotary Lift Company factory engineers.

For information on Rotary Oildraulic Elevators (Passenger and Freight) see 24a/Ro in the Architectural File or 16c/Ro in the Industrial Construction File.

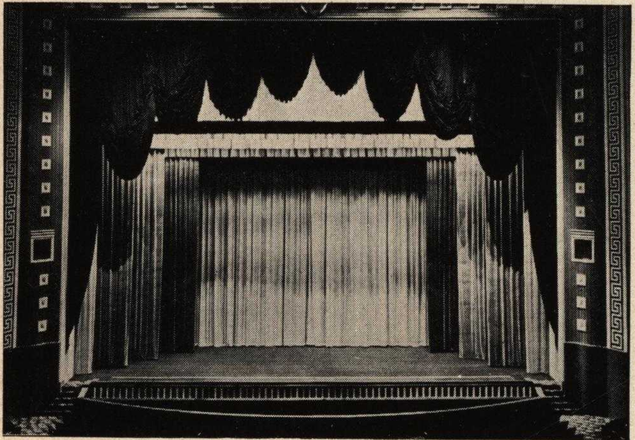
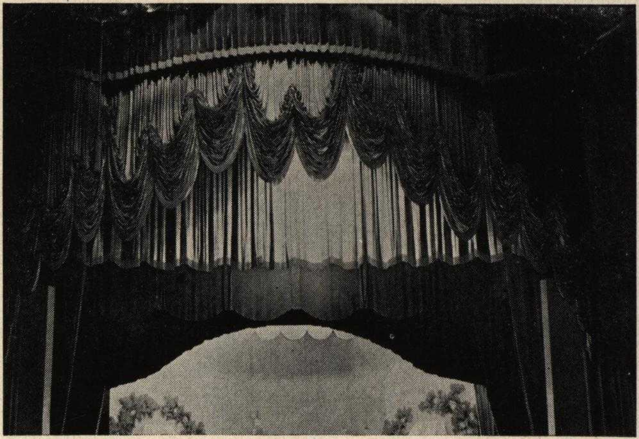
JOSEPH VASCONCELLOS, INC.

successor to PETER CLARK, INC.
West Babylon, N.Y., P.O. Box 1035
Burbank, California, 4021 W. Burbank Blvd.

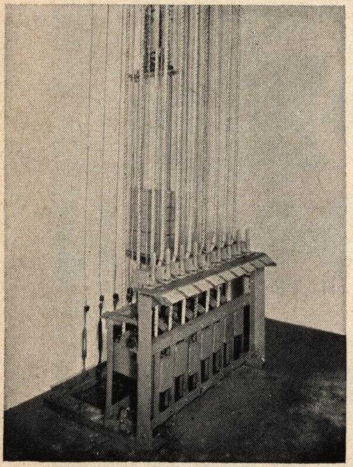
DESCRIPTION OF SOME TYPICAL VASCONCELLOS EQUIPMENT



Variable Contour Curtain rigging in El Roble Theatre, Mexico, D. F.



Fixed Contour Curtain rigging in Roxy Theatre, N. Y. C.



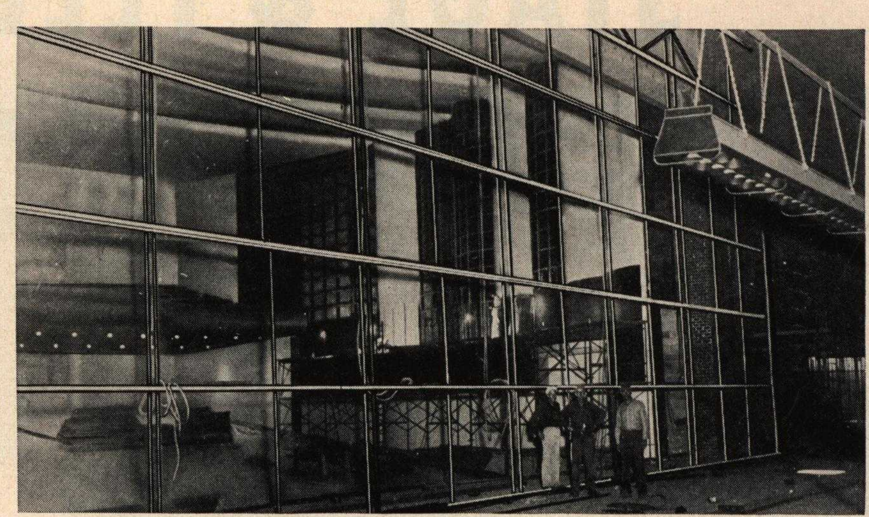
Close Up of Wire Guide Counterweight System with Locking Rail.

Contour Curtains

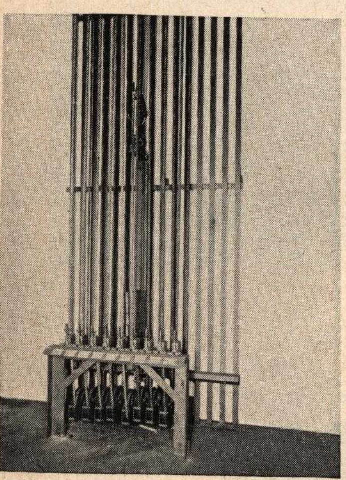
The modern way of rigging the front drapery. Its rich, versatile effects make it a "must" for the properly equipped stage.

It combines both vertical and horizontal movement in a wide variety of shapes and effects, from a single act tableau to a full opening.

Available in both pre-set type with complete remote control of shape and in the more economical fixed-shape type where size only is remotely controlled.



Rigid Asbestos Curtain, before covering, weighs 5½ tons and measures 70 ft. by 40 ft., installed at the E. C. Glass High School, Lynchburg, Virginia.



Close Up of Tee Track Counterweight System with Locking Rail.

Asbestos Curtains

We have designed, manufactured, and installed a wide variety of protective curtains in all practical combinations of the following types:

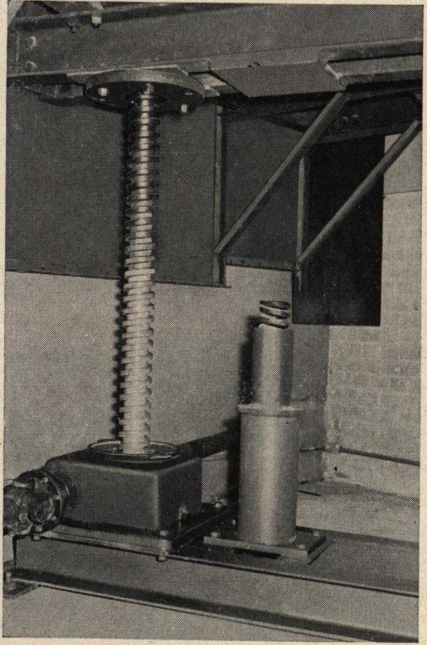
Single thickness asbestos, double-faced asbestos on rigid frame, and double-faced asbestos with steel core;

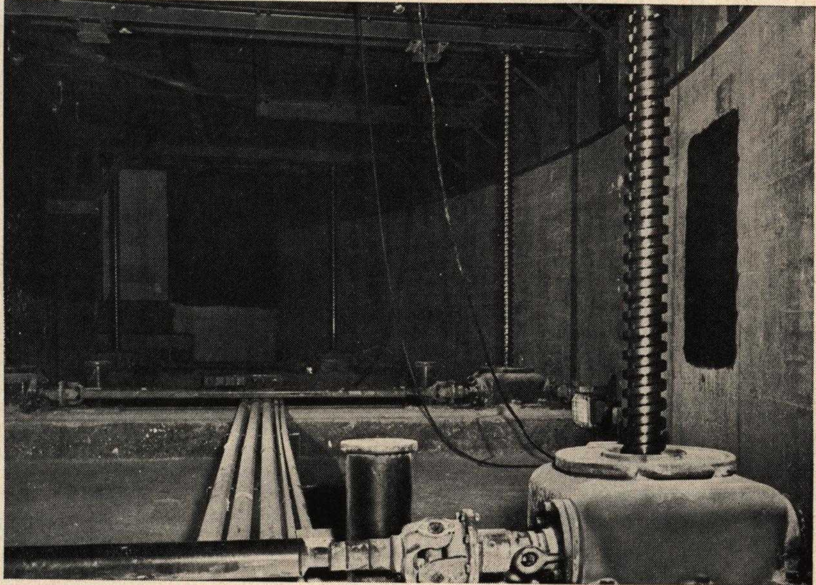
Straight lift, double-leaf, roll-up, and shirred types;

Manually operated, motor operated, or hydraulically operated.

All protective curtains are provided with an emergency release device of an approved type and are designed to comply with the applicable local code.

FOR THEATRES, STAGES, AUDITORIUMS





▲ View of Orchestra Lift pit—Lift in high position.
◀ View of section of orchestra lift pit-lift in low position.

Orchestra and Stage Elevators

Most commonly used as a pit elevator for musicians, the orchestra elevator is being used by present-day designers as a forestage extension at stage level, as a terraced forestage, or as an auditorium floor extension when additional seating is required.

Stage elevators, in single or multiple units, make possible many stage effects both above and below stage level; and also may serve as scenery and property elevators between scenes.

While we have designed, manufactured, and installed orchestra and stage elevators of many types, we usually recommend the jack screw type for mechanical reliability and low maintenance requirements.

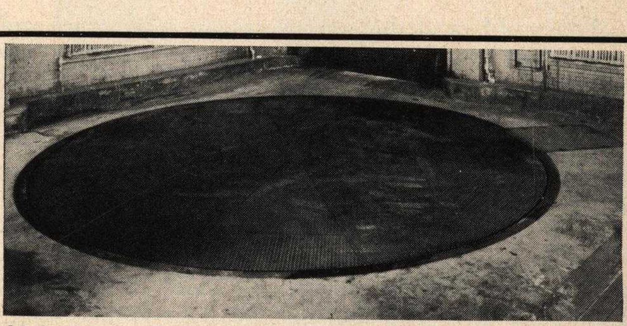
We also manufacture platform elevators for various industrial and special applications.

All of our elevators are designed to conform to applicable state and local code requirements.

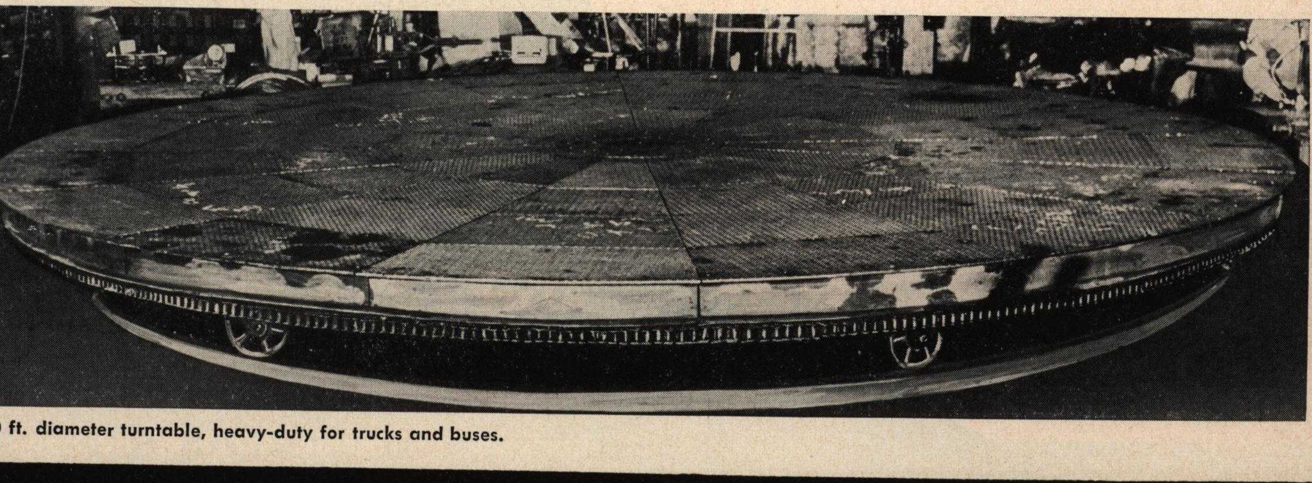
Turntables

We have designed, manufactured and installed turntables for many different applications, such as: display, stage, television studio, dance floor, vehicular, and industrial uses.

Each turntable was designed to suit its particular use and combined such features as: wood, steel or concrete slab platforms; constant or adjustable speeds; cyclic operation; current collectors, etc.



20 ft. diameter Bank turntable for Armored trucks, Federal Reserve Bank, Baltimore, Md.



40 ft. diameter turntable, heavy-duty for trucks and buses.

Desirability of Complete Service

JOSEPH VASCONCELLOS, INC. is the only organization in its field offering *complete* service—it both manufactures and installs required equipment. By maintaining complete control from the selection of raw materials to the installation of the finished equipment we eliminate the difficulties that arise from divided responsibility. A familiarity with field conditions, equipment built specifically for the job, installation by specialists, and a jealously guarded reputation for reliability, combine to guarantee satisfaction.

Wide Engineering and Erecting Experience

The problem of the proper designing of stages and equipment should be studied in the early sketch stage. Important savings in the cost and satisfactory stage operation can very often be assured if considered when the contract drawings are being developed. Having met the diverse requirements of stage, radio, television, and display fields, the personnel of Joseph Vasconcellos, Inc. has obtained unmatched experience, in every department. This experience is available to architects, engineers and builders in the development of designs and specifications to meet their requirements. Your inquiries are invited.

Catalog upon Request.

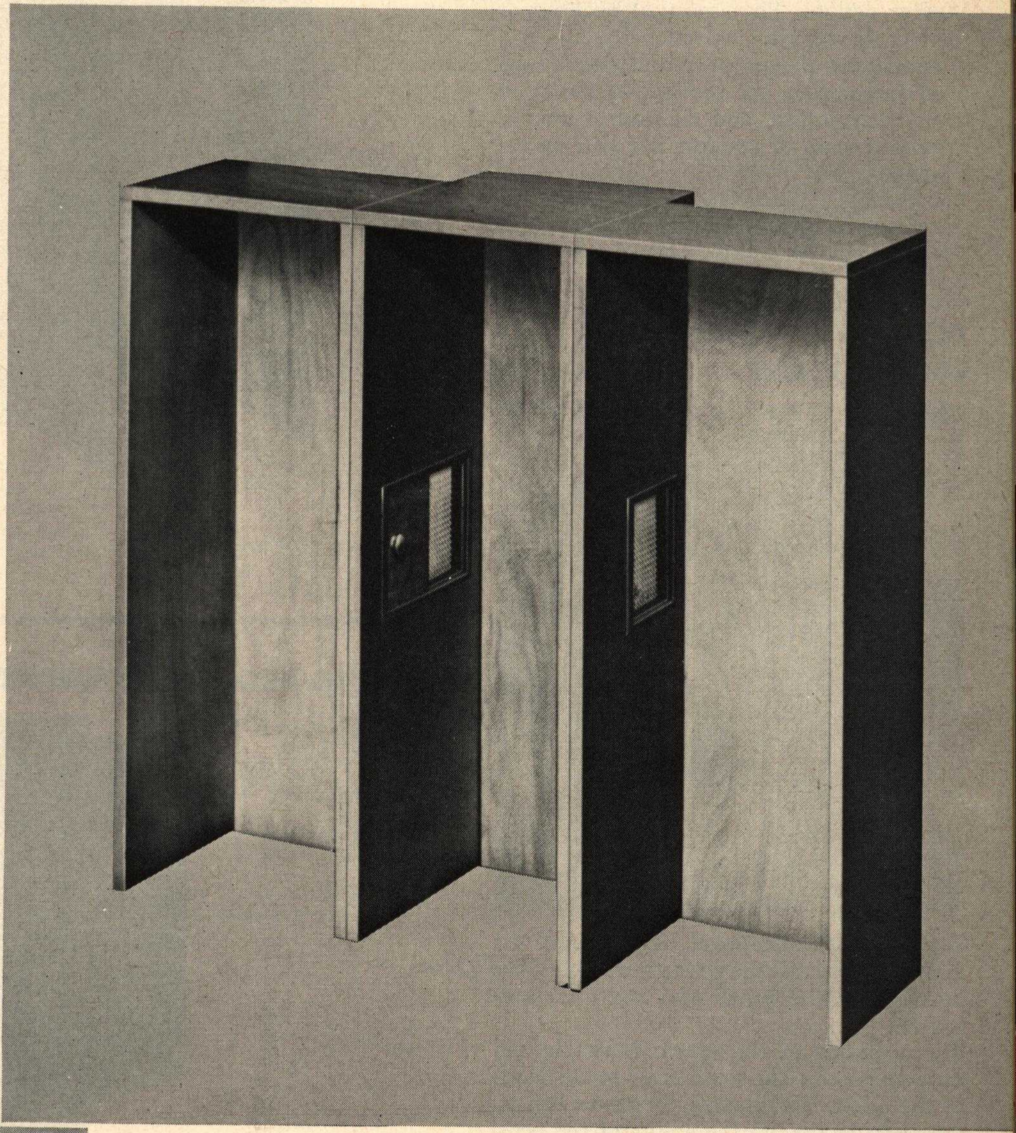
CONFESSIONAL PRIVACY



DONALD

Acousti-Confessional

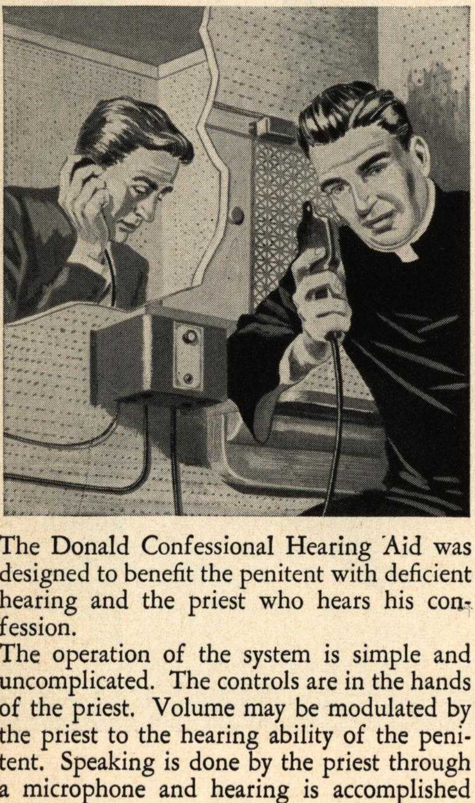
PERMANENT • MOBILE

J. R. DONALD CO. 620 N. 108th PLACE • MILWAUKEE 13, WIS.

The Donald Acousti-Confessional is the result of the study and work of outstanding acoustical engineers and the cooperation of Catholic clergy to provide a Confessional which is completely acoustic, practical and of efficient design. The acoustical qualities of the Donald Acousti-Confessional reduce to a minimum the danger of a confession being overheard beyond the confines of the Penitent's compartment, and the hushed interior imparts a sense of comfort and ease in the Penitent.

The Donald Acousti-Confessional, in either permanent or mobile model, is highly attractive, of the finest workmanship, durable, and intended to give lasting service.

DONALD CONFESSIONAL HEARING AID



The Donald Confessional Hearing Aid was designed to benefit the penitent with deficient hearing and the priest who hears his confession.

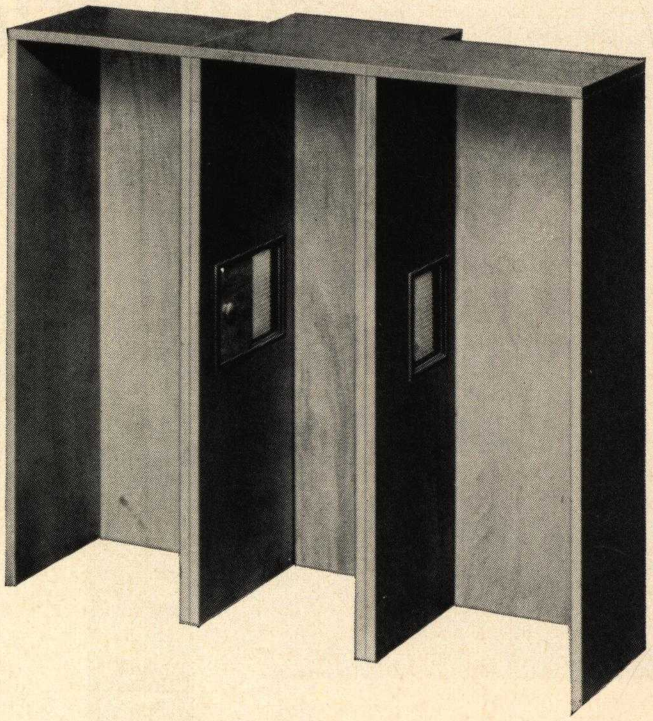
The operation of the system is simple and uncomplicated. The controls are in the hands of the priest. Volume may be modulated by the priest to the hearing ability of the penitent. Speaking is done by the priest through a microphone and hearing is accomplished by the penitent through a receiver which is suitably placed in the penitent's compartment and illuminated so that it may be clearly seen and readily available.

The Donald Confessional Hearing Aid was designed by a parish priest. It is a safe-guard against audibility beyond the confines of the confessional and reduces fatigue for the priest. It is easily installed.

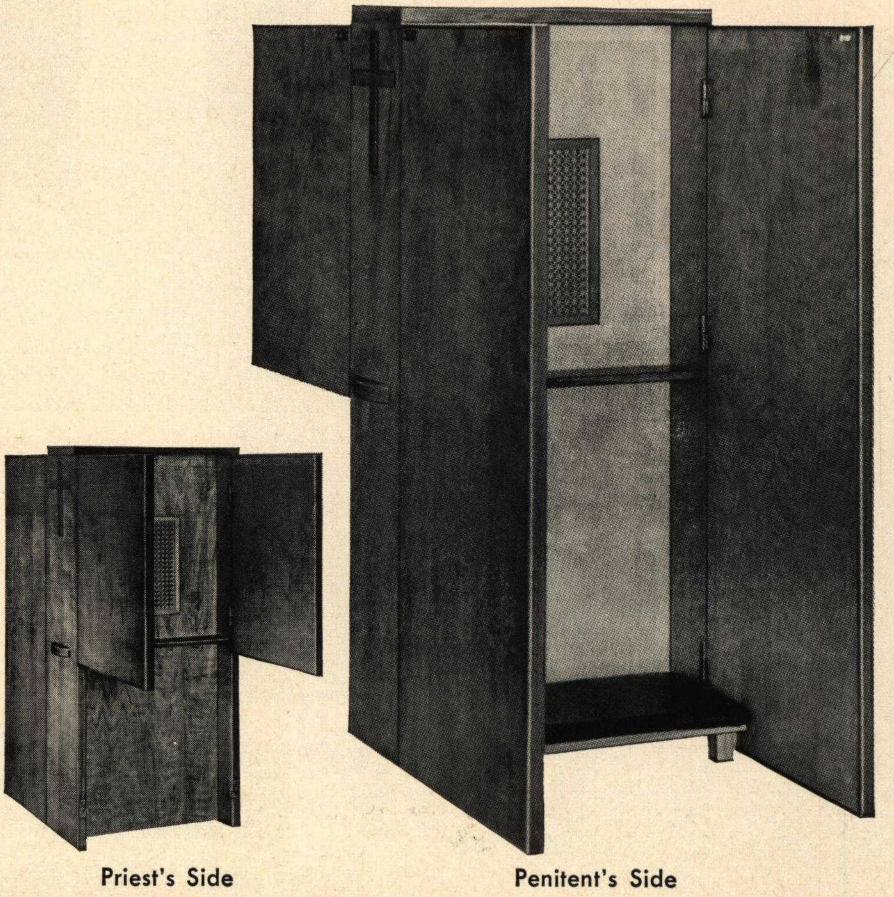
Specifications

115 Volts—25-60 Cycle. Power consumption less than 10 watts. No shock hazards. High gain amplification. Brown hammertone finish. All controls in hands of the priest.

PERMANENT ACOUSTI-CONFESSIONAL



MOBILE-ACOUSTI-CONFESSIONAL



Priest's Side

Penitent's Side

Acousti-Confessional

Model 801 DONALD PERMANENT Acousti-Confessional

For the Confessor, the Model 801 Donald Acousti-Confessional minimizes fatigue ordinarily attendant upon long hours in the Confessor's compartment. The acoustics decrease to a minimum the possibility of the Confession being overheard.

MATERIALS Model 801 is composed of twelve Donald Acousti-Panels and two Donald Grilles. Each panel consists of a solid outside panel and perforated inside panel enclosing a thick blanket of sound-absorbent material. The grilles each embody a thin translucent fabric which acts as a hygienic barrier against unpleasant odors and breath.

FINISH The 801 Donald Acousti-Confessional comes in a smoothly sanded natural birch finish ready for waxing or other fine finish.

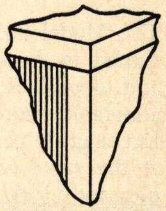
ADAPTABLE Panel dimensions have been selected to permit at least two alternative arrangements shown in the assembly combinations. Panel sizes may be adjusted to fit special conditions by trimming the solid edges or cutting through the panel wherever desired, without reducing the acoustical quality of the installation.

SINGLE CONFESSIONAL requirements may be met by reducing the number of panels to eight and one grille.

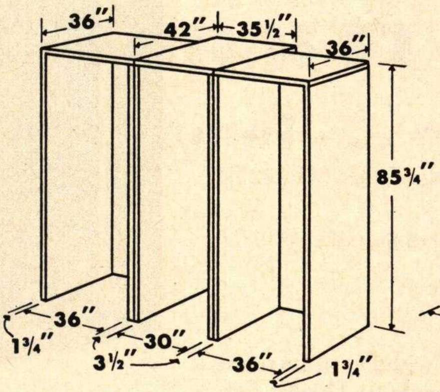
EXISTING CONFESSIONALS may be converted to give proper Confessional privacy with Donald Acousti-Panels. The panels are readily attachable to existing walls and ceilings by simply following the complete installation instructions packed with each panel.

Sizes and Assembly Combinations

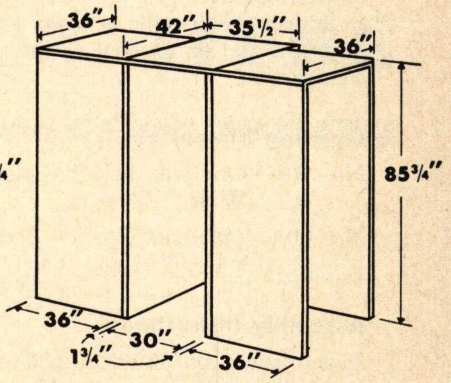
The Model 801 Donald Acousti-Confessional may be assembled with the penitent's compartments having entrances on the end or on the side shown here. The wall and ceiling panels are provided with solid wood edges which permit trimming as follows: a maximum of 1½″ on the sides and top, 4″ on the base of wall panels, 3″ on the edges of ceiling panel. All Model 801 Confessionals are shipped K.D. Complete assembly instructions are shipped with every confessional.



Top panel caps side panel as shown



Confessional with all entrances at the front.



Confessional with penitent's entrances on the end.

Model 702 DONALD MOBILE Acousti-Confessional

The multi-purpose Model 702 Donald Mobile Acousti-Confessional combines comfort, privacy and attractiveness, to give a practical answer to confessional problems in small as well as large parishes. In large parishes the Donald Mobile Acousti-Confessional may be used as an auxiliary unit to meet the problem of crowded Confessional facilities. In smaller churches or chapels it may be used not only as a mobile unit but as a permanent Confessional. It is also well suited for use in convents, monasteries, schools, hospitals, military establishments and other institutions.

DESIGN The sound-absorbent Donald Acousti-Panel components afford greater Confessional privacy than many conventional permanent confessionals. The open construction provides adequate fresh air and light for the comfort of both priest and penitent, but, nevertheless, maintains the privacy and seclusion which is so essential to the proper administration of the Sacrament of Penance.

PORTABLE The Donald Mobile Acousti-Confessional may be moved from one place to another without difficulty. One person can push the Confessional into place and two people can carry it with minimum effort.

FINISH The Confessional has a beautiful exterior finish of light walnut which harmonizes with any church interior. The interior is finished in natural birchwood. Other finishes are available on special order at slight additional cost.

COMPACT The Model 702 Donald Mobile Acousti-Confessional is compact, portable and easy to store. When closed the overall dimensions are 17¾″ x 28¾″ x 62″ high, which provides for ease of storage and economy of space.

Sizes and Assembly Combinations

FIGURE 1—standard arrangement, full length panels form the penitent's compartment; half-length panels form the confessor's compartment.

FIGURE 2—full-length panel on each compartment; this provides greatest privacy for both priest and penitent.

FIGURE 3—a corner installation for complete privacy; half panels are optional because the church walls provide adequate seclusion.

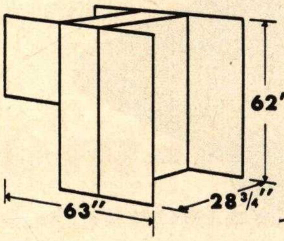


Fig. 1

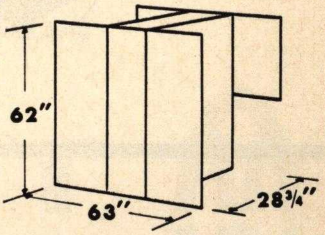

Fig. 2

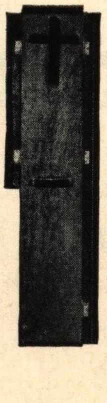

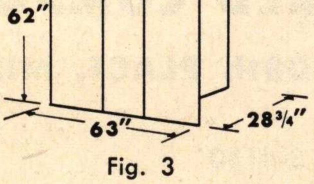

Fig. 3

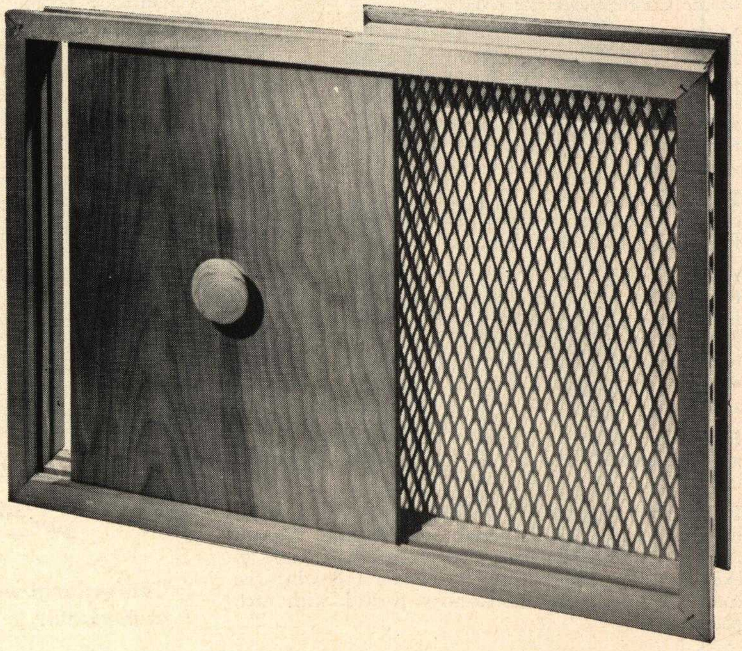
DONALD CONFESSIONAL GRILLE

The Model 901 Donald Confessional Grille was designed to complement Donald Acousti-Confessional and to provide additional Confessional privacy. It is adaptable, moreover, to any Confessional. The translucent grille permits unimpeded passage of sound and at the same time acts as a hygienic barrier to unpleasant odors.

The Model 901 Donald Confessional Grille is made up of two protective metal screens, attractively perforated and finished, and separated by a thin fabric barrier. Grooves provide free and easy action of the slide door. The grille is easily assembled for use in any type of Confessional facility, regardless of wall construction.



Opening Dimensions

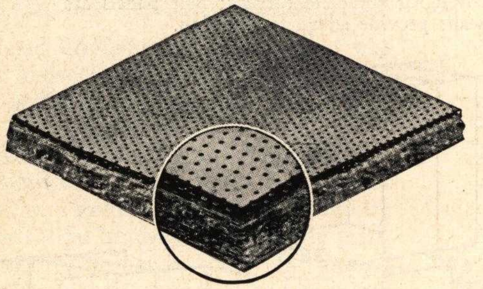
No. 901—One Side 11½″ Wide, Other Side 22⅞″ Wide.

No. 902 (Without Door)—Both Sides 11½″ Wide x 15½″ High.

Assembly Instructions

In permanent confessionals lined with Donald Acousti-Panels the two halves of the Model 901 Donald Confessional Grille are separated and installed per instructions shipped with grille. In existing confessionals the method is the same, except thinner partitions will require a filler on the grille in the penitent compartment. The Model 901 Donald Confessional Grille is unfinished to permit filling of individual requirements in finishing.

DONALD ACOUSTI-PANEL



In addition to being components of Donald Acousti-Confessional, Donald Acousti-Panels may be utilized and adapted to a great variety of conditions and circumstances requiring acoustical treatment.

Wherever circumstances require, Donald Acousti-Panels may be reduced in size by trimming or cutting without adversely affecting their acoustical efficiency. The panels, however, come in a number of convenient sizes which have been found to be ideal as standards.

CHURCH FURNITURE AND MANUFACTURING CO.
GARNETT • KANSAS

AIA No. 35-A-41

GARNETT PEWS

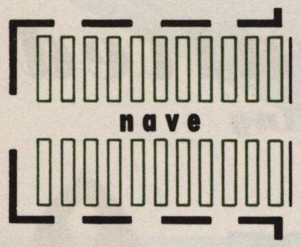
styling unlimited • quality unsurpassed

Church of the Gesu, University Heights, Ohio, John E. Miller, Architect, Cleveland, Ohio

Church seating involves more than comfort and convenience for the congregation. The style and quality of the pews contribute to the beauty of the structure as a whole, with the converging rows also helping to bring the focus upon the worship center.

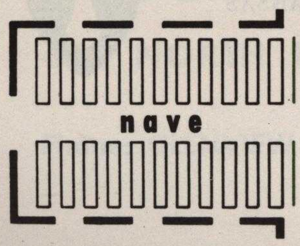
Technically, a pew is made up of two ends, a pew body, its center supports, and in certain cases, divisions. The styling and the quality of construction blend to make the finest church furniture. At Garnett, *you* determine the styling of every part of the pew. *Garnett* supplies quality craftsmanship in every construction detail.

PLAN YOUR PEW SPACING

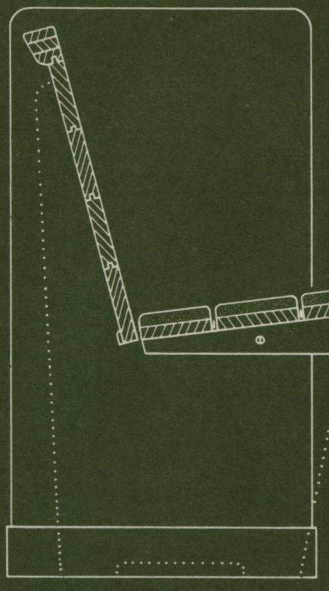


In sectarian churches, the pews should be spaced 34″ apart, from one pew back to the next pew back. In liturgical churches, where the faithful kneel for prayers, the spacing may be increased to 36″, and in this case, kneelers should be planned as a part of the pew. *For convenience in planning and laying out pew arrangements, Garnett can supply you with a special pew spacing scale upon request.*

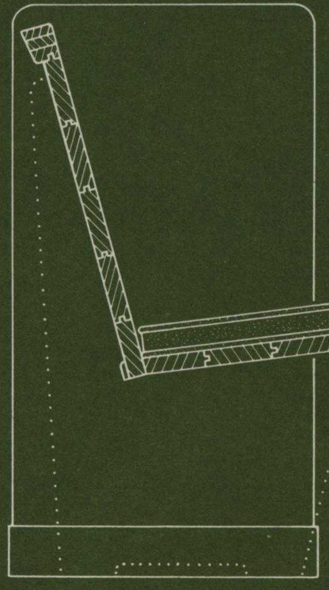
THE PEW SCREEN



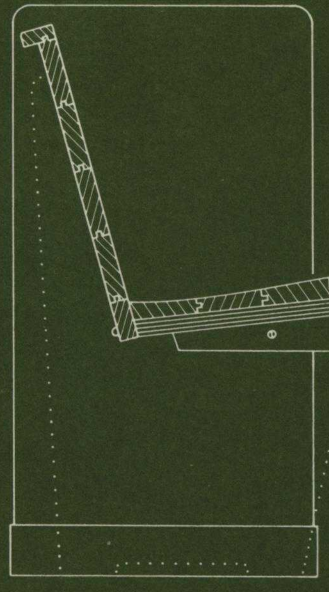
A pew screen (sometimes called a pew front) should be located in front of the first row of pews, its center 36″ to 42″ forward of the first pew back, its height equal to the height of the pew backs. Garnett pew screens are custom-crafted to match your pews in quality and styling.



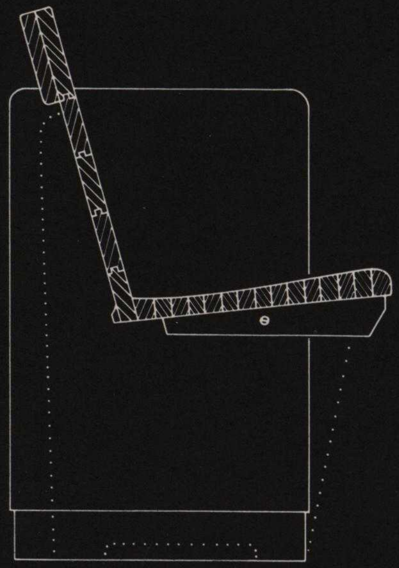
Pew Body No. 58



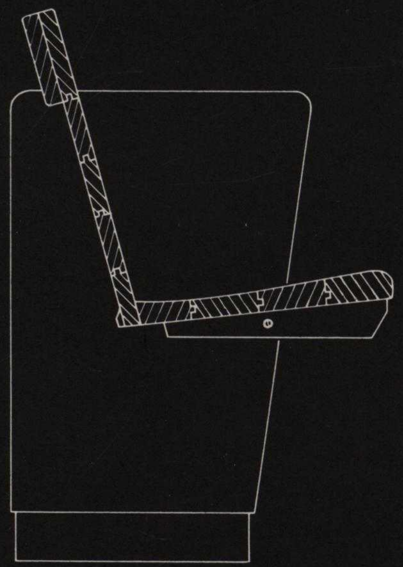
Pew Body No. 605



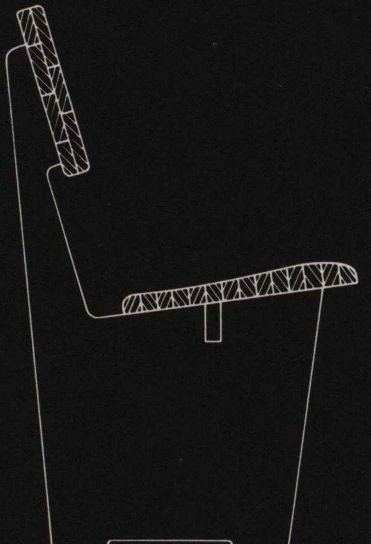
Pew Body No. 30



Pew Body No. 40



Pew Body No. 590

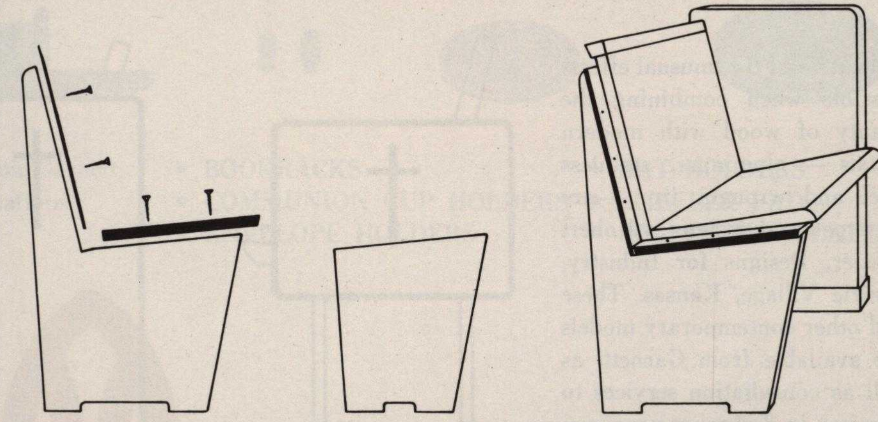


Pew Body No. 591

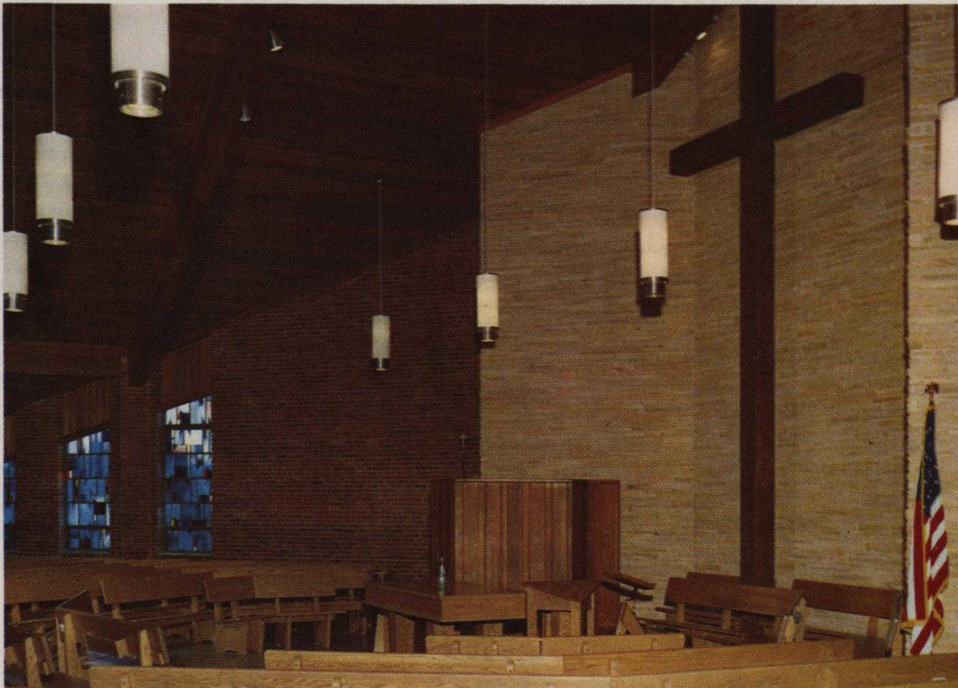
CREATE YOUR OWN PEW BODY

Let your theme determine the styling of a pew body best suited to your needs. Whatever that styling, Garnett can supply it. For example, the illustrations show a few of the most popular types, including pew bodies with strip seats or flat grain seats, and those with wide or narrow cap rails. The dimensions for these pew bodies were based on ideals of practicality and comfort, with the backs usually 32″-33″ from the floor to the top of the cap rail, and pitched from 4½″ to 5½″. The seats have a depth of 15″, rising 17″ from the floor to the front nose of the seat.

UNIQUE METHOD OF SUPPORT



Pews up to 14′ long are constructed without divisions. Longer pews, if necessary in your plans, have additional support in Garnett's unique blind division method, with sturdy cleats blind-screwed into seat and back — a simple, yet absolutely rigid construction allowing clear seating throughout the length of the pew.



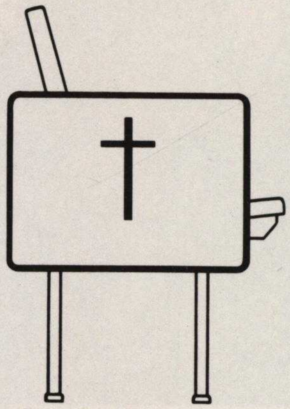
Trinity Presbyterian Church, Topeka, Kansas, Brown & Slemmons, Architects, Topeka, Kansas

The quoted price on Garnett Church Furniture includes transportation and installation charges. Pews will be delivered in Garnett's own trucks and installed by Garnett's trained personnel.

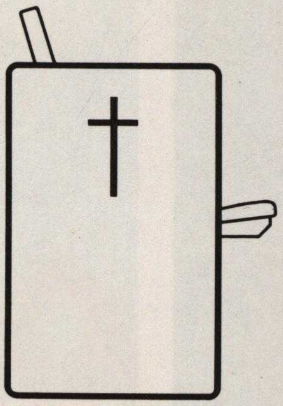
ADD PEW ENDS OF YOUR OWN DESIGN

Design your pew ends to carry out the desired effect, assured that Garnett can translate your creation into the finest of furniture. As the sample illustrations indicate, we are experienced with all types of pew ends, from the best of the traditional to the newest of the contemporary — including styles utilizing the beauty of modern metals. Whatever style you specify, you can be sure of enduring craftsmanship, in 2¼″ three-ply ends framed from ¾″ solid pieces, with the center pieces frame-crossbanded to insure against warpage. The ends will be routed with a dovetail bit to fit tightly to the pew body. The cap rail of the pew body will be routed into the ends for maximum back support. Plying of the ends will be accomplished with Urea-Resin glues, insuring great strength and enduring beauty, free from the darkening often encountered as inferior glues age.

Indicative of the unusual effects possible when combining the beauty of wood with modern metals — aluminum, stainless steel and wrought iron — are these pew end designs by Robert Bessier, Designs for Industry, Prairie Village, Kansas. These and other contemporary models are available from Garnett, as well as consultation services to help you in designing your own Wood With Metal pew ends.



Pew End No. 5901



Pew End No. 5906

ADD YOUR OWN INDIVIDUAL TOUCHES

In specifying Garnett, you are free to individualize your pews with your choice of cap mouldings, edge mouldings, panel carvings and bas relief details. The panel motifs illustrated are only a few of the many you might consider. *For your convenience, Garnett maintains a complete file of symbols appropriate to every denomination. We welcome the opportunity to help you select exactly the right symbolic elements for all your church furnishings.*

GARNETT

finest construction throughout

Although frequently copied in styling, Garnett Church Furniture cannot be surpassed for quality of workmanship and materials. Garnett uses highland-grown Appalachian Red Oak, a superior wood which grows slowly during cool mountain summers to form a finer grained, finer textured product, free from checks and mineral streaks. The lumber is air-dried for six months prior to being custom-kilned in Garnett's own kilns. The moisture content is carefully regulated for the area in which the furniture will be used. Where other companies might be content with the standard U. S. Forest Products recommendation of 7% moisture content, Garnett takes special care to reduce moisture to as little as 1% for furniture to be used in arid areas, and tailors the moisture content at 13% to 15% for higher humidity areas.

Grain patterns are matched as the wood is joined. Only best quality sun bronze screws are used, and except when attaching accessories to pews, the screw heads are plugged with oak. All glued joints are surfaced on Garnett's Glue-jointer so that the pieces snap into place for perfect bonding. Animal glue (the most invisible bonding agent) is used on all surface joints. Where animal glue is used, the material is heated to approximately 100° F. and the joints are allowed to stand at least 48 hours before surfacing. All plying (as on pew ends) is accomplished with Urea-Resin glues, finest for strength, durability and moisture resistance.

Throughout the production of any piece of Garnett Church Furniture, only the best genuine cabinet construction methods are employed — methods far surpassing millwork.

There are no standard finishes on Garnett furniture. After each piece is hand sanded and scraped, it is sealed and finished with Garnett's especially compounded finishes, scientifically applied to bring out the greatest beauty of the wood.

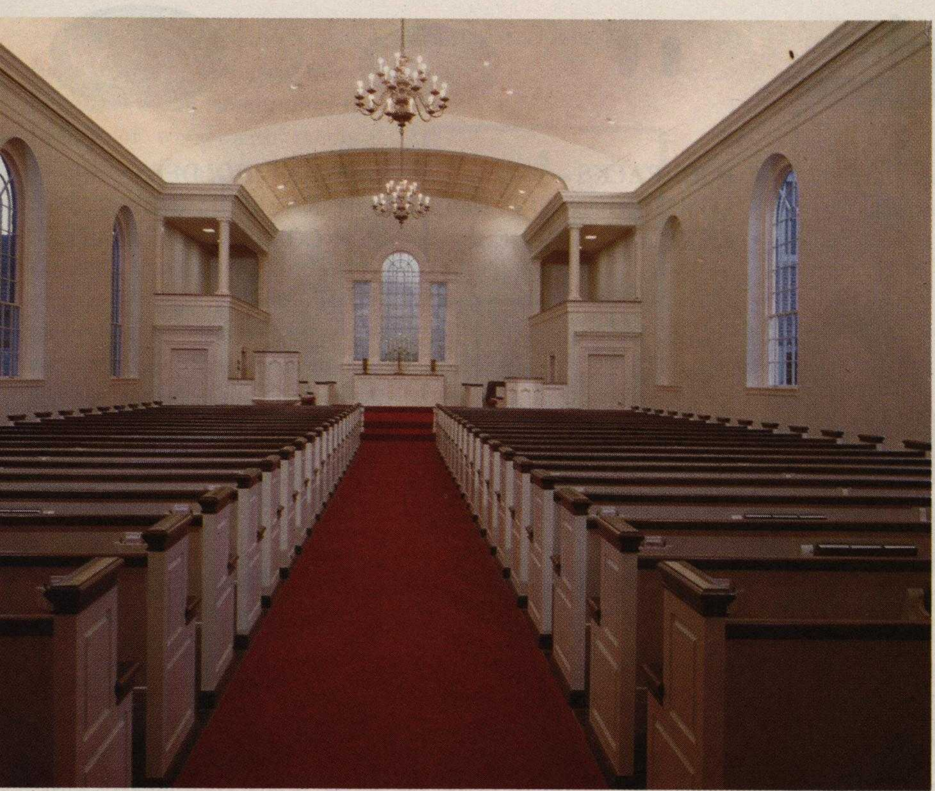
CHANCEL FURNISHINGS



St. John's Methodist Church, Kansas City, Missouri, Harry L. Wagner, Architect, Kansas City, Missouri

The chancel, whether it is of the divided type or of the center pulpit type, sets the theme for your treatment of the entire church. You may look to Garnett for the most faithful and accurate development of your theme through custom produced chancel furnishings.

The divided chancel and the center pulpit require different groupings of the furnishings; and there are, of course, variations among the denominations as to placement of the individual pieces. Having furnished more than ten thousand churches of all faiths, Garnett is fully experienced with all these variations, and can give you completely integrated service in designing your chancel and its fitments.

Examples illustrated are of churches for which Garnett has supplied complete chancel groupings.

MATCHED GROUPS
INDIVIDUAL PIECES
. . . of quality and distinction

In addition to complete chancel groups, Garnett offers custom-designed fitments in the enduring beauty of solid oak construction, with ornamentation and symbols either carved from solid oak or executed in gleaming metals.

Other woods are also available, in the same high quality construction, if specified.

Chairs may be upholstered in velvet or best quality heavy weight plastic, if desired.

Feel free to contact Garnett for any information you may require. We will be happy to supply shop drawings and/or detail drawings for inclusion in your church plans.

GARNETT CHURCH FURNITURE IS COMPETITIVELY PRICED

Garnett welcomes the opportunity to submit quotations on church furniture and accessories designed to your specifications. You will find no better quality at any price. Note, too, that the quoted price includes all installation and transportation costs.

SPECIFICATIONS

We welcome the opportunity to work with you in detailing complete specifications for chancel furniture, panelling, pews and accessories as custom-designed for your church.

GARNETT'S PLEDGE TO YOU

For three generations, Garnett has produced church furniture of the highest quality in materials and workmanship. We are proud of our products and we offer them with our guarantee of complete satisfaction. On all orders, large or small, you will receive first class cabinet work with high quality finishing. Garnett guarantees to replace, at any time, any work that proves unsatisfactory on account of faulty materials or workmanship.

Garnett is large enough to fill your orders promptly; not too large to give friendly personal attention to your church furnishing problems. If there is any way we can serve you, contact the Garnett, Kansas, office or your nearest Garnett distributor:

McShane bells and chimes

McShane Bell Foundry Company, Inc.

McShane **bells** and **chimes**

There's art and skill in the making of a Bell . . . an assembling of materials . . . deft hands to guide their fashioning . . . and a mass of shapeless metals becomes translated into deep, rich tones of sweetest music, floating across the air from the lofty tower of some cathedral . . .

Such is the making of a McShane Bell . . . a bit of master craftmanship that knows no other law than that of scientific accuracy.

Since the establishment of the company in 1856, over 100,000 McShane Bells have been installed. They ring from the towers of Cathedrals, Churches and Public Buildings in all sections of this country and throughout the world.

Our complete foundry and manufacturing facilities, our skilled workmen, long experienced in the uncommon art of Bell making, and the finest of materials assure a product unexcelled in its field.

McShane Bells are composed of pure Ingot Copper and imported East India Tin, the only metals which years of experience and test have demonstrated are capable of producing a satisfactory ringing alloy.

McShane chimes

While there is no limit to the number of bells in a chime, they are generally understood to consist of at least eight bells. One octave gives a narrow scope for tune playing. The most practical consists of ten to thirteen. The lighter sets ten; medium eleven; the heavier ones thirteen. We do not recommend more than thirteen unless an extra heavy bell is used for the "tenor."

The frame in which the bells are hung is built to suit the specific requirements of the tower.

Our playing actions are extremely simple; easy to install and play, inexpensive to maintain, being a make-and-break contact using a minimum of current.

Old or new chime installations can be electrified to be played from keyboard placed at organ console. The evenness of tone quality, solidity of frame and fixtures, everything desirable in a superior chime is inherent in "McShane Chimes."

PLANNING TOWERS FOR CHIMES

The average tower measures from 12′ to 15′ square with about a 10′ to 16′ ceiling having windows as large (maximum closure 2′ at floor and ceiling) and as open as possible. Louvers may be used to close the openings provided they are at a 45° angle. The floor should be nearly level, supported by heavy timers or "I" beams with a 4′ to 5′ square trap door in the center for hoisting the bells if the windows won't permit entry.

keyboard

Made of quartered oak or any finish desired, with a key for each tone hooked up to the relay panel. Relays also can be attached to the organ console itself.

hand ringing

Playing is done by the hand ringing stand below. A player roll attachment operated from a push button or clock is also available.

relay panel

In a steel cabinet attached to the lower part of the bell carrying frame. All parts are easily accessible and will give an indefinite period of service.

McShane Westminster peal bells

Peals are a combination of from two to five bells attuned to various musical intervals, and are fitted with the complete mountings in the manner of church bells and rung together. Each tone falling in one after the other produces a very beautiful, harmonious and pleasing effect.

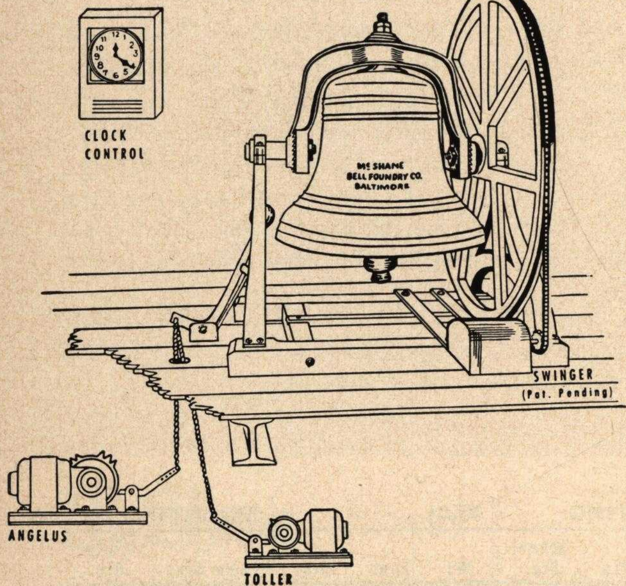
The demand for peals is constantly growing and we have had the honor of building the largest swinging peals in this country. This class of work is a specialty with us and many sets are sent out each year.

The Westminster peal is copied after the famous bells in the tower of the houses of Parliament, Westminster, and introduced many years ago in St. Mary's, Cambridge. It is also known as the "Cambridge Quarters." In England almost every parish has its "Peal" and change ringing is an art peculiar to that country.

The Westminster Changes consist of an interchange of sixteen notes. Four bells are required.

The usual method of mounting when used with tower clocks is in a frame with all bells stationary. All mountings are designed to permit the attaching of clock hammers when desired, and are arranged to suit the individual tower.

McShane bell swinger
Funeral Toller—Angelus



The new silent bell swinger is precision built, consisting of hardened and ground gears, completely ball bearing equipped to give you years of trouble free service. Bells are rung automatically or switch controlled. Our unconditional five year guarantee eliminates the need for service policies or adjustments of any kind.

McSHANE WARRANTY AND SERVICES

We extend the following warranty attached to the bill of sale of all bells of one hundred pounds in weight and upward.

"The above mentioned bell is warranted to be of genuine bell metal composition, of finest workmanship and of perfect tone (the purchaser to decide this). It is warranted not to break while being used in the proper manner, for a period of twenty-five years from this date. In case of failure in any of these respects, and notice be given us, we agree to recast the bell, or provide another of the same weight and quality which will be satisfactory, the purchaser to bear only the expense of transportation."

"Electrical equipment consisting of electric keyboard action, and player roll attachment, is guaranteed for a period of five years from date of purchase against original defects in workmanship and material."

We are always pleased to give any information desired on the subject, inspect towers, give demonstrations, furnish specifications and estimates.

for over 100 years . . . . .

Over 100,000 McShane Bells have been installed and ring from the towers of the finest Cathedrals, Churches and Public Buildings in every section of the world.

McShane Bells have been composed of all virgin copper and tin, the only metals which years of experience and test have demonstrated as capable of producing a satisfactory ringing alloy.

The name McShane has been, in itself, an unconditional guarantee of unrivalled quality and workmanship.

Architects and decorators have engaged our craft and design facilities for many years. We are prepared to set up a budget, estimate, full-size, fabricate, deliver and install projects in metal, wood, glass, mosaic, plastic and color-styling, developing submitted ideas or making original designs.

Our shops and studios are located in one building. Our staff is union. We are pleased to work under one contract in our several fields, thus expediting and coordinating all processes of design and execution. Fine craftsmanship is achieved when talent and experience are at the service of architects and designers.

Carillons, Bells and Chimes

SCHULMERICH

The Ultimate in Bell-Tone Perfection

The carillon, comprising many bells—supreme musical voice of all ages—has sung through the centuries in music which has no peer. Traditionally the voice of the towers of Europe, there can be no more magnificent mode of expressing the hopes and aspirations of mankind.

The carillon holds a place in the hearts of all who appreciate finer things. No other instrument ever conceived in the mind of man can approach its music in majestic beauty and ethereal splendor.

In the Low Countries of Europe, the people desired sets of bells on which the most elaborate musical patterns could be played. After centuries of search and experiment, the Flemish developed bells of such tonality that they could be used for unlimited harmony. Thus was born the Flemish carillon.

This magnificent instrument should be a part of each community—for the voice of the carillon reaches multitudes of people in all walks of life with its message of inspiration, hope, joy, comfort, peace and good will. But, in years past, because of the tremendous size and prohibitive high cost of cast bell carillons, few persons have been able to benefit by its unique contribution to the cultural and religious needs of the community.

NOW, this is no longer true!

why select a SCHULMERICH BELL *instrument*

Backed by a quarter-century of experience in the design, manufacture and installation of thousands of the popular "Carillonic Bells"* instruments, Schulmerich Carillons have proven their ability to provide music identical in every way to that of the finest type cast-bell carillons—at a fraction of the cost.

In addition to the traditional monochromatic voice of bells alone, Schulmerich has recently created the newest of all carillons—the "Americana" Bells instrument. This new multi-tuned instrument creates a full compliment of percussive voices providing musical dimensions never before possible in carillon music. All Schulmerich carillons use precision-tuned, miniature bell-metal tone generators, struck by metal hammers, as their tone sources—exclusive Schulmerich patents. Thus, because its action duplicates that of a metal clapper striking a cast bronze bell, the tones are produced in the traditional manner.

Through the magic of modern electronics, the faint but perfect vibrations of the bells of the Schulmerich Carillons are amplified millions of times and projected from the tower or roof by special stentors.

Over 5 thousand churches, colleges, schools, commercial institutions and public buildings throughout the world send out the beautiful music of Schulmerich Bells instruments. Whether large or small, Schulmerich manufactures bell instruments to meet the musical budget requirements of each one.

"CARILLON AMERICANA"® BELLS INSTRUMENT

The world's largest and finest carillon. A 305 Bell instrument comprising the following sets of chromatically tuned bells:

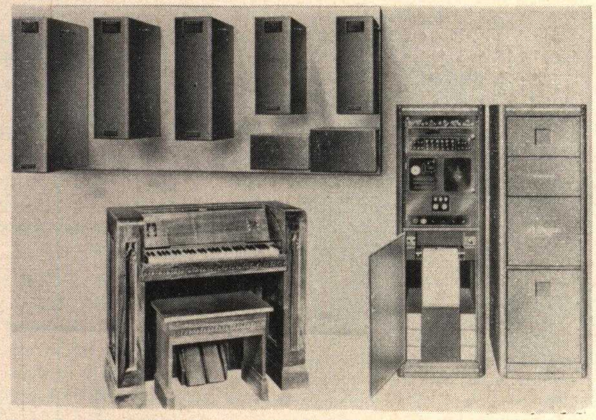
61	Flemish Bells
61	Harp Bells
61	Celesta Bells
61	Quadra Bells
61	Minor Tierce Bells

The "Carillon Americana" Bells are played from a 2 manual organ type console with full pedal clavier built to AGO standards. This instrument can be installed in any building—with or without a tower, and without the massive construction required to support heavy cast bells. All units of this instrument, other than the stentors, are housed within the building, in as little as 50 square feet of floor space. Total weight of the tower equipment is under 500 pounds. Automatic programs on the carillon are provided through clock-controlled playing devices.

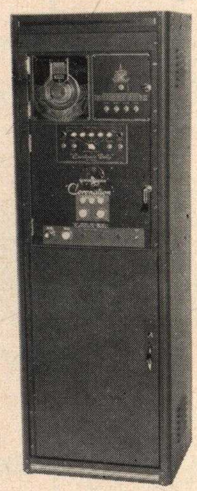
"AMERICANA"® BELLS INSTRUMENT

Inspired by the beauty of the Schulmerich "Carillon Americana" Bells, the "Americana" Bells are available in 50 to 183 bell ranges. To the beauty of traditional bell tones are added the new voices of the harp bells and/or the celesta bells. Schulmerich "Americana" Bells add true depth to carillon music—a new spiritual dimension never before provided by carillons of old. The "Americana" Bells are played manually from a dual manual keyboard or automatically through the use of clock-controlled program accessories. In a true carillon, ancient or modern, each note must share an exact relationship with every other note, as to the location and proportion of the particals making up its tone. In the "Americana" Bells, as in all Schulmerich instruments, tuning of each partical of each note is achieved by a patented process, using a chromatic stroboscope assuring an accuracy of 1/20 of 1 per cent.

"ARLINGTON"® CARILLON



Schulmerich "Arlington"® Carillons are manufactured in 25-, 37-, 49- and 61-bell instruments, with power factors engineered to meet the volume requirements of every type of installation location. Played manually from a single, chromatic keyboard, from the organ console, or through completely automatic playing devices, the "Arlington" Carillons meet every known bell service demand. Over 600 "Arlington" Carillon Models available.



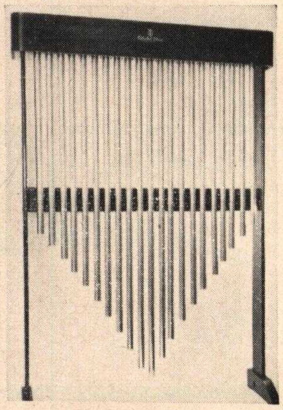
"CORONATION"® CARILLON

The Schulmerich "Coronation"® Carillon is a 25-Bell instrument, English-type tuning, for use from the tower as a carillon, plus inside the church or building with the organ, as organ bells. It is basically designed for manual playing, by any musician familiar with piano or organ—and may also be equipped with complete automatic playing devices. Over 900 "Coronation" Carillon Models available.

CATHEDRAL CHIMES

Schulmerich Cathedral Chimes of conventional tubular brass design, are built both for use with the organ and for amplified chime music from the tower. Engineered to out-perform all other tower chime systems and organ chimes, they are beautifully voiced in perfect pitch by "harmonic-tuning." They are built in 21- and 25-note models, with amplification systems to meet all tower volume demands.

Over 30 Cathedral Chime Models available.



CHIMEATRON®

The Schulmerich Chimeatron is a self-contained instrument, with chime-tone generators, amplifier, reproducer and keyboard cased in fine wooden cabinet—for use as a solo instrument or with the organ as organ chimes. It is also amplified to provide tower-chime tones—distinctly different tones as compared to the perfect cast bell tones of the "Arlington" Carillons and the "Carillonic Bells" instruments.

Over 40 Chimeatron Models available.

"BASILICAN"® BELLS INSTRUMENT

The Schulmerich "Basilican"® Bells is the most complete traditional bell instrument ever created. Originally designed for the North American College in The Vatican City, Rome, Italy, it is now available to chapels, churches and cathedrals. Using 6 bells, it is the perfect instrument for ringing the Angelus, Sunday and weekday Mass Calls, the de Profundis, all by clock control, and Funeral Tolls manually. The "Basilican" may be combined with the 25-bell "Coronation" Carillon, with any of the "Arlington" Carillons, or with both, for broader program use.

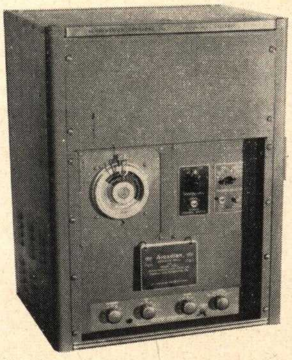
Over 300 "Basilican" Bells Models available.

"MARIAN"® BELLS INSTRUMENT

The Schulmerich "Marian"® Bells is a medium-priced instrument, designed to provide minimum traditional bell uses for the Church. It is a three-bell unit, offering completely automatic clock control of one to three bells for the Angelus and Mass Calls, with semi-automatic and manual use of the bells for tolling and other purposes.

Over 60 "Marian" Bells Models available.

"ARCADIAN"® BELLS INSTRUMENT



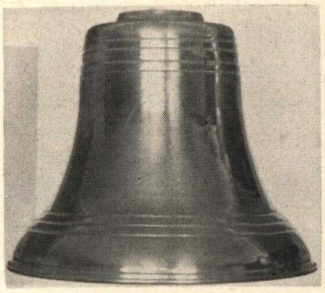
The Schulmerich "Arcadian"® Service Bell and Hour Toll provides a low-priced instrument for the church, using one bell of the "Carillonic Bells' as its tone source. It is designed for use where a single bell is required, the bell being rung manually or automatically by a program control clock. The "Arcadian" Angelus and Mass Bell, a similar instrument, provides the Angelus and Mass Calls for the Catholic Church by clock control, with manual tolling of the single bell for funerals. Both of the "Arcadian" instruments may be equipped with a manually-operated record-player—either single-speed manual or three-speed automatic changing.

Over 40 "Arcadian" Bell models available.

"MAGNEBELL"® TAPE PLAYER

The Schulmerich "MagneBell" is designed for the church or institution with a limited budget. At low cost, it provides the music of the famous Schulmerich carillons played on prerecorded magnetic tape, controlled by a 15-minute interval program clock. A "Call-to-Service" Bell is included. The basic control cabinet provides a single housing for the tape player, the special audio amplification, the "Call-to-Service" Bell and a monitor reproducer. Schulmerich also produces the model 155 "RecordaBell"* instrument, similar to the above, with a 4-speed record changer replacing the tape player mechanism.

SCHULMERICH BRONZED ALUMINUM BELL SHELLS



The churches on the cover are equipped with the above illustrated Schulmerich Bronzed Aluminum Bell Shells.

Where the bell shape becomes an important factor in the architectural design of a building, Schulmerich provides decorative bell shells in varying sizes to conceal the tower stentors. Made of spun aluminum finished in an anodized bronze color, these bell shells are available as accessories to any Schulmerich Bell instrument. Here is the perfect answer to the problem of combining modern bell instruments with the traditional visual representation of the bell shape.

services

The selection of the type and size tower instrument best suited to the needs of the institution and community to be served, can only be made after a survey of the many factors to be considered. Until the basic functions and program use of the instrument is determined, the proper equipment cannot be selected. Too much emphasis cannot be placed on the importance of making a thorough survey of the program needs of the institution, and a careful analysis of the facilities offered by each instrument, before a final selection is made.

To assist architects and clients, these services are offered by Schulmerich Carillons, Inc., without cost or obligation:

a. Field survey by District Manager
b. Equipment and wiring layout by District Engineer.
c. Architects Information File (available on request) no charge
d. Factory engineering services for special projects.

distribution

Sales of all Schulmerich carillon and bell instruments are handled by direct factory representatives located throughout the United States and Canada. Schulmerich also maintains its own organization of factory-trained field-engineers for installation and maintenance of Schulmerich carillon and bell instruments throughout the United States and Canada.

cast bells and carillons

For those lovers of traditional cast bells to whom weight and cost are no obstacle, Schulmerich offers the finest in imported cast bells. Carillons, chimes, peals, individual bells and a complete line of bell ringing equipment is now available.

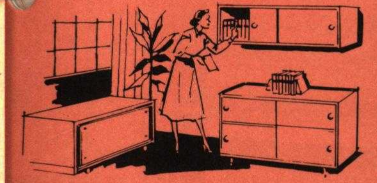
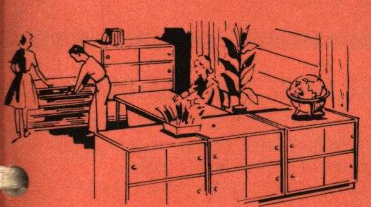
MOVABLE CABINETS

A complete line of storage and special purpose classroom cabinets

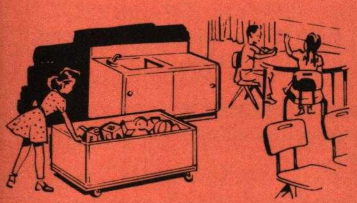
AS WALL CABINETS



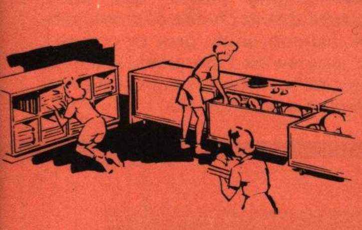
AS A ROOM DIVIDER



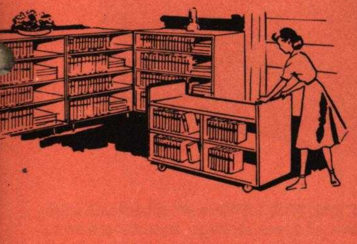
AS A MOBILE CABINET

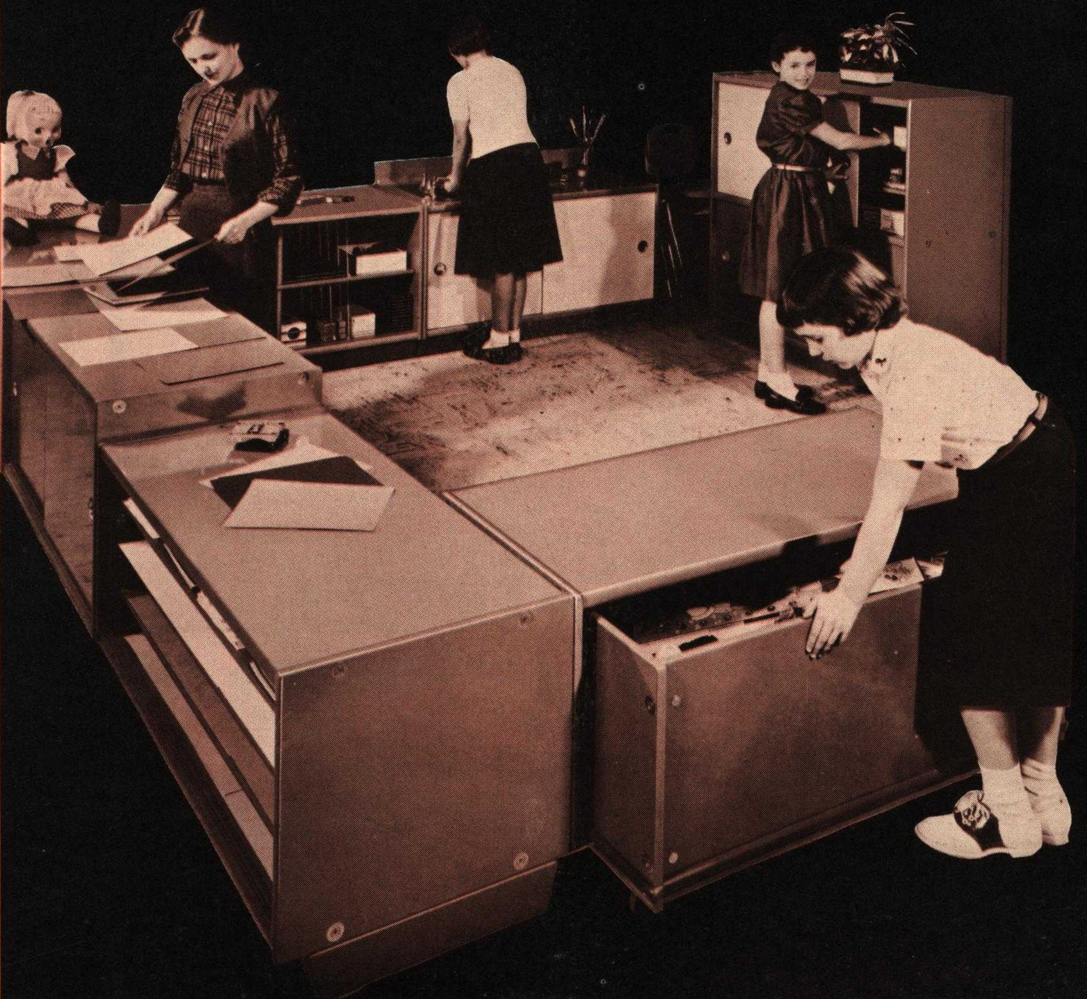


FOR STORAGE

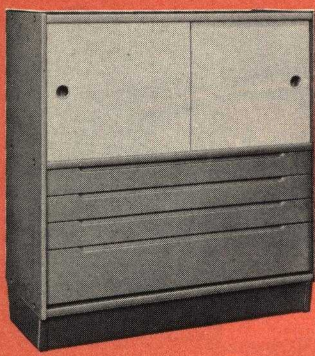


FOR LIBRARY USE

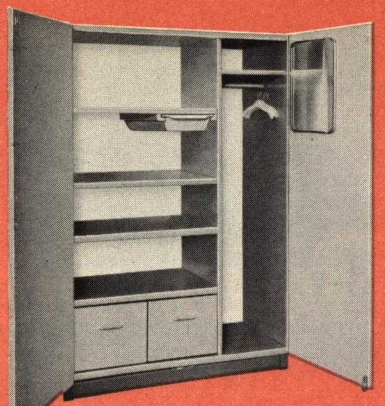




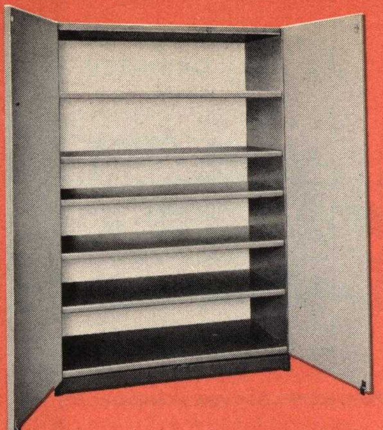
A.I.A. File No. 35-B-4



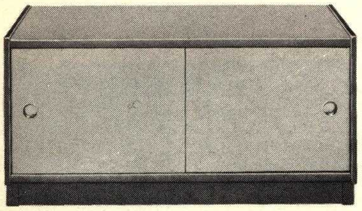
DOUBLE HEIGHT GENERAL STORAGE CABINET has twice as much practical storage space. One shelf allows storage of massive items . . . or add dividers to make up to 36 cubicles. Height: 49", 51"; Depth: 22".



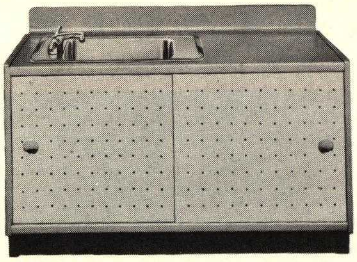
TEACHER'S WARDROBE—STORAGE CABINET. Teachers love this handy, compact, lock-away cabinet. It gives her a plastic vanity tray, mirror, file drawers and plenty of shelving. Height: 69½", 71½"; Depth: 22".



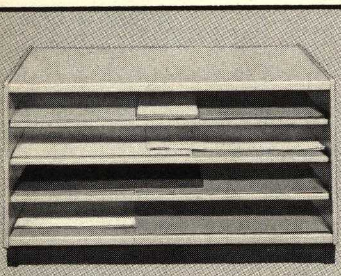
TEACHER'S STORAGE CABINET with five adjustable shelves. Lets the teacher keep her supplies locked away . . . gives her an uncluttered orderly classroom. Height: 69½", 71½"; Depth: 22".



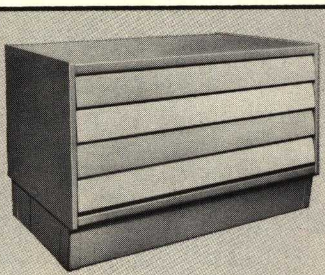
GENERAL STORAGE CABINET for all-around multipurpose storage. Use without shelves to store large items . . . or use up to 7 adjustable shelves, or with pull-out drawers. Height: 23", 25", 27", 29", 35", 37"; Depth: 22".



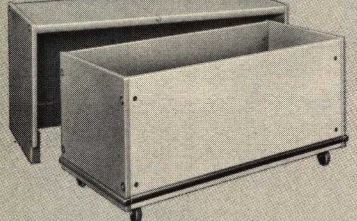
CABINET SINK with rugged plastic surface and deep-well stainless steel sink. Has H & C faucets, towel rack, basket strainer and optional fountain bubler. Perforated doors for proper ventilation. Height: 23", 25", 27", 29", 35", 37"; Depth: 22".



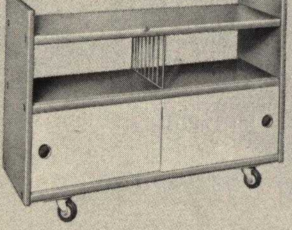
PAPER STORAGE CABINET extra deep . . . perfect for large drawing paper, newspapers, etc. Will accommodate up to 5 horizontal shelves. Height: 23", 25", 27", 29"; Depth: 26".



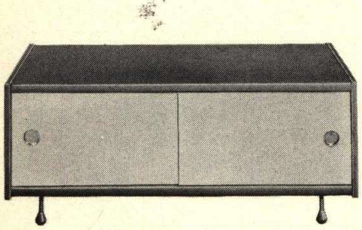
PAPER DRAWER STORAGE CABINET with waterfall front design, 4 or 5 alternating blue and yellow pull-out drawers on sliding extention arms. Height: 23", 25", 27", 29"; Depth: 26", Width: 39".



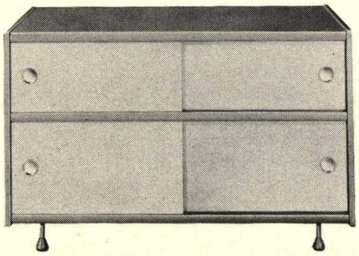
TOY CART WITH TABLE SHELL. Caster-mounted cart may be pulled out to move or gather toys, leaving the plastic-surfaced shell to serve as ah extra table. Height: 23", 25", 27", 29"; Depth: 22".



BOOK TRUCK on wheels for complete mobility. Roll books or supplies right to the spot where they're needed . . . and, against a wall, it banks as a Two-Tier cabinet. Height: 29"; Depth: 15".



ONE TIER CABINET. Ideal for wall mounting, supplementary storage . . . or as a decorative low cabinet for plant or book display. Perfect as a seat-storage bench. Unit height: 15"; Depth: 15".



TWO TIER CABINET for supplementary work surfaces. Singly or in banks, this cabinet can be used as "see-over" room dividers. Also ideal for spot storage of materials. Height: 29"; Depth: 15".

COMPARE THESE PLUS FEATURES

HONEYCOMB CORE construction gives tremendous strength without mass.

STEEL INTO BARREL NUT assembly permits unlimited reassembly without wear.

VERTICAL DIVIDERS, as many as 5 per shelf, answer specific functional needs.

LEVELING ADJUSTMENT assures perfect horizontal alignment despite floor irregularities.

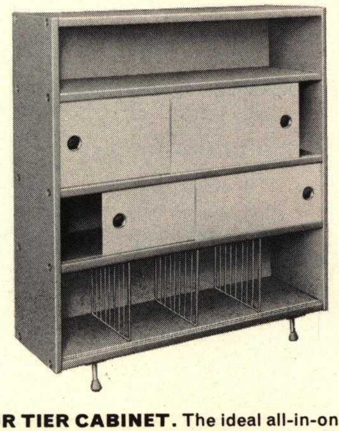
PLASTIC EDGING on all end panels and dividers to prevent marring.

ONE TOOL ASSEMBLY—Any cabinet can be assembled in minutes with a Phillips screw driver.

FIVE TYPES OF MOUNTINGS to choose from: Legs, Casters, Wall Mounting, Island Base, Full Base.

MOVABLE SHELVES may be moved up or down according to individual needs.

AVAILABLE IN 6 COLORS FOR LEARNING—Sliding panels and back panels are available in choice of coral, yellow, green, salmon, blue, grey to compliment your Brunswick Fiberglass seating. Warm grey cabinet frames help create the perfect learning environment.



FOUR TIER CABINET. The ideal all-in-one cabinet for open or closed storage space. Used in series it's a room divider . . . or it can be a storage-island or plant display unit. Height: 53"; Depth: 15".

consider quality and economy …then specify the investment line that continues to set the pace!

Brunswick

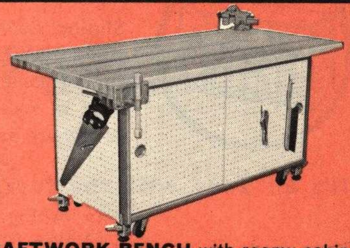
MOVABLE CABINETS

Quality and economy *do* go hand in hand . . . when you use Brunswick movable cabinets! One hundred thirteen years of quality manufacturing experience, together with the most advanced thinking in school furniture design, has enabled Brunswick to mass produce the most complete, functional line of movable classroom cabinets, and furniture available anywhere . . . and do it economically. As a result, here's the practical solution to the many problems incurred with undependable job-site construction of expensive, built-in storage cabinets. With Brunswick, you needn't worry about warping or checking, mismatched replacement parts, or worse yet . . . part-time performance of inflexible, fixed cabinets that are old before their time.

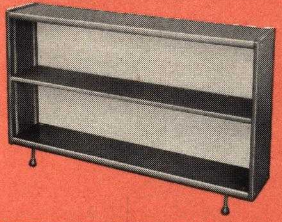
Brunswick movable cabinets complement your Brunswick furniture and flex with every need of the classroom . . . they serve as extra work surfaces, room dividers, project areas, storage islands. The only cabinets made with interchangeable parts that let you take out dividers, add shelves, or change heights to meet the ever changing functions of the modern school. Top quality throughout . . . precision turned hardware, sturdy structural parts, plastic covered work surfaces and molding, precision engineering, factory-built quality, inspected and tested to meet rigid standards of perfection. Brunswick cabinets are strong . . . will give a lifetime of good service.

All of the Brunswick representatives are school specialists who will welcome the opportunity to show you our complete line of classroom cabinets and furniture. Call your local dealer today . . . in addition to furnishing you with technical information and price quotations, he will be happy to place a trained staff of room equipment layout experts at your service.

AUDIO CONSOLE with Califone transcription player to serve a hundred uses. Use it as a portable PA system . . . for speech correction . . . music appreciation . . . even dances. Height: 29"; Depth: 22".

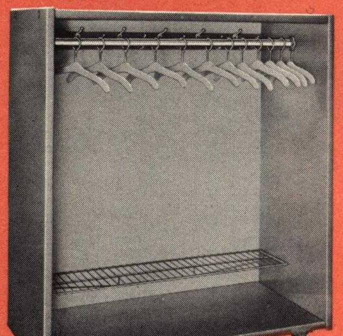


CRAFTWORK BENCH with roomy cabinet understructure mounted on casters provides a truly portable workshop. And tools may be safely hung out of the way. Height: 25", 29"; Surface: 28" x 60".

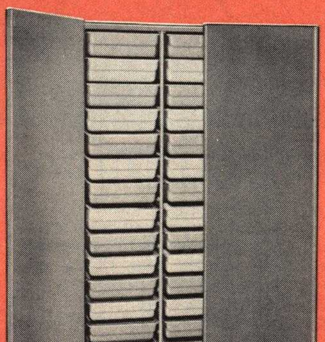


BOOKSHELF CABINET MODEL A with shallow 10" depth adjustable shelves fits snugly against the wall in minimum-space areas. A perfect unit for classroom or library. Height: 29", 31".

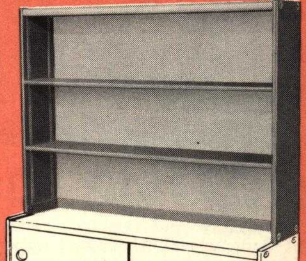
BOOKSHELF CABINET MODEL B with 5 fully adjustable shelves is a real space saver anywhere. Bank several snugly against a wall, or use them as handsome room dividers. Ideal for classroom or library. Height: 69", 71"; Depth: 10".



STUDENT'S WARDROBE with 15 hangers, 12 coat hooks and a wire shelf for books or lunch boxes. Turn it around and it's a sage green corkboard. Heights: 51", 54½"; Depth: 22".



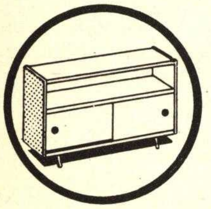
TOTE-TRAY STORAGE CABINET with up to 48 removable, plastic storage trays lets the student move books, ledgers or supplies to project areas quickly . . . easily. Height: 69½", 71½"; Depth: 22".



BOOKSHELF CABINET MODEL C with 3 fully adjustable shelves is a perfect accessory to the Two Tier and General Storage Cabinets. Mounts right on top to double your storage area in just minutes. Height: 34"; Depth: 10".

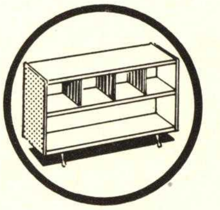
Brunswick MOVABLE CABINETS

exclusive advanced design features



Open Shelves or Doors

Sliding doors are available in a choice of six colors. Back panels are constructed of sturdy hardboard. Doors are automatically fixed in sliding position when cabinet side-panels are assembled.



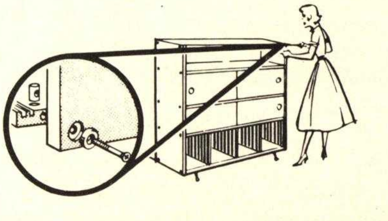
Full or Divided Shelves

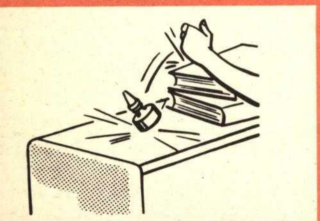
All shelves may be vertically divided with partitions extending from front to rear. Shelves are provided with pre-drilled anchor holes for this purpose.

It's all done with the turn of a screwdriver . . .

EXCLUSIVE "ONE TOOL" ASSEMBLY

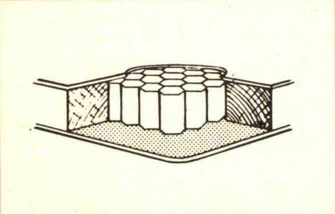
Any cabinet can be assembled in a matter of minutes with a Phillips screwdriver. Phillips head screws fit easily into pre-threaded metal ferrules which are permanent parts of all fixed shelves. Ferrules do not enlarge with use as do screw holes in wood. When panels are fastened into place all other components including doors, back panels and shelf dividers are locked in position. Once assembled, cabinets are more sturdy, more durable than any custom-made fixed cabinet installation.





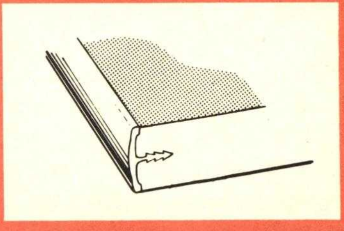
rotective Melamine Plastic Finish

he topmost surface of every cabinet, in its role
a work surface, needs and gets the double
otection of an impervious hide of pupil-proof
elamine plastic. It's approved by N.E.M.A.
addition, all surfaces receive a hard protective
ndercoat that acts as a tough, binding adhesive
r a sprayed on coat of sage grey finish.



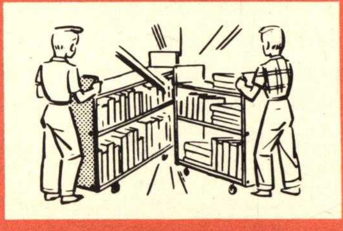
Reinforced Honeycomb Construction

Greater strength and mass without weight, plus resistance to warpage, is achieved by using an exclusive honeycomb core construction. A kraft material is formed in a honeycomb, impregnated with phenolic resin for extra durability, then sandwiched between two panels of strong, tempered hardboard in a hardwood frame.



Inlaid Plastic Edging

End panel, adjustable shelf and divider edges are faced with a strip of durable, smooth-surfaced ethyl cellulose plastic. Prevents cabinet from bruising, marring, markings. Strip is inlaid into middle layer of plywood panel, will not come loose during life of cabinet.

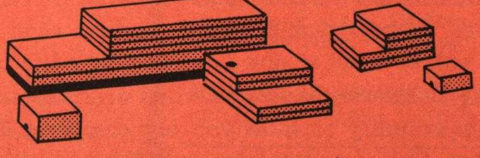


Rugged, Tempered Hardboard

The constant movement of books, materials and supplies in and out of cabinets calls for tough, long lasting construction materials. To stand up to this duty, Brunswick selected a well-muscled, tempered hardboard which gives it extreme durability and resistance to damage from liquids, abrasives and cuts.

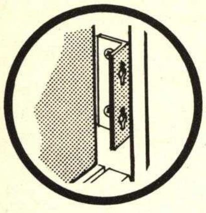
Shipped Flat . . . Stored Flat

Brunswick Cabinets are shipped "KD" (knocked down). All components for one cabinet packed in one carton. You save excessive freight charges on valueless bulk. In-school storage and handling are simplified. It is another example of how Brunswick Advanced Design keeps the total budget of the school official in mind.



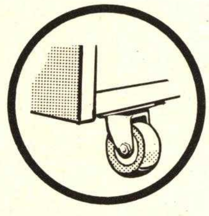
5 FUNCTIONAL MOUNTINGS

Brunswick Cabinets may be fitted with interchangeable wall mountings . . . casters . . . legs . . . bases—a choice which assures complete flexibility to satisfy any and all curricular needs.



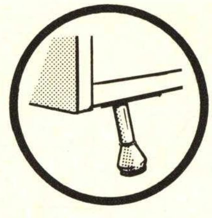
On the Wall

Can be simply and rapidly mounted on a wall through use of heavy-guage angle steel wall mounting brackets. This provides a semi-permanent installation. May be mounted with or without back panels.



On Wheels

Free-rolling, rubber-tired casters may be affixed to any unit (except Toy Storage Table and Cabinet Sink units) for complete "'round the school" mobility. Standard on Book Truck and Toy Cart.



On the Floor

Heavy-gauge, welded steel legs are equipped with exclusive resilient feet of nonmarking rubber and fitted with hard chrome-plated on-steel glides — assures silent and effortless cabinet movement.

Full and Island Bases

Available in $3\frac{9}{16}$ inch and $5\frac{9}{16}$ inch heights for the 2200 series only, bases extend around four sides of the cabinet. Receding angular design at front and rear affords ample toe-room. Large floor contact area minimizes damage to soft floor coverings. Also available, open front and rear island bases for use in rooms where baseboard heating is employed.

Self-Aligner Simple Screw Leveling Adjustment

Every base-fitted cabinet can be set in perfect horizontal alignment regardless of floor irregularity. The adjustment screw built into the corners of each base can be easily reached from the inside of the cabinet and manipulated with ease.

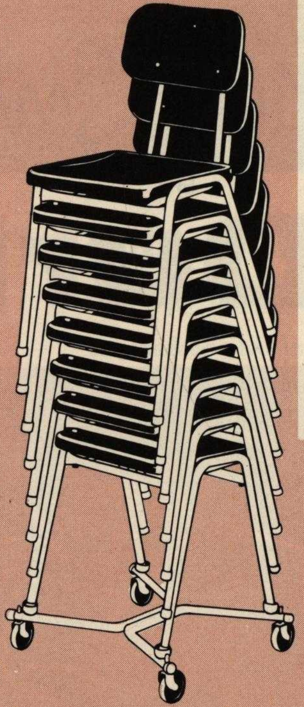
Durham......

Wherever people have to be seated in chairs which can be easily and quickly set up, easily removed and stored again, Durham is the logical choice for comfort, strength, beauty, dependability, and long service life.

Durham furniture is the result of more than a half century of experience in product design, development, manufacture, and distribution. Every step in the production process is carefully controlled, to assure that only the best bears the Durham name. Wherever you use them, you're sure of complete satisfaction.



No. 555 STACK CHAIR **No. 225 DOLLY**

Permanent chair utility incorporated in a stack chair. Vinyl plastic laminated to a steel seat and back for luxurious appearance and long wearing qualities. Seat and back won't scratch or mar! All steel tubular frame and legs. Standard dining height and comfortable posture built in. Rubber bumpers protect seats when chairs stacked. Fits standard folding chair trucks; minimum storage space required.

No. 566 Stack Chair. All steel construction. Beige painted finish.

Strong, easy-rolling dolly is specially designed for handling Durham stack chairs. Carries as many as 8 easily, safely.

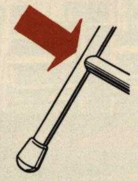
No. 875

Modern tubular frame all-metal folding chair. Posture back and large 16"x16" non-tipping seat.

No. 875TA

Folding tablet armchair. Same as 875 with large tablet arm 12"x24". 5 ply hardwood core base with high pressure plastic laminated face. Exclusive Wrap Rack on back. Compact storage; folded, 39½" high and 5" deep.

these superior construction features guarantee COMFORT · SAFETY · CONVENIENCE

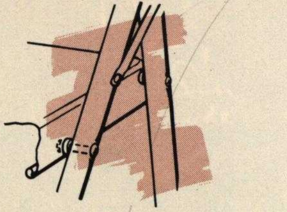


electronic braze

Die-cut tubular rear leg brace electronically welded with silver solder; 360° welded surface; strength unsurpassed in any type of chair construction.

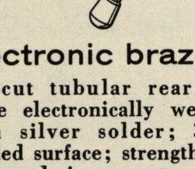
easy operation

To fold, step on rear brace, pull up on back. To open, bear down on chair back. Safety link prevents tipping of seat if someone stands on it front or rear.



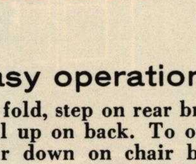
eyelet spacers

Four eyelet spacers, fastened forever, hold solid steel rivets joining chair seat to legs. Spacers provide bearing surface for free-riding rivets to turn smoothly, silently. Spacers bear weight when chair is in use. Exclusive with Durham . . . positive assurance of smooth operation, strength and safety. Fully curled edge of steel seat eliminates rough, sharp edges.



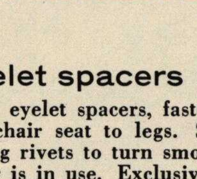
thick rubber foot

Rounded metal cap on steel leg protects rubber foot, lets it revolve for uniform wear. Rubber foot extra thick at base; thinner wall at top assures adhesion to steel leg.



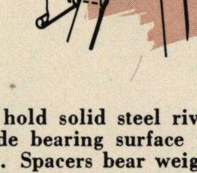
reinforcement

Channel frame chairs have cross braces embossed for strength, double riveted to legs. Flat rubber feet held by washer inside channel, easily removed for replacement.



3-way economy

"X" type Durham channel frame chairs save time, space, labor in setting up, clearing auditorium. Fold, unfold quickly, easily. Stack compactly, store in minimum space.



easy ganging

Clamps with quickly tightened wing nuts permit easy ganging. Use No. 800 clamps for tubular frames (**3** between chairs); No. 600 clamps for channel frames (**2** between chairs).

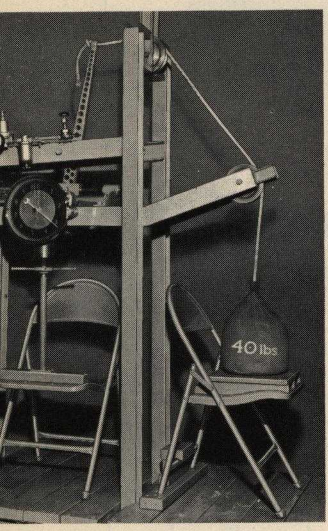
tests



Durham chair tests

In our own and in independent testing laboratories, Durham chairs are subjected to exhaustive, demanding tests, among which are five developed by the U. S. Bureau of Federal Supply:

1 **Brace Test** Static force of 300 lbs. applied vertically to center of rear leg cross brace, uniformly distributed over distance of 4″ about center line.

2 **Vertical Impact Test** 40 lb. sandbag dropped 10,500 times, from heights ranging from 4 to 12 inches, on hardwood board attached to chair seat.

3 **Seat Test** Static pressure of approximately 300 lbs. applied to ¾″ thick wood block resting on seat, with center point of block 12 inches from edge of seat.

4 **Frame Test** Vertical static force of not less than 295 lbs. nor more than 305 lbs. applied to block of wood 4″ long fitted to top of chair back.

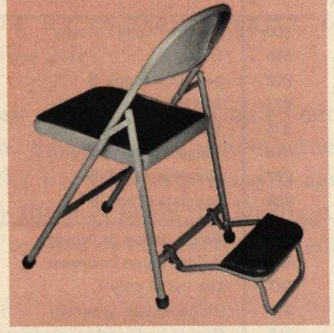
5 **Tilt Impact Test** 76 lb. metal weight secured to seat at point 5″ from rear edge. Chair tilted rearward until front legs are 4″ from floor and released at rate of approximately 25 drops per minute for 20,000 impacts.

After each test chairs are carefully measured for any frame deflection and thoroughly inspected. Durham chairs withstand all five tests.

accessories

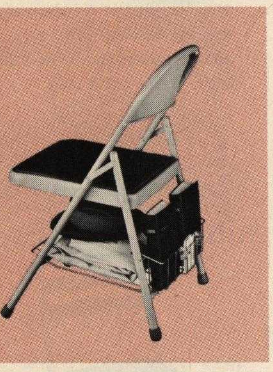
kneeler—7001

Clamps to rear brace of any Durham tubular folding chair. Folds compactly within chair for storage; can be tilted up under seat to keep aisle clear. Firm density foam rubber pad ½″ thick on ⅜″ plywood base; covered with chocolate vinyl leatherette. Top size 12″x 5″; height 6″; overall length, including clamps, 13″.



book hat rack—7008

Made of bronze plated wire. Holds two hymnals, two communion cups, offering envelopes. Under seat storage rack for hats and coats. Chair folds flat with rack attached, holding hymnals or empty. Cups rest securely yet easily removed. Lightweight, attractive, long lasting.



tables

Made in various styles for institutional and general use. Table 34M (illustrated) is standard card table size, adaptable to many purposes. Has 30″ square tempered Masonite top with Benite finish, supported by steel cross braces. Deep ribbed frame. One-inch tapered steel legs with nickeled floor glides; positive Durham leg locks, fingertip release.

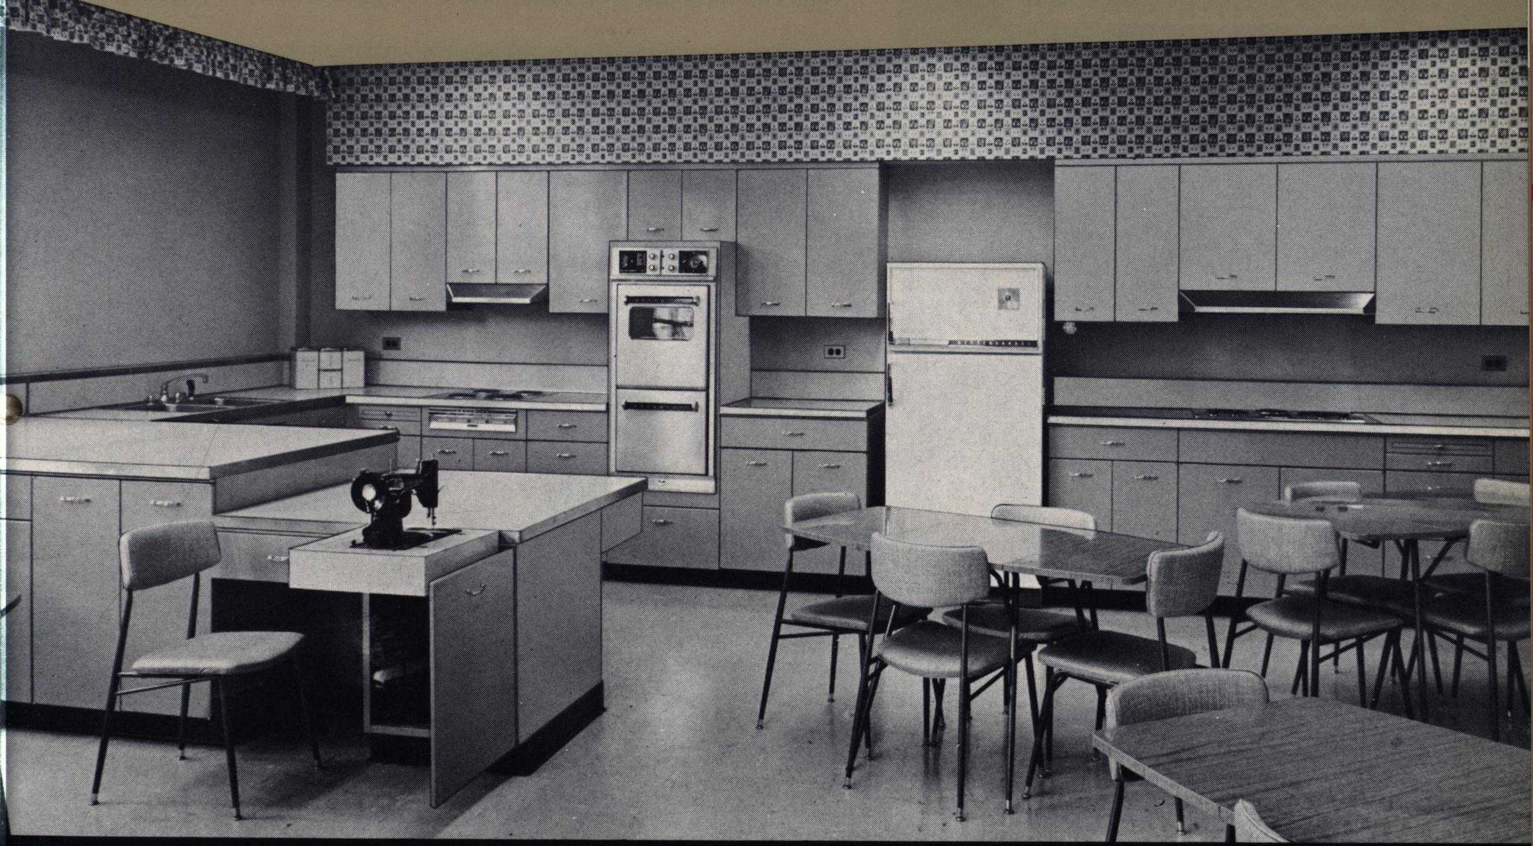
FOR SCHOOLS AND COLLEGES



FOOD AND CLOTHING LABORATORIES • ARTS AND CRAFTS ROOMS

now new Impasto.

. . . the toughest, most durable finish ever applied to cabinets. Here is unbelievable warm elegance, never before possible in steel cabinet design. Impasto imparts a soft, textured effect that eliminates the high gloss and highlights of baked-on enamel. It is not simply a new finish, but a far superior finish that is extremely resistant to marring, chipping, scratching, and staining. Abrasion tests have proved the extreme durability of Impasto, and indelible ink, mustard, grease, alcohol, vinegar — all common household items, will not phase this new finish.

Maintenance is practically nil with Impasto. A slightly damp cloth will whisk away any spots or dust. Fingerprints just don't show. Impasto textured finish affords unlimited decorating opportunities. It is available in six attractive colors, plus white.

FOOD LABORATORIES

The basic line dimensioned on these two pages gives complete flexibility in planning Foods Laboratories. Any space can be planned exactly the way you want it with this wide assortment of standard size cabinets. It may also be used in conjunction with the Clothing Laboratory and Arts and Crafts lines which are detailed on the following pages. Architects and teachers alike hail the quality of Geneva casework as ideal for school use because the maintenance is negligible. Geneva's finish keeps its luster, doesn't chip or crack.

There are hundreds of Geneva installations in clasrooms throughout the country. Your Geneva distributor will be glad to give you a list to visit in order that you can see for yourself how they can be adapted to any particular requirement.

Color plays an important role in any school room design. Geneva offers at no extra cost a selection of six pastel colors. Each color is carefully calculated to coordinate with other colors and all are easy to decorate around. Many schools have combined as many as three or four different colors into one large department with delightful results.

WHY YOU SHOULD SPECIFY GENEVA

Today's curriculum in the Homemaking Department covers many subjects ranging from health to home furnishings, sewing to sickness, and management to maternity. The modern school must have proper equipment to house the tools for teaching these courses, as efficiency and a desirable place in which to work and learn are extremely important.

The Geneva casework for this purpose incorporates all of the latest thinking and design ideas of architects and home economists. Special cabinets for specific uses and accessories galore solve the various storage problems which confront both teacher and student. Most accessories may be moved from one location to another quickly and easily.

With building costs at an all time high it is necessary to utilize every square foot of space to best advantage. The Geneva line allows great flexibility so that best use can be gained from the space. You are not limited to "stock" arrangements or sizes.

1 LONG LIFE — Steel casework is ideal for school use because of its long life and lasting beauty. It blends in with the steel appliances and will never warp, split or shrink.

2 LESS MAINTENANCE — A simple wiping will keep Geneva cabinets clean and looking like new. Paint will not chip or flake off requiring frequent painting. Drawer slides will never wear out or need replacement.

3 COMPLETE FLEXIBILITY — Geneva offers the widest selection of cabinets plus any custom work desired. This permits complete personalized planning.

4 SUPERIOR QUALITY — Many exclusive features are built into Geneva casework to give it unmatched quality. Finest materials and expert craftsmanship go into every unit. Backing up these advantages is a price to fit your budget.

Casework shown on this page has been designed to solve the many unusual storage and working problems peculiar to Arts and Crafts rooms. The range of activities which take place in these Studio-Workshops demand flexibility and versatility. Space used for drawing classes in the morning may have to be converted to model building or set designing for afternoon classes.

Special materials, clay storage, paint spray booths, clean-up sinks, etc., make specialized casework a "must" for the modern art department. The complete Geneva line shown here has been engineered and designed to handle every storage problem in the field of art.

SPECIFICATIONS

WALL CABINETS — Design shall be flush type construction and cabinets shall be of width, depth and height as indicated. They increase in width at increments of 3″. Cabinets shall be constructed of U. S. S. cold rolled high grade furniture steel. Corner mullions shall be of full wrapped construction with no raw edges or flanges exposed. All welds shall be flush and ground to eliminate flashing or pitting. Shelves shall be of heavy open wire construction and fully plastisol coated. They shall be adjustable on 1″ centers.

BASE CABINETS — Design shall match exterior wall cabinet styling. Cabinets shall be of width, depth and height as indicated and increase in widths at 3″ increments. Cabinets shall be of U. S. S. high grade furniture steel. Gussets and reinforcing members shall be of 16 ga. steel. Cabinets shall be equipped with fixed top rail. All base cabinets shall have an integral subbase forming a recessed toe space 3″ deep and 4″ high. Shelf shall be of steel reinforced construction. All welds shall be flush and ground to eliminate flashing and pitting.

TALL CABINETS — Such as general storage, tote and wardrobe, etc. Same specifications apply as listed above.

SINK CABINETS — Same specifications apply as listed under base cabinets, except that top rail shall be of special corrosive resistant steel.

FILLERS, ACCESSORIES AND SPECIAL UNITS — A complete line of accessories shall be available to fit standard cabinet units with minimum effort for installation. All fillers and special units shall follow same specifications for construction and gauges of metals as wall and base cabinets.

DOORS — Shall be of double pan construction with interlocking flange die drawn with radius edges. These parts shall be completely finished inside and out before assembly. Reinforcing and sound deadening material shall consist of full size pad laminated to both inner surfaces of front and liner under heat and pressure, forming a dense integral unit. Doors shall close against sound deadening bumpers.

DRAWER SLIDES — Drawers shall be suspended on four rollers formed of moulded nylon securely riveted to channel members which incorporate self-closing device and built-in stops. Channel members shall be of 16 gauge Terne Plate (lead coated) steel.

DRAWER BODIES — shall have radius bottom sides and be securely fastened to cabinet lining in a manner that forms a rigid integral unit.

DRAWER HEADS — shall be painted inside and out and filled with sound deadening material. These fronts shall be removable, but shall be assembled with special push in tabs forming a rigid assembly to the drawer body.

HANDLES — Decorative bar type pull shall be die cast steel heavily chrome plated and polished to a bright finish.

HINGES — shall be semi-concealed type which open 180°. They shall be made of extra heavy cold rolled steel and plated for full protection. All 62″ high doors shall be equipped with three hinges.

CATCHES AND STRIKES — Catches shall be sound deadened type of moulded nylon closing against steel strikes. All 62″ high doors close with approved roller type nylon catches.

FINISH — shall consist of chemically etched surfaces covered with minimum ¾ mil coat of rust inhibiting primer baked at a suitable temperature for one-half hour, followed by a minimum ¾ mill coat of decorative synthetic gloss enamel baked for one-half hour at a suitable temperature.

PACKING — Wall units shall be wrapped in protective paper and doors shall be securely wire strapped in locked position. Units shall then be packed in approved type cartons with protective top and corner pads. Base cabinets shall be crated in reinforced slat type full enclosed package. Doors and drawers shall be securely fastened against accidental opening.

STANDARD STAINLESS STEEL SINK TOPS — Construction of deck surfaces and bowls shall be of approved type stainless steel. Complete deck and backsplash surface shall be one-piece construction with raised edge section and without exposed notching or welding on the top surface. Bowls shall be flush welded to deck and ground to form a seamless appearance. Entire underside of sink shall be fully sound-deadened.

CUSTOM COUNTER & SINK TOPS — shall be 25″ deep. Core is ¾″ plywood built up to 1½″ thick with back splash 4″ high and 1″ thick. Surfacing shall be securely bonded to water-proof plywood under applied pressure. Standard edging available.

SPECIAL ITEMS — Other related items such as flat drawer files, tables, work bench bases and tops are of best commercial quality.

CONSTRUCTION

Here is quality based on finest materials, skilled engineering, and superb workmanship throughout. Geneva cabinets are fabricated from the highest grade steel available. For maximum strength, Geneva incorporates into each cabinet section the strongest bends known.

In addition, each section is die formed. The wrap-around mullion construction leaves no sharp edges to cut or snag. Like size drawers are interchangeable from one cabinet to another . . . drawer fronts are replaceable. On each Geneva cabinet two baked-on enamel coats are applied to chemically etched steel, yielding a satin smooth . . . chip-proof finish.

Nothing has been spared to make Geneva the finest cabinet available.

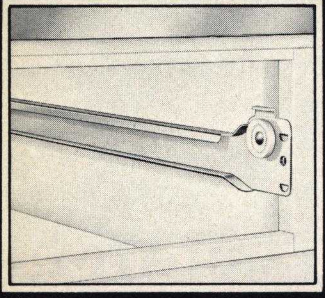
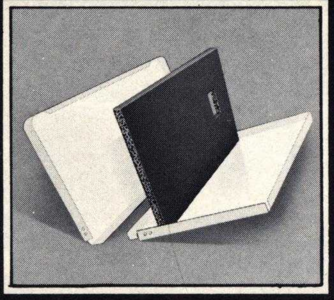
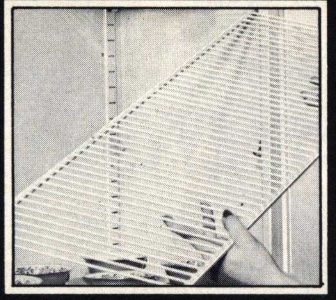
Features like these add up to top quality



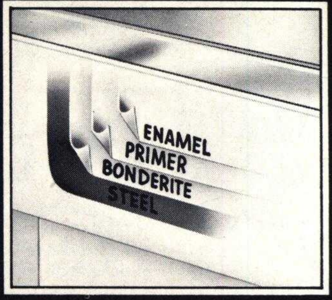
DRAWER SLIDE
The slightest touch gently closes a fully loaded drawer. These lead-coated interlocking steel channels and wear-proof nylon rollers combine to produce effortless action.



INSIDE PAINTING
All door and drawer fronts are painted inside and out to protect against effects of humidity and moisture. Full thickness insulation gives complete sound deadening.



PLASTISOL SHELVES
Exclusive plastisol coating of open wire shelves eliminates noise and affords real protection for dishes and glassware. Plastisol is a vinyl which resists abrasion.



NO-CHIP FINISH
Steel is Bonderized before $^3/_4$ mil coat of rust inhibiting primer is baked on. Top coat of $^3/_4$ mil decorative synthetic gloss enamel is then baked on.

GENERAL SPECIFICATIONS

CABINETS — Cabinets shall be constructed from 20 gauge cold rolled steel, resistance welded throughout. 18 gauge steel is used in 78" high #4000 Series cabinets.

CABINET BASES — Cabinet bases shall be constructed from 18 gauge or heavier cold rolled steel, resistance welded throughout and shall be equipped with leveling bolts, rubber cushioned steel glides, or 2" diameter rubber wheel ball bearing swivel type casters.

CABINET DOORS — Steel doors shall be double wall construction, resistance welded throughout. Special sliding door track shall be furnished. Steel doors, Pegboard doors, and melamine plastic doors may be used interchangeably on sink, counter storage, and wall cabinets. When doors are not required, cabinets shall be equipped with door track fillers.

FINISH — Cabinets, bases, doors, and other steel parts shall be degreased and a 60-90 mg. per square foot phosphate coating applied, then sprayed with two coats of high bake specification enamel to withstand approximately 250 hour salt spray test.

MELAMINE PLASTIC TOPS — Top material shall be 1/16" melamine plastic bonded to 18 gauge steel. Sink units shall be equipped with 7" back splashes of same construction. Top and backsplash trim and coving shall be non-marking clear anodized aluminum. All sinks and bowls shall be deep drawn stainless steel and shall be attached with standard sink frames.

STAINLESS STEEL TOPS — Tops and integrally formed 7" back splashes shall be fabricated from 16 gauge #302 stainless steel. All edges shall be die formed into channel shape and shall be die depressed along front and ends to form a 1/4" raised lip. All sinks and bowls shall be deep drawn stainless steel and shall be seamlessly welded to tops. No overlapping or soldered joints shall be permitted. The entire top shall be ground and polished to a #4 mill finish.

PLUMBING TRIM — To the extent required sink units shall be equipped with combination faucets, squirt-proof bubbler fountain heads, strainer-wastes with tailpipes for sink bowls, and tray plugs with tailpipes for bubbler bowls.

SHIPMENT AND INSTALLATION — All cabinets shall be shipped set up to eliminate on-the-job assembly. Sink cabinets are equipped with removable back panels. All traps and fittings and all plumbing connection work shall be supplied by others. Wall cabinets are constructed with recessed backs which are pre-punched for mounting. Installation shall be done by others.

TYPICAL ROOM LAYOUTS

Typical classroom plans demonstrate the adaptability of Grade-Aid Classroom Equipment. All-Steel Grade-Aid units are designed to meet any Architectural and structural requirements. Mobile Grade-Aid units may be arranged to fit all classroom needs.

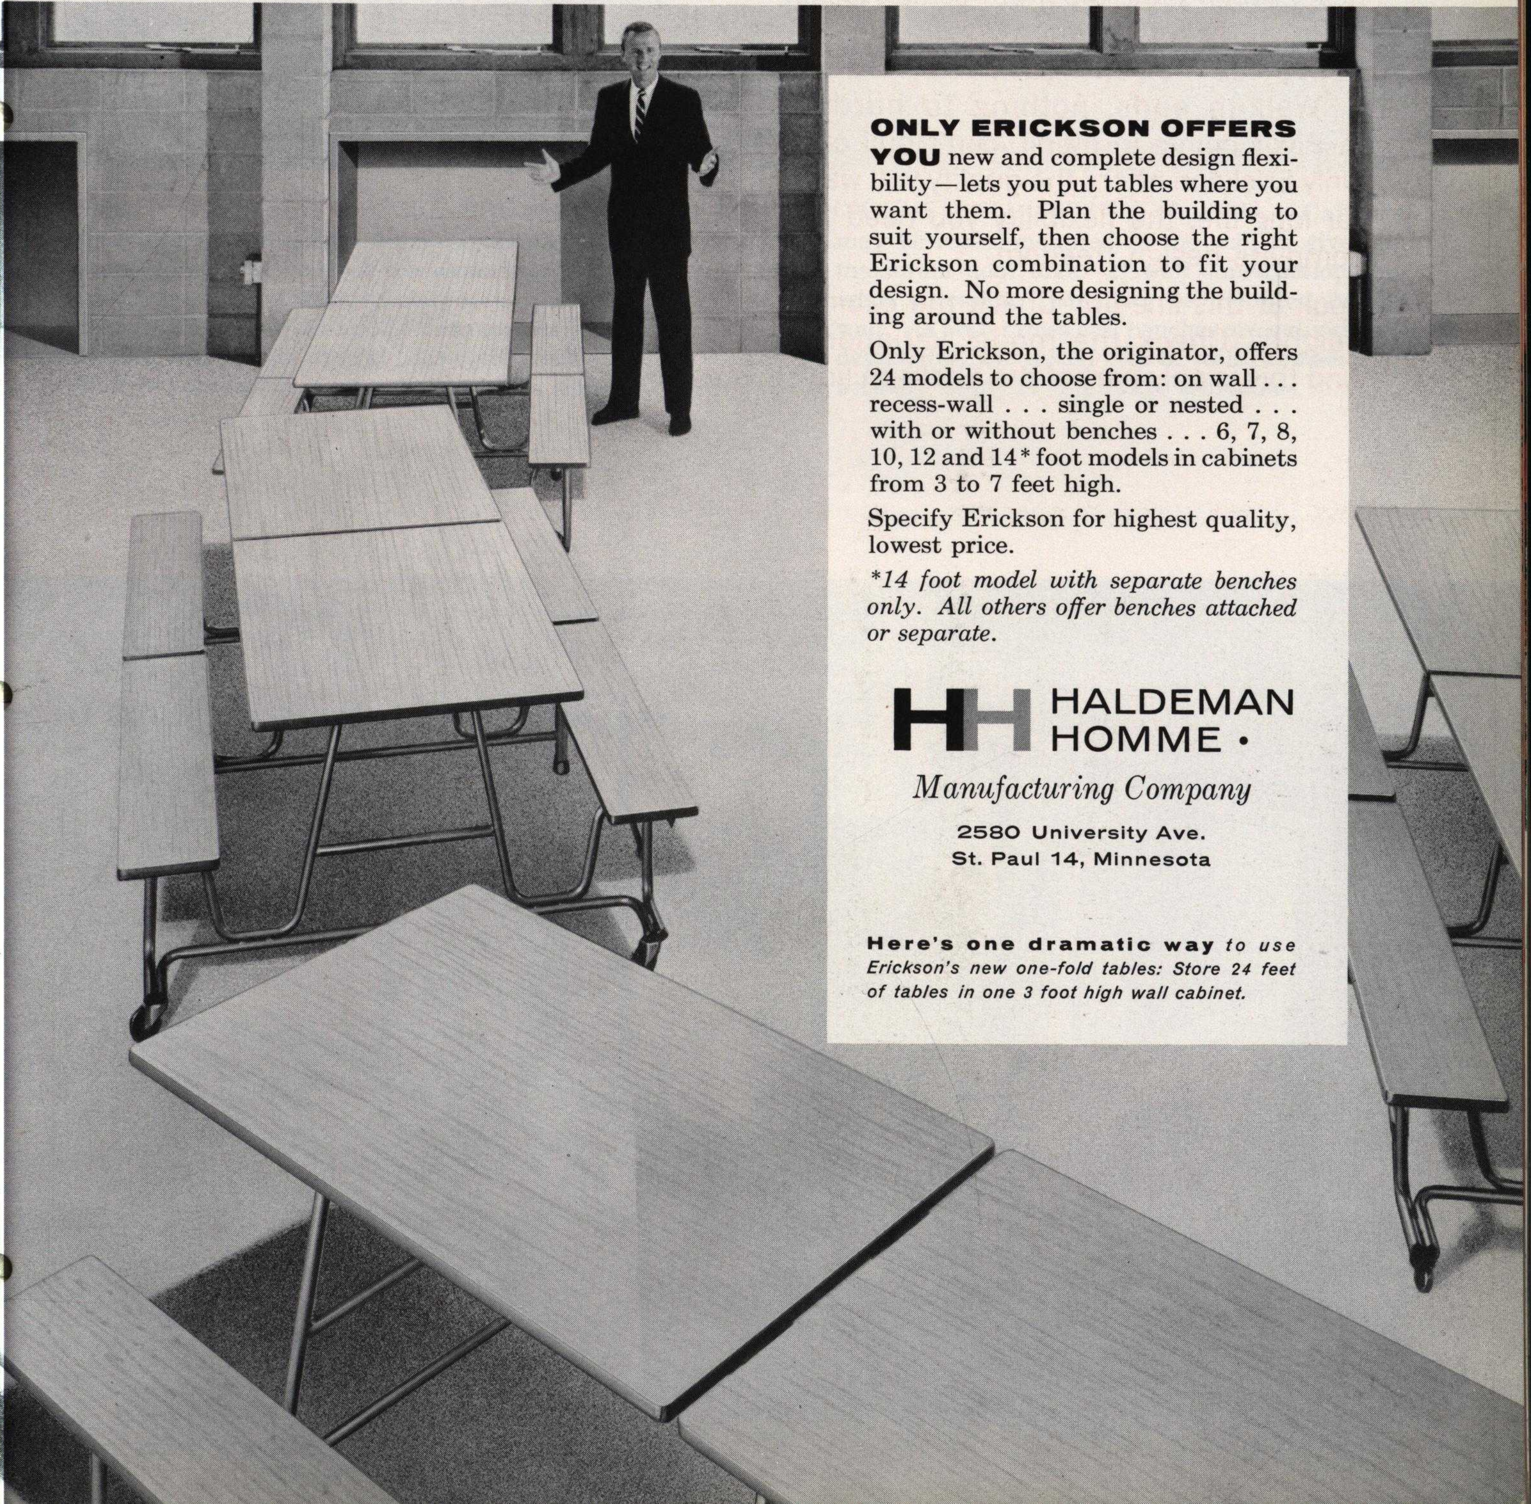
NEW!
Revolutionary design flexibility with Erickson *one-fold* wall tables

24 MODELS TO CHOOSE FROM — SIX CABINET HEIGHTS, 3 TO 7 FEET



ONLY ERICKSON OFFERS YOU new and complete design flexibility—lets you put tables where you want them. Plan the building to suit yourself, then choose the right Erickson combination to fit your design. No more designing the building around the tables.

Only Erickson, the originator, offers 24 models to choose from: on wall . . . recess-wall . . . single or nested . . . with or without benches . . . 6, 7, 8, 10, 12 and 14* foot models in cabinets from 3 to 7 feet high.

Specify Erickson for highest quality, lowest price.

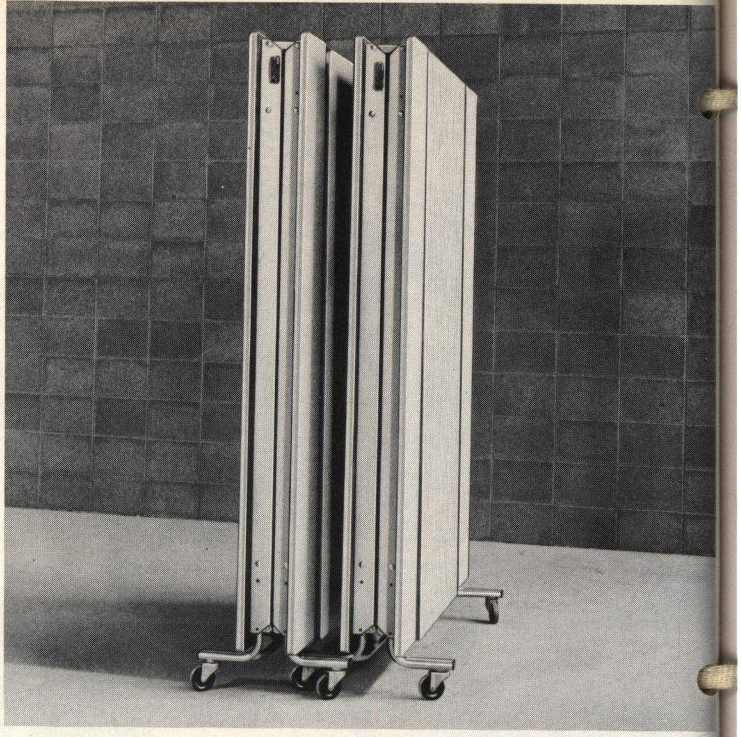
**14 foot model with separate benches only. All others offer benches attached or separate.*

HALDEMAN
HOMME •
Manufacturing Company
2580 University Ave.
St. Paul 14, Minnesota

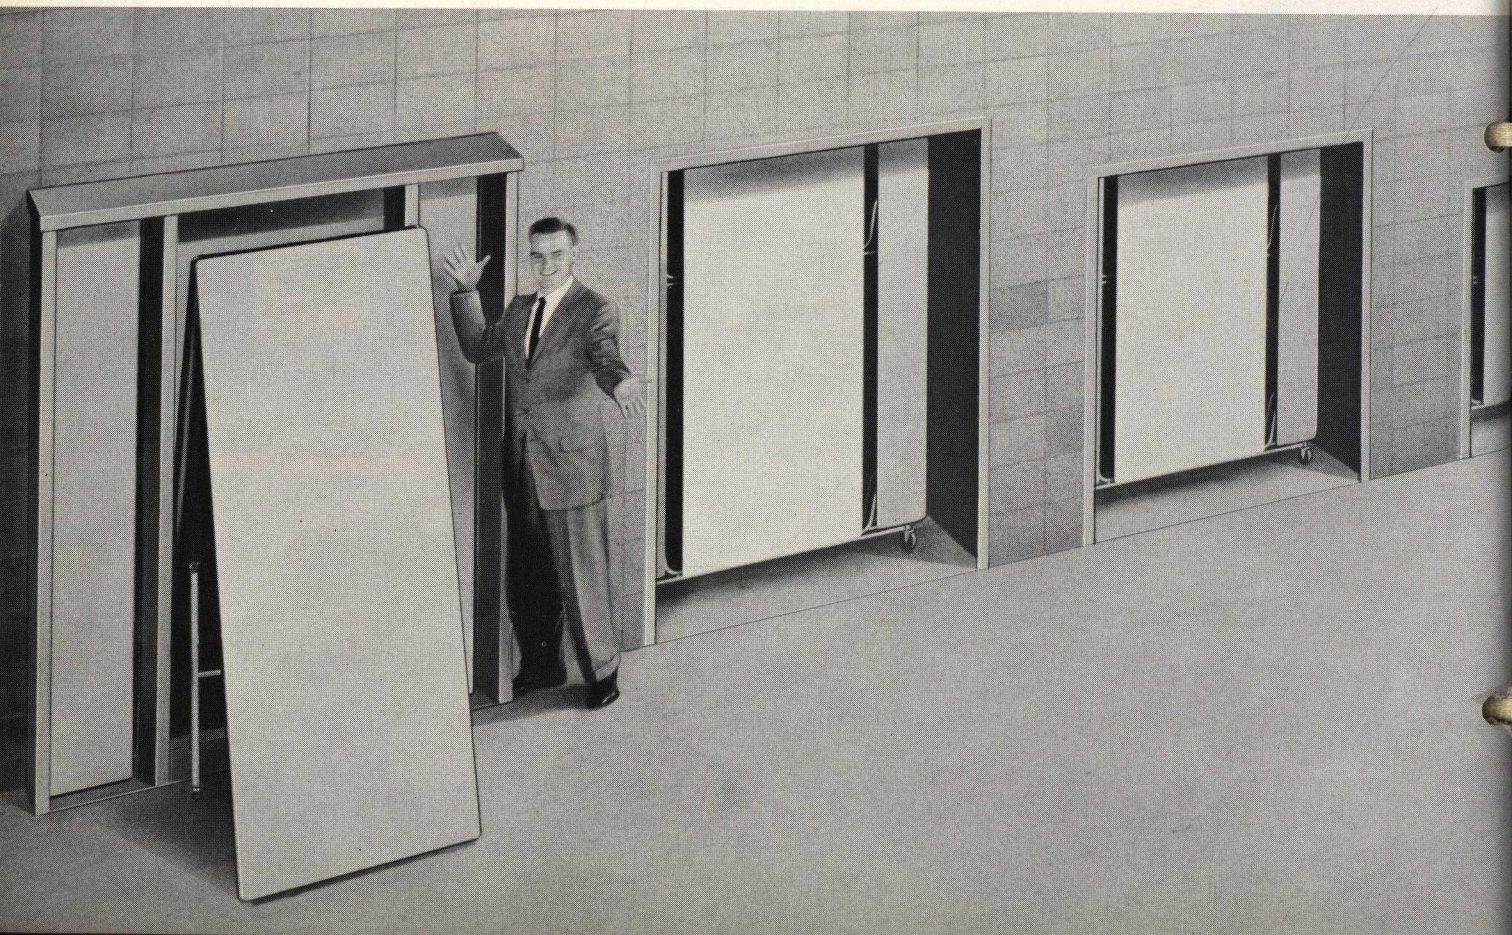
Here's one dramatic way *to use Erickson's new one-fold tables: Store 24 feet of tables in one 3 foot high wall cabinet.*

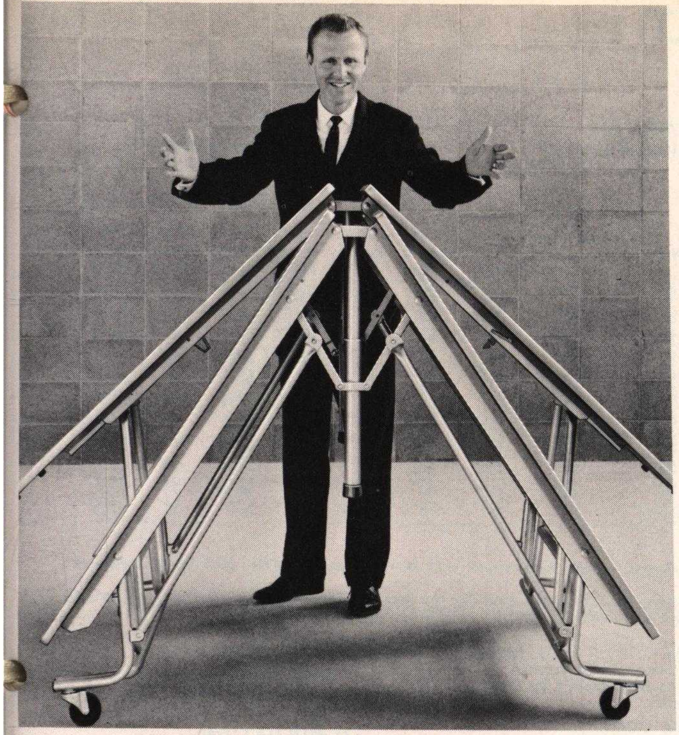
Here's the quality you get in each and every one of Erickson's 24 one-fold models: 1. Two steel channels under each bench and the table top, an Erickson exclusive, 2. Rugged, simple understructure, no unsightly knobs or projections to bump or tear, 3. Torsion and compression springing for one-step controlled folding and unfolding, 4. Bonded NEMA plastic tops and benches with ¾″ solid core material, 5. Sanitary benches never touch table tops, 6. Position locks —no teeter-totter when extended, no "surprise" openings when folded, 7. Walk-in ends, nothing to hurdle, 8. Pivot points in metal, can't pull out. Only Erickson offers the quality you want for long life, the flexibility you need for complete design freedom.

Look at this line-up! Check the cabinet heights. Check the model variations. And this is only part of the Erickson line!



SEE HOW THE ERICKSON TABLES NEST. Each table has its own track and its own guide wheels. Wheels move easily to the right track and a simple push puts the table exactly in place. Take out one table, or two, or all. The school gets flexibility, too. (Photo shows two portable models nested. Wall units nest flush in cabinets.)





SIMPLE, FAST, EASY, SAFE OPERATION. Erickson's special torsion and compression springing maintains complete control throughout the entire folding and unfolding cycle. Never before has folding and unfolding been so convenient and effortless.

ON THE WALL OR IN THE WALL. Cabinets may be recess-mounted in the wall to give you maximum floor area. If wall construction prevents recessing, they may be mounted on the wall. As both tables and benches are individually detachable, the initial cost of wall cabinets may actually result in long range economies.

NO MORE DESIGNING AROUND THE TABLE. Now you can have the window or wainscot treatment you want. Then select the wall table or table combination that's exactly right for your design. You can even put Erickson wall tables under cork-board display areas, in home ec. rooms, labs, etc. Choose Erickson. They fit.

Note: On-Wall Tables have Model Numbers similar to Recess Models, except, for example, a 12 ft. table has Model No. 2912-BOW, instead of 2912-BRW. For 14′, use RW and OW.
Cabinet Dimensions for On-Wall Tables are the same as the following two dimensions given for the Recess Wall Cabinets: Width Front "A"; Width Back, same as front; and Depth "C". Cabinet depths are for single tables only. For nesting, multiply by number of tables desired.

SPECIFICATIONS

Tables shall be Erickson "One-Fold" Model (No.)———— (specify unit or combination of units desired from above chart). Recess Wall (or On-Wall) type Tables with Benches (without benches) as manufactured by Haldeman-Homme Mfg. Co., St. Paul 14, Minnesota.

OPERATION: Tables (and benches) shall fold and unfold from wall cabinet in a single operation with both folding and unfolding operations controlled through their cycles by a combination of torsion and compression springing. End legs shall be equipped with casters.

CONSTRUCTION: Top to be of ¾" solid core material with NEMA Standard high pressure Melamine plastic 1/16" thick bonded to tops with plastic balancing sheet on the underside. (Tops of benches to be plastic covered with plastic balancing sheet on the underside.)

Color of tops (and Benches) shall be ————. Specify number of tables desired in the color combination desired from the following: Yellow Plaid Top (with Charcoal Plaid Benches) . . . Turquoise Plaid Top (with Charcoal Plaid Benches) . . . Light Birch Top (with Charcoal Plaid Benches) . . . Light Birch Top (with Light Birch Benches.) (Other selections on special order.)

All edges of tops (and benches) trimmed with flush-type plastic T-molding with no exposed fastenings.

UNDERSTRUCTURE: Legs of 1" 14 gauge round steel tubing cold formed and jig welded. Table top shall have two 14 gauge channel steel frames of 1½" (and benches shall each have two channel steel frames — outside channel 2⅜" . . . inside channel 1½"). All metal parts finished with gray baked enamel applied by electrostatic process.

RECESS WALL CABINETS: To be of 16 gauge steel construction, complete with strap anchors welded to each side of cabinet. For Recess Wall installation make openings approximately ¾" wider at top and sides and ½" more in depth than actual cabinet measurements.

Note: Lintels for cabinets to be supplied by others when required.

ON-WALL CABINETS: Same as Recess Wall cabinets except shall have finished sides and top to mount to existing walls.

FINISH: Recess Wall or On-Wall cabinets shall be supplied with prime coat, to be finished on job by others.

ALL PARTS AND MATERIALS to be unconditionally guaranteed.

Note: Copy within the parentheses to be used when specifying tables with benches.

14′ OPERATION

Tables shall be equipped with hydraulic cylinder for automatic and safe opening. There shall be an opening between table and bench tops to act as safety space. Tables and benches shall open with manual lock, and lock automatically when folded to close position. Unlocking shall be accomplished with special key wrench through stile of cabinet with no openings in table top or bench tops. Both tables and benches shall detach from the cabinet.

Complete specifications, shop drawings and 20 page catalog available from nearest Erickson distributor or from Haldeman-Homme.

Mitchell FOLD·O·LEG Doubler

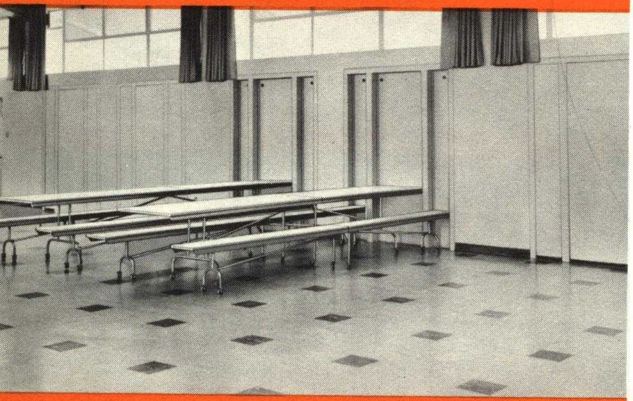
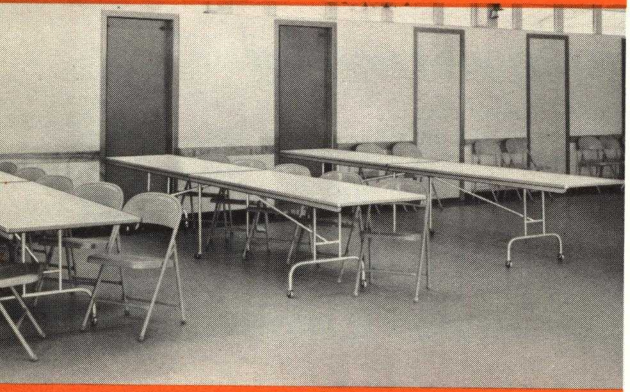
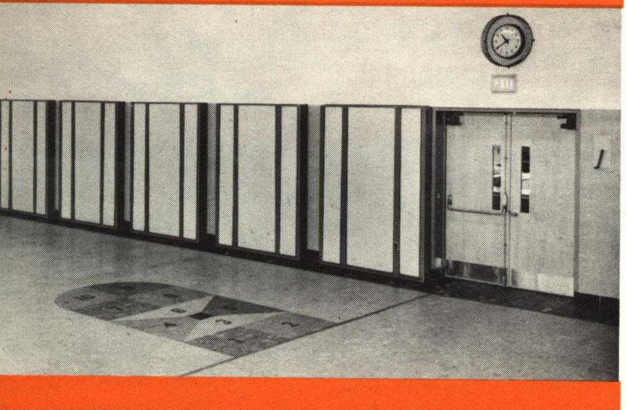
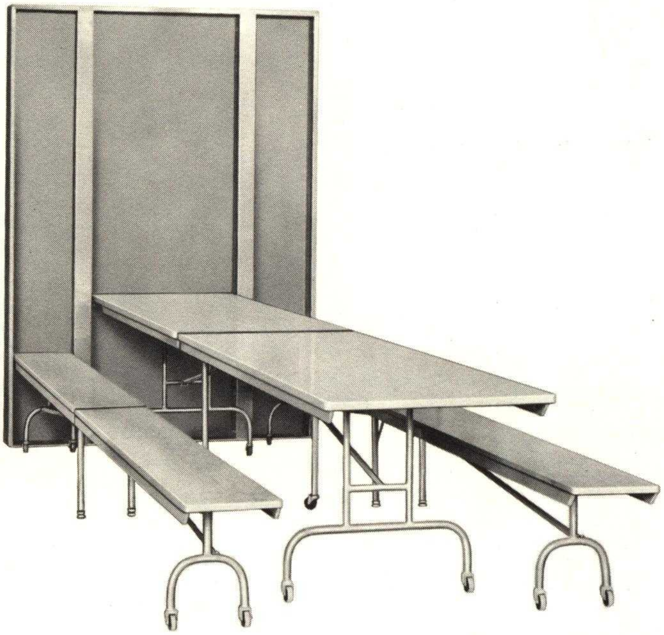
SET-IN-WALL... in new building





AGAINST-WALL... economical remodeling





PATENTED

Cabinet-stored folding table and bench sets offer fast conversion possibilities for multiple-use of gymnasiums, halls, classrooms, corridors, and other areas without affecting their original use. The compact wall cabinet can be placed "Against-the-wall" for remodeling or "Set-in-wall" in new buildings.

The separate tables and benches are completely independent units that can be used (a) with one end attached to the cabinet for quick lunches, arts and crafts, games, and other purposes or (b) can be detached and rolled away from the cabinet for meetings, banquets, varied activities through the means of the safe and easy-to-operate End Lock.

FEATURES

Shallow all steel wall cabinets equipped with a double length folding table and two double length folding benches that will comfortably seat 20 children or 18 adults.

- **SAFETY FIRST.** Space provided between table and bench twin tops eliminates finger pinching hazards. Individual keyless locks hold table and benches securely in cabinets. Units safely and easily operated by one person and so balanced that even when locks are unlatched equipment will not tip or "run" out of cabinet endangering operator. Quiet and trouble-free use is assured by the high position and angle of the sturdy, simple end-leg braces designed to prevent use as a foot rest.
- **FASTER OPERATION, SEMI-AUTOMATIC, KEYLESS, LEVER-TYPE LOCKS** attach units to cabinet. Fewer operations required when folding and unfolding units.
- **SMOOTH SANITARY TOP SURFACES.** No lock key-holes to collect food particles or other objects that might interfere with operation. Safety space between twin tops also permit safe, easy and thorough cleaning even when in use. Top edging is tough and durable, fitted absolutely tight to prevent retention of food debris.
- **COMFORTABLE SEATING** provided by generous extra-width units. Pedestal type end legs on table eliminate knee interference.
- **STEEL CHANNEL TOP SUPPORTING FRAME** on both tables and benches insures rigidity. Table and bench tops rest directly on full width cross member of leg assembly for maximum support and load distribution. This design eliminates the use of individual leg anchoring and expansions bolts which might bulge or mar top surface.
- **CABINETS EASILY AND QUICKLY INSTALLED.** Easily mounted into recesses provided in wall. When masoned into growing wall, mortar securely grips design of cabinet sides so special anchors are not needed.

DOUBLE DEPTH (DOUBLE CAPACITY) CABINETS

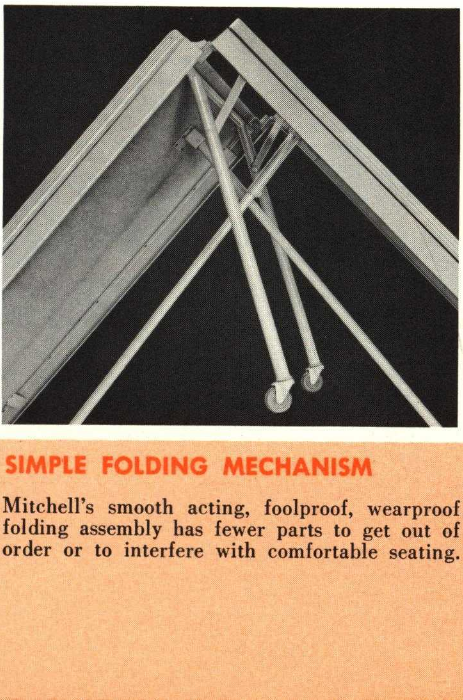
* Cabinets available in "Against-wall," full "Set-in-wall" and half "Set-in-wall" models.

① For double depth cabinets with two tables and four benches or two tables only, cabinet thickness is (1'-1¼") one foot, one and one-quarter inches.

② For double depth cabinets with two tables and four benches or two tables only, cabinet thickness is (1'-1⅜") one foot, one and three-eighths inches.

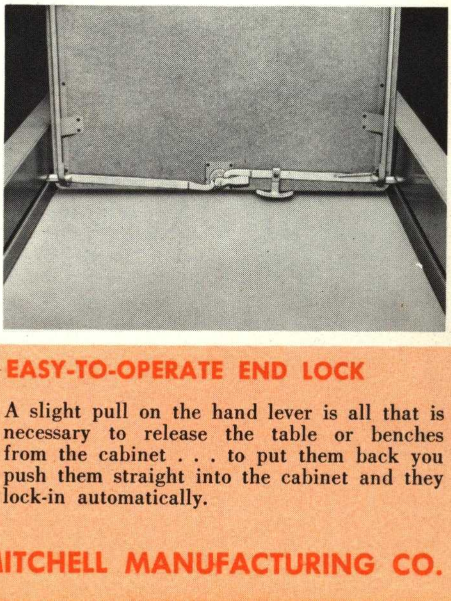
SAFE TO OPEN AND CLOSE

Units are safely and easily operated by one person and so balanced that even when locks are unlatched equipment will not tip or "run" out of cabinet endangering operator.



SIMPLE FOLDING MECHANISM

Mitchell's smooth acting, foolproof, wearproof folding assembly has fewer parts to get out of order or to interfere with comfortable seating.



EASY-TO-OPERATE END LOCK

A slight pull on the hand lever is all that is necessary to release the table or benches from the cabinet . . . to put them back you push them straight into the cabinet and they lock-in automatically.

Mitchell FOLD-O-LEG Doubler SPECIFICATIONS

GENERAL: Where indicated on the plans and covered by these specifications, the contractor shall furnish and install MITCHELL DOUBLER units as manufactured by the MITCHELL MANUFACTURING COMPANY, Milwaukee 46, Wisconsin.

CABINETS: To be furnished with full steel backs and constructed of 16-gauge formed and welded steel, except sills and necessary trim flanges which shall be 14-gauge steel, designed to provide well-rounded edges. Units to be shipped completely assembled, ready to install. For mounting, ⅝″ holes shall be provided near the top in back panel and additional ⅝″ holes in the sill. Cabinet equipped with special design Depth Guides attached to inside of cabinet top and bottom, serves to hold tables and benches in line with front of cabinet frame when in locked position. In operation, these guides shall not touch top surfaces. Cabinets supplied with one coat of metal priming paint. (If specified, Standard Light Bryce Beige enamel finish will be applied at factory.)

FOLDING LEGS and LEG MECHANISM: Legs at each end of tables shall be of pedestal arch design with full-width top cross members, channel apron which is the top supporting frame, to rest directly on the top cross members of leg assemblies for maximum load carrying capacity. Understructure and working parts attached to tops with special hexagon head "Sure-Grip" plated screws. End legs to be equipped with non-marking 2″ rubber-tired stationary type casters. Table center legs with the same style swivel-type casters for easier maneuverability. Center legs on benches to be equipped with rubber cushion glides. Slanted tubular steel folding braces shall be pivotally connected to tops and legs and positioned high from floor to prevent use as a foot rest. Folding mechanism must permit safe, quiet, easy opening, closing and locking into cabinet. Electric welded high carbon steel tubing having a minimum carbon content of .45% and not less than 14-gauge wall thickness shall be used for all legs.

TABLE and BENCH TOPS: Adequate space shall be provided between adjacent halves of tops to prevent lodging of food particles and to act as finger safety space when units are opened or closed. Top surfaces shall be absolutely free of key-holes or locks.

SIZES and FINISHES: The standard size for tables to be 13′-10″ long, 30″ wide and 29″ high. The standard size for benches to be 13′-10″ long, 12″ wide and 18″ high. If 27″ or 24″ table heights are ordered, 17″ or 15″ high benches will be furnished (specify). Standard cabinets must be designed to accommodate different table and bench heights without special adjustment. All metal parts shall be finished with high grade Light Bryce Beige enamel. (See cabinet diagrams to specify combinations of 28″ wide tables 12″ or 10″ wide benches.)

FORMICA TABLE and BENCH TOPS: Formica sheets approximately 1/16″ thick, bonded to ¾″ thick Temper Treated Hardboard-faced panel with selected plywood core balanced with Hardboard back. Selection from three standard patterns.

RESILYTE TABLE and BENCH TOPS: Resilyte sheets approximately 1/16″ thick, bonded to ¾″ thick Temper Treated Hardboard-faced panel with selected plywood core balanced with Hardboard back. Selection from four standard patterns.

Other colors and patterns can be furnished on special order.

TOP FRAME CONSTRUCTION: Tops shall be supported by 1¾″ deep, 16-gauge, cold rolled, full-length steel channels with formed steel reinforcements. Hinges for center folding of tops shall be strongly welded to the ends of the steel channels to give maximum rigidity and strength, independent of top materials used.

TOP EDGING: To be stainless steel T shaped moulding extending on all sides of adjacent halves of each top section to fully protect all edges and to be absolutely tight-fitting to prevent food particles from lodging therein.

INSTALLATION: Cabinets installed into recesses (Set-In-Wall) require openings larger than rear of cabinet dimensions. Opening to be not more than ¾″ additional at top and each side and ½″ more in depth. Contractor, at his expense, shall completely install cabinets plumb and level according to installation drawings and instructions furnished by manufacturer. Contractor, at his expense, also, shall install tables and benches into cabinets.

COMBINATIONS AVAILABLE: One folding table in cabinet, one folding table and two benches in cabinet, also double-depth cabinets with two tables and four benches, or two tables only for "Set-In-Wall" or "Against-Wall" installations. To specify combinations of tables and benches other than listed in the foregoing specifications write for cabinet dimensions.

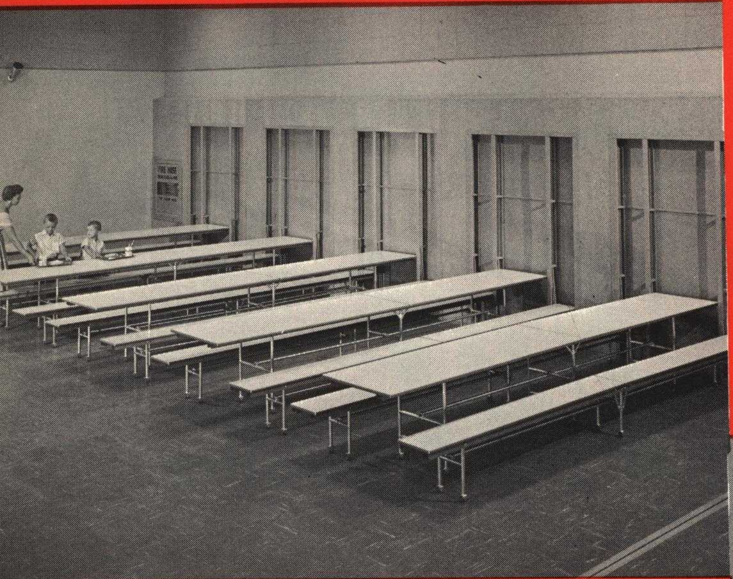
ROL-FOL TABLE INC.
Los Angeles 46, California

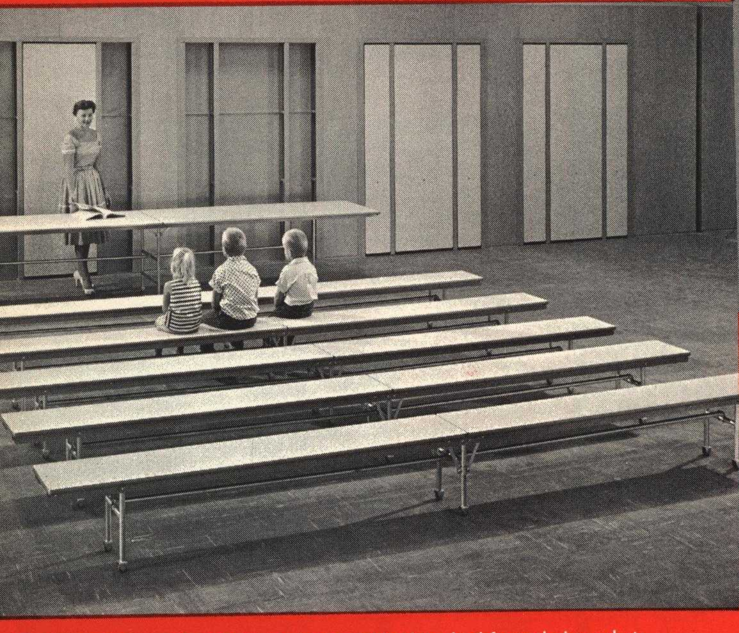
Wall-Fol

FOLDING TABLES AND BENCHES

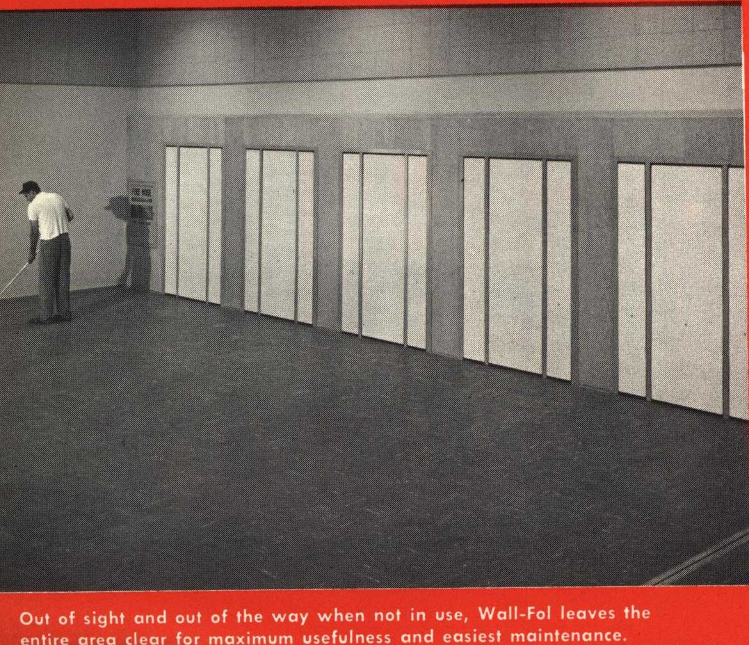
with space-saving wall storage pockets for multi-purpose rooms and social halls



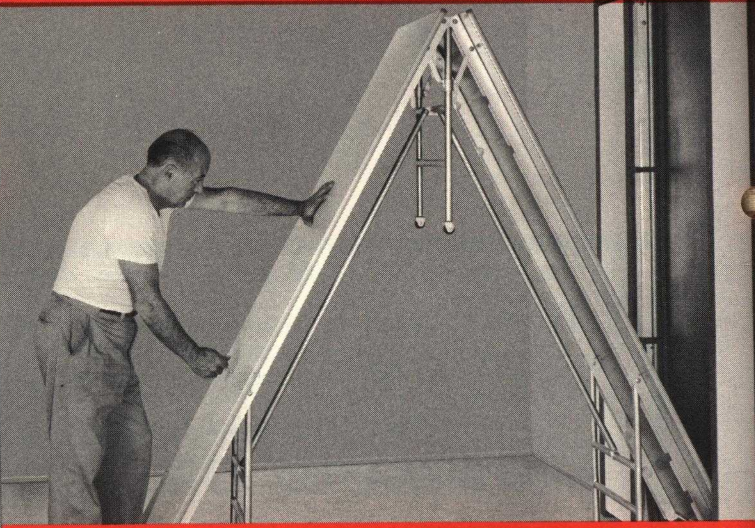
When in use, Wall-Fol Tables can be locked in position to prevent accidental folding.



Wall-Fol Tables and Benches may be quickly detached from their pockets and rolled anywhere in the room. Benches may be used for assembly seating.



Out of sight and out of the way when not in use, Wall-Fol leaves the entire area clear for maximum usefulness and easiest maintenance.



Wall-Fol Tables and Benches fold and lock securely into their own attractive wall pockets. Easily operated by one man.

ATTRACTIVE APPEARANCE: Top surfaces of Wall-Fol Tables and Benches are finished with FORMICA in a wide variety of colors and patterns. Since tables and benches become part of the wall when folded in the pockets, Wall-Fol equipment is pleasing to the eye when stored or in use.

RUGGED CONSTRUCTION: Table and bench top panels are securely attached to the sturdy self-supporting and self-standing steel undercarriage . . . won't come loose! Steel legs and hardware are zinc lustron plated to offer a long wearing protective finish.

COMPACT: Single depth steel wall pockets are only 5½″ deep . . . require minimum space when built-in-the-wall or on-the-wall . . . eliminate the need for extra storage room space.

TIME-SAVING: Fast, easy setup and storage of tables and benches save time and labor . . . make multi-use of rooms truly practical.

LARGE CAPACITY: Strong, durable Wall-Fol Tables and Benches are 14 feet long, seating 20 or more children per set; tables alone for use with folding chairs will comfortably accommodate 16 adults. Tables and benches are available in a choice of 6 heights.

FLEXIBLE: Wall-Fol Tables and Benches may be quickly and easily detached from their pockets and rolled to any desired arrangement. In a few minutes' time, tables can be placed for social functions and banquets.

STANDARD POCKETS: Wide variety of pocket models offers the utmost in installation flexibility for mounting in-the-wall or on-the-wall, with and without bench pockets. Multiple-depth pockets are available to store two, three or four sets, a further saving on storage requirements. Dimensional details on triple and quadruple depth pockets supplied on request.

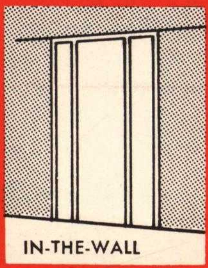
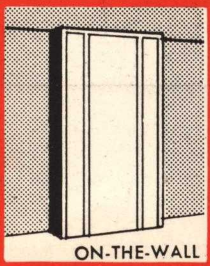
TWO METHODS OF INSTALLATION



IN-THE-WALL pockets are installed in wall recesses or built into the wall during construction.

ON-THE-WALL pockets for installation in existing rooms, may be attached directly to the wall surface.



DOUBLE-DEPTH pockets are used where wall space is limited. Two table and bench sets are stored in each pocket. The front set is unlocked from the pocket and rolled to a desired location. The second set is unfolded and left attached to the pocket or removed.

ROL-FOL TABLE INC.

Wall-Fol SPECIFICATIONS

FOLDING TABLE AND BENCH SETS: Furnish two-leaf folding tables and benches 14 feet long complete with steel pockets, IN-THE-WALL (or ON-THE-WALL) WALL-FOL Model No. (to be selected) as manufactured by ROL-FOL TABLE, INC., 8467 Melrose Place, Los Angeles 46, California. Phone OLive 3-2428.

TABLES AND BENCHES: Tables shall be 14′ long x 28″ wide; benches 14′ long x 11¾″ wide, constructed as follows: The table and bench undercarriage shall be of all-steel construction. Top frames shall consist of 16 gauge cold rolled steel U channel 1⅞″ wide by 1-9/16″ deep. Legs and bracing shall be electro-weld, high carbon steel tubing 1″ O.D. x 15 gauge wall thickness. The entire undercarriage shall be one complete unit, self-supporting and self-standing, to which the top shall be securely fastened.

Hardware shall be precision die formed of ⅛″ steel. All casters shall be fixed, non-marking, rubber tired.

Each table and bench shall be provided with two manually operated locks and a safety catch lock. Manually operated clamp-locks shall be installed on the center legs of all tables for preventing accidental folding.

The tops of tables and benches shall be constructed of ¾″ particle board surfaced with a high pressure laminated plastic and plastic backer sheet. The plastic color and pattern shall be chosen by the purchaser from a selected group of FORMICA samples submitted by Rol-Fol Table, Inc. (Non-standard patterns and FORMICA in solid colors available at premium price.)

Edges of tables and benches shall be trimmed with a dent resistant plastic moulding, silver gray color. The moulding shall be applied to make a tight fitting joint with the plastic top surfaces.

The tubular steel undercarriage and all hardware parts shall be zinc lustron plated. Steel top frames shall be baked enamel, gray Hammertone finish.

TABLE AND BENCH HEIGHTS

To be selected by purchaser.

Standard table heights:
25″, 26″, 27″, 28″, 29″, 30″.

Standard bench heights:
15″, 16″, 17″, 18″, 19″ and 20″.

Note: 19″ and 20″ high benches are not recommended for schools.

DETACHABLE AND INTERCHANGEABLE: The extended tables and benches shall be instantly and individually detachable from the pocket so they can be rolled about for various groupings. Any height table or bench shall operate in any pocket.

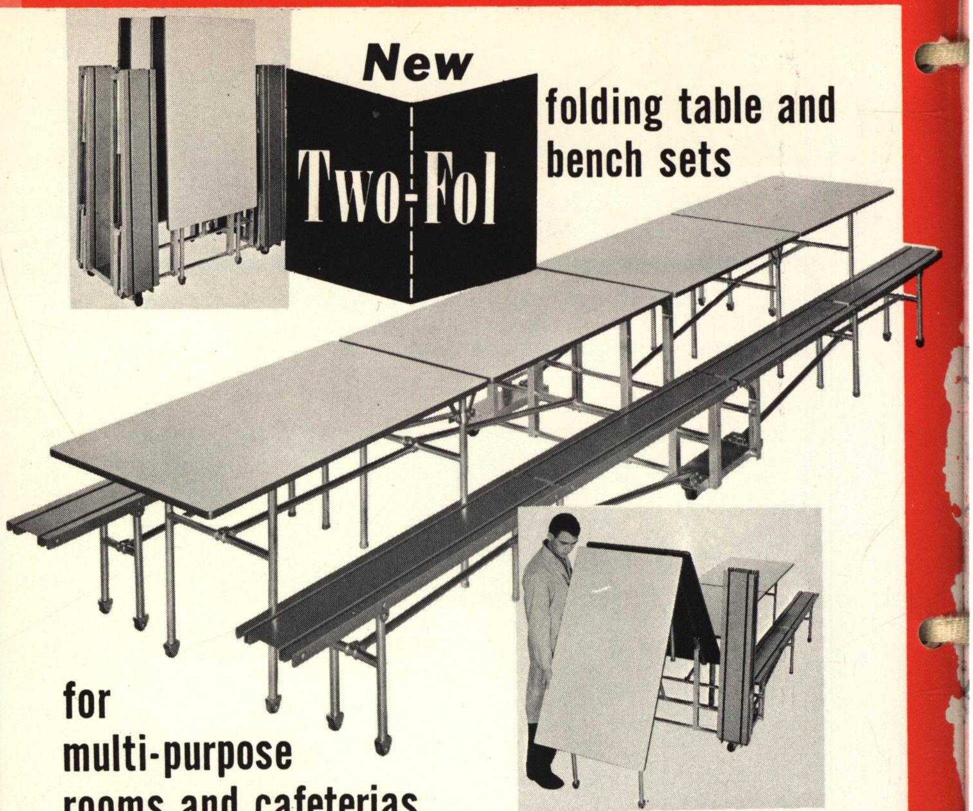
STEEL POCKETS: Wall pockets to house tables and benches shall be all-welded construction of 18 gauge steel. Vertical members to be open steel columns. Pockets shall be enclosed at sides, head and back with steel panels. Pockets shall be factory prime painted. Finish painting after installation shall be done by purchaser.

When steel pockets are to be built into masonry wall (specify) three strap anchors shall be welded to jambs on each side of pocket by manufacturer. Angle iron lintels shall be furnished by others.

INSTALLATION: Contractor or purchaser shall provide wall recesses for in-the-wall models, install pockets and place tables and benches in pockets. The pockets are to be set plumb, true and level and anchored according to manufacturer's recommendations. Sales agent shall provide installation drawings and instructions.

NOTE: The manufacturer reserves the right to make material and design changes to further improve the product.

U. S. Patent Numbers 2,650,146 and 2,699,978



New Two-Fol folding table and bench sets

for multi-purpose rooms and cafeterias...

where space for wall pockets is not available

These attractive, skillfully designed and sturdily built sets will easily accommodate 24 to 30 children, yet can be stored in less space than conventional equipment.

EXTRA CAPACITY: Table and both benches are a full 16 feet long—two to four feet longer than other similar equipment—so that *three* TWO-FOL sets provide the same seating capacity as *four* conventional 12-foot sets.

SPACE-SAVING: TWO-FOL sets fold up and store in the same space required for equipment with *one-fourth less seating capacity!* Storage area is just 8 square feet (50″ x 23″) per set—the same as for a 12-foot set. Height folded, 63″.

TIME-SAVING: A further advantage of this new size is in saving of custodian time; TWO-FOL sets can be set up or folded and stored in three-fourths the time required by conventional sets... *a 25% saving!* TWO-FOL is easy to fold and store. Bench and table sections are folded separately. Large swivel casters permit the folded set to be quickly rolled with little effort.

STURDY CONSTRUCTION: The rugged self-supporting undercarriage is constructed of zinc-lustron plated steel tubing and channel. Table panels are surfaced with damage-resistant Formica. Baked enameled steel benches add to appearance and will withstand severe usage.

ATTRACTIVE APPEARANCE: Tabletops are available in a variety of colors and patterns; trimmed in silver-gray extruded plastic—a handsome and durable combination.

ADDED FEATURE: Benches may be left in folded position so that tables may be used for display purposes... or place chairs at tables for special occasions.

TWO HEIGHTS: Table 27″ high with 15″ benches
Table 29″ high with 17″ benches

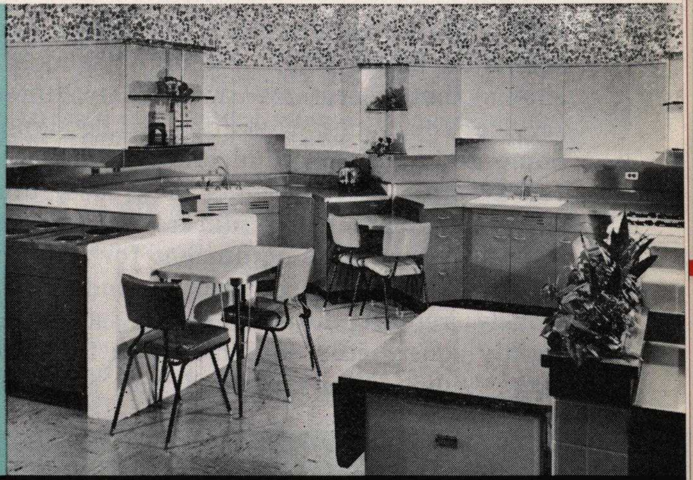
SCHOOL STORAGE FURNITURE



Flowers
Earth

FOOD LABORATORY
CLOTHING LABORATORY
ARTS AND CRAFTS
CLASSROOM STORAGE

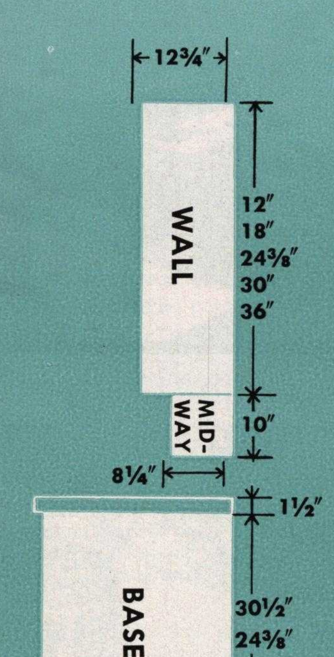
There are no stock St. Charles products — anywhere. Each unit, each kitchen is built strictly to order — following your client-approved specifications. This means that the variety, type and size of individual units are almost limitless.

BASIC DIMENSIONS OF ST. CHARLES SCHOOL LINES

St. Charles' experience in furnishing custom school furniture to thousands of schools has shown that there are two widely differing service conditions that cannot be ignored. Some activities, arts and crafts and clothing, for example, require units of greater dimensions and completely different engineering approach than does equipment for food preparation. These more severe conditions obviously require heavier gauge steel, more rigidly constructed equipment. In the face of these widely differing conditions, St. Charles has refused to compromise by furnishing a single line which would be stronger than necessary for the lighter service and insufficiently strong for the heaviest service.

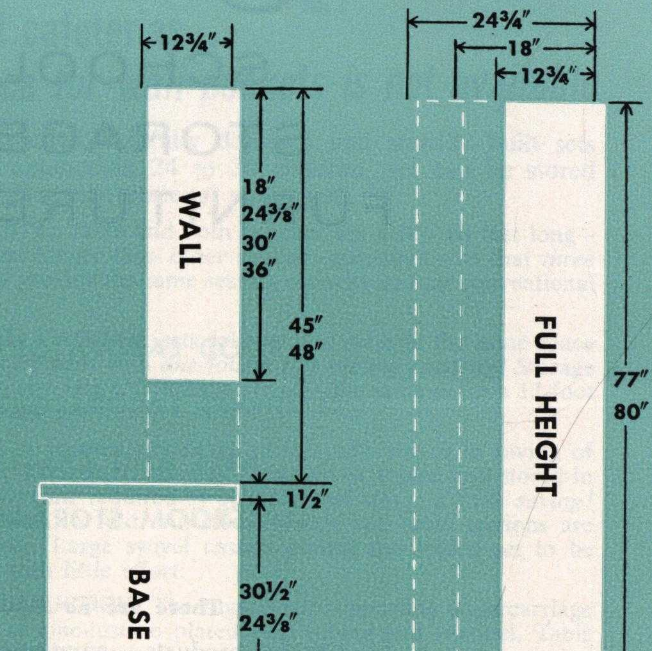
Accordingly, St. Charles offers not one line, but two. The E-line of casework is for use in the foods laboratory or in other areas where comparable storage is required. The S-line is recommended for other departments requiring heavier gauge steel, full height doors, wider doors and drawers and reinforced shelving for heavier storage.

The basic dimensions shown below are for your immediate convenience in room layout. Space does not allow us to show detailed storage information; however, we will be happy to furnish you with details upon request.



E-LINE

Wall unit widths 12″ thru 42″. Sliding glass door wall unit widths 30″ thru 60″. Base unit widths 12″ thru 42″. Full height unit widths 18″ and 24″. All width dimensions are in increments of 3″.



S-LINE

Well unit widths 15″ thru 48″. Base unit widths 15″ thru 48″. Full height widths 18″ thru 48″. All width dimensions from 18″ to 48″ are in increments of 6″.

CONSTRUCTION DETAILS

Material — E and S-Line
Cabinets and shelving shall be fabricated of mild, cold-rolled, annealed furniture steel.

Gauges
Gauges shall be as follows:

E-Line
16 gauge: Case and drawer slides.
18 gauge: Cross rails and gussets.
20 gauge: Door and drawer fronts, sub bases, bottoms and sides of full height units.
22 gauge: Wall and base unit sides, door and drawer liners, drawer bodies and shelves.

S-Line
14 gauge: Cross rails.
16 gauge: Top rails; case and drawer slides; bottom reinforcements.
18 gauge: Sides; bottoms, door and drawer fronts; shelves; gussets; sub bases.
20 gauge: Tops; backs; liners for door and drawer fronts; shelf strips; drawer bodies.

Case Construction — E and S-Line
Top of wall unit shall project over door, when closed, forming cap to resist entrance of dust. Bottom of wall unit shall be flush of double pan construction. Top rails and cross rails of base units shall be U-shaped channels.

E-Line
Two 90° bends on front edge of side form channel to which is welded U-shaped shelf support channel making closed rectangular stile ½″ x 1¼″.

S-Line
Sides shall be formed to make rabbeted stile 1⅛″ wide which shall be closed by welded channel containing shelf adjustment louvers.

Doors and Drawers — E and S-Line
Doors and drawer fronts shall be of double panel construction, ⅝″ thick, sound deadened. Handle reinforcement between panel.
Doors and drawers shall have soft rubber bumpers for quiet closing.
Drawer bodies shall be formed of one sheet and welded to front and back through flanges. Tops of side shall be rolled to eliminate sharp edges.
Drawer slide shall be a formed channel with a roller at rear; case slide shall be formed channel with roller at front. Shall have positive stop to prevent accidental removal.
Glazed doors shall be reinforced panel construction cut out to receive glass. Glass to be set in rubber glazing channel and held firmly in place by removable retaining strip.

S-Line
Sliding door shall operate in a track and roller assembly at top of unit and with a guide at bottom. Shall have recessed door pull.

Shelves — E and S-Line
Front and rear shelf edges are formed into a 30° triangular truss with extended lip. This truss edge rests in cadmium plated shelf clips. Adjustable on 1½″ centers. Glass shelf clips have rubber bumpers.

Hardware — E and S
Catch housing in door shall have two vertically mounted, full floating springs. Strike of hardened steel shall be attached to unit. Door and drawer pulls in exclusive design in solid cast zinc.

E-Line
Hinges shall be pivot type with stainless, long life pins attached to top and bottom of doors with counter-sunk screws. Doors over 36″ high will have additional hinge in center.

S-Line
Hinges shall be brass, five-jointed institutional type, 2″ long. Doors over 36″ high shall have an additional hinge in center. Hinge pin shall be locked in place.

Finish — E and S-Line
Following a six-stage wash and phosphate coating spray process, prime coat of film thickness of 1 mil plus or minus 10% shall be sprayed on and baked. Finish coat of equal film thickness shall be sprayed on and baked, resulting in a finish having a film thickness of 2 mils plus or minus 10%. Colors as selected.

ST. CHARLES MANUFACTURING CO.

PLANNING SERVICE

When planning a new school or an addition to an existing school, the architect or superintendent will find it helpful to call in a St. Charles representative. Working with him from the planning stage will prove beneficial in obtaining the best results from the use of St. Charles equipment.

Architects — superintendents: Write for complete Catalog No. 89.

ST. CHARLES UNIQUE SERVICES

1. Advantages of experienced custom building.

1. It permits the architect in planning to give first consideration to the needs and tastes of his clients without wasteful compromise.
2. Custom building allows a wider choice—and more flexible and efficient placement of storage, appliances and specialized equipment.
3. Custom building permits maximum scope to the use of bold imaginative layout—free from the limiting influences of mass produced design.

2. Skilled assistance of a dependable St. Charles dealer.

St. Charles dealers keep constantly abreast of the latest design techniques — aided by frequent sessions of field and factory schooling by St. Charles designers.

You can enlist the assistance of the St. Charles dealer at the earliest stages of planning — and rely on his ability to render detailed plans once the basic needs and ideas have been clearly defined.

3. Careful attention to individual specifications.

In the St. Charles method of custom manufacture, there are no stock units. Each element is manufactured as a part of the individual area for which it has been ordered. Thus, your specifications can be followed explicitly.

The only limits to dimension and design are those we suggest to protect you and your clients from hazards of design failure or useless expense.

4. Complete, thorough supervision of installation.

Trained installation crews, under the St. Charles dealer's personal supervision and responsibility, assure you that the completed job, will be satisfactory in every respect.

For that reason it is strongly recommended that the equipment be installed by a skilled St. Charles dealer.

FOLDING TABLES & BENCHES

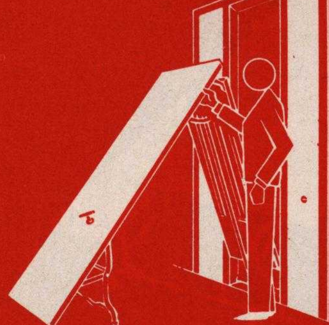
Schieber

SINCE 1931

A MODEL FOR EVERY APPLICATION

•

THOUSANDS OF INSTALLATIONS FROM COAST TO COAST



SCHIEBER'S Rugged Quality Construction Eliminates Maintenance Problems Assures Safe, Easy Operation and LONG LIFE

IN-WALL

THE ONLY ALL-STEEL FOLDING TABLE AND BENCH UNIT FOR SCHOOLS

In-Wall, the all-metal, all-welded folding table and bench unit was originated by Schieber and the first wall pocket model offered to schools. It dates back to 1931 and as testimony to its sound engineering and sturdy, solid construction, is the fact that the first installation, now 29 years old, is still in daily use and has never failed. There are unquestionably more In-Wall units in use today than all other makes and models combined. More than a thousand school architects have specified it and countless school districts have standardized on it. It is guaranteed for the life of the school.

Accommodates 20 trays.

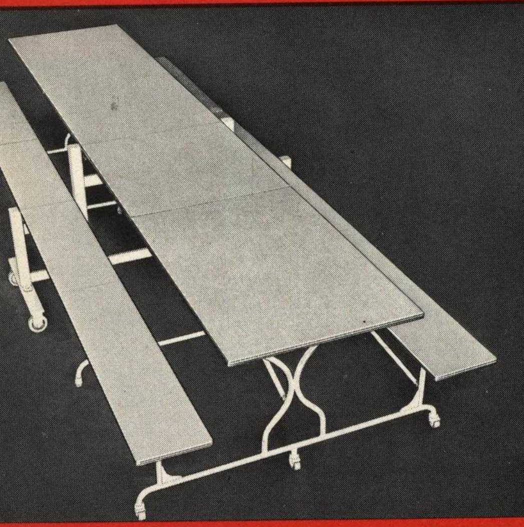
COMPAC-FOLD

DETACHABLE, WALL POCKET TYPE FOLDING TABLE AND BENCH UNIT

Compac-Fold is a detachable type unit. Tables and benches may be rolled to any position and used separately. One of its chief features is the shallow 5″ depth pocket which permits installation of single units in thinner walls such as are often specified in warmer climates. The detachable feature also permits use of multiple depth pockets for storing two or more units where wall space is restricted. Like all Schieber equipment, the Compac-Fold is "over-engineered" to provide strength and long life in school use. All edges are trimmed with top quality butyrate molding.

Accommodates 20 trays.

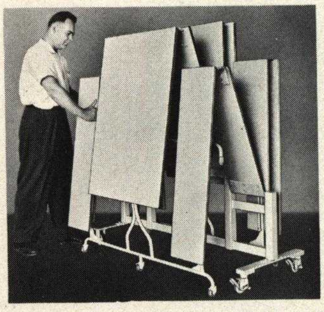
FLEXO-FOLD



**Flexo-Fold Table-Only. Available in 8', 10', & 12' Lengths.*

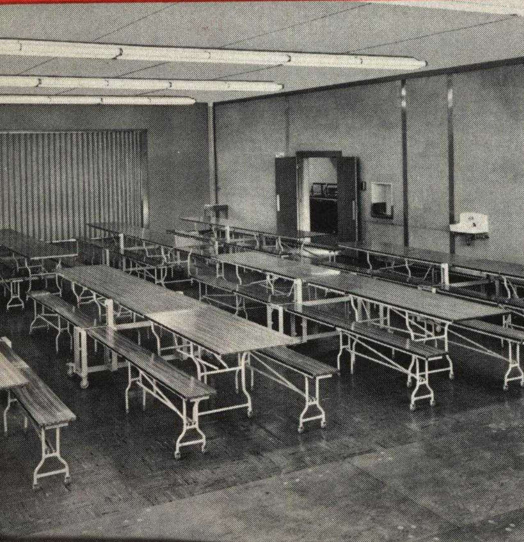
NEW 12′ PORTABLE WITH BUILT-IN CARRIER

The Flexo-Fold by Schieber is designed to meet the need for a portable folding unit that adapts itself to smaller or cut up areas. While it is lighter than most portables and easier to fold and unfold, it features typical Schieber rugged construction capable of serving in daily school use. One of the important features of the Flexo-Fold is the unitized strutting. The table and two benches of each side fold up and unfold as a single unit. Preloaded springs assist the operator.



Accommodates 16 trays.

TRANSI-FOLD



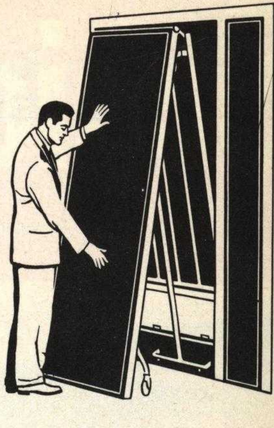
PORTABLE, INTEGRAL CARRIER UNIT, 20 AND 16 FOOT MODELS

Schieber's Transi-Fold unit is now available in two models. A 20 foot model has been added which has a seating capacity of up to 30 children. The 16 foot model of 24 children capacity is continued in the line. This unit is so compact and rugged it is widely used in industrial plants for seating adult workers. Table and bench tops are built like Compac-Fold with all surfaces sealed and trimmed with top quality butyrate molding. The open channel type carrier is all welded and serves as the center "leg." It is equipped with large rubber casters. When folded and rolled against the wall, Transi-Fold protrudes only 22 inches. Because of its compactness and speed with which it is operated, it is often first choice in portable equipment.

IN-WALL specifications

This covers furnishing two-leaf folding tables and benches manufactured by Schieber Mfg. Co. Connected to and operating from steel pockets, they shall be approximately 14′ long when extended. Shall be provided with automatic and manually operated locks and flush with wall when folded and locked in pockets. Pockets shall be approximately 7′4″ high and 4′ 9½″ wide. Made of 16 gauge steel with ⅛″ x 3″ steel facing to overlap wall and have 3/16″ x 1″ x 6″ long anchors welded to pocket lining approximately 2′3″ o.c. and be furnished with a 3″ x 3″ x ¼″ angle iron lintel welded to top of pocket lining and extending approximately 6″ over each side of pocket. Against-the-wall pockets shall be approximately 7′7″ high, 5′2⅜″ wide of the cabinet type with rounded corners on front top and sides. Tables shall be of #20 gauge sheet steel welded to 1½″ x 1½″ x 3/16″ angle iron frames, covered with ⅛″ battleship linoleum. Shall have automatically operated hinge legs with oilless bearing rubber wheel terminals secured to outer frame and a strut secured to inner frame and be counter-balanced for ease of operation. Benches shall be of #16 gauge steel welded to 1⅜″ x ⅞″ x 3/16″ angle iron frame, covered with ⅛″ battleship linoleum and shall have two automatically operated legs and strut member. The edges of the tables and benches shall be trimmed with 3/32″ x 1¾″ stainless steel welded to the steel frames. Pockets shall receive one coat of red lead before shipment. Finish coat on pockets by others. The underside of the tables and benches shall be painted with aluminum paint by manufacturer. Factory trained personnel shall install tables and benches after pockets are installed in walls by others. Operation and function of the "In-Wall" unit is guaranteed for the life of the building.

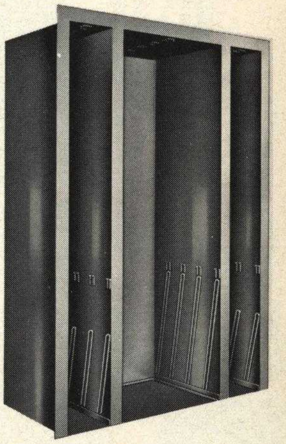
WRITE FOR DETAIL DRAWINGS



Counter Balanced for Easy Operation

COMPAC-FOLD specifications

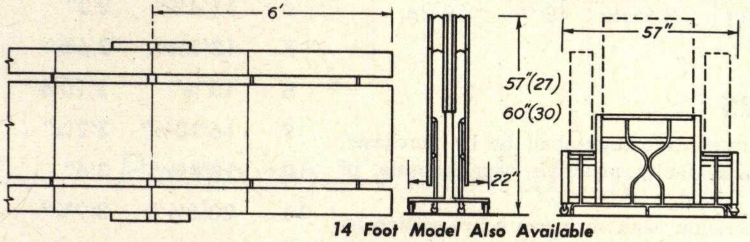
Approximately 14 feet long when extended. Constructed with automatic and manual locks. Flush with face when locked in pockets. DETACHABLE from the pocket. POCKETS 16 gauge steel spaced approximately 6′ 6″ O.C. approximately 7′ 1⅝″ high, 4′8⅝″ wide, 5⅝″ deep including stiffening bars, ⅛″ x 2″ facing, 3/16″ x 1″ x 4″ long anchors welded to pocket sides, two anchor bars ¼″ x 1″ extending 2″ each side. Against-the-wall pocket approximately 7′ 3⅝″ high, 4′ 11½″ wide. Cabinet type with rounded corners and edges. Double-depth pockets same specifications as above except depth 10 11/16″. TABLES ¾″ laminated wood covered with high pressure, laminated, heat-resistant plastic, available in 6 colors (specials extra) and backer sheet. Automatically operated hinged tubular legs, 1 1/16″ O.D. with ⅛″ wall and rubber wheel terminals. Formed stiffening support entire length of table top. BENCHES same construction as tables except tubular legs. 27/32″ O.D. with ⅛″ wall. All edges trimmed with top quality butyrate molding to seal joint between plastic top and core. (Stainless steel molding optional extra.) Table heights 25″ to 30″ in 1″ increments. Benches 15″ to 20″ in 1″ increments. (Table 24″ and bench 14″ at additional charge.) Pockets to receive one coat of red lead before shipment. Finish coat by purchaser at his expense. Understructure painted by manufacturer. Pockets built into or attached to wall by purchaser. Tables and benches installed by purchaser or manufacturer's agent.



WRITE FOR DETAIL DRAWINGS

FLEXO-FOLD specifications

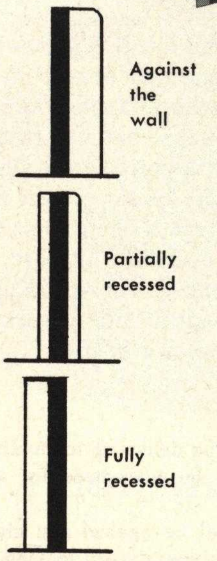
Two folding tables and four benches permanently attached to carrier. Carrier constructed of 2″ square steel tubing with ½″ x 2″ welded joining members and with four bearing equipped casters, 2 pivoting type. Understructures of tables and benches 27/32″ O.D. steel tubing. All fixed joints welded. Table top with plastic backer sheet and surfaced with high pressure, laminated, heat resistant plastic in 6 standard colors. Edges trimmed and sealed with top quality butyrate molding. Benches same as tables or optional "Everform" wood. Edges rounded and all surfaces finished with mottled, neutral tone plastic spray, non-absorbent, chip, scratch and wear resistant. Floor space occupied when folded 22″ x 57″, when opened 12′ x 57¼″. Optional table and bench heights: 27″/17″ and 30″/20″. Height of unit when folded: 27″ model 57″, 30″ model 60″. Carrier and understructure painted by manufacturer.



14 Foot Model Also Available

** Plastic on Benches, Additional Charge.*

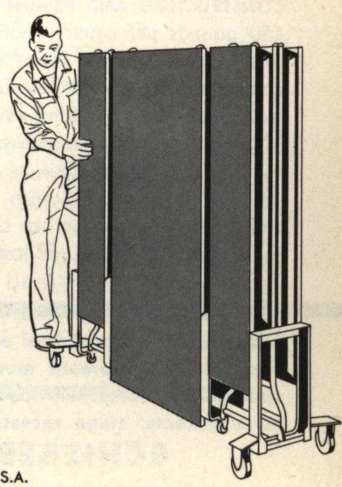
MULTIPLE DEPTH POCKETS



These pockets may be installed in new buildings or in remodeling projects. They are available for two, three and four complete units and are approximately 10″, 15″ and 20″ deep respectively. This type installation is particularly adaptable where wall space is limited.

TRANSI-FOLD specifications

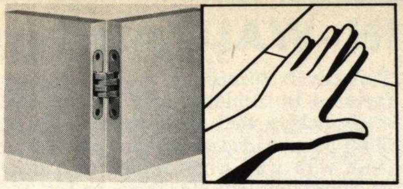
Two tables and four benches permanently attached to carrier. CARRIER constructed of channel formed steel equipped with 3½″ rubber, oilless bearing casters. Dimensions of carrier: 22″ wide, 61″ long. 16 foot model 62″ high when tables and benches are folded. 20 foot model 74″ high when tables and benches are folded. TABLES laminated wood covered with high pressure, laminated, heat-resistant plastic in 6 standard colors (specials extra) and backer sheet. Automatically operated hinged legs with rubber wheel terminals. Tubular legs 1 1/16″ O.D. with ⅛″ wall. Formed stiffening support the entire length of table top. BENCHES same construction as tables except tubular legs, 27/32″ O.D. with ⅛″ wall. All edges are trimmed with top quality butyrate molding. Table heights 27″ and 30″; bench heights 17″ and 20″. Carrier and understructure of the tables and benches painted by manufacturer.



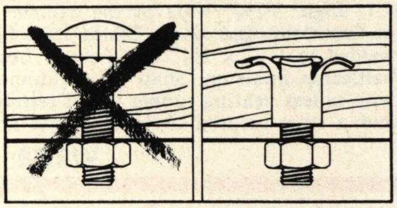
Note: Understructures of all Schieber units will be painted in special colors if specified. There will be a small additional charge.

Litho in U.S.A.

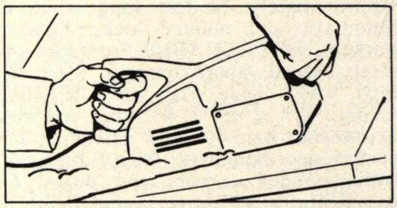
Schieber Stage
FOLDING



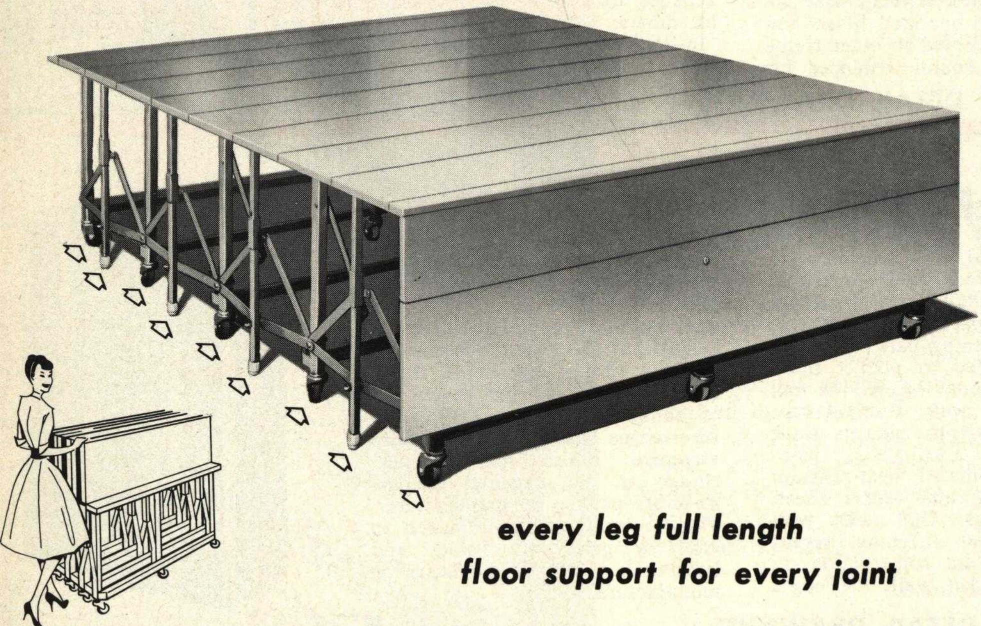
Soss concealed hinges provide flat tight joints without projections. They're guaranteed the life of the stage.



500 pound pull test expansion anchors secure planks to supporting structure. No bolt heads projecting or recessed.



7 fir strips per board. Free of imperfections and bonded by high pressure adhesive. Finished with special hard, mar-resistant seal. Freedom from bolt and hinge projections simplifies refinishing.



every leg full length
floor support for every joint

Solid is the name for it! The new Schieber stage is the next best thing to a permanent built-in stage. With Schieber you get a surface as level as the floor it stands on. It is not a trussed construction but has twice as many legs as other designs and is supported from the floor at each and every joint. This feature means greater rigidity and easier folding. The Schieber stage is free of bolt and hinge projections and gaps between boards. Furniture, props, band equipment, etc. set level without rocking. Rugs lay flat. Fold it — roll it against the wall or into a recess or storage area. It's out of the way when not in use!

SPECIFICATIONS

GENERAL. Shall be delivered to purchaser fully assembled in crates. Uncrating shall be by purchaser. Each unit shall be guaranteed for a period of one year against faulty materials, workmanship, or operation.

OPERATION. Shall be opened and closed in one continuous operation, with each two board section individually and automatically locking open. Shall be equipped with minimum of one floor stop, with non-marking rubber pad, located at each corner.

CONSTRUCTION AND DESIGN. (1) Shall be designed and constructed to support minimum live-load of 150 pounds per square foot. (2) Floor boards shall be supported at each joint by square or rectangular tubing, each making direct contact with the floor. (3) Top surface of floor boards shall be smooth and completely free from bolt heads, hinges or other projections or recesses. (4) Floor boards, base boards, and tail boards shall be edge-glued strips of Douglass Fir, each board dimensions being approximately ¾" x 11". (5) Understructure casters to be two inch, non-marring type, oilless bearing rubber wheels. (6) Understructure shall be finish painted by manufacturer in standard brown enamel. (7) All wood parts shall be sanded with radiused edges with two coats of hard mar-resistant finish and one coat of finish wax applied before shipment. (8) Shall be completely portable when folded. Shall be movable in extended position, as long as no load is on the top surface. (9) Key lock to prevent unauthorized operation.

Schieber offers complete assistance to those contemplating the use of their equipment. Our representatives in all areas are qualified school equipment men who will work with you and your architects in planning your needs, figuring costs and writing specifications. We also maintain a layout service. Upon submission of floor plans our engineers will plan pocket locations, seating arrangements, stage recesses, etc., for maximum use of floor space.

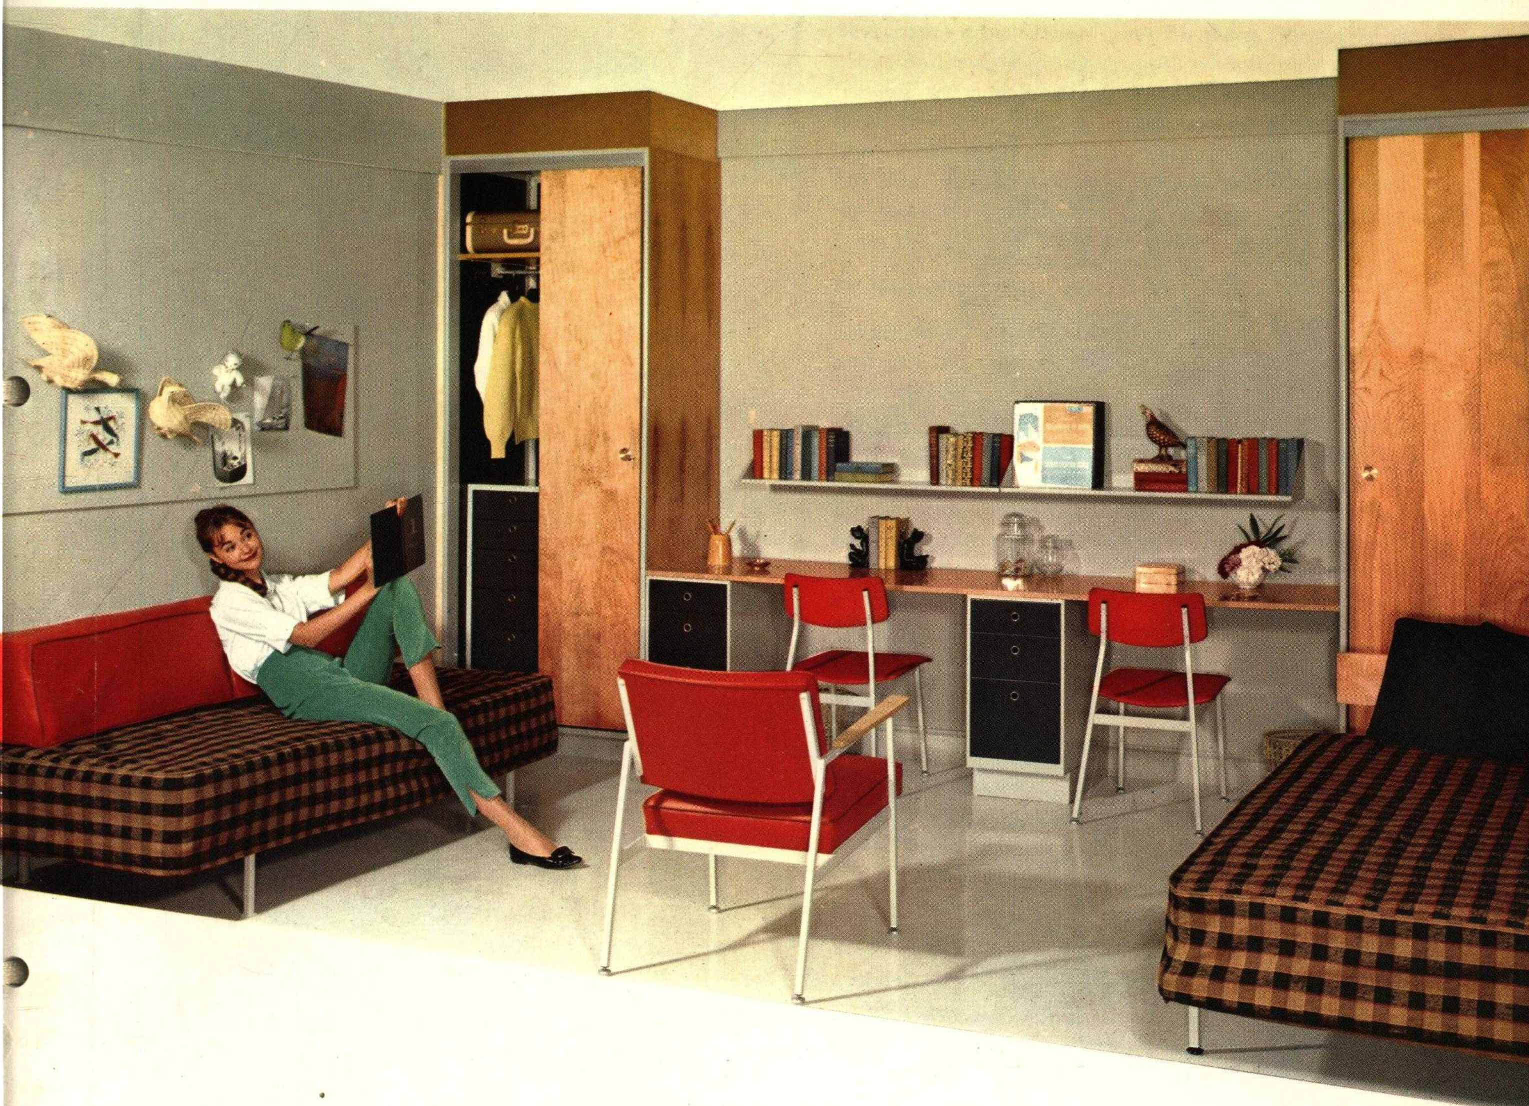
DORM LINE
by **SIMMONS**



Planning... installation... maintenance... financing —all EASIER with Simmons Dorm Line

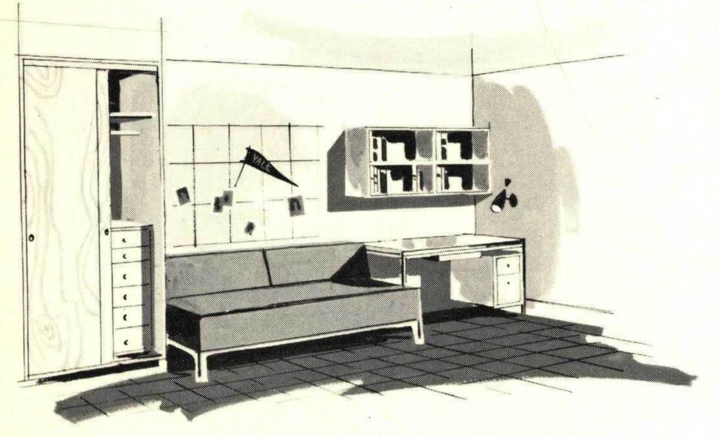
From start to finish, your job is simplified with Dorm Line installations—simplified even in building design. Rooms may be planned in standard shapes and sizes to save time and costs. They may be arranged in a wide variety of ways without loss of spaciousness. Then as you add Dorm Line units, you achieve efficient, colorful, homelike rooms.

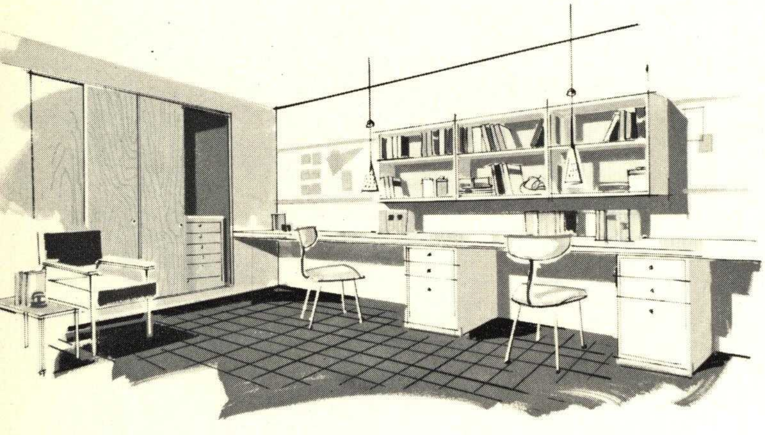
Simmons color range makes it possible for each dorm room to vary in color scheme without changing basic wall color. The variety of combinations available in chests, desks and wardrobes permits unlimited floor plan arrangements.

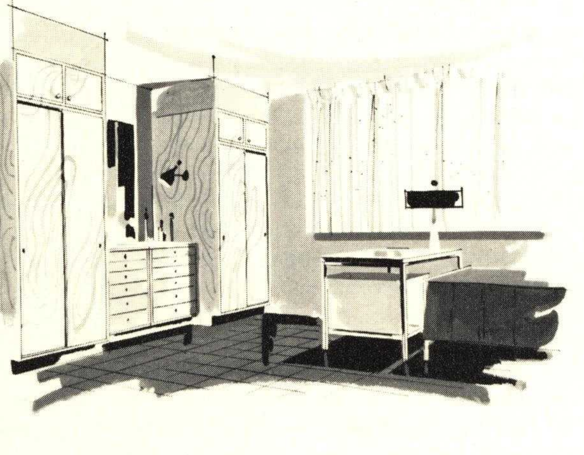
Installation is quick and easy — no time-consuming custom-built wardrobe or closet construction required. Easy maintenance — certainly. Steel construction means "student-proof" abuse-resistance and durability . . . wardrobe frames never warp . . . doors won't sag or stick . . . steel drawers assure smooth, quiet operation.

Money problems are easily solved. Simmons Dorm Line wardrobes, chests, desks—even beds—are built-in to qualify for *long-term* government financing. This all adds up to furniture that long outlasts the loan!

Simmons **DORM LINE** *construction safeguards your investment . . .*







lasting quality

Architects and designers are assured of specifying sturdy, attractive, livable dormitory furnishings with Dorm Line. Efficiently designed units offer unexcelled opportunity for effective, economical use of floor space. Rigid standards of quality control assure furniture that will keep its new look through generations of students with minimum maintenance.

savings • approved financing

Prefabricated, steel framed wardrobes shipped k.d. are ready to be installed on the job at a fraction of the cost and time required for wood units. Standard, unvarying dimensions enable the architect to design storage areas with the knowledge that each unit will fit perfectly into the space provided. All built-in units in the Simmons Dorm Line qualify for long term government financing.

simplicity of lines

Dorm Line units stay in style throughout their long years of service because their lines are clean and simple. They are never dated, because taste and judgment place no time limit on simplicity.

engineered comfort

True, lasting comfort is designed into every Simmons Dorm Line bed, chair, and desk. Dorm Line units accommodate themselves naturally to comfortable, yet correct, easy body postures—and that comfort stays with them year after year because Dorm Line construction is planned for permanence.

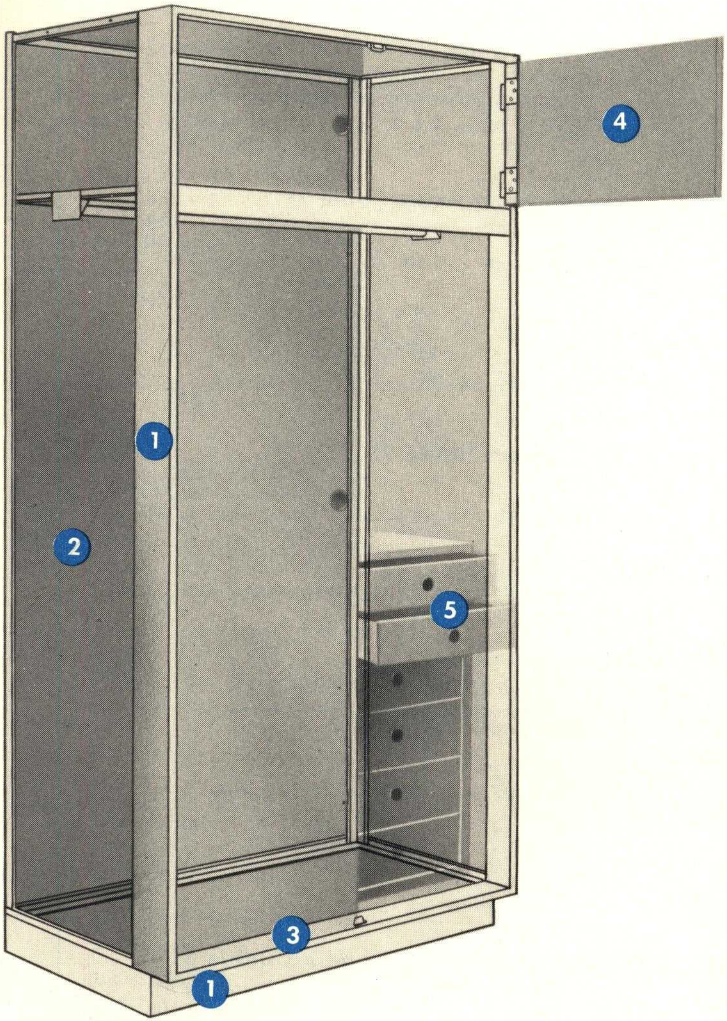
durable lasting colors and finishes

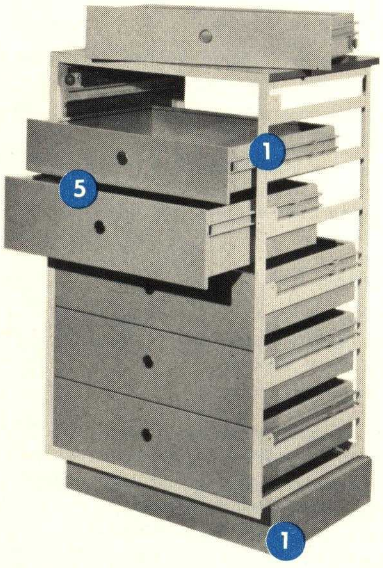
Simmons offers the most comprehensive selection of colors and finishes ever available on dormitory furniture and equipment. The Simmons Dorm Line offers color and individuality without extra expense.

additional units

Dorm Line furniture is by no means limited to the built-in pieces shown here. A complete line of free-standing furniture is available in styles designed to match the built-in units. Simmons is also equipped to design and produce custom dormitory furniture on special order. You are invited to ask about this Simmons service whenever you have a need that cannot be met with standard Dorm Line units.

DORM LINE
by SIMMONS





1. welded steel frames, drawers, and bases

Skyscraper construction gives Simmons Dorm Line wardrobes and chests sturdy strength without ugly bulk. Steel framed wardrobes provide more usable space in less area than conventional wood framed built-in construction. After years of use they are as firm and rigid as on the day they're installed. Steel bases anchor firmly to the floor to support whatever weight may be imposed upon them in even the most rigorous dormitory use.

2. Novoply sides, doors and backs

Sides, doors and backs are of Novoply, proved by test and use the most stable material for this type of construction. It is practically free from warp and retains its size and shape in all climates. Sides and doors of Dorm Line wardrobes and sides of chests are available in Birch-faced Novoply sealed and lacquered, paint grade Novoply in any standard Simmons color and plain Novoply sealed and lacquered. Sides and backs also available of masonite.

smoothly operating hardware

3. easy-sliding doors

Stay that way because the extruded aluminum Stanley track assembly is secured to the steel framework and hanger brackets screw into the back facing of doors (not in top edging). Doors withstand 3000-lb. strength tests. Suspension hardware is fully adjustable. Track assembly has nylon rollers for everlasting easy operation. Triple guides at bottom of doors are securely anchored to wardrobe floor.

4. hinged doors

With flush ring-type hardware give easy access to the shelf of wardrobe units. Storage of suitcases and other bulky pieces will be easy. Magnetic catches hold the doors firmly closed, yet permit them to be opened quickly and without effort.

5. drawers

Are built to the highest Simmons standards. Nylon rollers covered with Buna rubber rings and rubber stops assure quiet, smooth operation. Drawers cannot be pulled out of chest accidentally. They never warp or sag. They're impervious to changes in temperature and humidity, and are easily kept clean. Grommet pulls replace the usual projecting and easily broken pulls.

Write for catalog and price list covering the complete Simmons line of built-in, free-standing and upholstered furniture.

Three types of high pressure melamine plastics are used on Simmons furniture; Textolite by General Electric, Fiberesin and Park Panel. All meet N.E.M.A. Standards and Federal Specifications for high pressure decorative laminates. They will withstand abrasion, bumps, knocks and scratching which would ruin other materials. They will not warp or separate, cannot be ringed by glasses or burned by a forgotten cigarette. Simmons furniture may be ordered in any of the finishes listed above with plastic protection as required. Color samples of paints and plastics are available at the sales offices listed below.

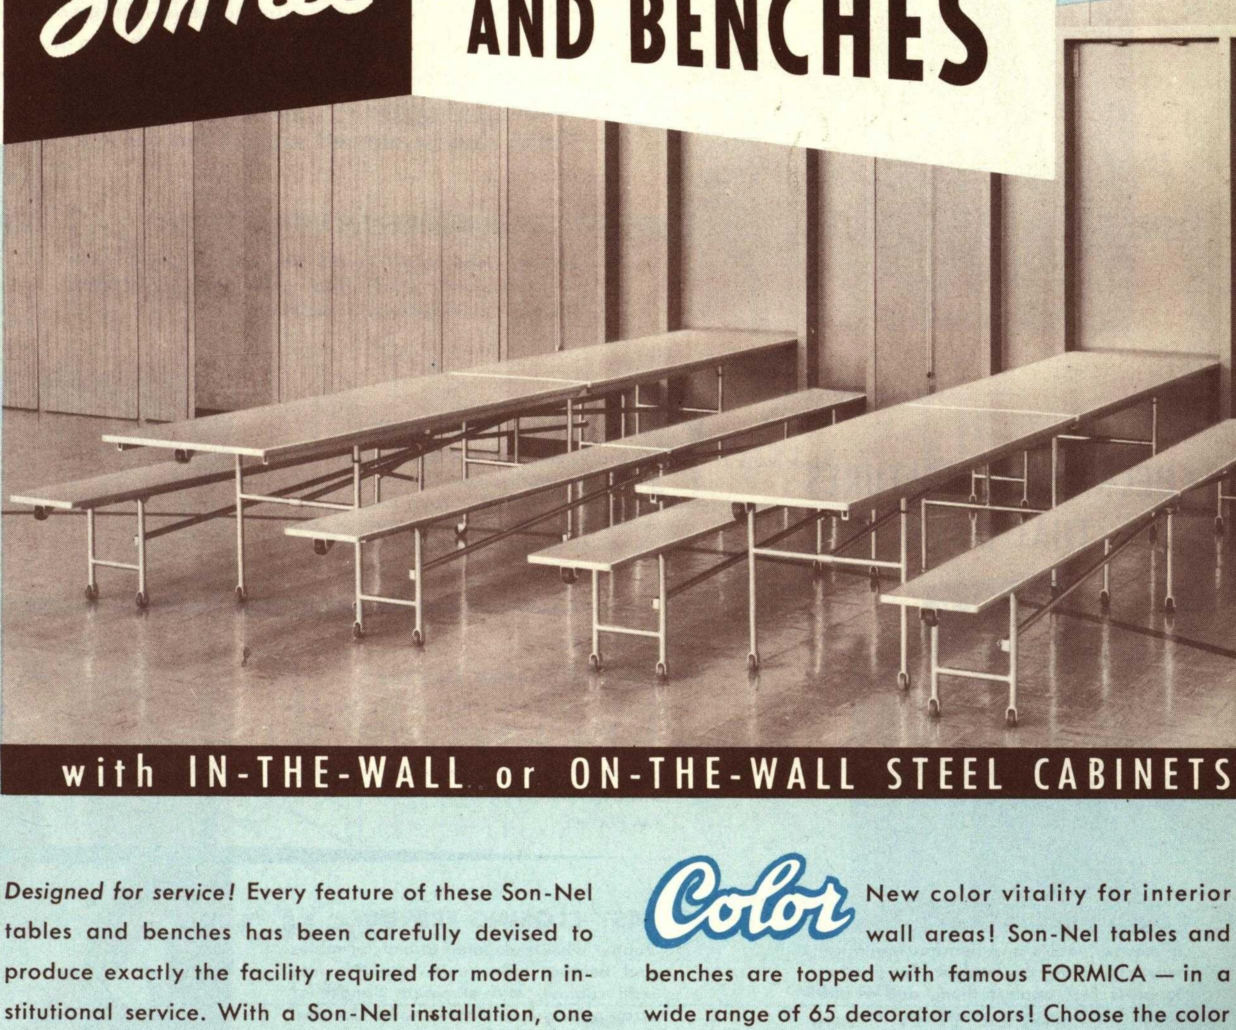
Son-Nel FOLDING TABLES AND BENCHES



with IN-THE-WALL or ON-THE-WALL STEEL CABINETS

Designed for service! Every feature of these Son-Nel tables and benches has been carefully devised to produce exactly the facility required for modern institutional service. With a Son-Nel installation, one man can easily convert a whole room into a study hall or cafeteria. Tables and benches are quickly unlocked, easily and safely lowered, securely positioned in place, or are easily detached and moved to any position in the room. When no longer needed, they are easily folded back into precision-made steel wall cabinets; once locked they remain so, with Son-Nel's vandal proof safety locks. Every movement is easier, quicker, safer! Only Son-Nel offers these exclusive features outlined in this folder.

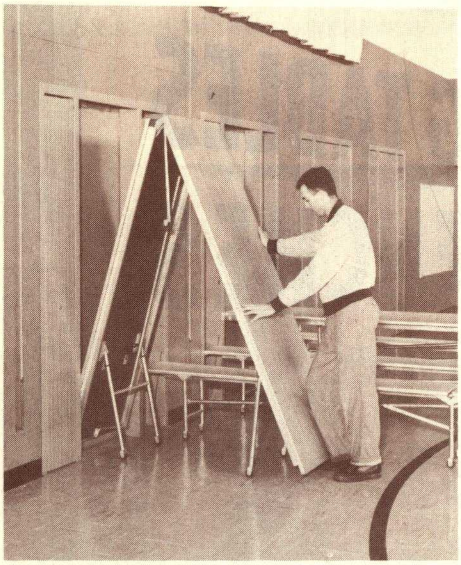
Color New color vitality for interior wall areas! Son-Nel tables and benches are topped with famous FORMICA — in a wide range of 65 decorator colors! Choose the color and finish that best suits your requirements.

SON-NEL *Guarantee*

Son-Nel is proud of its special design features (as detailed inside this folder), developed with skilled workmanship. For this reason, every Son-Nel Folding Table and Bench carries a **full 10-year** guarantee against any defects in material or workmanship.

"The Easiest of all to Use"

Son-Nel FOLDING TABLES AND BENCHES



designed for service in every detail!

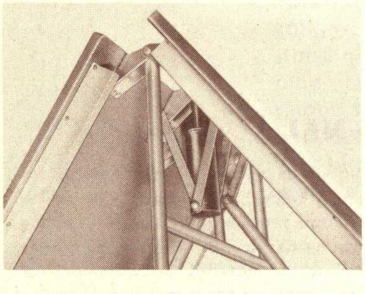
Each table and bench unit will comfortably accommodate 20 children or 18 adults; they are easily detached from wall cabinets for movement anywhere in the room. Son-Nel wall cabinets are sturdily constructed of 16-gauge steel—and may be mounted recessed *in-the-wall* or flush *on-the-wall*. Either way, the colorful table and bench tops fold to become an integral part of the wall surface for stimulating color appeal. Tables may be ordered without benches if so desired.

◀ Son-Nel units unfold quietly and smoothly, and when in place provide sturdy, dependable seating and table facilities for virtually any application.

CHECK THESE FEATURES THAT MAKE Son-Nel THE FIRST CHOICE EVERYWHERE

✓ "FOOT FREE" STRUTS

Braces for tables and benches angle upward, removing the tendency for persons to press feet against them, and at the same time providing greater leg room.

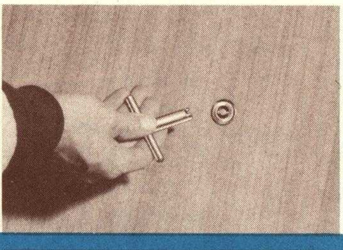


✓ AUTOMATIC SLOW-OPENING ACTION—*An Optional Feature*

Hydraulic valve action! A specially designed Son-Nel hydraulic piston controls rate of opening to gently unfold units for safe handling. Unlock the unit, let it go, and it lowers gently to the floor automatically, freeing service personnel for other duties.

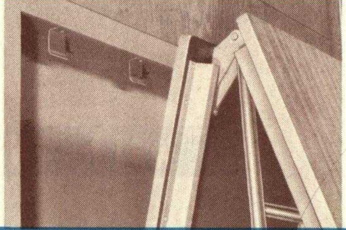
✓ VANDAL PROOF LOCK

Special female key and Vandal Proof lock prevent unauthorized tampering. Lock cannot be "picked." Units may be released from securely closed position only by use of special Son-Nel key.



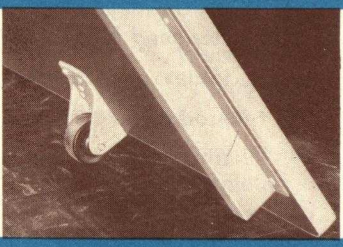
✓ TOP LOCKING DEVICE

Folded units are automatically gripped by Son-Nel's top locking device. These safety "fingers" eliminate the hazard of the top tilting outward when unfolding; no adjustment required.



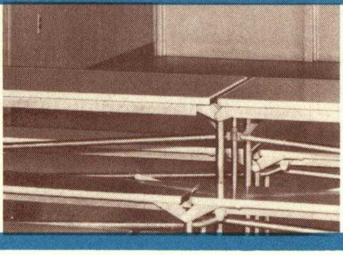
✓ EASY CLOSING FEATURE

Rubber wheels mounted at ends of tables and benches guide units smoothly into wall cabinet, and eliminate danger of scraping edges on floor. Another Son-Nel "designed for service" feature!



✓ FINGER GRIP SAFETY SPACE

No pinched fingers! A full ¾-inch is allowed between table and bench top sections to positively eliminate the danger of pinched fingers.



✓ 100% INTERCHANGEABLE

On any given job, Son-Nel bench and table units fit smoothly into **any** of the cabinets: they do not have to go back into the cabinet from which they came! This eliminates "key numbers" and saves time and effort when clearing room area—another Son-Nel service-ease feature.

Specifications

FOLDING TABLE AND BENCH SETS

Furnish two-leaf folding tables and benches, complete with steel cabinets, Model No.____________ (in-the-wall or on-the-wall), as manufactured by Son-Nel Products Company, 900 - 19th Avenue, Oakland 6, California.

TABLES AND BENCHES

Tables shall be approximately 14 feet long by 28 inches wide; benches approximately 14 feet long by 12 inches wide of the following construction:

Top shall be three-quarter inch (¾") plywood, laminated Formica pattern on top and plastic coated backing sheet on bottom. Each table section shall have two extruded aluminum hat channels full length of units. Top shall be banded with seven-eighth inch (⅞") flat anodized aluminum T molding. Three-quarter inch (¾") space minimum between top leaves on tables and benches.

Legs and braces shall be of one inch (1") o.d. tubular steel, bright zinc plated.

Casters shall be Bassick oil-less bushing rubber-tired.

Each table and bench shall be equipped with two manually operated locks. One for locking into cabinet, one for disconnecting units from wall cabinet. The design of these locks to be such that only the proper key will operate them.

Each table and bench unit shall be equipped with tail wheel.

TABLE AND BENCH HEIGHTS

Standard table heights: 24½", 27½", 30".

Standard bench heights: 15", 17½", 20".

(Any height table and bench will operate in any cabinet.)

ATTACHMENT

The extended tables and benches are instantly detachable from the cabinet to enable them to be placed in any position in the room.

STEEL CABINETS

Cabinets to house tables and benches shall be welded construction of 16 gauge steel, bonderized and with a baked-on prime coat. Cabinets shall have positive non-mechanical lock at top of unit. All attachments shall be furnished by manufacturer.

INSTALLATION

Contractor or purchaser will provide recess for in-the-wall models, and install both on-the-wall and in-the-wall cabinets, true and plumb.

STEEL WOODWORKING BENCHES

free standing

Every HALLOWELL woodworking bench is designed and fabricated to obtain longest possible service with least possible maintenance. The cabinet base types offer the utmost in versatile bench storage. The HALLOWELL steel bench legs, which are industry standards, embody a functional optimum for open bases models. Superb design, rugged construction, optional units and assorted accessories make every HALLOWELL bench a sound investment in utility and economy.

Benches shown on this page are free-standing type. Wall benches with cabinet or locker bases are also available. Write for Bulletin 2112 Rev.

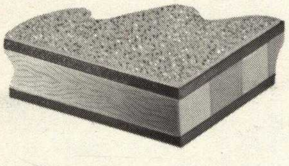
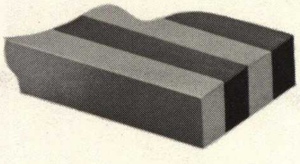
SPECIFICATIONS
top materials



"SHOP TOP"



LAMINATED WOOD TOP

"SHOP TOP"—This exclusive HALLOWELL top has a core of solid laminated block construction, and is faced both top and bottom with a ¼″ or ⅜″ thick layer of Resinwood, a composition of uniform wood particles and natural resins bonded under heat and pressure into a smooth, high density material. Its tough, durable surface is splinter-proof and resistant to acids, alkalis, oils and greases. Can be refinished like wood.

WOOD—HALLOWELL wood tops are edge laminated hardwood. Seasoned, kiln-dried, selected hardwood strips 1¾″ wide are electronically glued and reinforced. Tops 64″ x 54″ have either 5″ wide bolster or steel spline at each end.

SPECIFICATIONS (continued)

BASES

cabinet—All welded heavy gage steel with interlocked deep flange construction. Channel-reinforced doors have 2-point latching device with cylinder locking handles. Two keys supplied for each lock. Cabinets have one adjustable shelf which can be removed to store large items. *Additional shelves available.* Tops attach directly to cabinet, or steel angles are available for securing cabinet to top and floor. See table for dimensions and number of cabinets in base.

locker—Constructed of heavy gage steel with self-closing, spring-hinged doors containing pulls and padlock attachments. Provision is made for flat key locks, if desired. Tops attach directly to lockers, or angles are available for securing lockers to top and floor. See table for dimensions and number of lockers in base.

open—All-steel base consists of HALLOWELL all-welded bench legs with integral cross braces. Leg assemblies are secured rigidly by ribbed steel stringers. Legs are available in four widths and three heights. See table for dimensions.

FINISH

Tops are coated with clear, durable finish on work surface and edges. Undersides are coated with moisture-resistant sealer.

Bases are phosphate coated, then finished with tough, long wearing SPS green baked-on enamel. Other colors available at additional cost.

ACCESSORIES

A variety of bench dogs, adjustable bench stops, locks, number plates and other accessories are optional at additional cost. Master keys for all drawer, cabinet, locker and door locks are available. Benches can be ordered with or without vises, as desired. See Bulletin 2112 Rev. for complete details.

GENERAL INFORMATION

All lockers are assembled and shipped in 6-locker units. Cabinets are shipped assembled and ready for installation. Open benches are shipped knocked down. All tops and accessories are packaged separately. Because hole requirements for dogs and stops vary, request Form 102 to indicate number and location of stops, dogs and holes wanted.

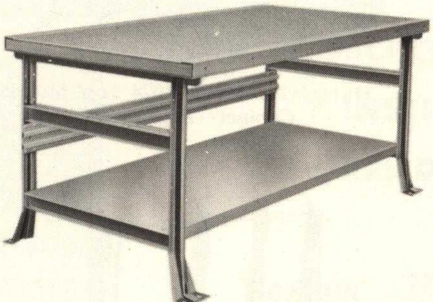
Model 1021 Stake Bench



Model 1030 Machine Bench

Model 1110 Welding Bench

School shops can be completely outfitted with HALLOWELL standard units at a fraction of the cost of custom-designed equipment. The items shown on these pages have been specifically developed for industrial arts and vocational shops. They are identical in material, construction and quality to HALLOWELL shop equipment that has been standard throughout industry for many years.

The complete line of HALLOWELL school shop furniture is listed and described in Bulletin 2112 Rev., available on request.

HALLOWELL Drawing Tables and Service Units

Here is the solution to multi-class drawing instruction. Each student is assigned a drawer and a drawing board which are stored in the service unit. Before class, the student takes board and drawer to table, which has slides underneath to hold drawer. After class, student returns both drawer and board to service unit, making room for next class. Using the same tables, as many modular service units may be obtained as necessary to accommodate varying day and evening classes.

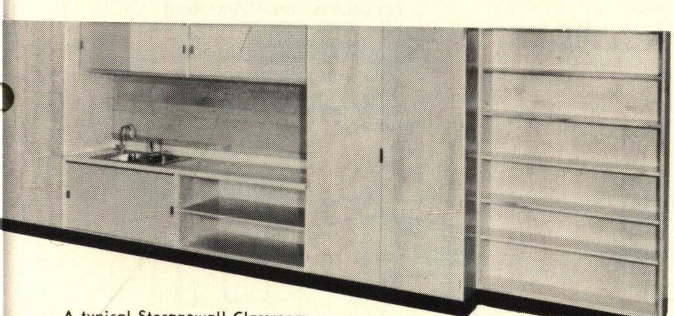
PREFABRICATED CABINETS

for
- SCHOOL · DORMITORY
- INSTITUTIONAL · COMMERCIAL
- RESIDENTIAL USE



A typical Storagewall Classroom Assembly. Notice three depths of cabinets—12", 18" and 24".

flexible **STORAGEWALL** units are available in a wide range of stock sizes and types. Unlike other "built-ins", STORAGEWALL units can easily be moved from place to place.

space saver **STORAGEWALL** cabinets have been designed and engineered to *provide the maximum of storage in a minimum of space.*

quality in production **STORAGEWALL** The original prefabricated factory built cabinet works wood to a tolerance of 1/32".

ready made *Eliminate conflicts on the job from misinterpreted plans or specifications.* Eliminate chance with hit or miss carpentry. Ease supervision on the job.

save drafting time *No time-consuming or costly details required.* List the type and show the sizes by catalog number directly on the elevation or plan.

factory assembly All **STORAGEWALL** units are uniform products manufactured to a rigid, precise engineering standard, assembled by experienced, skilled craftsmen in a *factory equipped with proper woodworking equipment.*

easily installed Everything comes cut and drilled to size. A level and screwdriver are all the tools required. However, **STORAGEWALL** quotes jobs installed.

Storagewall Wardrobe Unit (Note garment racks for 12" or 18" deep unit)

Unit 2101 Teachers Wardrobe White Interiors

Unit 2304 Classroom Supply Cabinet (Note 1/4" pegboard sliding doors with bracing full length handle)

Complete STORAGEWALL Data File Upon Request

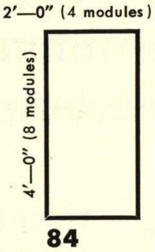
Design a Storagewall

The *Basic Principle* to bear in mind when designing with **STORAGEWALL** cabinets is that the "shells" of **STORAGEWALL** units (a group of cabinets form a "wall") are similar in detail throughout. The cabinets vary in height, width and depth by modules of six (6) inches. If the stock sizes shown on these pages are not adequate in type or size merely plan or specify into the "proper size shell" the equipment to do the job.

Color for interiors or panels as well as woods, types of doors, door pulls, formica tops, etc. are optional.

SYMBOLS FOR MODULAR SERIES CABINET SIZES

The individual **STORAGEWALL** cabinets vary in height, width and depth by multiples of six (6) inches. This standard unit of size is the **STORAGEWALL** "Module".



The number below the unit in the diagram at the right gives the size of the unit in terms of this "Module".

The depth of a cabinet is indicated by a letter.

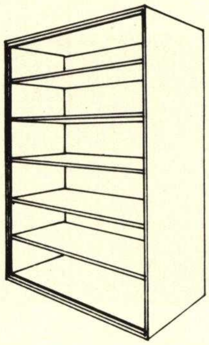
"A" stands for a 12" deep cabinet
"B" " " " 18" " "
"C" " " " 24" " "

These symbols are used to designate the cabinet sizes in ordering or layout on plan or elevation and is written directly on the layout or elevation together wih a brief description of how the cabinet will be used. For example above, if a chest of drawers of this size is required the drawing would be designated as 84B or C CHEST OF DRAWERS or if a wardrobe is desired 84C WARDROBE, etc.

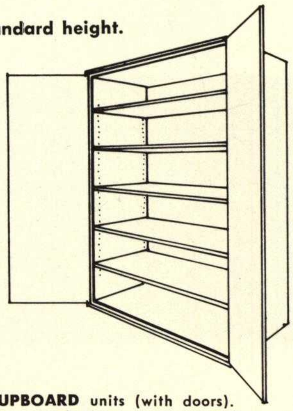
"MODULAR SERIES" CABINETS (Stock Sizes)

FOR DORMITORY, INSTITUTIONAL, COMMERCIAL AND RESIDENTIAL USE.

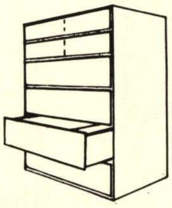
Unit or continuous bases not shown—3" standard height.



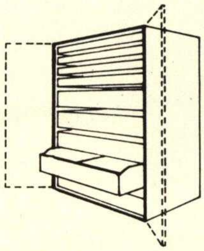
OPEN units
Heights—2, 3, 4, 5, 6, 8 & 12 modules
Widths—2, 3, 4, 5, 6 & 8 modules
Depths—A, B & C
Adjustable shelves



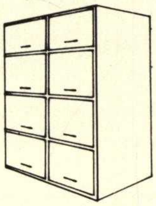
CUPBOARD units (with doors).
Same stock sizes as open units.
Adjustable shelves.
Proper size cabinets can be hung on the wall or used as counter units in the kitchen.
Sliding pegboard, or glass doors if desired.



CHEST OF DRAWERS
Height—4, 6 & 8 modules
Width—4, 5 & 6 modules
Depth—B & C
3, 5, 6, 7 & 8 drawers
flush or surface mounted pull



TRAY unit
Height—6 & 8 modules
Width—4, 5 & 6 modules
Depth—B & C
With or without doors
6 & 9 trays



FILE unit
Height—4 or 8 modules
Width—5 (standard) or 6 (legal)
Depth—B or C
Rolling metal or plastic slides.

The Storagewall "4000 Series" cabinet. Structural aluminum frame with full length pull.

SPECIAL FEATURES OF STORAGEWALL

The rib and channel principle of construction, exclusive with **STORAGEWALL,** protects against warpage, insures a strong, structural wall and permits safe, concealed electrical wiring to run horizontally and vertically between the units (see drawing below) and through the base. Electrical outlets may be installed on the 3" standard base. **STORAGEWALL** is a structural unit in itself and need not require blocking to wall or ceiling, assuring no damage to plaster in new construction or remodelling. All **STORAGEWALL** units, by nature of their construction and design are finished flush on the interior. The quality of **STORAGEWALL** is apparent in that the tolerance used in working the wood is 1/32".

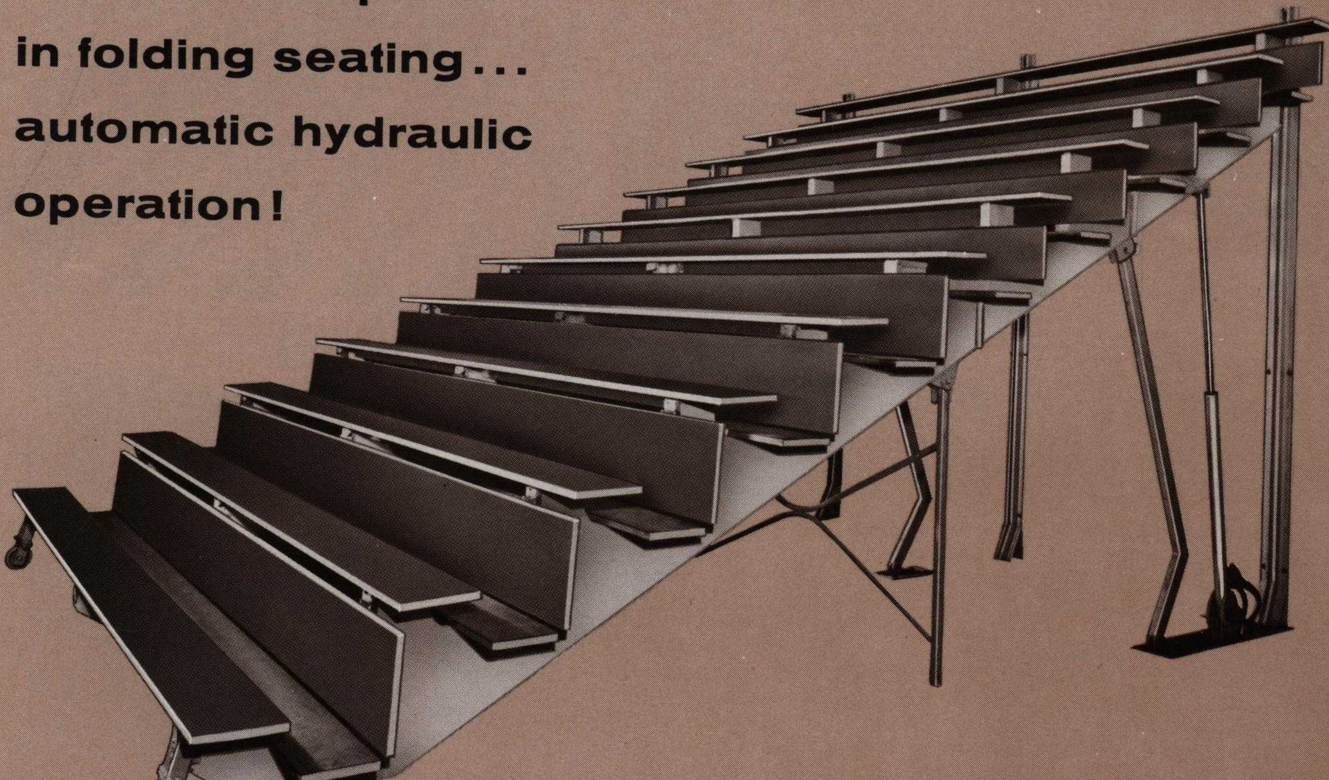
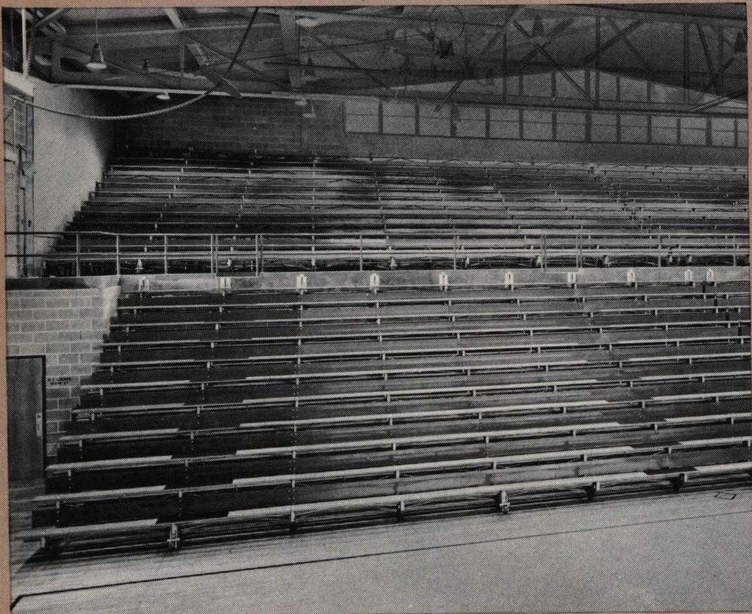
Automatic Folding
GYMNASIUM SEATING

**a new concept
in folding seating...
automatic hydraulic
operation!**

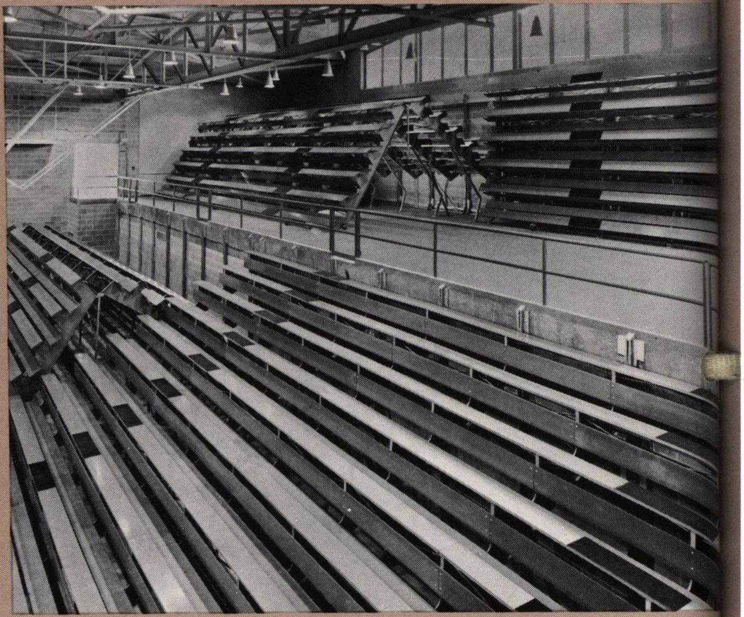


BARBER-COLMAN COMPANY • ROCKFORD, ILLINOIS

BARBER-COLMAN Automatic FOLDING BLEACHERS



Hydrofold Bleachers on balcony and main floor providing maximum utilization of space in East High School, Waterloo, Iowa.



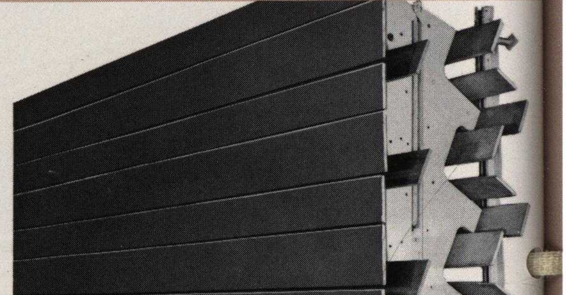
Continuous fifty foot lengths of Hydrofold Bleachers in open and partly closed positions showing operation.

HYDRAULIC ACTION!

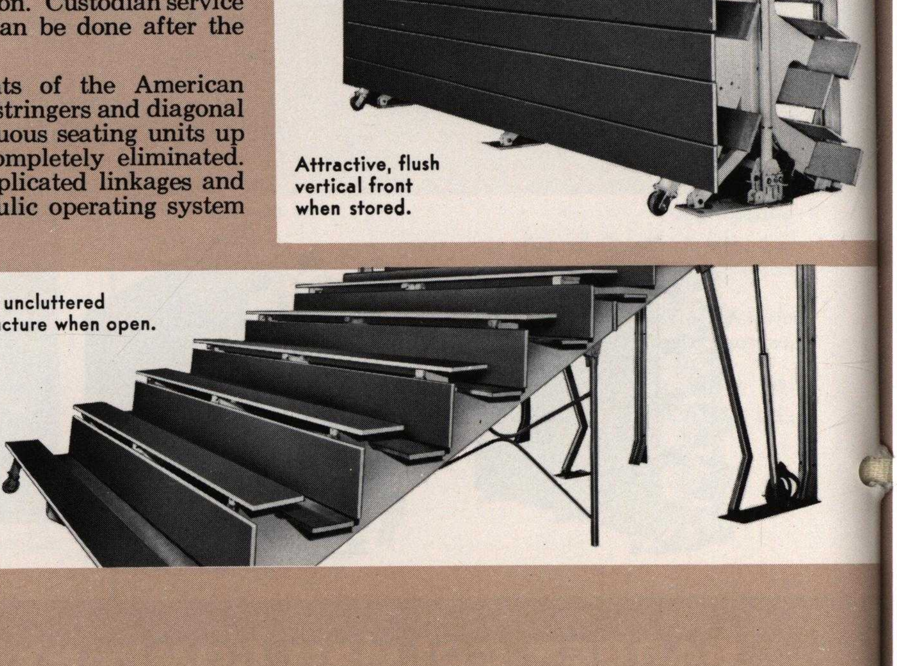
Barber-Colman Company presents an entirely new concept in gymnasium seating design — hydraulic folding bleachers. *Hydrofold Bleachers* fold rather than telescope thus eliminating metal-to-metal operating friction and 90% of trouble causing linkages. Fully automatic Hydrofold operation is push-button simple — a touch of a lever in the compact electro-hydraulic operating cabinet completely opens, closes, or stops and locks the entire unit in any position. Seating for the entire gymnasium automatically opens and stores in minutes — no tractors or add-on operating units required. After-game cleaning is fast and easy. Hydrofold bleachers are self-cleaning as they close and debris does not interfere with operation. Custodian service time is cut as much as 60% because all cleaning can be done after the units are completely stored.

Hydrofold bleachers exceed all safety requirements of the American Standards Association. Structurally engineered base stringers and diagonal bracing are scientifically combined to permit continuous seating units up to 50 feet long and 20 rows high. Side sway is completely eliminated. Service is no longer a problem — there are no complicated linkages and springs to go out of adjustment. The electro-hydraulic operating system is smooth, safe, and efficient.

When stored the flush vertical front assures handsome appearance and maximum protection. There are no protruding edges or parts to cause injury or collect dust. Seats, risers and footboards made from select, vertical-grain, seasoned lumber, laminated with hardboard are furnished as standard. Select, edge glued, vertical laminated, Douglas Fir or solid structural Douglas Fir seat, riser, and footboards optional. All boards are factory prefinished with one coat of quality clear sealer and one coat of super spar varnish.



Attractive, flush vertical front when stored.



Safe, yet uncluttered understructure when open.

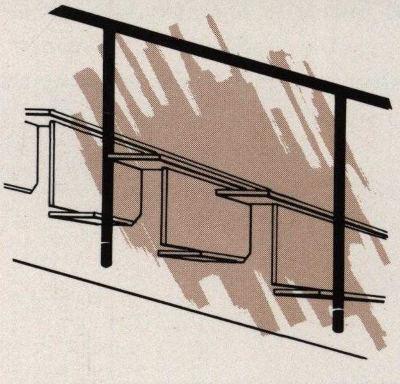
SHORT SPECIFICATION

Folding gymnasium seating shall be Hydrofold Bleachers as manufactured by Barber-Colman Company, Rockford, Illinois, and shall be of size shown on plans. All units shall be fully automatic with hydraulic operating mechanism and constructed in accordance with American Standards Association File Z 20.3 "Safety Code for Grandstands" Section 3.3. Manufacturer shall furnish recent test data by independent laboratory showing horizontal and lateral deflections in conjunction with above tests.

Folding gymnasium seating shall be delivered and installed by manufacturer or authorized representative. The entire installation shall be guaranteed for one year against faulty materials, workmanship, and operation.

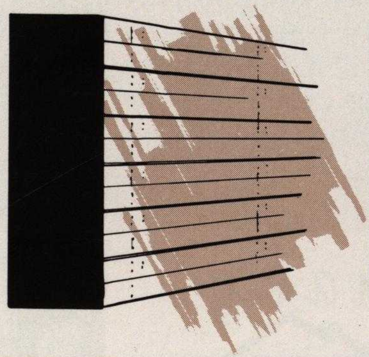
Accessories shall be furnished as indicated on drawings and/or as scheduled below:

ACCESSORIES



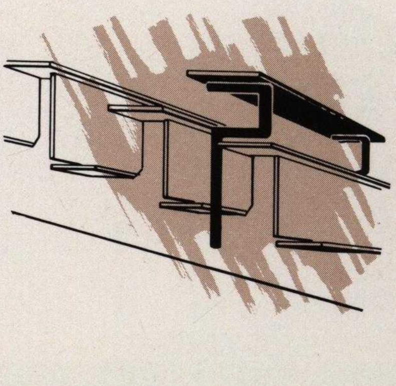
REMOVABLE END RAILS

End rails of 1¾" O.D. steel tubing may be quickly installed by insertion into steel sockets welded to the base stringers. The rails may be easily removed, folded, and stored when not in use.



END CLOSURES

To insure a complete protective enclosure and give the seating unit a clean, handsome, compact look, End Closures are available. Made of sturdy ¾" plywood, the End Closures will completely conceal all mechanism.



TIMERS TABLE

The timer's table is easily installed by inserting the legs of the table into sockets welded to the base stringers. When not in use, the table legs may be folded for easy storage. The table is normally mounted between the second and third row of bleacher seats.

HYDROGLIDE BLEACHER

In answer to the need for bleachers in small gymnasiums, where floor space is a premium, Barber-Colman Company engineers have designed the *Hydroglide* bleacher. Basically, the same working principles are involved in *Hydroglide* as in Hydrofold. Instead of the "jack-knifing" effect as employed with Hydrofold — *Hydroglide* rolls along the floor and rises parallel to the wall in one continuous unit. When stored it takes up only 2′9″ of floor space, and is the perfect bleacher for the small gymnasim.

rouble-free hydraulic action!

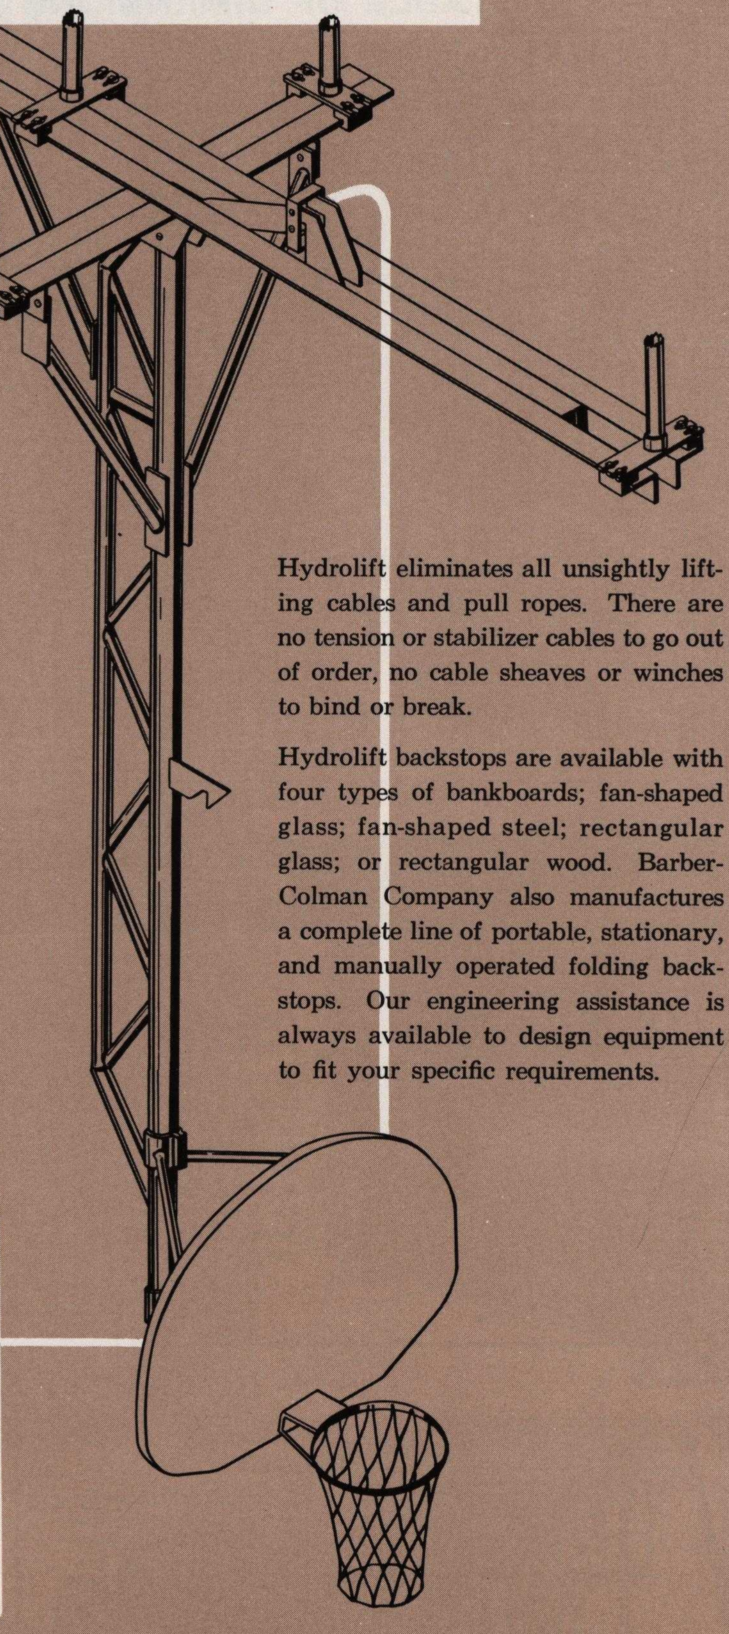
BARBER-COLMAN

Hydrolift

BASKETBALL BACKSTOPS

nother Barber-Colman engineering first . . . *simple* automatic upward folding basket-all backstop! Hydro-lift backstops combine rouble-free hydraulic operation with struc-urally engineered construction to assure ears of maintenance-free service.

conomical, timesaving, hydraulic lifting ystem simultaneously folds up to four units ompactly to the front, back, or either side. ackstops automatically lock rigidly in place o minimize vibration when in playing posi-on. They also lock when in raised position or positive safety. Keyswitch on electro-ydraulic operating cabinet insures against nauthorized operation.



Hydrolift eliminates all unsightly lifting cables and pull ropes. There are no tension or stabilizer cables to go out of order, no cable sheaves or winches to bind or break.

Hydrolift backstops are available with four types of bankboards; fan-shaped glass; fan-shaped steel; rectangular glass; or rectangular wood. Barber-Colman Company also manufactures a complete line of portable, stationary, and manually operated folding backstops. Our engineering assistance is always available to design equipment to fit your specific requirements.

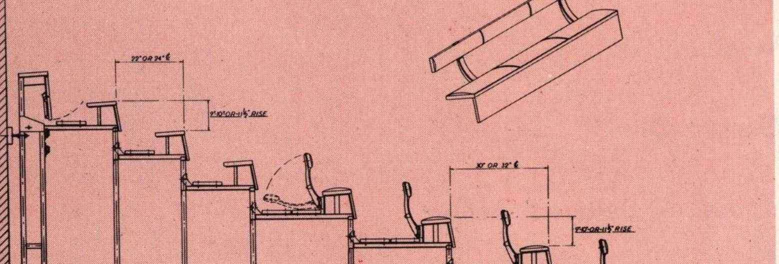
OMEGA EZ-A-WAY DELUXE COMBINATION



22" OR 24" ℄
9"-10"-OR-11½" RISE
30" OR 32" ℄
9"-10"-OR-11½" RISE

THE LAST WORD IN
• COMFORT • CAPACITY • CONVENIENCE

A Turn of a Key Opens and Closes the Bleachers.

A winning combination for spectator seating — BERLIN DELUXE EZ-A-WAY FOLDING BLEACHERS that provide the maximum comfort for premiums seats, the standard EZ-A-WAY seats and the OMEGA Electric Drive. Easy and simple operation . . . any school personnel can operate it, and it's reliable and safe in its operation . . nothing to get out of order — no maintenance cost. Colors for the backs and seats to harmonize with the gymnasium setup. Seats and back-rest pads are of Vinyl covered foam rubber. Complete specifications upon request.

EZ-A-WAY FOLDING BLEACHERS

Spectators can enter the bleachers from the balcony by use of the 34 inch walkway along the front of the balcony sections, designed also to provide easy exit from the balcony. For capacity crowds the walkway can be converted to additional seats, so that all balcony space becomes spectator seating. When closed there is continuous face so that on occasions only the bleachers on the main floor need be extended. These continuous design EZ-A-WAY bleachers may be equipped with the OMEGA drive unit for simple, easy operation.
Complete specifications upon request.

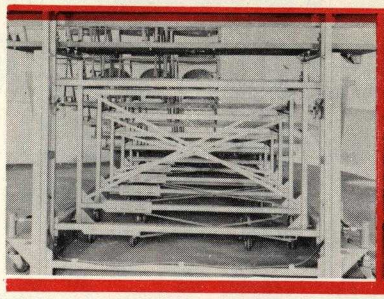
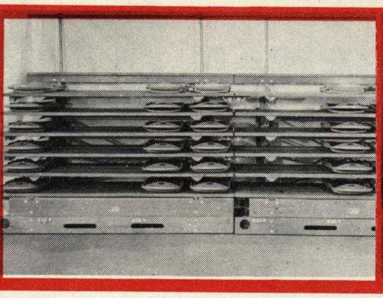
PANEL
BALCONY FLOOR
MAIN FLOOR

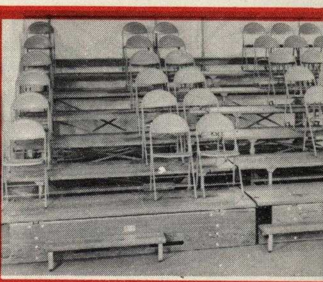
- Continuous arrangement of seats from the main floor to top of the balcony . . . without jog or interruption.
- Any number of rows and length of row.
- Can be furnished in Deluxe opera style seats.

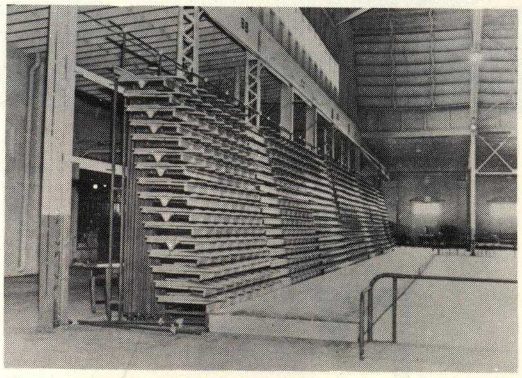
EZ·A·WAY

MECHANICAL FOLDING CHAIR STANDS









Illustrated is the installation at the Richmond Arena, Richmond, Virginia. Note the floor space available for other activities when EZ-A-WAY chair stand is in closed position.

BERLIN CHAPMAN CO. has applied the principle of the EZ-A-WAY mechanical folding bleacher into a folding chair stand for deluxe seating. The EZ-A-WAY chair stand is a series of platforms designed to attach folding chairs to the base for public seating. Chairs fold up in banks of 2 to 8 seats, and lay on the platforms when closed. Acceptance of the EZ-A-WAY chair stand in TV studio seating arrangements, arenas, field houses, auditoriums, and gynasiums has been enthusiastic . . . built 30" and 32" centers with 8" standard rise.

Rugged, ALL STEEL frame with conventional "diagonal bracing" — self contained hydraulic, mobile units are available.

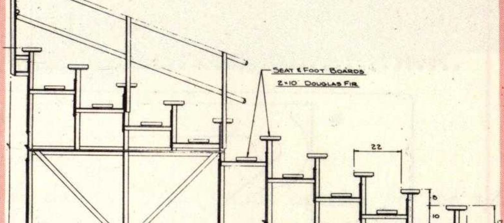
GRANDSTANDS

portable and permanent

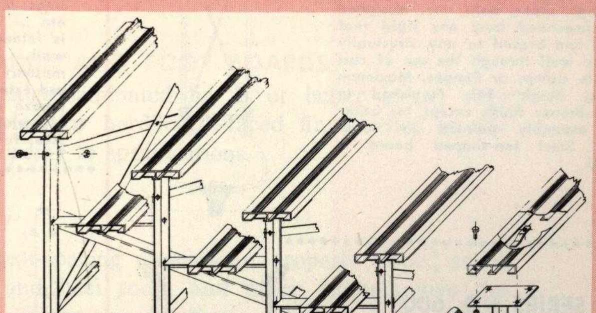
BERLIN STANDARD TYPE "C" PERMANENT GRANDSTAND is a rugged, dependable neat appearing stand (as shown by the illustration taken underneath the installation at St. Clair Shores, Michigan, High School). With clean pleasing lines, it requires the minimum number of concrete footings . . . is easy to clean underneath the entire stand . . standard size 24" ℄ and 8¾" rise and (2) 8" foot boards; also available with 24", 36", or 48" high standard walkways on the front . . . other sizes upon request.



BERLIN ALL STEEL PORTABLE BLEACHERS are engineered and designed to provide maximum seating capacity for both indoors and outdoors . . . designed in standard interchangeable sections that permit additions vertically and laterally as needed to accommodate varying situations. Semi-permanent, they can be dismantled and re-erected wherever needed. Because of simplicity of design and interchangeable parts no skilled help is required to either erect or dismantle. ALL STEEL Hydraulic-Moveable Portable Bleachers simplifies handling and moving as it is no longer necessary to tear down bleachers and reassemble at another site. This mobile feature can be built into ALL STEEL Bleachers at a slight additional cost.

Aluminum

- Easily moved . . . independent sections
- Average weight only 9 lbs. per seat
- All seatboards are anodized, architectural finish
- All foot and seatboards extruded aluminum (only in Berlin Bleachers)
- Non-skid seat surfaces
- Available in 22" and 24" center . . . 8" rise
- Guard rails of aluminum available
- Meets ASCE design specifications
- Excellent for swimming pool seating
- All structural members high strength aluminum alloy



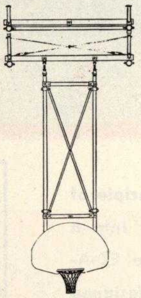
BERLIN ALUMINUM PORTABLE BLEACHERS
No Maintenance . . . No Painting . . . Light Weight — Your Ideal Outdoor Seating

BERLIN CHAPMAN Basketball Backstops

Backboards meet the latest rules of National Basketball Committee of United States and Canada

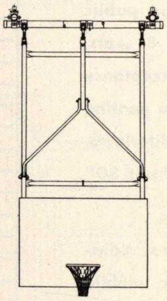
SERIES NO. 100

iling suspended, forward swing-up pe furnished complete including all ounting fittings, pipes, bolts, etc. aximum mounting height of standard ries No. 100 is 35'. Finished in tique Bronze except for backboard sembly white enamel . . . all back-ops furnished with Steel Fan-Shaped ards.



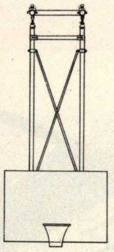
SERIES NO. 120

iling suspended, modified forward ving-up type furnished complete in-uding all mounting fittings, pipes, lts etc. . . . Maximum mounting ight of standard Series No. 120 is '. Used where backboard must be cated near a wall, folding partition other backstop. Forward bracing is of jack knife design which folds when it is raised. Finished in Antique onze enamel except backboard as-sembly white enamel. All backstops rnished with steel fan-shaped boards.



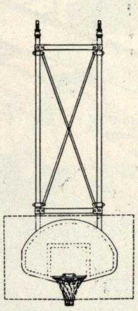
SERIES NO. 130

iling suspended, backward swing-up pe furnished complete including all ounting fittings, pipes, bolts, etc., signed so that unit can be suspend- from any rigid roof framing. Maxi-m mounting height 35' . . . Finished Antique Bronze except backboard as-mbly in white enamel. All backstops nished with steel fan-shaped boards.



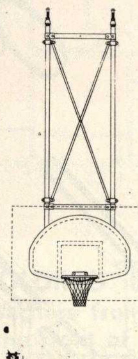
SERIES NO. 160

iling suspended, stationary type unit nished complete including all neces-y mounting fittings, pipes, bolts, ... designed to be suspended m any rigid roof framing. Maximum unting height 35'. Furnished in tique Bronze except backboard — ite enamel. All backstops furnished th steel fan-shaped boards.



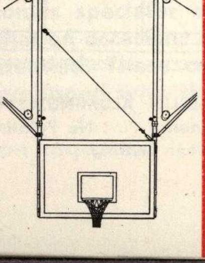
SERIES NO. 300

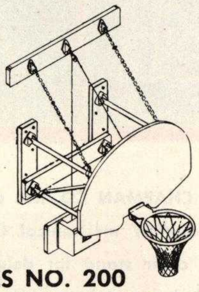
iling suspended, wall braced type nished complete including all mount- fittings, pipes, bolts, etc., designed be suspended from any rigid roof ming and braced to any structually equate wall through the use of cast lleable clamps or flanges. Maximum unting height 34'. Furnished in tique Bronze finish except for back-ard assembly painted in white amel. Steel fan-shaped board is ndard.



SERIES NO. 600

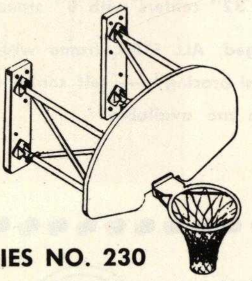
iling suspended, Gate-type side fold- used where a folding partition ides gym, furnished complete in-ding mounting fittings, pipes, bolts, ... Maximum mounting height ommended is 25'. Finished in Antique onze enamel except backboard as-mbly white enamel . . . standard ckstop furnished with steel fan-aped boards.





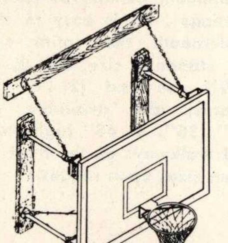
SERIES NO. 200

Wall attached, swing-up type unit furnished complete including all mounting fittings, wall boards, anchor bolts, etc. . . . designed so that when unit is folded the backboard is parallel to the wall, adaptable to either frame or masonry construction. Maximum standard extension is 10' from face of backstop board to the wall. Furnished in Antique Bronze finish except for backboard assembly painted white enamel. Steel fan-shaped board is standard.



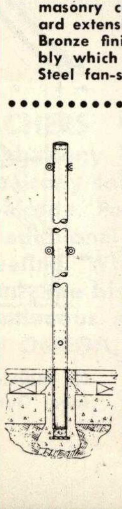
SERIES NO. 230

Wall attached, stationary type furnished complete including all mounting fittings, wall anchor boards, anchor bolts, etc. . . . designed to be adaptable to either frame or masonry construction. Maximum standard extension 10' from face of backstop board to wall. Furnished in Antique Bronze finish except for backboard assembly painted in white enamel. Steel fan-shaped board is standard.



SERIES NO. 260

Wall attached, side fold type furnished complete including all mounting fittings, wall anchor boards, anchor bolts, etc. . . . designed so that when unit is folded backboard is parallel to the wall . . . adaptable to either frame or masonry construction. Maximum standard extension 10'. Furnished in Antique Bronze finish except backboard assembly which is finished in white enamel. Steel fan-shaped board is standard.

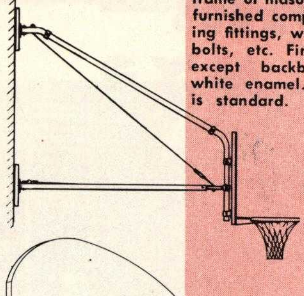


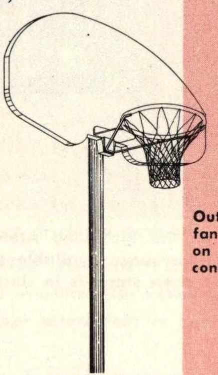
MODEL NO. 50

The only complete and rigid volley ball post that doesn't require any additional support cables, floor hooks or screw anchors, or heavy floor plates to support it. Its design permits use in either new or old schools having wood or tile floors, in addition to being used outdoors, providing year-round use. Symetrical design eliminates RIGHT or LEFT Hand post so additional nets and posts can be added later, easily erected. Complete specifications contained in bulletin No. 31058P1.

SERIES NO. 350

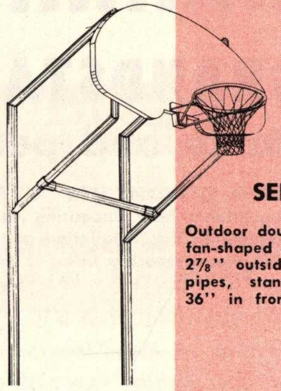
General purpose backstop designed principally for use where backboard is located in path of a folding partition, or to be used as a wall modified unit where mounting to a wall presents a problem. Maximum wall extension limited to 12' Adaptable to either frame or masonry constructed walls . . . furnished complete including all mounting fittings, wall anchor boards, anchor bolts, etc. Finished in Antique Bronze except backboard assembly painted white enamel. Steel fan-shaped board is standard.





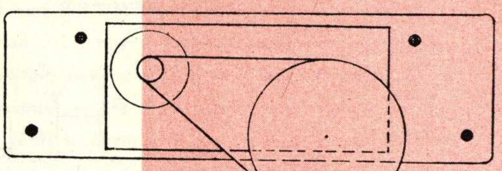
SERIES NO. 500

Outdoor single post backstop, all steel fan-shaped backboard mounted flush on 3½'' outside diameter pipe set in concrete.



SERIES NO. 550

Outdoor double post backstop, all steel fan-shaped background mounted on (2) 2⅞'' outside diameter vertical support pipes, standard backboard extended 36'' in front of vertical supports.



ELECTRIC WINCH

Designed and manufactured in 2 models — one specifically made to raise and lower Series No. 100 and 130 basketball backstops. ''Remo - Drive Model'' and the other especially designed to raise and lower Series No. 200 basketball backstops. ''Electro-Drive Model'' equipped with single phase 60 cycle ballbearing 1/3 HP motor, 1725 rpm . . . until reversible to easily raise and lower backstop unit . . . ball-thrust-bearings provide smooth operation.

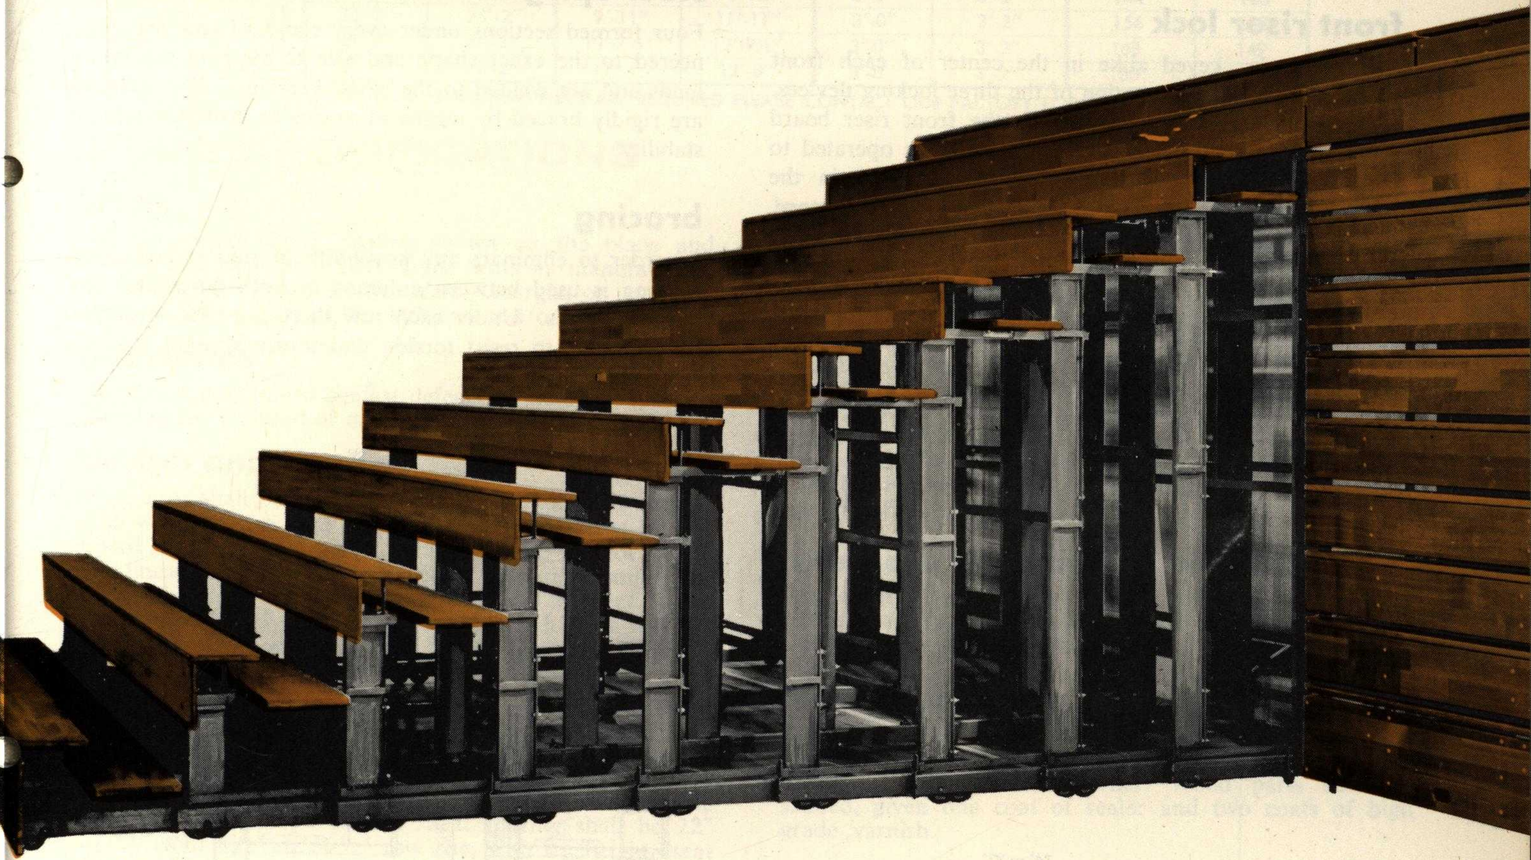
Eska

TELESCOPIC GYM SEATS



OPERATION

ESKA Rolling Gym Stands operate on the telescoping principle, requiring only one continuous operation for opening or closing. Simplified moving parts, few in number, permit manual operation with ease. Straight-line tracking and large oilless, non-marking wheels contribute to ease of operation.

DESIGN

The steel supporting structure is precision engineered and is completely self-supporting in open or closed positions. Any number of rows can be locked open for use as required. Positive safety locking can be accomplished in any operating position.

SAFETY

ESKA Gym Stands are designed to meet nationally recognized codes covering spectator seating.

SEAT BOARDS AND FOOT BOARDS

Choice of edge laminated fir, B or better grade, edge laminated pine, or hardboard faced fir, finished at the factory according to specifications.

COMFORT

Choice of seat-spacing dimensions, properly sloped seats, ample toe and heel room and other features give the greatest possible seating comfort.

ESKA PRODUCTS, INC., SCOTTDALE, GEORGIA

TYPICAL CONSTRUCTION DETAILS

materials

ESKA Gym Seats are constructed for 22″ or 24″ seat centers, and with 8½″ or 10½″ row rise. Seat to foot board height (leg height) is 17″. Special seat rise is available when line-of-sight conditions require it.

Wood members are top grade selected lumber. Seat boards are 1-1/16″ x 9½″, foot boards are 1-1/16″ x 10⅞″ riser boards are ¾″ x 8¼″.

front riser lock

Cylinder locks, keyed alike in the center of each front riser board, control the action of the three locking devices. When the cylinder lock is opened, the front riser board can be raised and the gym seats can then be operated to close or open to any desired position. Locking in the desired position is effected by depressing the riser board, thereby engaging the rubber friction brakes operating against the floor.

Top riser board shall be hinged to provide a basket ball deflection board when seats are in nested position.

All gym seat parts to be finished at the factory as specified.

wheels and carriages

Two large wheels under each column (eight wheels under each row) are housed in a formed steel carriage. All carriages are interlocked, thereby locking the wheels in place under the columns and transferring the spectator load directly to the floor. Rubber wheels are oilless and non-marking.

steel uprights

Four formed sections under every standard row are engineered to the exact shape and size to support maximum loads and are welded to the wheel carriages. The columns are rigidly braced by means of angles to insure maximum stability.

bracing

In order to eliminate any possibility of side or end sway, bracing is used between columns in both horizontal and vertical planes. Under each row there are two horizontal angle braces to resist torsion and insure straight tracking as units telescope.

IF OTHER THAN STANDARD RISES ARE REQUIRED PLEASE CONTACT OUR FACTORY FOR RECOMMENDATIONS.

ESKA SPECIFICATIONS

scope

All Telescopic Gymn Seating shown on the plans and as specified shall be ESKA Gym Seats as manufactured by ESKA Products, Inc., Scottdale, Georgia, or approved equal in the opinion of the architect and/or owner.

guarantee

Product is guaranteed against defects in material or workmanship for a period of one year from date of installation.

design and loading

Gym seats shall be designed to support in addition to their own weight a live load of 120-lbs. per linear foot of seat board and foot board, and a horizontal sway load of 24-lbs. per linear foot of seat board. Steel parts only considered in figuring load stresses. Gym seats are to meet Safety Codes established by A. S. A. Stresses in lumber will not exceed those recommended by the U. S. Forest Products Laboratory.

dimensions

Nested depth of all rows shall be 36" for 22" seat spacing, and 38" for all rows 24" seat spacing. On wall attached units the distance from front of top row to wall shall be 12", or as conditions permit. Seat spacing shall be 22" or 24" with 8½" or 10½" row rise, with leg height (seat to footboard) to be standard 17". Horizontal toe room shall be a minimum of 6" beyond edge of footboard, and heel room about 3" from footboard. For extended depth of all rows, see schedule of dimensions. Standard sections are 16'0" long maximum. Units of lesser lengths can be furnished as required.

construction

The steel understructure shall be steel of rolled and formed sections, designed, engineered and fabricated to form a rigid self-supporting frame. Each row of each full length section shall be supported by four steel columns welded to the formed steel wheel housing. Each column shall be supported by two heavy duty oilless 4" diameter flat-faced non-marking wheels enclosed in a formed metal housing. Operating latches attached to the wheel housing shall lock each row with respect to the other. Each section of seats shall be equipped with friction type locks operated by the front riser board which will permit one or more rows to be locked open. All units shall be attached to the wall and floor so that possible movement of the floor will not disturb the proper alignment of the installation.

wooden members

Seatboards shall be 1-1/16" thick by 9½" wide. Footboards shall be 1-1/16" thick by 10⅞" wide. Riser boards shall be ¾" thick by 8¼" wide, except top and bottom riser boards. Top riser board shall be hinged to form a basketball deflection board over the closed cabinet of wall attached sections. Bottom riser board shall be hinged and provided with hand holds for operating the gym seat. When gym seats are closed, risers and seatboards shall form a flush face of a vertical cabinet. The wooden members mentioned above can be furnished in laminated clear Douglas Fir with eased edges, laminated pine, or clear Douglas Fir.

alternate for wooden members

Seatboards, footboards and riserboards can be furnished in the same approximate dimensions of flat grained West Coast Douglas Fir Hardboard Faces.

finish steel

Metal parts shall be properly cleaned after fabrication and given one coat of best quality enamel of color as selected by the architect and/or owner. Wood parts shall be sanded, given one coat of sealer and two coats of high grade varnish.

special accessories

The following accessories shall be furnished as requested:

Guard Rails: Guard rails of not less than 1⅜"-inches O. D. steel tubing shall be installed on the open ends of all gym seats.

End Panels: End panels shall be installed on all exposed ends of wall-attached gym seats.

Aisle Steps: Aisle steps 36-inches long and 12-inches wide shall be provided in areas between seat boards and risers to effect a vertical aisle.

Removable Seat and Foot Boards: Removable seat and foot boards shall be provided, as required, for additional seating capacity between sections which must be kept separated because of doors, partitions, pilasters, etc.

Scorer's Table: A scorer's table with a tilted 8-foot by 16-inch plywood top and having a retaining lip on the lower edge shall be provided. No bolts shall be required for assembly.

Note: Nothing above shall prohibit ESKA Products from offering latest design innovations.

STEELCO GRANDSTANDS and BLEACHERS

planning service

Let our planning engineers solve your seating problem. A letter or post card outlining your requirements will receive careful attention and full information will be sent you promptly. All services without obligation, of course.

To assist us to properly design and interpret your needs, please supply the following information:

RT PORTABLE BLEACHERS

- Rows High (Available 2 to 15)
- Length or number of sections
- Grouping of sections
- Number of aisles
- Number of seats
- Seating area available
- Special conditions, if any

PG PERMANENT GRANDSTAND

- Rows High (Available 10 to 26)
- Length or number of sections
- Grouping of sections
- Number of aisles
- Number of seats
- Seating area available
- Press Box size, if required
- Will you require entrance from rear?
- Is site level ground?

general data

Salvage Value: Stands can be disassembled at small cost and re-erected at a different location if this becomes necessary or desirable. This is a feature not possible with other types of construction.

Low Up-Keep: No maintenance required except occasional coat of paint which will preserve them indefinitely.

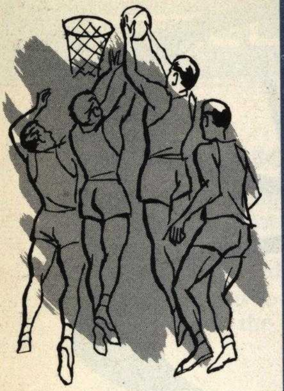
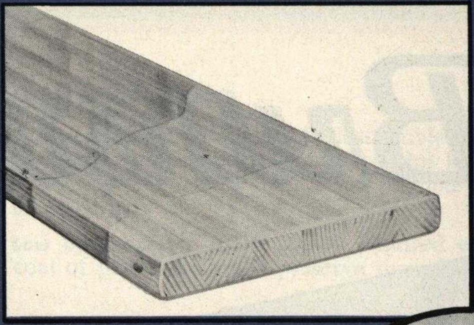
Brunswick

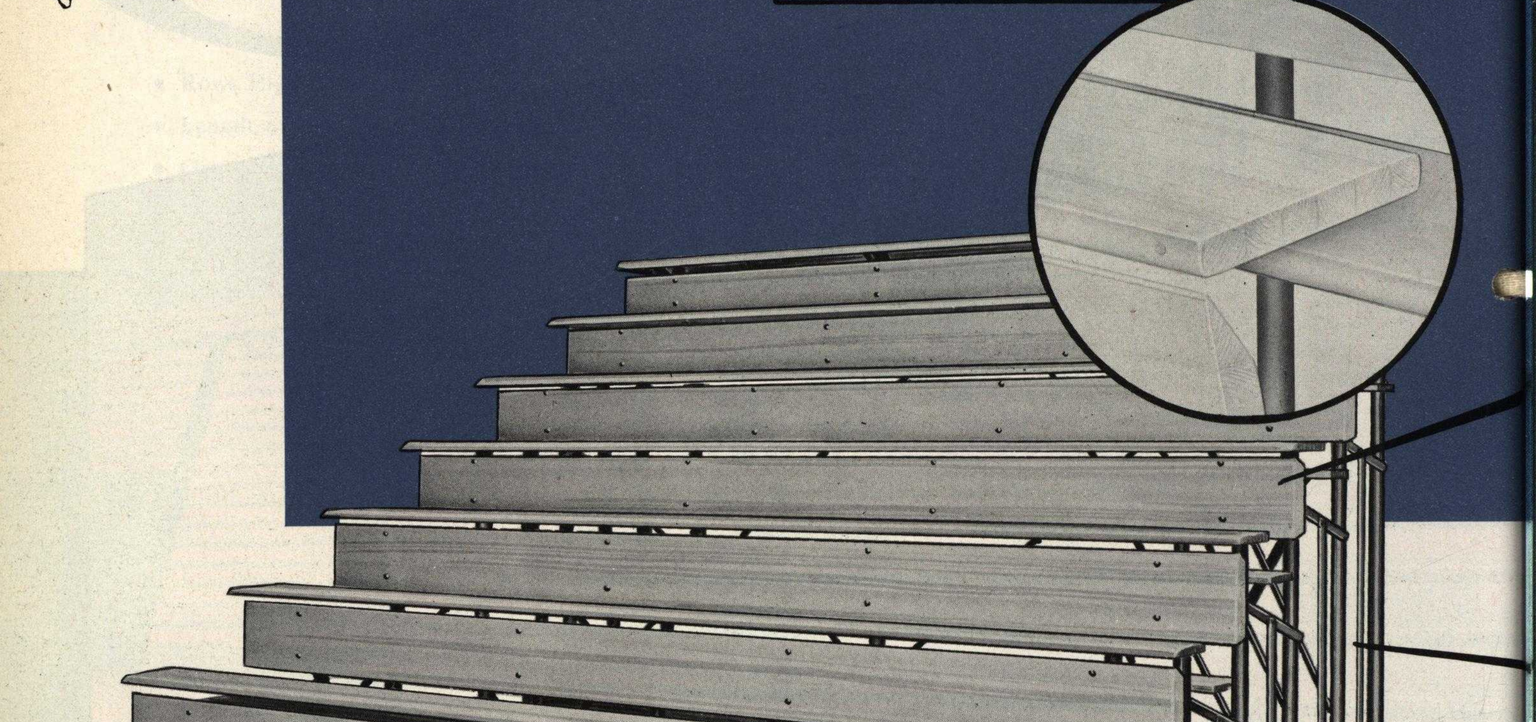
FOLDING GYMNASIUM SEATING



RESILIENT FINISH

Prior to waxing, all unitboards are carefully sanded and factory finished with two coats of the same Urea synthetic finish used on Brunswick bowling alleys. This unique finish literally flexes under impact.





Brunswick

FOLDING GYMNASIUM SEATING

- Custom design for maximum utility
  - Superior engineering for greater comfort
- Superior materials for longer life
  - Superior construction for minimum maintenance

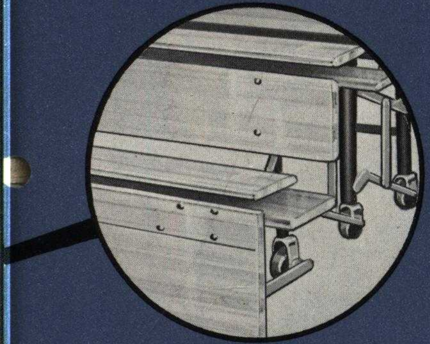
LAMINATED BOARDS

Seatboards and footboards edge laminated under Brunswick's own factory supervision—another exclusive—are made from 1½″ vertical grain Douglas Fir. Vertical, edge grain laminated under hydraulic pressure to provide greater strength. And surface-pressure glued floating dowels prevent checking or splitting. Unique assurance of lifetime, warp-free service.

GREATER SEATING FACILITIES... MAXIMUM SPACE UTILITY

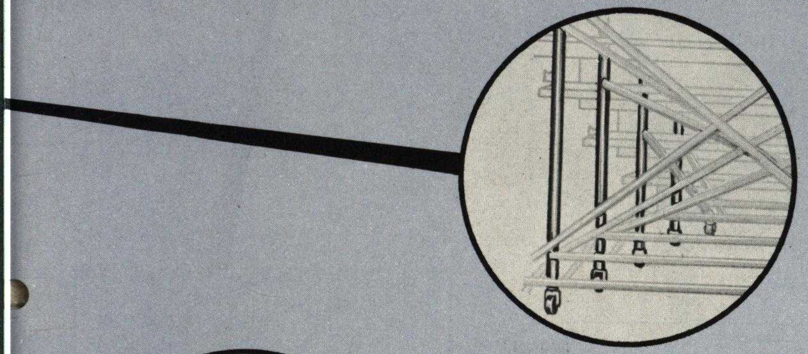
Any school's gymnasium seating problem... whether it be the largest or the smallest, receives the same high quality construction, service and engineering.

Every seating unit installed by Brunswick is carefully tested to insure consistent safe operation and performance from start to finish. Each seating unit is subjected to exacting requirements and complete supervision of Brunswick gymnasium experts. No matter what your gymnasium seating requirements may be, Brunswick brings maximum revenue and seating capacity to *your* school.



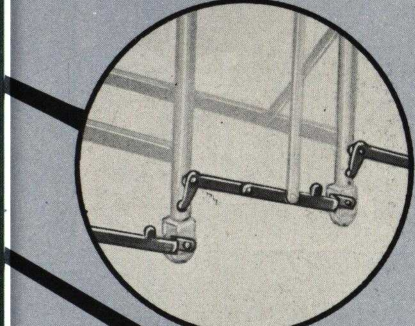
SKIRTBOARDS

All Brunswick seating is equipped with skirtboards designed to prevent basketballs and other objects from becoming lodged under the unit. And in the closed position the skirtboards slope out to form a smooth, handsome enclosure for the entire unit.



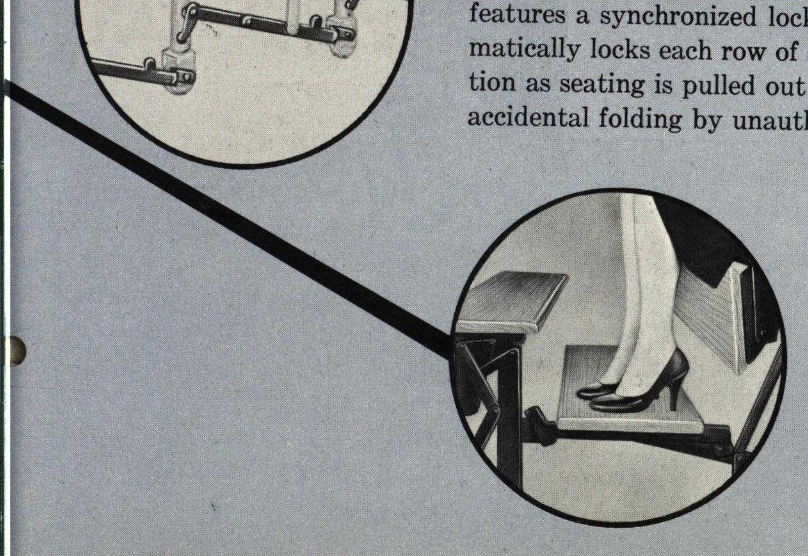
TUBULAR SUPPORT COLUMNS

Four column support assemblies for each full length sixteen foot seating unit provide maximum stability . . . allow construction for greater seating capacity. Each column is heavy gauge tubular steel to provide maximum strength. And all vertical supports are joined together with steel to steel crossbraces to prevent side sway.



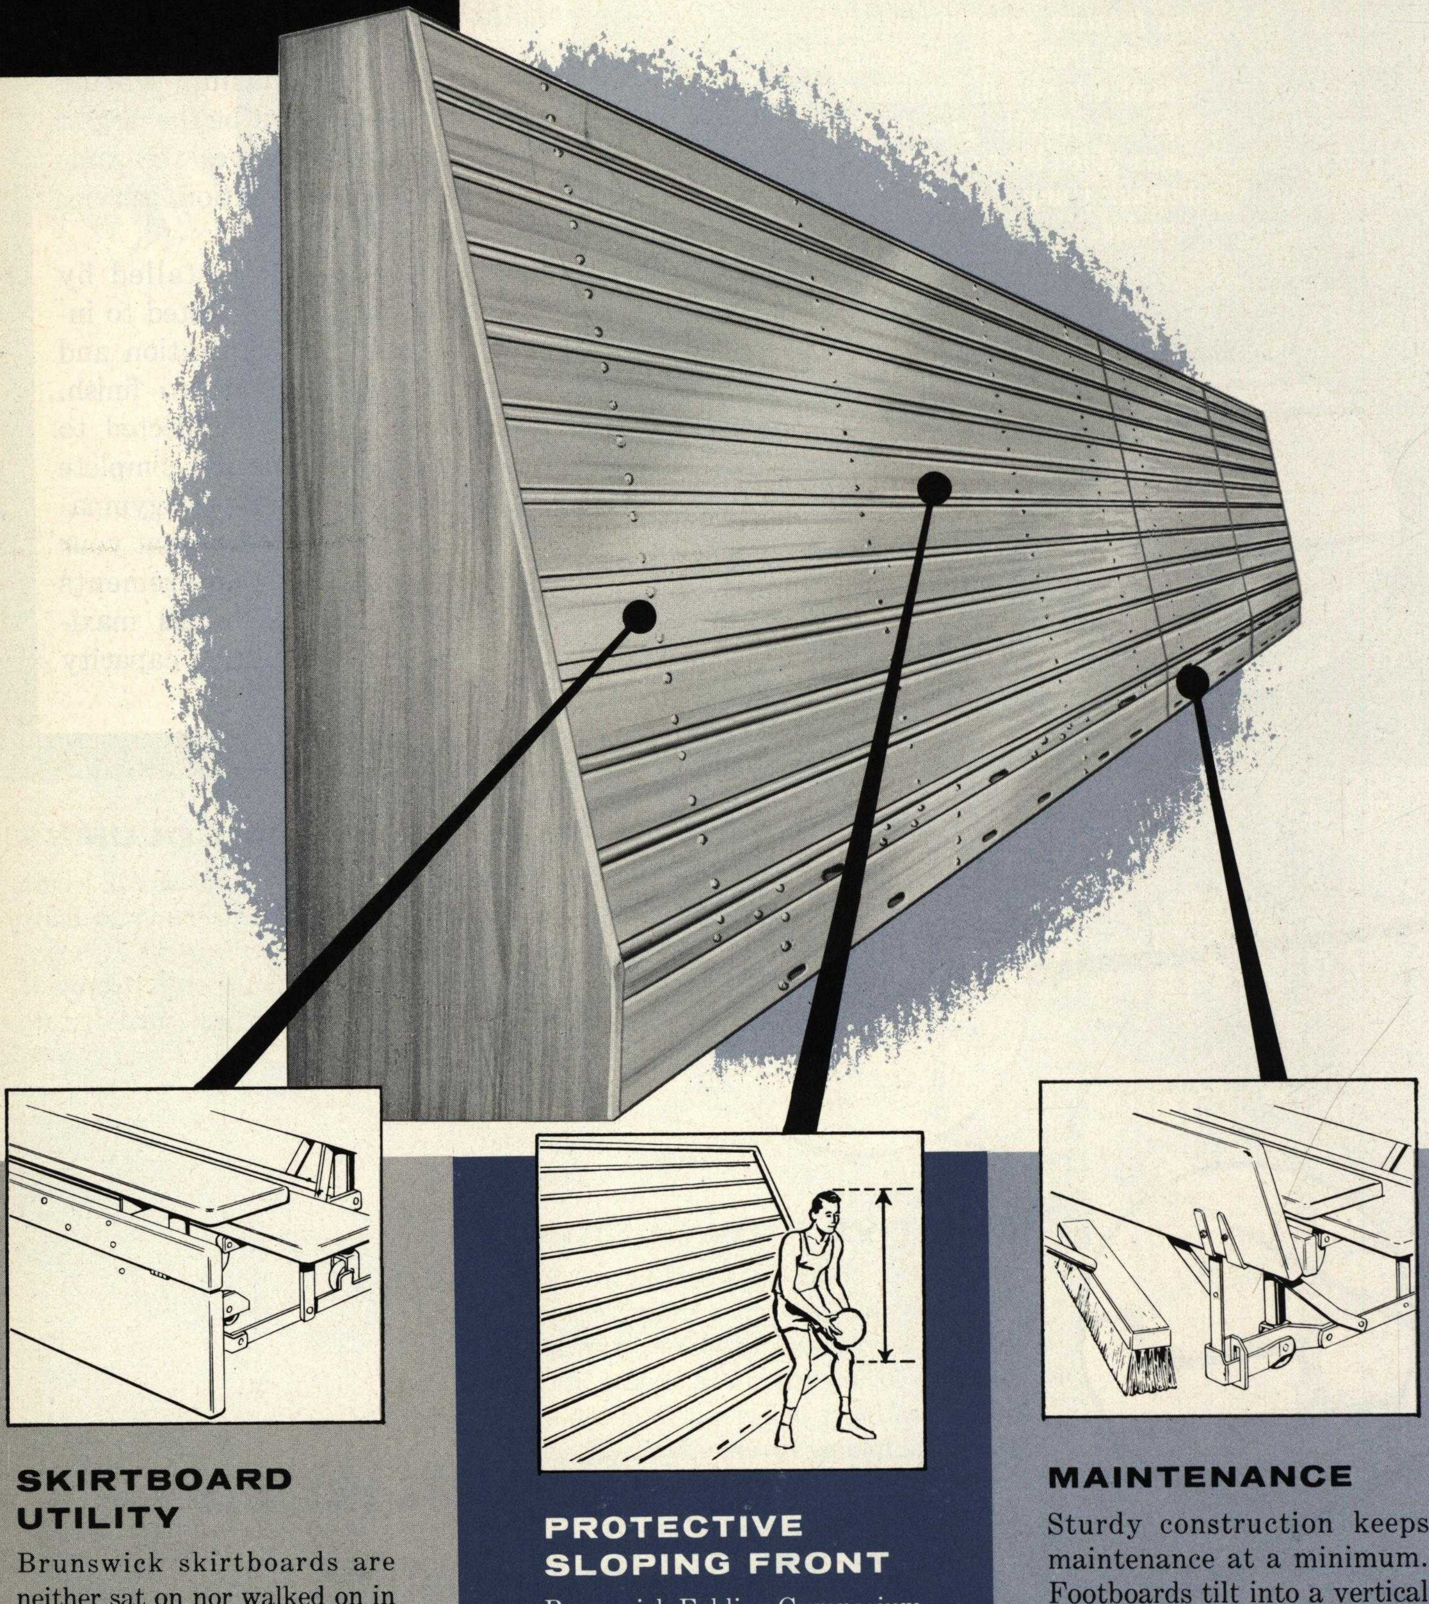
POSITIVE ROW LOCKING

Brunswick's positive row locking provides maximum versatility and protection in gymnasium seating. It features a synchronized locking principle that automatically locks each row of seating in the open position as seating is pulled out from the wall. Prevents accidental folding by unauthorized persons.



FOOT FREEDOM

Uniquely constructed skirtboards slope a full 2½″ back from the leading edge of the seatboard to allow more comfortable seating and greater provision for leg and foot freedom. The space economy of Brunswick's exclusive skirtboard design provides maximum foot freedom in a minimum space . . . provides room where it counts—for construction of additional rows of seating.



SKIRTBOARD UTILITY

Brunswick skirtboards are neither sat on nor walked on in the open position, thus assuring a clean, smooth surface in the closed position when the scuff and scratch-free skirtboards form the front of the unit. Just like a handsome piece of living room furniture!

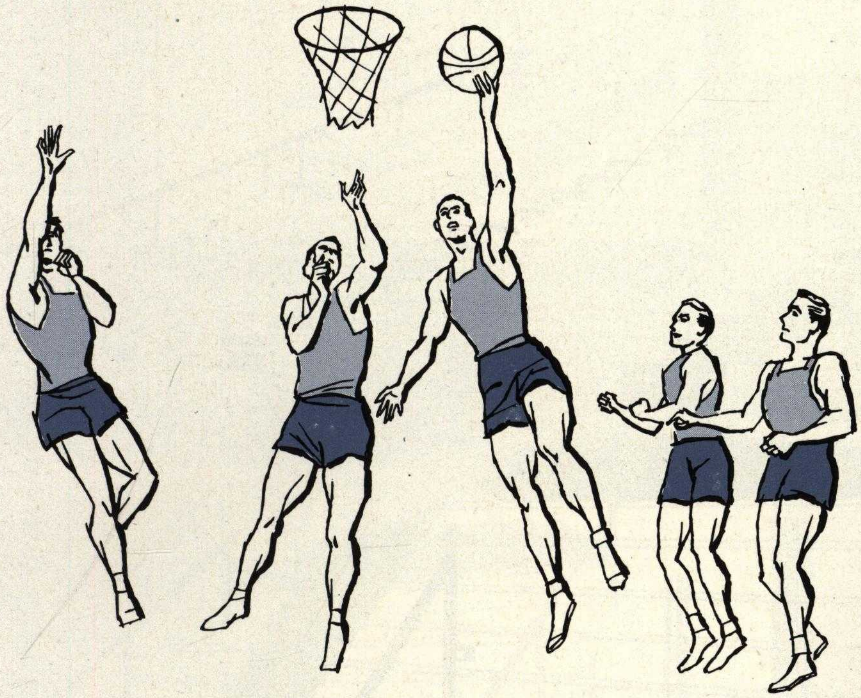
PROTECTIVE SLOPING FRONT

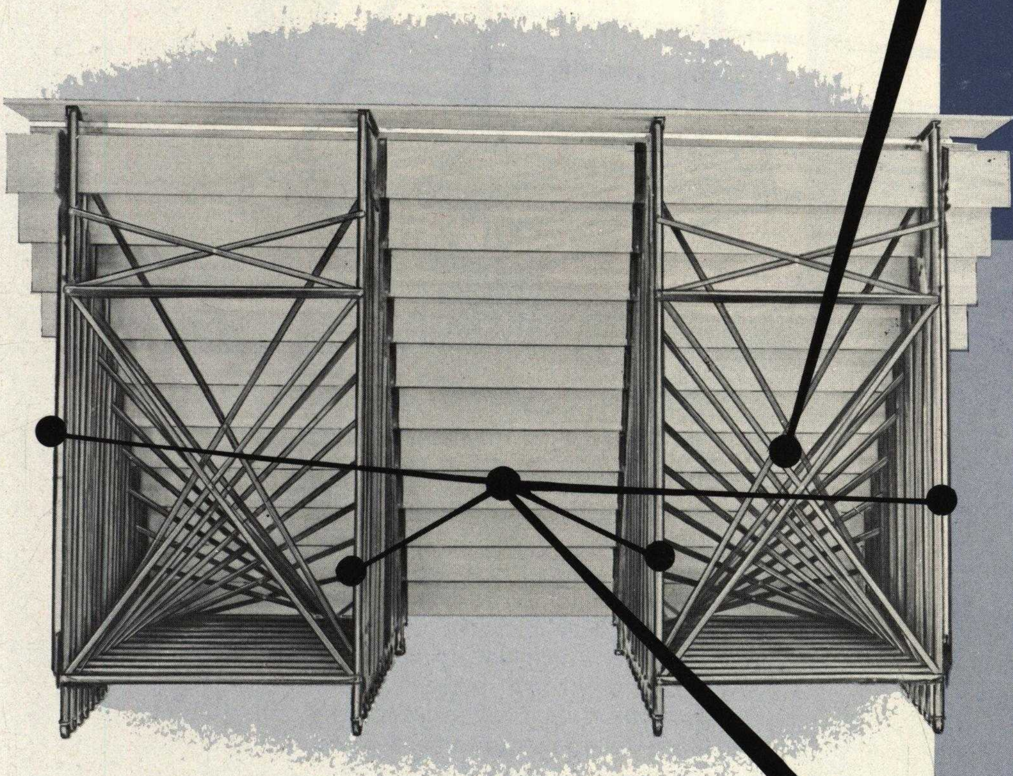
Brunswick Folding Gymnasium Seating forms a solid, inclined front with no protruding edges or parts to cause injury in the event of a fall or collision.

MAINTENANCE

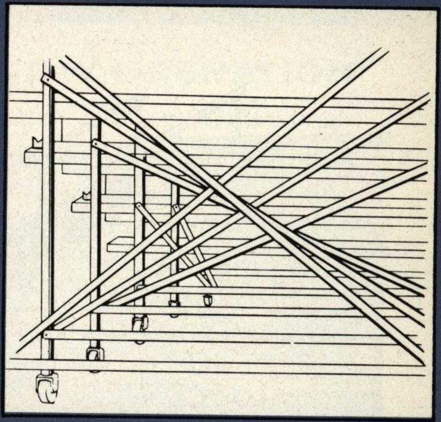
Sturdy construction keeps maintenance at a minimum. Footboards tilt into a vertical position when the unit is being closed, allowing miscellaneous objects to fall *in front* of the unit for easy recovery. And wall attachments eliminate the need for troublesome floor anchors.

HANDSOME, RUGGED AND DURABLE



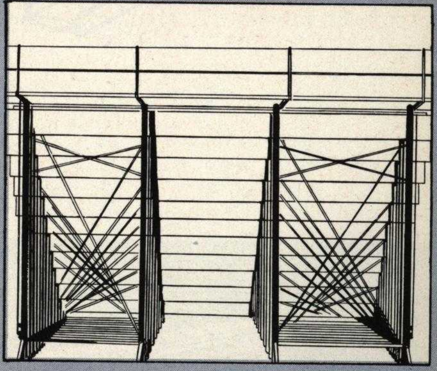


Brunswick Folding Gymnasium Seating is quality engineered for superior strength. Its heavy gauge steel and scaffold-type understructure have made it the architects' favorite.



CROSS-BRACED UNDERSTRUCTURE

All vertical, tubular support column assemblies are connected with heavy duty "X" type cross bracing to provide additional strength and rigidity under a live load, and to compensate for sway factor.

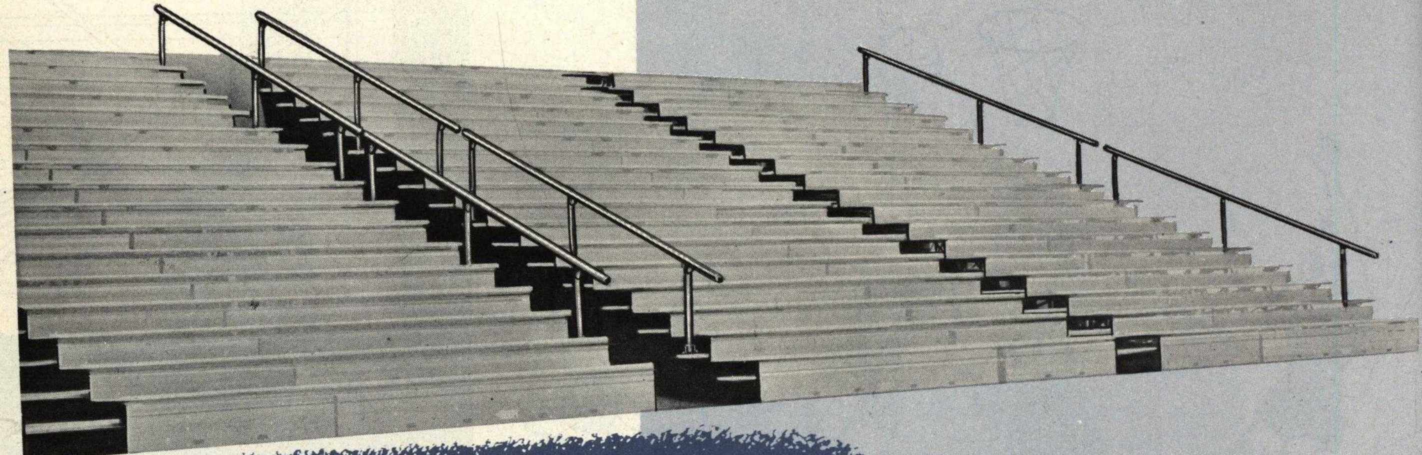


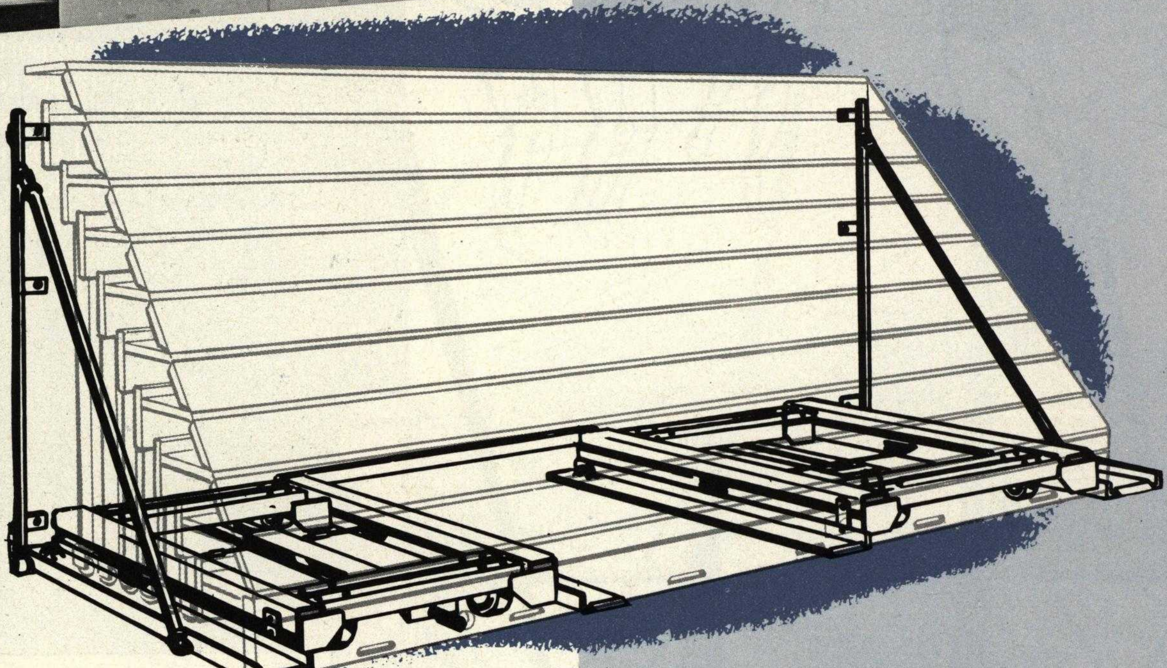
EVEN LOAD DISTRIBUTION

The live load of each sixteen foot unit is evenly distributed and supported by four tubular steel support assemblies . . . a plus factor of safety that is built into every unit. No loads requiring special support are imposed on wall structure.

Brunswick

THE QUALITY STANDARD

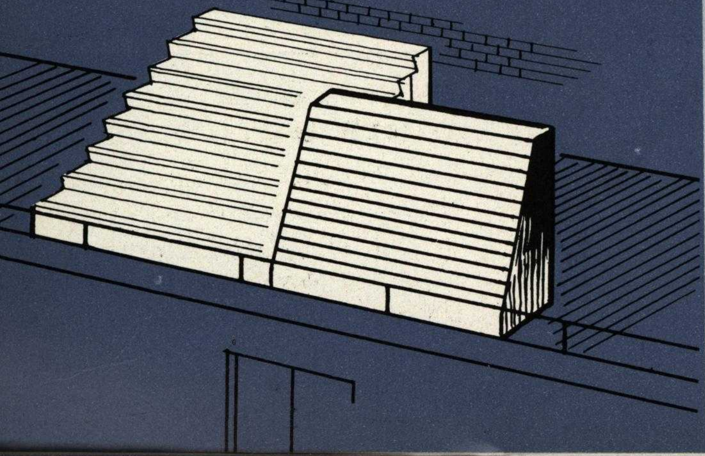


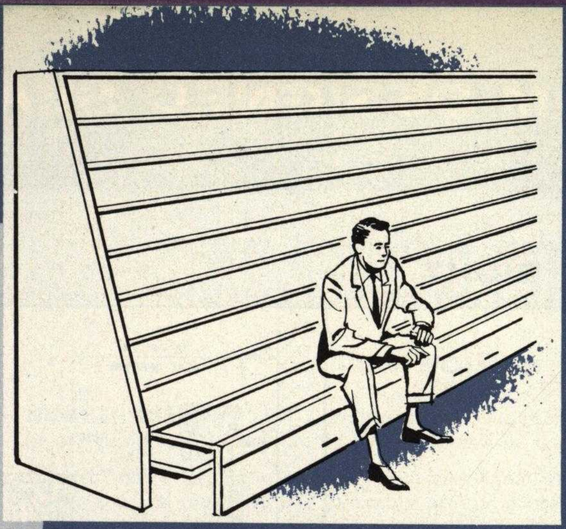


SELF-CONTAINED MOBILE UNIT

Brunswick's new self-contained mobile unit provides the ultimate in gymnasium seating flexibility. This unique portable unit features a self-contained mechanical lifting system to provide not only easy mobility and versatility, but maximum protection to the gymnasium floors as well. What's more, this compact unit is ideal for gymnasium balconies, where space is at a premium . . . actually allows the balcony to be used as an extra gymnasium and in the closed position it serves as a visual divider for added privacy.

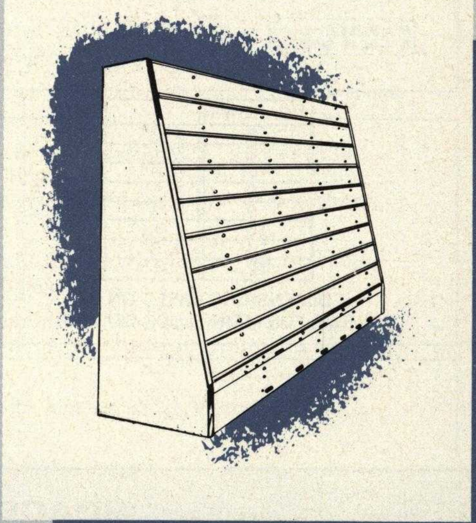
Ideal for gymnasium balconies where space is at a premium, Brunswick's self-contained mobile unit allows the balcony to be used as an extra gymnasium. And in the closed position it serves as a visual divider for additional privacy.





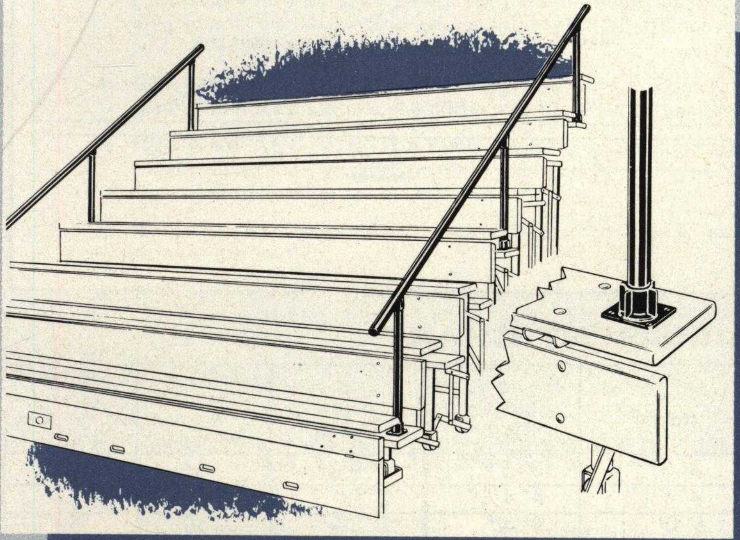
SINGLE ROW OPERATION

Unique construction of Brunswick Folding Gymnasium Seating allows individual operation of one . . . two . . . or as many rows as are needed. With Brunswick *automatic row locking,* the desired number of rows may be quickly and easily extended and locked into place.



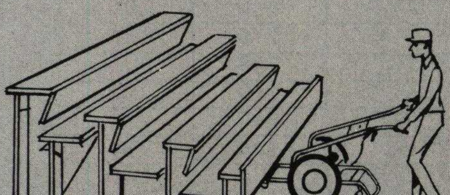
END PANELS

End panels on all Brunswick Folding Gymnasium Seating complete the protective enclosure and give the seating unit a clean, handsome, compact look as well.



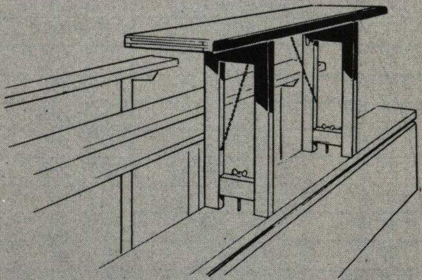
END RAILS

Removable end rails are also available. They can be quickly and easily inserted into built-in sockets to provide an added safety feature for the opened unit. And when not in use they can be conveniently stored within the unit.



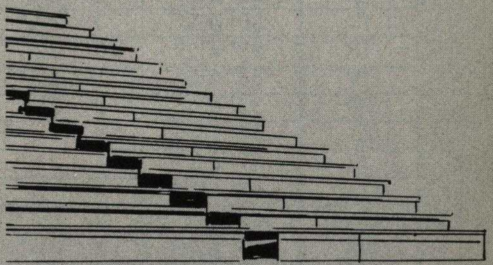
MOTO-FOLDER

Brunswick's new Moto-Folder supplies the "muscle" which folds the entire structure into a compact unit in one continuous movement. Operates quickly, easily.



TIMER'S TABLE

The timer's table is another Brunswick plus. It is easily attached to any row, giving the scorer comfortable seating on the row above.



AISLES

Brunswick offers sure-tread, stadium-type aisles to implement and safeguard spectator control movement.

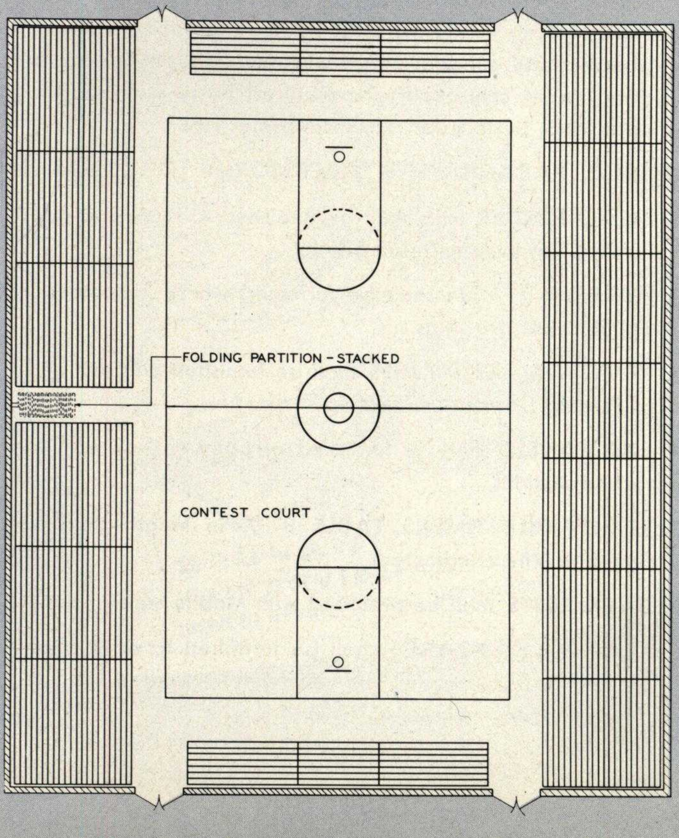
TO MEET EVERY REQUIREMENT

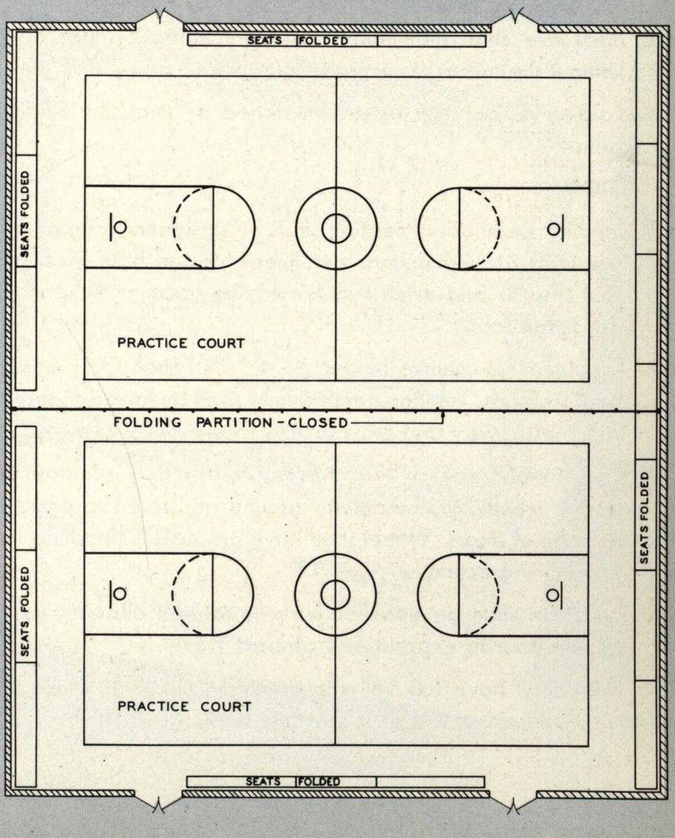
YOUR FOLDING GYMNASIUM SEATING BRUNSWICK PLANNING GUIDE

TEN POINTS TO CONSIDER

- **NUMBER OF COURTS**—Enrollment demands dictate early determination of whether one playing court will be adequate or whether folding partitions will be required to provide two or more practice courts.
- **COURT SIZE**—Regulation court sizes are as follows: College—94′x50′; High School—84′x50′ (contest courts require minimum 3′0″ clearance around court boundaries. When seats adjoin the court, 4′0″ should be allowed between the court boundary and the first seat).
- **SEATING CAPACITY**—Student enrollment provides the basic seating requirement, which should then be modified in terms of community interest in the sport.
- **SPACE ECONOMY**—Since 2.5 sq. ft. per person is a commonly accepted seating allowance, it becomes more economical to plan for Brunswick unit standard lengths of 8′0″, 10′0″, 12′0″, 14′0″ and 16′0″.
- **DOORWAYS**—Since improperly located doorways may result in a 15-20% loss of "good seats", plan to locate doorways in space adjacent to corners—preferably end-walls.
- **WALL CONSTRUCTION**—Construction utilizing piers, pilasters, ducts or furring should be avoided in gymnasium interior areas where seating is to be installed. Valuable seating space can be saved by utilizing filler boards across the front of the folding partition door stack. (To determine the necessary stack opening, add 12″ to the folding partition door width.)
- **SEATING ATTACHMENT**—To allow full freedom for contraction and expansion of floating floors, folding gymnasium seating units should be wall attached rather than floor-anchored.
- **HEATING AND VENTILATING**—Seating units allow a 4½″ wall-clearance for narrow grill-type radiators. Proper circulation of radiator air is provided by rail-type board construction available on Brunswick Folding Gymnasium Seating.
- **WINDOWS**—In the initial fenestration design, plan to have window sills located above the top row of gymnasium seating.
- **FUTURE NEEDS**—When budget demands restrict initial installation of folding gymnasium seating to a minimum, it is wise to provide the maximum number of rows and a *limited* number of seating sections rather than a maximum number of seating sections and a *limited* number of rows. (It is impossible to add rows later.) End-wall space may also be reserved for future seating additions.

GYMNASIUM PLAN TYPES





FOLDING GYMNASIUM SEATING SPECIFICATIONS

. GENERAL SCOPE:

A. Folding Gymnasium Seating shown in Architect's plans and specifications shall be as manufactured by The Brunswick-Balke-Collender Company, Kalamazoo, Michigan, or equal as approved by the Architect.

B. Folding Gymnasium Seating shall be delivered and installed by manufacturer. The entire installation shall be guaranteed against faulty materials, workmanship and operation for a period of one (1) year.

. EQUIPMENT REQUIREMENTS:

A. Furnish*____________Units as indicated on drawings and/or as scheduled below:

1. **__________Sections__________Rows High,________'__________" Total Length, (**9", 10½", 11½"**) Rise, (**22" or 24"**) Depth.

2. **__________Sections__________Rows High,________'__________" Total Length, (**9", 10½", 11½"**) Rise, (**22" or 24"**) Depth.

*Standard Units, Reverse Fold Units, Self Contained Mobile Units.

**A section is a continuous run of one or more adjacent Units.

B. ACCESSORIES:

Furnish accessories as indicated on drawings and/or as scheduled below:

1.____

2.____

3. OPERATION:

A. Units shall be equipped with cylinder locks keyed alike. All rows shall extend and fold in a continuous action. One or more rows to be extended as desired.

B. Each row shall individually and automatically lock open without the use of floor plates or shoes.

C. Folding action shall be accomplished by precision folding arms.

4. DESIGN:

A. Folding Gymnasium Seating shall be designed to support a live load of 120 pounds per lineal foot on both seat and foot boards and a horizontal swaying force of 24 pounds per lineal foot.

B. Tubular steel columns (4 per 16'-0" unit) shall form all upright supports. Tubular steel columns shall be joined together with metal sway and cross braces to prevent side sway.

C. Each support column shall have a heavy duty composition rubber wheel of 3" diameter ground and trued to prevent marring of floors. Wheel shall have an "OILITE" bushing for easy rolling action.

D. Each unit shall be attached directly to wall allowing gymnasium floor to expand and contract freely.

E. Units shall have full 18" chair height. Unit shall allow unrestricted movement of spectator's feet.

F. Units shall have skirt boards to close the area beneath seat boards to prevent basketballs lodging beneath units. When units are closed skirt boards shall form face of units, which shall slope up and back to protect athletic participants from injury.

G. Foot boards shall fold to vertical position causing debris to fall to floor. Tubular columns shall close in tandem to expose maximum floor space beneath units for removal of debris.

5. CONSTRUCTION:

A. Manufacturer shall fabricate steel understructure and all wood members in his factories.

B. Electric arc welding shall be utilized on all steel members. Welding shall be done by certified welders.

C. Seat boards, foot boards and skirt boards shall be vertical grain Douglas Fir fabricated from selected kiln dried lumber. Pitch pockets, knots, shake, wane and other defects not permitted. Seat and foot boards shall be 1¼" Thick before sanding. Seat boards shall be 9½" wide and foot boards shall be 11¼" wide.

Solid boards shall consist of individual rails edge laminated under pressure through use of electronic glue machines. Floating dowel pins shall be placed at ends of boards to prevent end splitting.

6. FINISH:

A. All steel understructure shall be bonderized before finishing. Metal parts shall be finished in DuPont Olive Green enamel No. 4458.

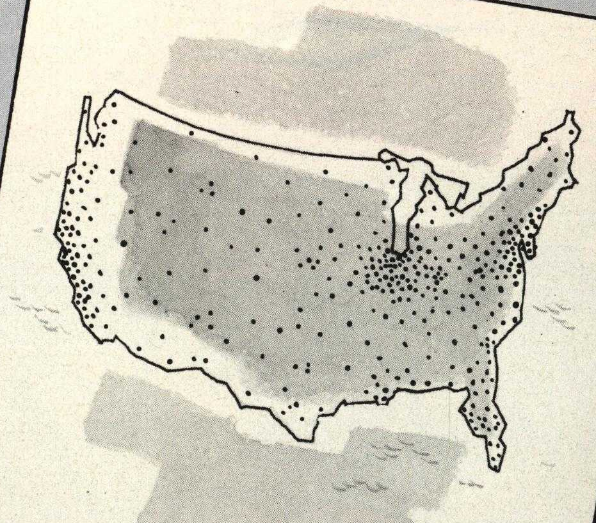
B. All wood parts shall be drum sanded, edges eased and final hand sanded before finishing. Finish shall consist of two (2) coats of Urea Based Synthetic finish on all finished sides of boards hand sanded between coats. The finish shall be dried under controlled temperatures. Paste wax shall be applied at Factory for maximum protection.

SECTION 2, PARAGRAPH B, ACCESSORIES (OPTIONAL):

1. **MOTO-FOLDER** units shall be furnished to close and open Folding Gymnasium Seating Units.
2. **AISLES** 3'-0" wide shall be furnished where indicated on Architectural drawings.
3. **REMOVABLE END RAILS** shall be furnished on open ends of Folding Gymnasium Seating sections.
4. **END PANELS** shall be furnished at open end of wall attached sections.
5. **REMOVABLE TIMERS TABLE** 8'-0" in length shall be furnished where indicated.
6. **BACK RESTS** shall be provided with Mobile units.
7. **REAR FILLER BOARDS** shall be furnished to close space between top seat board and wall where indicated. (Recommended when in excess of 10".)

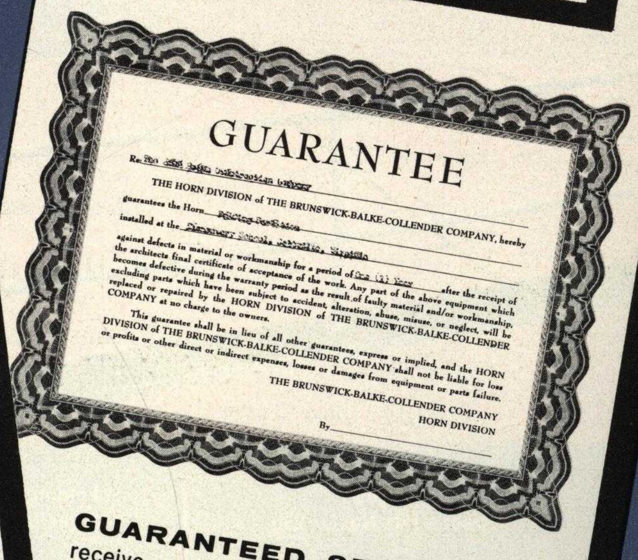
Brunswick PLANNING AND MAINTENANCE SERVICES HELP YOU CUSTOM DESIGN A SOLUTION TO ANY GYMNASIUM SEATING PROBLEM

PLANNING SERVICE—Brunswick maintains a staff of trained engineers for your convenience.



NATIONAL DISTRIBUTION—Local sales organizations to assist you with local planning problems.

BRUNSWICK TRAINED SUPERVISORS—Located in your area to assure proper installation.



GUARANTEE

Re: [illegible]

THE HORN DIVISION of THE BRUNSWICK-BALKE-COLLENDER COMPANY, hereby guarantees the Horn [illegible] installed at the [illegible] against defects in material or workmanship for a period of One (1) Year after the receipt of the architects final certificate of acceptance of the work. Any part of the above equipment which becomes defective during the warranty period as the result of faulty material and/or workmanship, excluding parts which have been subject to accident, alteration, abuse, misuse, or neglect, will be replaced or repaired by the HORN DIVISION of THE BRUNSWICK-BALKE-COLLENDER COMPANY at no charge to the owners.

This guarantee shall be in lieu of all other guarantees, express or implied, and the HORN DIVISION of THE BRUNSWICK-BALKE-COLLENDER COMPANY shall not be liable for loss or profits or other direct or indirect expenses, losses or damages from equipment or parts failure.

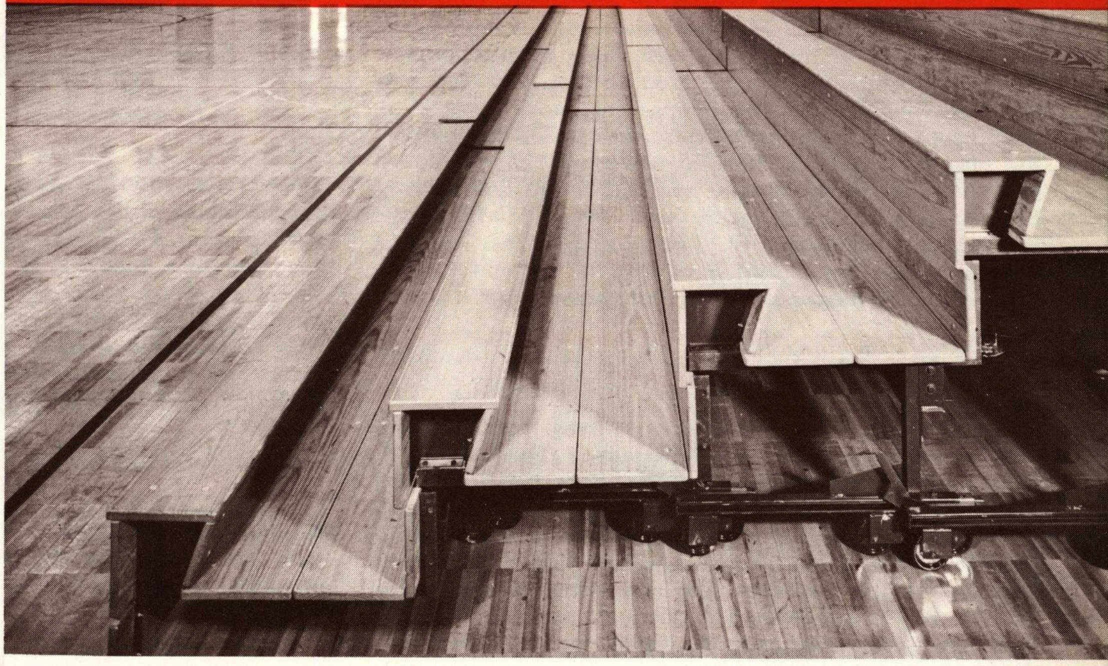
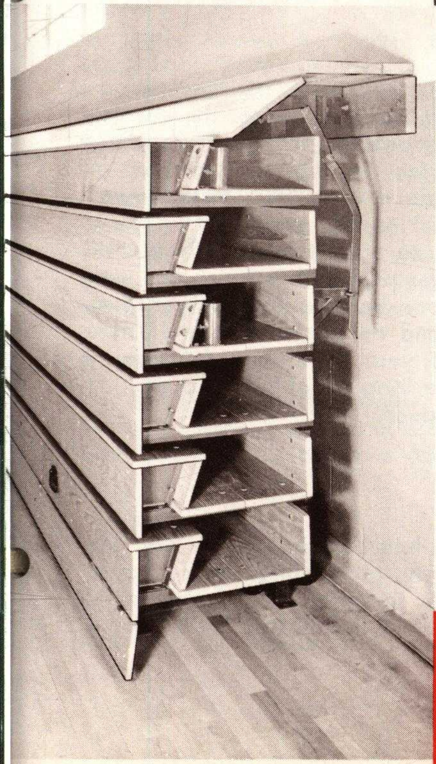
HUSSEY
SAFE SEATING

ROLL-OUT GYM SEATS



There's no opening for people, belongings, or debris to fall through a Hussey Closed Deck.



Closed stand has smooth vertical face. Maximum depth is 3'8".

the only Roll-Out gym seats with:

- a closed deck
- a box girder seat section
- a truss supporting frame

the CLOSED DECK insures maximum PERSONAL SAFETY.

the BOX GIRDER and TRUSS provide maximum STRUCTURAL SAFETY.

no other gym seats have these three features.

A.I.A. File No. 35-F-11

HUSSEY MFG. CO., INC.
NORTH BERWICK, MAINE
ironworkers since 1835

new gym seat design

Hussey's Closed Deck design is still new, even though in use in over 500 installations in 32 states, because it is the only major improvement in gym seat design in more than 20 years. It was specifically engineered with features which insure maximum PERSONAL SAFETY and CONVENIENCE for spectators. Hussey's completely enclosed walkway has **no opening for an accident.** Seats are of simple, trouble-free construction and operate easily.

fully closed deck

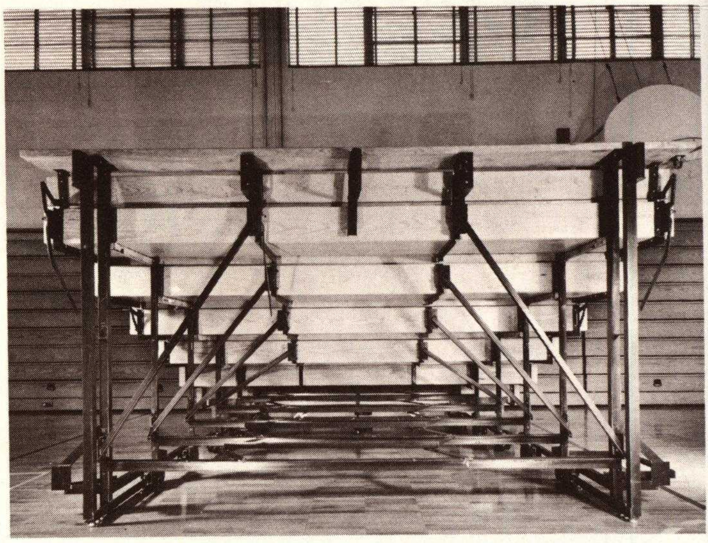
This one feature distinguishes Hussey Roll-Out seats from all other gym seating. Front and rear risers eliminate the illusion of height and the hazard of slipping through the stands. The 16" or 18" footboards are at least 39% wider than on any other seats. The Closed Deck insures safe, firm footing for spectators who leap suddenly to their feet to cheer wildly. It facilitates getting into or out of the stands past those already seated. Personal possessions cannot drop to the floor. No embarrassment is caused by youngsters beneath seats. A fire hazard is eliminated because no trash collects under the stands. Sweeping time is decreased 25% because trash can be pushed directly into containers. Stands may be closed with trash inside and cleaned when convenient. It is not necessary to clean under them in order to close them. The Closed Deck created these major improvements in personal safety and convenience.

box girder construction

The second exclusive feature of Hussey Roll-Out gym seats is the box girder type construction. The box girder consists of two riserboards and the seatboard which are held in proper relation by 8 steel diaphragms inside each 16′ box girder section. It has a sectional modulus of 55 inches^3. This is 25 to 30 times greater than that of any other retractable bleacher. The box girder Safety Factor of 7 to 1 was engineered to virtually eliminate deflection. This does away with the dangerous cantilever action found at the end of conventionally supported seatboards. It also increases rigidity, reduces lateral sway, and prevents excessive stress, strain, and wear at bolted connections. Under a test load of 12,220 lbs., a single 16′ row for 12 persons had minimal deflection of 1-9/16" which did not approach elastic limits. When unloaded the seatboards immediately returned to normal.

steel truss supporting frame

The third distinctive feature of Hussey Roll-Out gym seats is its steel truss underframe. The supporting columns of each row of seats are 1½" and 2" square steel tubing. These columns are tied together with horizontal steel 2½"x2½"x3/16" angle iron braces. Beginning with the third row, two diagonal steel braces connect the vertical columns and the box girder. These diagonal braces vary from 1½"x1½"x3/16" to 2½"x2½"x3/16" depending on the height of the row. The combination of vertical, horizontal, and diagonal braces plus the box girder is one of the strongest and most rigid arrangements possible. The entire unit has a Safety Factor of 4 to 1 and all load carrying members have steel-to-steel connections.



safety code requirements

These seats equal or exceed all safety requirements or specifications of the American Standards Association, the Pennsylvania Code (Hussey Penna. Certificate No. 1902), the American Institute of Steel Construction, the U. S. Forest Products Laboratory, and the National Lumber Manufacturers Association. These stands are engineered to withstand the stresses and strains of excited spectators. They are fully braced diagonally and horizontally with steel to resist side or end sway.

positive locking device

An extra feature is the positive, mechanical cam and dog lock. Stands can be operated only with a key that fits all units. Seats may be locked with one row, or all rows extended.

minimum maintenance

The only moving parts on these seats are the scissors-type paralleling device, the locking device, the casters, and the automatic closure panel on the top row. There are no hinged or complicated assemblies to get out of adjustment. U. S. Forest Products Laboratory tests showed Arkansas Long Leaf Yellow Pine has greater strength; is harder and more resistant to splintering, scuffing, and denting; is tougher and less susceptible to shocks and heavy blows; and has more bolt holding power than other lumber commonly used for bleacher seats. These features plus Hussey's 125 year reputation for quality Maine craftsmanship assure long, trouble-free operation and a minimum of maintenance.

easy operation

Oversize, smooth-rolling, oilless bearing casters and the simple, effective, scissor-type paralleling device cause Hussey Roll-Out gym seats to open and close easily. These 4" casters tested to 3966 lbs. before failure, or a Safety Factor of 8 to 1.

appearance

Standard Hussey seats are slightly tinted Arkansas Long Leaf Yellow Pine. They are also available at slight extra cost in dark finish or in Genuine African Mahogany. These seats improve the appearance of any gym. When closed, the stands fit snugly against the wall and occupy at most 3'8" of space (see table of dimensions). The well finished risers provide a smooth, flush wood surface. The vertical face prevents climbing up closed stands and avoids knee injuries in gym classes. The Closed Deck and End Panels completely conceal the steelwork.

accessories

End Rails, End Closure Panels, Vent Grilles, Aisle Steps, Scorer's Tables, Tablet Arm Brackets, Hydraulic Dollies, and Tractor Units are available if desired.

portable Roll-Out gym seats

Portable units are identical with standard wall-attached units except that they are limited for safety to 3 to 10 rows high. They can be re-located easily on the hydraulic dollies provided with each installation. Portable units increase the flexibility of seating arrangements and increase alternate-purpose usage.

engineering service

Hussey's experienced seating engineers are available at all times for consultation without cost or obligation. Because most installations have to be engineered to fit the desired location, it is suggested that you ask a factory representative to call and determine detailed requirements. A firm quotation will be submitted promptly.

• other HUSSEY products

(separate catalogs available on request)

Models 6, 8FA, and 10 portable sectional steel bleachers for indoor and outdoor use.

Permanent Grandstands custom built to any size and specifications. Hot-dip galvanized steel.

HUSSEY MFG. CO., INC.

standard specifications

scope of work

(a) Where indicated on plans supply and install Roll-Out Gym Seats.

(b) Roll-Out Gym Seats shall all be standard wall attached type, except where portable sections, including one pair of dollies, are required.

(c) The following accessories shall be included:

End Rails ....

Scorer's Table ....

Ventilating Grilles: Wire .... Slotted ....

End Closure Panels ....

Aisle Steps ....

Tablet Arm Brackets ....

Tractor Unit ....

design & construction

(a) The Roll-Out Gym Seats shall be designed and constructed to support, in addition to their own weight, a live load of 120 lbs. per lineal foot of both seat and footboard, and to resist by adequate diagonal bracing a horizontal sway load applied lengthwise to the seats, of 24 lbs. per lineal foot of seatboard. Under these loads, stresses in steel shall conform to the standard specifications of the American Institute of Steel Construction, and stresses in wood shall not exceed those recommended by the National Lumber Manufacturers Association.

manufacturer

(a) Roll-Out Gym Seats with fully closed decks are to be furnished as manufactured by the Hussey Mfg. Company, Inc., North Berwick, Maine, or approved equal.

dimensions

(a) Depth per row, 22″ or 24″ measured horizontally from front edge of one seatboard to the front edge of the next seatboard.

(b) Rise per row, 9⅝″ measured vertically from top of one seatboard to top of next seatboard.

(c) Height of seat, 16″ measured vertically from top of footboard to top of corresponding seatboard.

unit construction

(a) Each group shall consist of one or more independent units, the length of each unit to be as near 16′0″ as conditions permit.

(b) Each unit shall be completed in itself, consisting of steel structure and closed deck connected together to form one integral assembly with means of attaching said unit where required to floor and walls (except portable units.)

(c) Each tubular steel column of the unit except the rear column shall be equipped with four 4-inch diameter wheels made of a plastic composition. Each wheel shall be equipped with suitable oilless bearings.

(d) Two diagonal angle iron braces shall be installed under each row of seats to resist end sway. These, plus the steel tie bars near the lower end of the supports, shall create a structural steel truss.

(e) Each section shall be equipped with hinged front skirtboard into which is set a Yale type lock. All locks shall be keyed alike. Immediately behind the front skirtboard shall be three spring loaded plungers, which, when the front skirtboard is lifted, shall slide ahead freeing a locking mechanism that mechanically controls the operation of the stand. This mechanism, when the front skirtboard is down, shall hold the stand locked in position.

(f) Each tier shall be equipped with a positive scissors-type paralleling device to prevent "cocking" or rubbing on adjacent stands when a section is being opened or closed.

fully closed deck

(a) These Roll-Out Gym Seats shall have a completely closed deck for additional personal safety and to prevent refuse collecting under the unit.

(b) Seatboard risers and deck shall form a complete unit reinforced with steel diaphragms so as to form a box girder type construction. The riserboard under the rear of the seatboard shall be placed at an angle so as to provide extra toe space.

(c) All lumber shall be of B and C grade kiln dried Arkansas Pine, having an allowable fibre stress of not less than 1800 lbs. per square inch. All lumber shall be finished not less than 25/32″ in thickness.

(d) Seatboards shall be B grade kiln dried Arkansas Pine, to finish not less than 25/32″ thick and 9¼″ wide with edges rounded.

(e) Alternate: All lumber to be Genuine African Mahogany finished ⅞″ thick.

finish

(a) All steel parts of the understructure shall be properly cleaned and finished in best quality schoolroom brown enamel.

(b) All wood parts shall be given one sealer coat, and two coats of clear Rynalon finish shall be applied to all exposed surfaces.

installation

(a) Installation shall be performed under the manufacturer's supervision. Each unit shall be securely attached to the floor and walls unless it is of the movable type.

The construction of the floor is: Fixed .... or Floating ....

1. Material ....
2. Thickness ....

The construction of the wall is:

1. Material ....
2. Thickness ....

guarantee

(a) The manufacturer shall guarantee all work performed under these specifications to be free from all defects of material or workmanship for a period of 1 year from date of completed installation.

GYM SEAT ACCESSORIES IF REQUIRED

end rails

Removable end rails shall be provided on all open ends, and shall extend from the top down to a point on the gym seat which does not exceed four feet above the floor. Said rails shall be designed and constructed so they are easy to put in, take out, and store.

grilles

Two 4″x30″ wire grilles per section, or a series of ¾″ wide slots in skirtboards shall be provided for adequate ventilation.

scorer's table

15″ wide by 8′ long and 1¼″ thick laminated pressed wood with mar-not formica top. Rounded corners and plastic moulding on all edges. Adjustable folding legs which permit convenient storage in footboard space when stands are closed.

end closure panels

End closure panels of proper size and shape to conceal the under structure from view when gym seats are closed shall be provided to match the woodwork of the gym seat. These end closure panels shall be permanently attached to the unit and to the wall.

aisle steps

Aisle steps shall fit firmly into the footspace so as to become part of the stand and not interfere with its operation. Their tread shall be level with their seatboards and finished to match the seats, they shall be .... inches long.

tablet arm brackets

Six detachable tablet arm brackets shall be provided per 16′ section. They shall match the stands and shall swing into a vertical position for easy access to the seats.

hydraulic dollies

Two roller bearing hydraulic dollies shall be furnished for relocating portable Roll-Out gym seat sections.

tractor units

Provide electrically powered tractor equipped with two 18 x 5.50-8 pneumatic-tired wheels, powered through roller chain and gear train by ¾ H.P. 110 volt single-phase motor. Tractor to be provided with 100 feet of 14/4S rubber covered cord with Hubbell twist-lock armored male plug #7411. Reel to be provided on tractor for retrieving 100 foot cord. Extension cords can be provided in 50 feet increments. Tractor to operate at approximately 30 feet per minute.

We reserve the right to improve materials or design without notice.

MEDART

TELESCOPIC GYM SEATS

Medart has achieved, in Telescopic Gym Seats, three basic objectives: (1) the greatest possible seating capacity in the least space; (2) the ultimate in spectator safety; and (3) recovery of maximum floor area when seats are not in use.

The steel understructure, conforming to A.S.A. specifications, is completely self-supporting open or closed. It is strong enough to support up to 400 pounds per linear foot per row without noticeable deflection or side sway.

Each full length 16′ row rests on *four* double-angle welded vertical uprights and is rigidly sway-braced with steel channels. The live load bears directly on the uprights, which cause dual rubber rollers to retract into housings and place all the weight immovably on the floor. There is no load on walls or casters. Uprights are staggered for even distribution of weight over entire floor area.

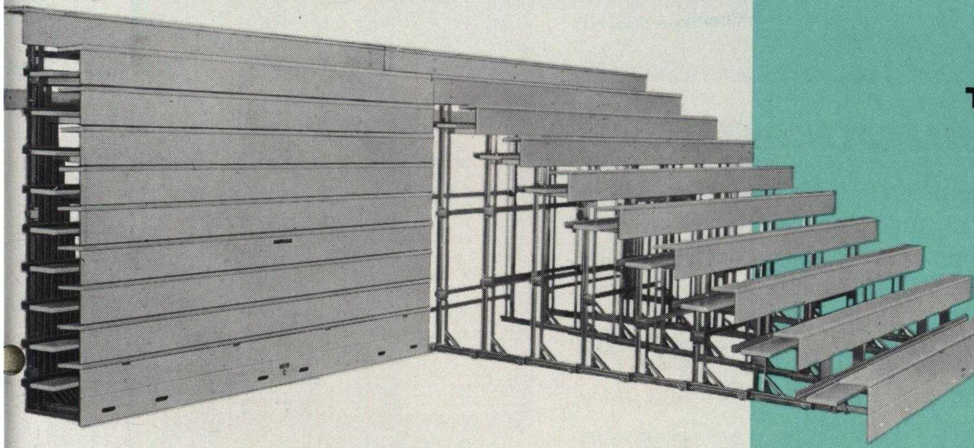
Medart Seats do not depend on diagonal bracing, hinged rods or other stress-bearing devices. Wood seat, foot and riser boards add additional rigidity to the self-supporting steel understructure. No other retracting type of seat exceeds the dependable safety of Medart Telescopic Gym Seats.

BASKETBALL BACKSTOPS

The superiority of Medart Basketball Backstops has long been established wherever basketball is played. Excellence of design, materials and workmanship is a Medart tradition: full conformance to the standards of the National Basketball Committee is an unvarying policy; and the many extra years of dependable service, free of costly upkeep and maintenance, other than a minimum of normal seasonal attention, has won for Medart unequalled preference among schools, colleges and architects everywhere.

Contributing largely to the enviable reputation of its basketball backstops is Medart's practice of providing experienced engineering counsel during planning and specification stages to assure a strong, rigid and vibration-free installation. Medart not only helps to choose the *right* backstop but, by an analysis of structural conditions, designs "Tailored-To-The-Job" backstops unexcelled in ruggedness and faultless service.

Medart—The Nation's Most Experienced Authority—has been recognized as the pioneer and major producer of basketball backstops since Dr. James Naismith developed and introduced the game in 1892. This vast reservoir of "know-how", unmatched in the industry, is available without obligation to help in solving every basketball backstop problem. To be sure it's right, consult Medart! (*See page* 6.)



WALL-ATTACHED TYPE TELESCOPIC GYM SEATS

No special construction is required for installation. Simply attached to the wall and anchored to the floor at the back, the entire weight rests on the floor. Furnished in standard 16′ full-length or 8′ half-length sections from 3 to 21 rows. For special conditions, seat sections can be furnished in 12′, 13′, 14′ or 15′ sections.

RECESSED & TWO-LEVEL TYPE

Recommended for new gymnasiums, these modern installations offer, at lower cost, the same facilities, convenience and safety as permanent built-in seats, yet release when not in use, maximum areas on main floor and balcony for other activities. Flush recessed seats are placed under a balcony when conditions make a suitable recess available. (See detail on Page 2.) Construction of Recessed Seats, up to 20 rows in height, is the same as wall-attached except for minor mechanical differences required for installation.

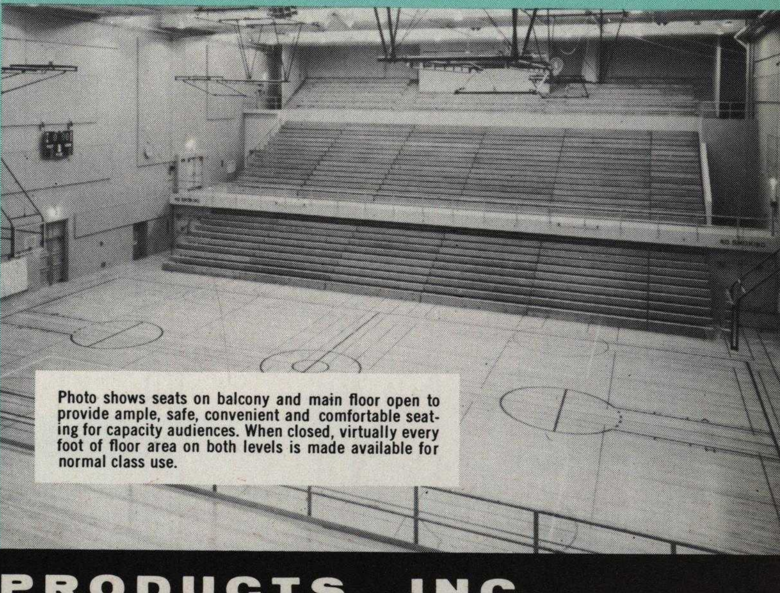


Photo shows seats on balcony and main floor open to provide ample, safe, convenient and comfortable seating for capacity audiences. When closed, virtually every foot of floor area on both levels is made available for normal class use.

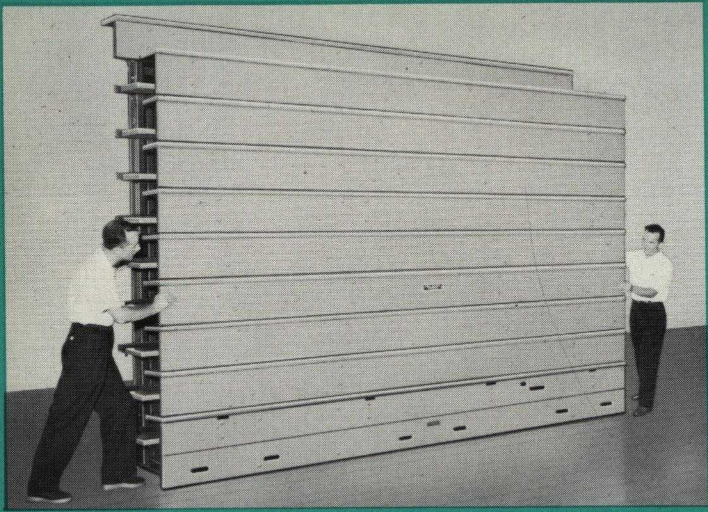
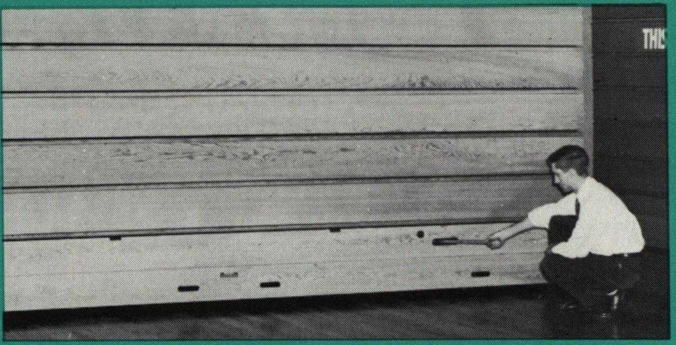
Copyright 1959 by Fred Medart Products, Inc. • Saint Louis 18, Missouri, U. S. A.

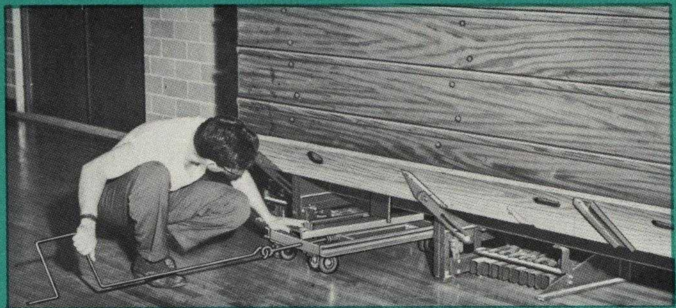
MOVABLE TYPE GYM SEATS





HYDRAULIC LIFT is built integral with steel understructure of each section. A few strokes of the pump handle raises seats; release of valve lowers them quickly, quietly. The rugged construction is typified by 4" channels, cold rolled steel shafts, dual 5" ball-bearing swiveling wheels turning on double ball-bearing races, etc. Caster capacity, per pair, 1000 lbs. 3000 lb. hydraulic pump. There are no hydraulic lines to leak oil.

Perfect solution to the seating problem when building conditions do not permit installation of wall-attached seats. Movable seats provide ample seating that can be compactly and easily stored. They are identical to wall-attached seats except for the addition of truck guides on understructure base if seats are to be moved on Lift Trucks, or adding the Hydraulic Lift mechanism which eliminates the use of separate trucks. (See details at right.) Movable Type seats are furnished in full or half length sections of 3 to 12 rows.



LIFT TRUCKS roll into guides beneath understructure, and are raised, for rolling seats into position, by a crank inserted through holes in front riser. Trucks have large dual rubber-tired casters that swivel on ball bearings. Two trucks are furnished for **each installation.**

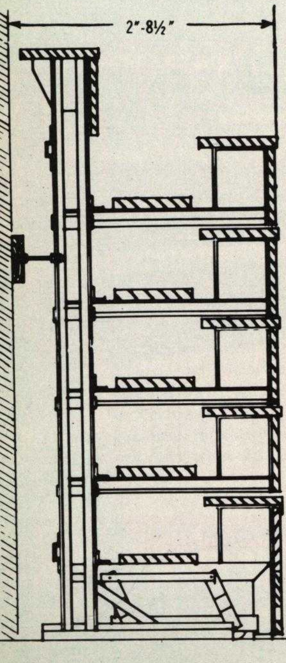
TYPICAL CONSTRUCTION DETAIL

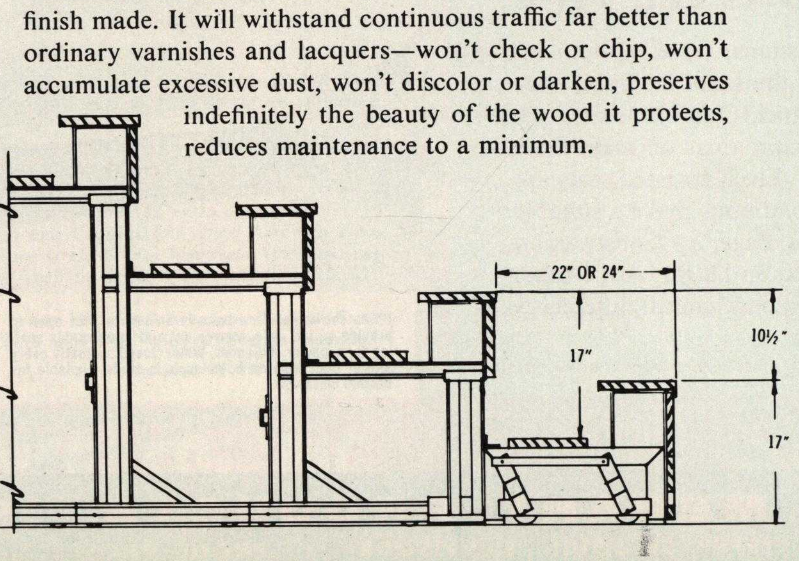
Medart Seats are built with 22" or 24" row depth and with 10½" or 11½" row rise. Leg height is 17" for 10½" row rise and 18" for 11½" row rise. Special seat rise is available when "line of sight" conditions are extreme. An automatic front row lock engages 8 rubber brake shoes on 1st and 2nd rows to prevent shifting when seats are open.

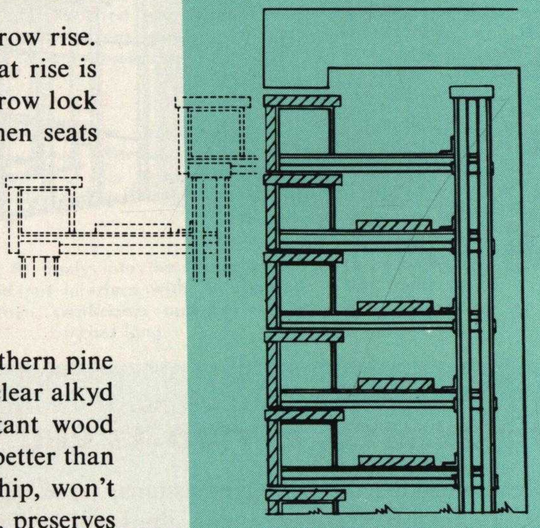
Seat boards are 1-1/16" x 9½"; foot boards are 1-5/16" x 9½"; risers are 25/32" x 9". Front riser has hand grips for easy opening and closing of seat section. Top riser is furnished hinged or non-hinged.

Tough, scuff-resistant wood finish

Wood members are finest kiln-dried clear fir or Southern pine with prime and finish coats of oven-dried lustrous, clear alkyd melamine varnish—smoothest, most abrasion-resistant wood finish made. It will withstand continuous traffic far better than ordinary varnishes and lacquers—won't check or chip, won't accumulate excessive dust, won't discolor or darken, preserves indefinitely the beauty of the wood it protects, reduces maintenance to a minimum.







TYPICAL DETAIL OF RECESSED SEATS IN CLOSED POSITION

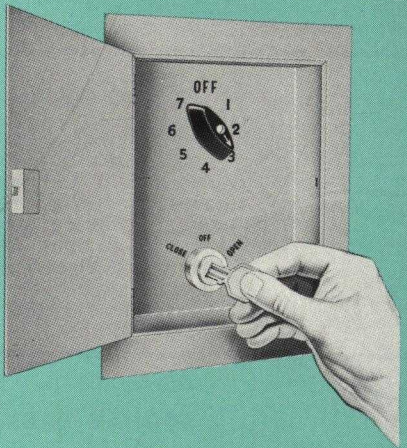
Minimum depth of recess for 22" seats to 11 rows should be 2'8½"; for 24" seats, 2'10½". Minimum recess height for 10 rows or less is height of top seat plus 1". An additional 2' of recess depth is required for seats 12 to 20 rows high. Seats with 11½" row rise require comparable increase in recess height.

MEDART AUTOMATIC POWER-OPERATED GYM SEATS

TWO TYPES: **UNIT MOVER for independent operation of individual seat sections**
BANK MOVER for simultaneous operation of multiple seat sections

- Medart's power operation eliminates all effort necessary for manual opening and closing of seats
- No special construction provisions required
- Key-operated control may be installed anywhere

KEY-OPERATED CONTROL OPENS, CLOSES SEATS QUICKLY, QUIETLY



Moves the biggest seat installations into position in minutes. If full capacity of seats is not required, release of key stops movement instantly when desired number of rows are in position. Automatic safety controls insure hazard-free operation. Limit switches in control circuit prevent over-travel in either direction. Switches for any number of Unit Movers or Bank Movers are incorporated into a single key-operated control which can be remotely installed anywhere in gym for greatest convenience. Removable key prevents unauthorized operation.

MEDART'S FULL AUTOMATIC POWER OPERATION* opens and closes the largest gym seat installations quickly, quietly and safely without physical effort. A smooth, controlled speed of 10 feet-per-minute eliminates all slamming and banging—life of seats is prolonged—maintenance is reduced to a minimum.

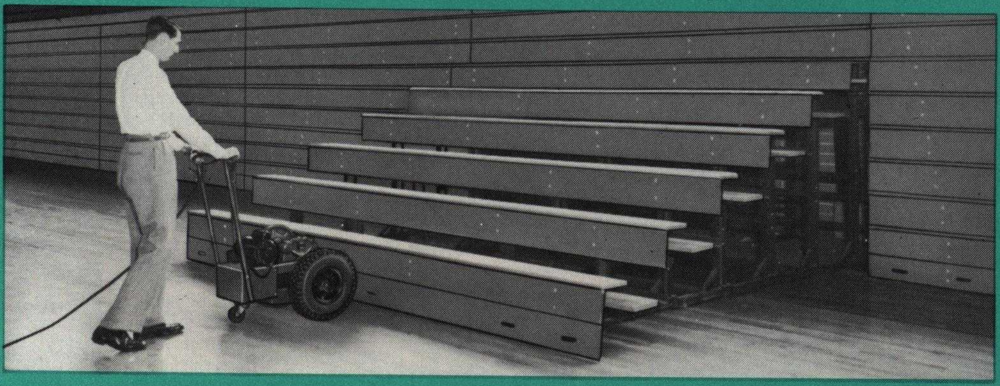
- Medart's Bank Mover opens and closes at one time, all aligned seat sections of a maximum length of 112 feet and up to 15 rows high, or a maximum length of 80 feet and up to 21 rows high.
- Medart's Unit Mover opens and closes individual seat sections one at a time as desired, regardless of length or height.
- No floor tracks or building changes are necessary. The installation of power operation requires no other conditions than are needed for manually-operated seats.
- No complicated wiring is needed. Any ordinary 110-volt power source will do.
- Seats roll open or closed without binding or "crabbing". Straight-line trackage is an outstanding feature of Medart power-operated seats. All caster bearings are made of a Nylon material which needs no lubrication, thus eliminating any possible oil-staining of gym floor.
- Seats automatically lock in any position during opening or closing by release of control key. Whether one, a few, or all rows are required, seats remain safely stationary until power control is key-actuated.

Power Operation For Medart Seats Already In Service—Automation can be applied to existing Medart Seat installations. No extensive changes are necessary in gym seat construction. Cost is surprisingly low. Ask for complete details.

*Patents Pending

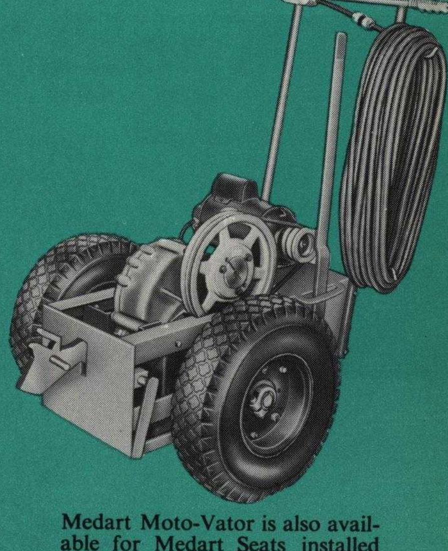
MEDART MOTO-VATOR†

Mobile Power Operator For Medart Gym Seats



Opening and closing the largest telescoping gym seat sections with the Medart Moto-Vator is easy and simple.

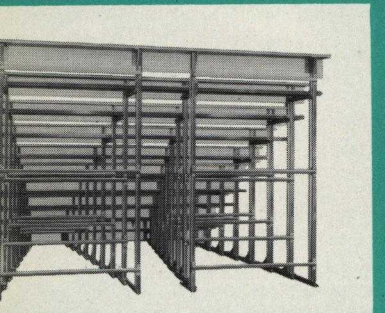
A lock-lift arm at the front of this rugged, compact electric power unit is directed into an opening in the center of the front seat riser. A handle-lever instantly releases the braking mechanism of the seat section. A switch is moved to "open" and in a few seconds the section is fully opened. To close, the simple procedure is reversed. Easy steering of the Medart Moto-Vator guarantees accurate straight-line trackage. Extra large pneumatic tires insure against damage to floors.



Medart Moto-Vator is also available for Medart Seats installed since 1954.

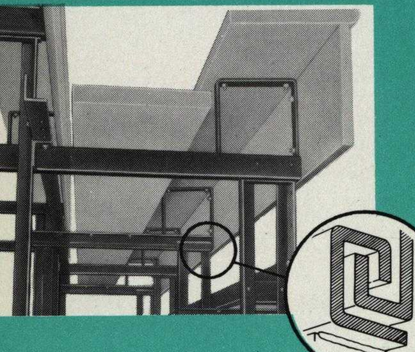
†T. M. Reg.

FEATURES OF DESIGN AND CONSTRUCTION



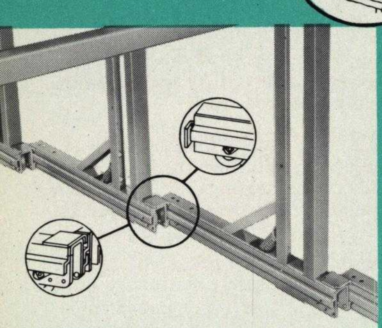
SELF-SUPPORTING STEEL UNDERSTRUCTURE

Rear view photo showing seats in extended or open position. Note how each row is supported on 4 vertical uprights and how they evenly distribute the load over entire floor area. Impartial laboratory tests show complete safety under loads of 400 pounds per linear foot of row without appreciable deflection, and practically no side sway at peak of stress.



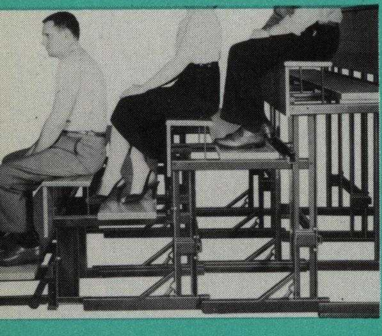
FLOATING MOTION

A Medart exclusive feature—an arrangement of smooth-working precision-formed parts that make it possible for seat sections to be opened and closed without effort. A 5″ long sleeve at top of upright interlocks with a horizontal member along which the sleeves move. Interlocking of these members precludes jamming and binding during opening and closing. No row can be disengaged from another.



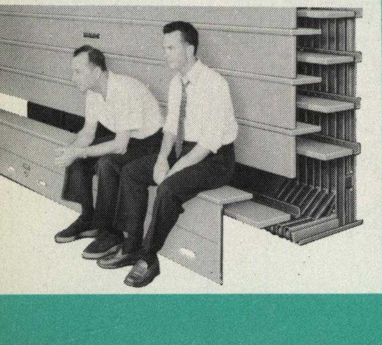
DUAL ALIGN

Another Medart exclusive! "Dual Align" provides direct line opening and closing of each gym seat section. Roller housings are keyed together and have lateral aligning interlocking guides. Each of the four uprights per row with the "Floating Motion" arrangement at the top and the "Dual Align" housing at the bottom assure straight-line, quiet and efficient operation.



SEATING COMFORT

Most spacious of all gym seats. Full 17″ from seatboard to footboard, considered most comfortable height by seating authorities. Plenty of room from front to back in either 22″ or 24″ row depth (front to front of seatboards). Open toe space under seatboards and heel space under risers add many extra inches of foot room.

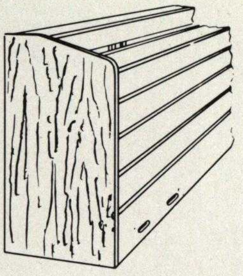


USE OF INDIVIDUAL ROWS

Medart Seats can be partially opened to permit use of one, two, or as many rows of seats as may be desired for any specific event. Eliminates need to carry, set up, fold and return to storage, folding chairs normally required for such events. With one row open, each seat becomes a comfortable bench around the gym, or for the length of the balcony or stage.

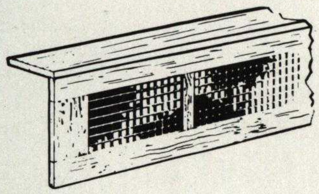
Printed in U.S.A.

ACCESSORIES FOR MEDART SEATS



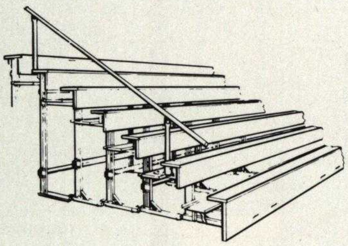
END CLOSURE PANELS

Used for enclosing exposed ends of Wall-Attached seats when closed. Fastened permanently in place. Not removable. Thick plywood finished with clear lacquer.



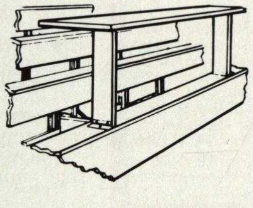
VENTILATING GRILLS

Installed in front or hinged top risers for heat or air circulation when seat sections are installed in front of radiators or ventilation ducts. Olive green finish.



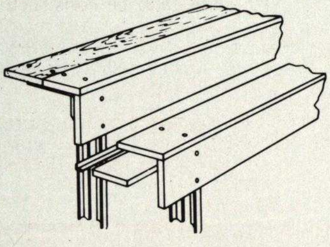
END RAILS

Furnished for movable or wall-attached seats of 7 rows or more. 1-11/16″ O.D. steel pipe; olive green baked enamel. Hinged uprights clamp into metal sockets bolted to seats. Stored on footboards when seats are closed. Back rails also furnished for movable seats.



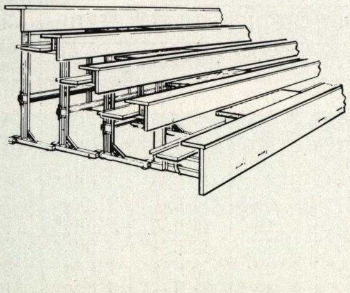
SCORER TABLES

Available in standard 6′ and 8′ lengths. Top quality seasoned lumber. Non-scuff composition reinforced top, 22″ wide, 3/4″ thick. Mounted on seatboard with bolts and wing nuts. Legs fold under table for storing. Clear lacquer finish.



FILLER BOARDS

Should be installed at top row level when structural conditions keep top seat more than 6″ from wall. Solid wood 1-1/16″ thick, mounted on steel supports fastened beneath top seatboard.



AISLE TREADS

Make it easier to reach upper rows of seats . . . may be required by law or preferred by buyer. Tread is 3′ long (can be furnished in special length if desired). Mounted on steel brackets bolted to footboards. Flush with seatboard in front of footboard on which they are mounted. Won't interfere with opening or closing. Furnished at extra cost.

SPECIFICATIONS FOR MEDART TELESCOPIC GYM SEATS

GENERAL SCOPE—As shown by plans and covered by these specifications, contractor shall furnish and install the following length units of Medart Telescopic Gym Seats, as manufactured by Fred Medart Products, Inc., St. Louis, Missouri, or approved equal in the opinion of the architect.

......ft. long units......rows high, wall type.

NOTE: Although standard length sections are specified in foot increments, actual length is 1″ less than nominal dimension, i.e., 16′0″ section is 15′ 11″ long.

Material and workmanship to be of best grade. Fabrication and finish shall be in accordance with the highest standards for this type of work. Equipment shall be installed by factory trained personnel. Contractor shall furnish all hardware required for proper installation. Equipment shall be guaranteed against defects in material or workmanship for a period of one year from date of installation.

OPERATION GENERAL—Gym Seats shall operate on the telescoping principle. The front of the seats shall be in vertical registration when closed. Operation shall permit one or more rows of seats to be opened for use, while remaining rows are left in "nested" position.

MANUAL OPERATION—Gym Seats shall be of type to be opened or closed manually.

AUTOMATIC POWER OPERATION—Gym Seat sections shall be equipped with integral, electrically-powered operators, controlled from one or more panels. Opening or closing action to be achieved by turning the selector switch for a specific power operator and then actuating the key switch to the open or close position.

MEDART MOTO-VATOR OPERATION—Portable power-operated mover for use with Medart telescopic gym seats to open or close any size section up to and including 16 ft. long and 21 rows high.

DESIGN—1. Gym Seats shall be designed to support, in addition to their own weight, a vertical "live" load of 120 lb. per lineal foot of seatboard and footboard and horizontal "swaying" force of 24 lb. per lineal foot of seatboard. Consider steel parts only in calculating load stresses.

2. Maximum height, open or closed, shall not exceed............. When closed, seat sections of 3 to 12 rows inclusive shall not extend from wall in excess of 2′8½″; not more than 4′8½″ for sections 13 to 21 rows inclusive. When in open position, seats shall not extend from wall in excess of......... *Increase above depths 8″ if sections are power-operated or placed further than 1″ from wall for top seat comfort.*

3. Each row shall have depth of not less than 22″ from front to front of seatboard, a full 17″ of height from footboard to seatboard, and a row rise of 10½″ from seat to seat. Provide horizontal toe room of at least 6″ under the next lower seatboard.

NOTE: ABOVE DIMENSIONS MUST BE CHANGED FOR 24″ ROW DEPTH, AND/OR 11½″ ROW RISE.

CONSTRUCTION—Each standard length unit shall not exceed 16′0″—and shall consist of the following:

UNDERSTRUCTURE—The understructure shall be a rigid frame fabricated entirely of steel to conform to A.S.A. Specifications. All uprights, except the front uprights, shall each be constructed of two rolled steel angles with electrically welded boxtype cross members. Rear uprights shall be self-sustaining so that walls are not required to support any vertical load. Feet of rear uprights shall be fastened to floor at four points.

Each row of each full-length section to be supported by four uprights; each row of each half-length section (8′0″ or less), by two uprights. Uprights are to be transported in and out of the "nested" position by a multiple of bronze-bushed rubber wheels (2 per upright) completely covered by steel housing. The "live" load shall automatically compress the coil spring actuating each upright, permitting a flat shoe to bear firmly on the floor. When seats are extended, each upright must be interlocked (1) at the top, to the foot and seatboard support and (2) at the bottom, to the wheel housing of each succeeding upright. *Scissors-action linkage between succeeding rows will not be accepted.*

First row of seats shall have formed steel uprights interlocked with succeeding uprights and shall be equipped with toggle mechanisms automatically operated by raising and lowering of hinged front riser. Lowering of front riser shall automatically bring 8 corrugated rubber shoes into firm contact with floor, preventing shifting.

All welding shall be performed by certified welders and manufacturer shall present such certification upon request. Bolts for field assembly of steel understructure shall have lock washers.

RISERS, FOOT AND SEATBOARDS—All wood parts shall be of seasoned, quality lumber, carefully sanded, finished with rounded corners and bolted securely to steel members. Finished sizes shall be as follows:

Seatboards....................	1-1/16″ x 9″ to 9½″
Footboards....................	1-5/16″ x 9″ to 9½″
Risers........................	25/32″ x 8½″ to 9″

Slat type boards will not be accepted.

Front hinged riser is to be equipped with a springbolt, key-operated lock, permitting locking of seats when closed. Riser to be wide enough to extend from seatboard to floor, and have sufficient pairs of hand holes to facilitate opening and closing of seat section. Optional: Top riser may be hinged if desired. Automatic top riser available at additional cost. Risers must be vertical type. All foot boards, seatboards and risers must be full-length.

END PANELS—End panels shall be furnished for wall type seats only at each open end exposed to view. End panels shall be of wood, shaped to outline of end of section when closed, and firmly fastened.

END RAILS—End rails of not less than 1-11/16 O.D. steel pipe are to be provided at all extreme ends of seat sections (not placed next to an end wall) which are 7 rows or higher. Construction to permit removal of end rails for storage within the gym seats when in the "nested" position.

AISLE TREADS (OPTIONAL)—Provide aisle treads (maximum 3′0″ width) in gym seat sections as shown on the plans. All aisle treads shall be mounted on metal brackets and bolted to and become an integral part of footboards. Aisle treads to be of such design that they can be installed or removed without remodeling of seating.

FINISH—Steel parts shall be finished with olive-green baked-on enamel. Wood parts shall be factory-finished with mechanically applied prime and finish coats of Medart's alkyd melamine varnish, each warm air-dried in special ovens.

MOVABLE GYM SEATS—(Furnished in sections of 3 to 12 rows inclusive.) Gym Seat section or sections specified above as "movable type" are to be similar to seating heretofore described. Specify whether movable seats are to be furnished with Hydraulic Lift Mechanism or Lift Trucks. (See page 2.)

RECESSED GYM SEATS—Gym Seat section or sections specified above as "recessed type" are to be identical to seating heretofore described, except rear uprights be provided with interlocking guide means at each upright permanently fastened within the recess to limit withdrawal of the section from the recess. *Link or folding attachments are not acceptable.* Recess depth shall not be less than 2′8½″ for sections of 11 rows high or less; not less than 4′8½″ for sections of 12 rows or higher. Interior recess height shall be 6″ greater than height of top seat. Top seatboard shall have 1″ clearance.

TABLE OF DIMENSIONS 22″ or 24″ ROW DEPTH

NUMBER OF ROWS	FLOOR SPACE				OPEN OR CLOSED HEIGHT	NUMBER OF ROWS	FLOOR SPACE				OPEN OR CLOSED HEIGHT

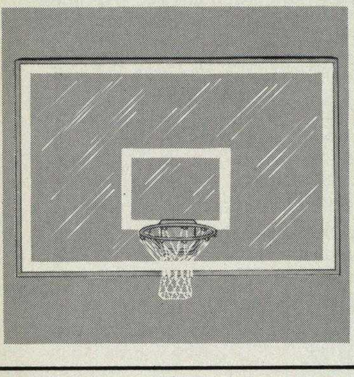
MEDART BASKETBALL BACKSTOPS

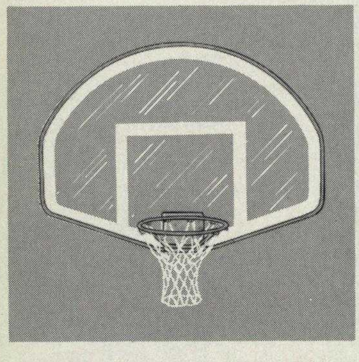
BACKBOARDS

GLASS



No. 1102 Rectangular Glass. Best of its type. Banking surface ½″ tempered glass (Herculite). Specially formed dual-angle metal frame riveted into a single unit after assembly. A precision, fast bank, important in rebounds. Glass set in Neoprene cushion. Target and border fired white vitreous enamel on reverse side.

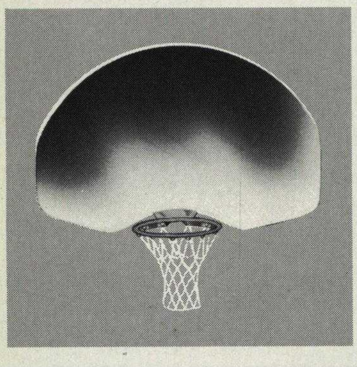
HERCULITE is the registered Trade Mark of The Pittsburgh Plate Glass Co.



No. 1104 Fan-Shaped Glass. Newest, finest made. Banking surface ⅜″ tempered glass (Herculite). Specially formed dual-angle metal frame riveted into single unit after assembly. Excellent rebound characteristics. Glass cushioned in Neoprene. White vitreous enamel border and target on reverse side.

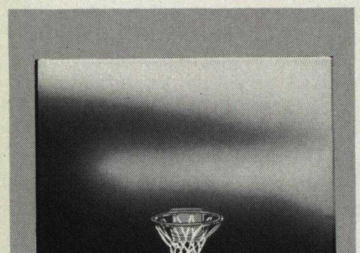
Height adjustment feature available for all backboards.
Write for complete information.

STEEL



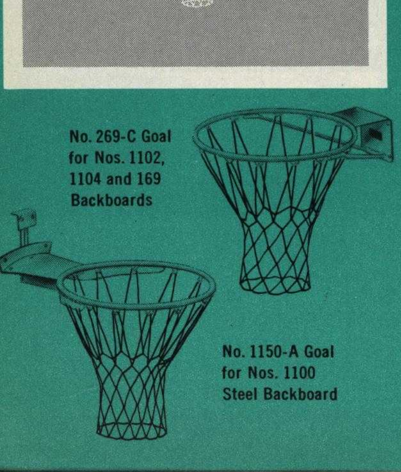
No. 1100 Fan-Shaped. 1-piece die-formed shell of 12-gauge steel. Perfectly rounded edges. Deep heavy-gauge steel, welded reinforcement on back assures level face and good banking surface. Has mounting for Official goals. Eggshell white finish.

WOOD



No. 169 Rectangular Face ¾″ thick, 5-ply, mounted on sturdy wood framework. A precision-made "true" backboard. Edges of smooth, rounded moulding. Won't crack, won't warp. Finish, 2 coats white enamel.

GOALS



No. 269-C Goal for Nos. 1102, 1104 and 169 Backboards

No. 1150-A Goal for Nos. 1100 Steel Backboard

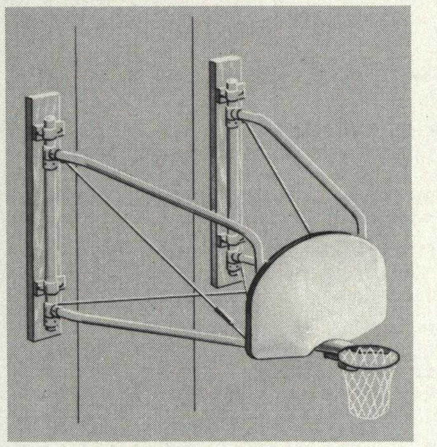
No. 269-C for Nos. 1102, 1104 and 169 with use of auxiliary mounting plate furnished. Conforms to mounting standards of NBC. Orange enamel finish. Slip-on net attachment; white cord nets. **No. 1150-A** for use with No. 1100.

A basketball backstop is a backboard complete with all suspension or framework necessary to support the backboard in its proper location. Location of backstops depends upon length and width of basketball court best adapted to size of gymnasium.

As building conditions vary, backstops must be built to fit individual requirements. Windows, wall radiators, ventilation ducts or partitions unable to withstand strain must be considered when deciding type of backstop to be used. Suspended ceilings, not provided with proper fittings during building construction period, also affect decision.

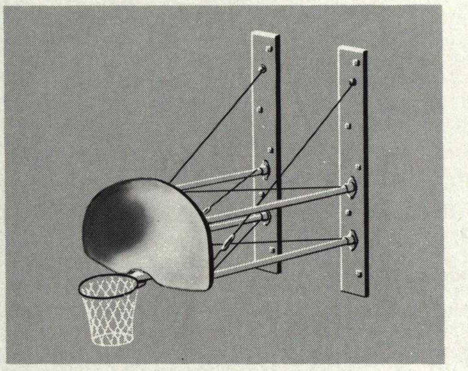
Medart can design and manufacture basketball backstops to suit every conceivable type of unusual structural condition. Backstop at left is typical of those designed by Medart, "tailored" to job conditions. Special equipment can be avoided if proper attention is given when building plans are prepared (i.e., standard backstops could be economically employed by locating courts or folding partitions slightly off center).

Very unusual structural conditions cause greater specializedtreatment. "Wings" and truss-type reinforcement for drop and brace pipes may be required or special reinforcement incorporated into wall construction. Although not recommended, Medart has even designed special suspended type backstops for extreme truss heights. (Such cases occasionally require installation of extra "deep" cradle.) Instead of specially reinforced drops and braces, expensive special suspended type can often be avoided by using portable floor type backstops.



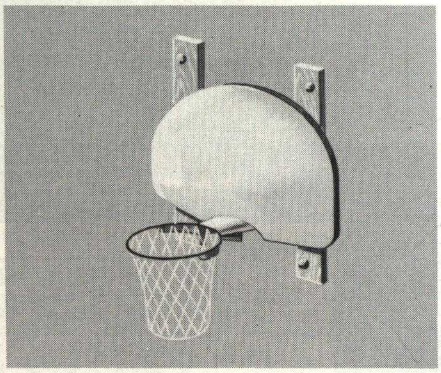
TYPICAL SPECIAL MOUNTING

STANDARD MOUNTINGS



No. 55 Extended Wall Braced—Can be braced from the wall up to 8′ 0″. Includes backboard, 4 heavy pipe extensions with malleable fittings, 2 sets of cross guys, 1 pair of oblique hanger braces, wall stringers. Guy and brace rods ⅜″ diameter with screw turnbuckles for tension adjustment. Specify extension dimensions.

No. 110 Wall Attached—Not official, but satisfactory for practice. Occasionally used in elementary school gyms where length of floor is less than 60′0″. May be installed in play rooms with rim of goal less than official height, making shots at basket less difficult for small children. Complete with wood stringers.



PORTABLE FLOOR AND STAGE BACKSTOPS

Medart Portable Backstops are available where suspended types cannot be economically installed in buildings with excessive ceiling heights. They are designed for ease of handling, movability, safety and durability. Write for catalog or consult with Medart about any special problem.

CONSTRUCTION FEATURES

The engineering and careful construction of all Medart Backstops assure strength, rigidity and durability. Compare the following with ordinary equipment:

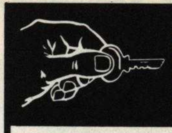
Fittings. Heavy-Duty malleable iron, sturdy without being cumbersome, for rigid connections. Undesirable strap steel not used.

Adjustable Guys. Steel rods ⅜" diameter. Screw-type Turnbuckle permits adjustment and absolute tension. No undesirable strap iron bracing.

Pipe. Overhead pipe is 3" I.D., the accepted, safe standard for all suspended gym apparatus. Drop pipes 2" I.D., braces 1½" I.D. Extension pipe for wall-type backstops variable in size but always provided of sufficient diameter to assure rigidity.

Winch. Exclusive with Medart! Worm-geared, crank-operated, "safety" winch. Automatically holds backstop when raised or lowered. Fully enclosed drum and gears; no chance of injury. Removable crank lessens unauthorized use. (Electric winch operator also available).

SUSPENSION (Truss member illustration below) Minimizes vibration from long span pipe deflection. Sufficient overhead and cross members provided to properly reinforce backstop supports. Suitable "cradles" supplied when conditions demand. Sturdy malleable fittings, with wide grip for rigidity and operation ease.



MEDART POWER-OPERATED REMOTE-CONTROL BASKET BALL BACKSTOPS

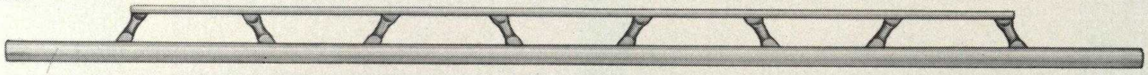
A Key Does All The Work .....

NOW . . . any Medart forward swing-up or backward swing-up backstop can be furnished with power operation! So simple, so easy, so safe, that any authorized person—boy, girl or grownup—can raise or lower the heaviest backstop without danger to himself, players, spectators or equipment.

A key-operated switch, for remote control of power-operator, can be placed at any convenient location in the gym. Key can be safeguarded to prevent unauthorized operation. Power operator can be installed on wall or overhead rigging depending upon conditions. Ruggedly built, compact and quiet, it requires no maintenance other than semi-annual operation.

Power operator can be installed on most Medart suspended backstops already in service.

ASK YOUR MEDART DISTRIBUTOR FOR DETAILS
or write direct



Truss Member

TYPICAL SPECIFICATIONS FOR SUSPENDED BACKSTOPS

SUSPENDED TYPE BACKSTOP

OVERHEAD SUPPORT—Backstops shall be suspended from 3" I.D. pipe, fastened to overhead roof frame members by malleable iron beam clamps. When overhead pipes are fastened on centers greater than 16′ they shall be reinforced with welded truss pipe (not necessary for overhead sheave pipe).

DROP PIPES—Backboard supporting drops to be 2" I.D. pipe. Fittings for fastening to overhead pipes shall be clamp type, with wide surface bearing. Drop pipes to be rigidly braced with 2" I.D. intermediate spacer pipes as required. All drop pipes to be guyed with ⅜" steel cross rods, equipped with screw type turnbuckles.

(NOTE: *Brace and drop frames of No. 270 type suspended, forward swing up backstop shall be of welded construction, with cross rods described above on drop frame.*)

BRACING (Select type desired)

No. 276 FORWARD SWING-UP TYPE—Bracing shall be forward of drop pipes, to consist of 1-1/4" I.D. pipe, hinged at the middle.

No. 261 FORWARD SWING-UP TYPE—Bracing shall be 1½" I.D. pipe. Upper ends to have malleable "broad contact" hinge fittings. Lower ends to permit elongation when hoisting, and equipped with locking mechanism.

No. 270 FORWARD SWING-UP TYPE—Bracing shall be 1½" I.D. pipe. Upper ends to have malleable "broad contact" hinge fittings. Lower ends to have slide-bar attachment to drop pipes, and with "micro-adjustment" nuts for simultaneous "seating".

No. 272 FORWARD SWING-UP TYPE—Braces to be 1½" I.D. pipe fastened near lower end of drop pipes with malleable iron fittings. Opposite ends to be wall fastened with toggle type fittings (bolted to wall stringers). For stage attachment braces shall be secured by hand screws fitted into flush type floor plates.

No. 271 BACKWARD SWING-UP TYPE—Bracing shall consist of 1" square steel bars hinged in middle, fastened at upper end to overhead support and at lower end near bottom of drop pipes. Connections to be malleable iron.

No. 424 FIXED SELF BRACED TYPE—Bracing to be 1½" I.D. pipe. Upper ends to fasten to overhead pipe. Opposite ends to fasten near lower ends of drop pipes. Connections to be malleable iron.

No. 420 FIXED WALL BRACED TYPE—Bracing to be 1½" I.D. pipe fastened near lower ends of drop pipes. Opposite ends shall be fastened to wall with fittings bolted to stringers.

No. 822 WALL BRACED GATE TYPE—Bracing to be four 1½" I.D. and four 1¼" I.D. pipes. Backboard to be connected to two 2" I.D. pipes, each hinged at one end and with opposite ends having detachable fittings. Braces to extend backboard________ft.________in. (specify distance).

All bracing to be guyed with ⅜" steel cross rods equipped with screw type turnbuckles. When required, braces shall also be equipped with spacer pipes.

WALL SUPPORTED BACKSTOPS

No. 55 WALL RIGID TYPE—Four 1¼" I.D. pipe supports shall extend backboard________ft.________in. (specify distance). Provide two sets of horizontal cross guys and one set of oblique hanger rods of ⅜" diameter with screw turnbuckles.

No. 421 WALL RIGID TYPE—Two 2" I.D. pipe supports shall extend backboard________ft.________in. (specify distance). Two 1½" I.D. brace pipes of suitable length. Provide horizontal cross guys of ⅜" diameter steel rods with screw turnbuckles.

No. 821 WALL RIGID TYPE—Four 1½" I.D. pipe supports to extend backboard ________ft.________in. (specify distance). Provide two sets of horizontal cross guys and one set of oblique hanger rods of ⅜" diameter with screw turnbuckles.

No. 472 WALL SWING-UP TYPE—Same as No. 421, except indicate hinge type fittings and include sheave, winch and hoist cable specifications.

No. 404 WALL SWING-UP TYPE—Four 1¼" I.D. pipe supports to extend ________ft.________in. (specify distance). Furnish two sets of horizontal cross guys of ⅜" diameter steel rod equipped with screw turnbuckles. Two ¼" diameter steel stay cables at approximately 45° to fasten at backboard top and to wall stringer. Stay cables to have screw turnbuckle adjustment. To have wall mounted winch and hoist cable for raising and lowering.

No. 405 SIDE SWING WALL TYPE—Four 1¼" I.D. pipe supports to extend backboard________ft.________in. (specify distance). Furnish horizontal cross guys of cable equipped with instantaneous turnbuckles. Two ¼" diameter steel stay cables at 45° fastened to top of board and wall stringer. With screw turnbuckles provide two pull ropes, necessary sheaves and rope cleats for moving to open or closed position.

No. 820 WALL GATE TYPE—Attach to wall by stringer. Four 2" I.D. pipe supports to extend backboard________ft.________in. (specify distance). Supports shall be mounted on two vertical 2" I.D. pipes with hinged malleable fittings. Provide one set of horizontal cross guys with instantaneous turnbuckle with screw adjustment and one set of oblique hanger rods of ½" diameter steel with screw type turnbuckles. Include hand screw locking arrangement to permit backboard to be disconnected for swinging backboard and pipe supports to wall.

FIELD HOUSE BACKSTOPS

No. 455 FIELD HOUSE BACKSTOP—Shall permit lowering backboard and extensions between uprights. Base to be two castings joined by three 2" I.D. cross pipes. Uprights shall be 3" I.D. pipe. Braces to be 2½" I.D. pipe. Base to have four concealed steel casters operated by foot lever. Backboard to be 7′0" from uprights. Four extensions shall be 1½" I.D. pipe and guyed with ½" steel rods and screw turnbuckles. Hand operated geared winch included for raising and lowering backboard.

No. 533 FIELD HOUSE BACKSTOP—Shall permit lowering backboard and extensions between uprights. Base to be two castings joined by three 2" I.D. cross pipes. Uprights shall be 3" I.D. pipe; braces to be 2½" I.D. pipe. Base to have four concealed steel casters, operated by foot lever. Backboard to be 10′ from uprights. Four extensions to be 2" I.D. pipe. Vertical strut and spacer pipes of 2" I.D. size. ¼" diameter 6 x 9 wire cable fastened to roof structure shall provide additional support for backboard in raised position. To have wall mounted winch and hoist cable for raising and lowering of backboard.

No. 634 FIELD HOUSE BACKSTOP—Same as No. 455 type, except to be rigid and without winch. Concrete counter weights to be supplied by owner.

No. 555 FIELD HOUSE BACKSTOP—Shall be of 6 inch pipe of L shaped design. Shall mount in a floor flange embedded in concrete slab (reinforced concrete slab by owner). Bolted flange connections to be below floor level to permit removal as desired. (Cover plate for floor opening by owner.) Sufficient extension to place backboard 10′ from upright.

BACKBOARDS AND GOALS

STEEL FAN-SHAPED BACKBOARD & COMPANION GOAL—Official 35" by 54"; drawn from 12 ga. steel with 1½" flanges. Finish white enamel. Goal of welded steel ring with "Slip-on" attachments for heavy-duty net. Goal to have orange enamel finish. Goal of welded steel ring with "Slip-On" attachments for 120 thread retarding type net also included.

TRANSPARENT FAN-SHAPED BACKBOARD & COMPANION GOAL—Official 39" x 54". To have metal frame; with Herculite imbedded in Neoprene. To have goal mounting plates front and rear with Neoprene sheeting, front plate fastened to frame. Border and target to be fired vitreous white enamel (on back surface). Goal to have orange enamel finish. Goal of welded steel ring with "Slip-On" attachments for 120 thread retarding type net also included.

WOOD RECTANGULAR BACKBOARD & COMPANION GOAL—Official 4′0" by 6′0", ¾" 5-ply fir, on yellow pine frame. Corners, tongue-and-groove joined. Frame to have 4 vertical braces. Board shall have one coat of flat white finish; backboard face, a second coat of white enamel. Goal to have orange enamel finish. Goal of welded steel ring with "Slip-On" attachments for 120 thread retarding type net also included.

TRANSPARENT RECTANGULAR BACKBOARDS & COMPANION GOAL—Official. To have metal frame; with ½" thick Herculite imbedded in Neoprene. To have goal mounting plates front and rear with Neoprene sheeting. Rear plate to be connected to safety rod. Border and target to be fired vitreous white enamel (on back surface). Goal to have orange enamel finish. Goal of welded steel ring with "Slip-On" attachments for 120 thread retarding type net also included.

(NOTE: *Installation Hardware is not furnished with backstops as erection conditions vary greatly.*)

GENERAL

FINISH—All parts, except backboards, goals, cables, ropes, bolts and nuts, shall be finished in black enamel. Wood stringers to be natural finish.

NOTE: *If other finish desired, specify at job site by painting contractor.*

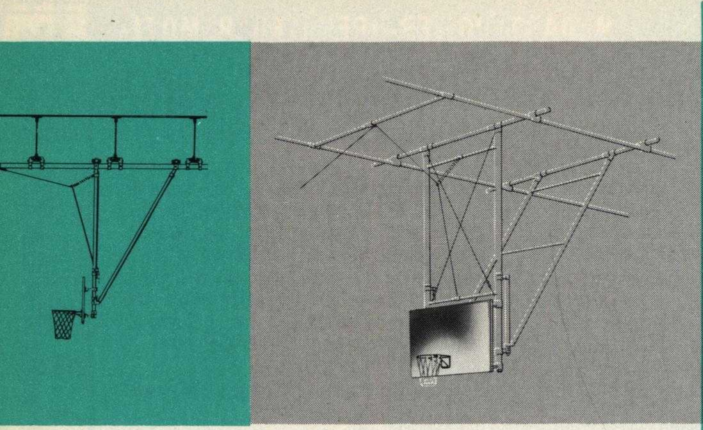
SHEAVES, ETC.—Swing up backstops shall be equipped with suitable sheaves and other fittings to permit easy hoisting.

WINCH AND HOIST CABLE—Winch to be enclosed type, worm gear design. Winch shall be operated by—(specify hand crank, portable operator, or remote control). Hoist cable to be of good quality steel.

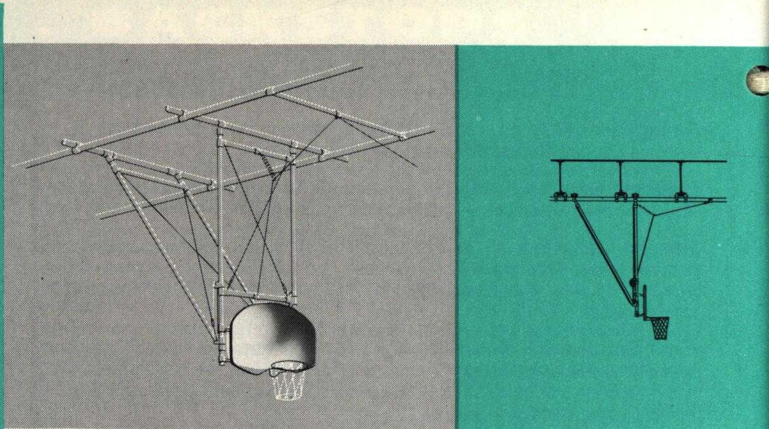
NOTE: *More detailed specifications are available, if desired.*

HERCULITE is the registered Trade
Mark of The Pittsburgh Plate Glass Co.

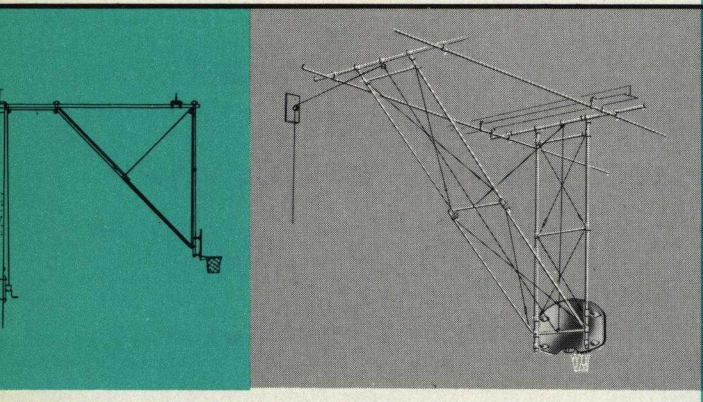
TYPICAL SUSPENDED TYPES OF MEDART BASKETBALL BACKSTOPS



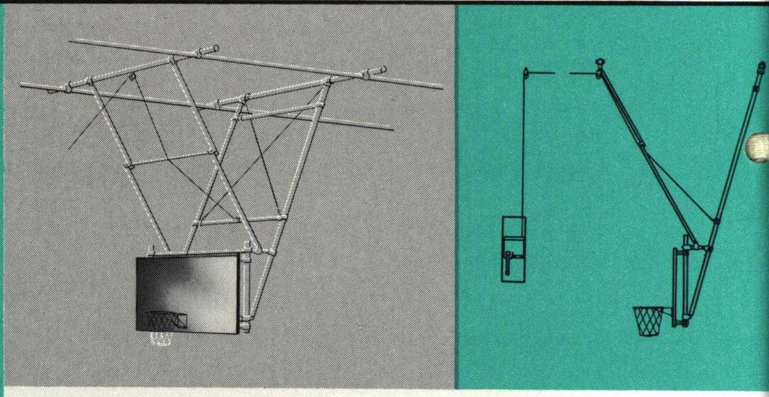
No. 270 Self-Braced Forward Swing-Up. Welded drop and brace frames assures exceptional rigidity. Slide rod connection between drop and brace frames is equipped with adjustment nuts to provide simultaneous seating when backstop is lowered. Fully automatic action with power operation.



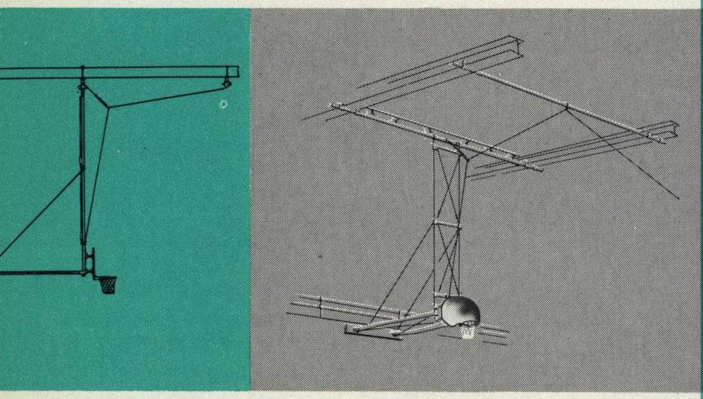
No. 261 Self-Braced Forward Swing-Up. For use in front of stage, balconies, or where wall must be kept clear. This backstop features exclusive locking mechanism which automatically disengages when backstop is hoisted.



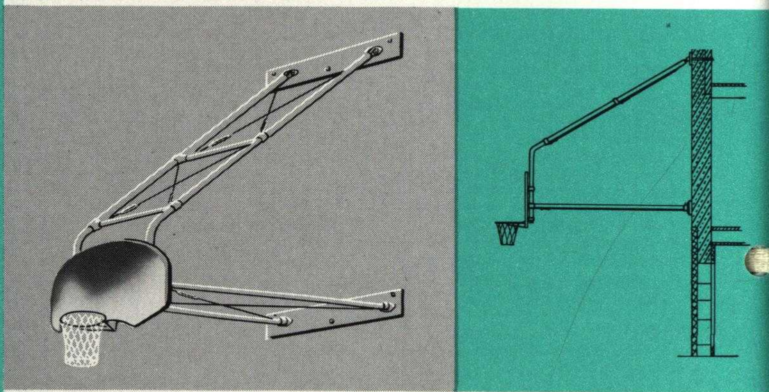
No. 271 Backward Swing Up. Whenever space and other building conditions permit, this type of backstop can be installed. The rear braces are jack-knife construction, folding together as the backstop is raised.



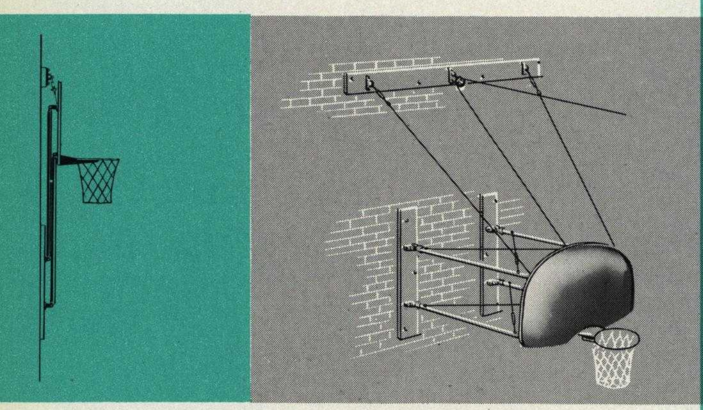
No. 276 Forward Swing-Up. Used where backboard must be placed close to wall or folding partition. Forward type bracing is jack-knife type, folding when backstop is raised.



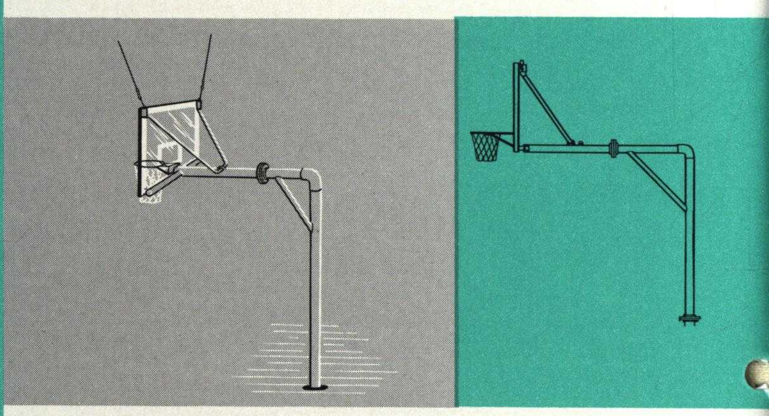
No. 272 Structure-Braced Forward Swing-Up. Can be braced to wall, balcony or stage floor. Hand screw or toggle bolt secured braces . . . easily unfastened for hoisting.



No. 421 Modified Fixed Wall-Braced. Recommended when wall is sturdy and board must be extended more than 8'0" and conditions do not interfere with stringer location. (Can be hinged to swing up if desired—No. 472.)



No. 404 Wall-Braced Swing-Up. Often used instead of suspended swing-up backstop. Equipped with hinged pipe supports, backstops can be folded up and back against wall. Extensions up to 8'0".



No. 555 Field House Type. Recommended when trusses are extremely high. Can be unbolted from mounting flange imbedded in concrete slab which is below floor surface.

National Basketball Committee Rules permit "6 inch extension" as official. This is Medart Standard.

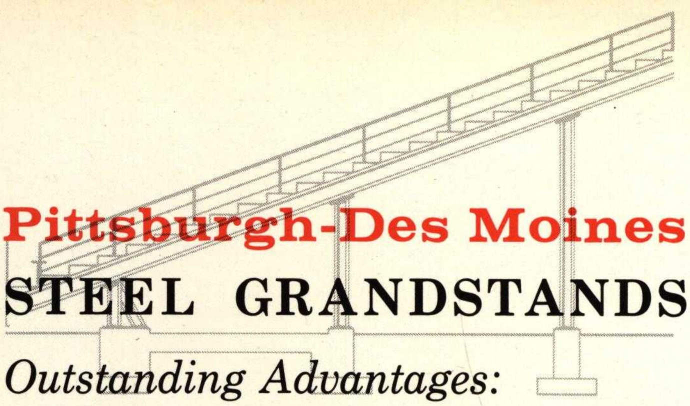
PDM
STEEL GRANDSTANDS

STEEL GRANDSTANDS by Pittsburgh-Des Moines

for schools and colleges, municipalities, fairgrounds, racetracks, industrial athletic fields, ball parks, etc.



Pittsburgh-Des Moines
STEEL GRANDSTANDS

Outstanding Advantages:

SAFE—The first requirement of spectator seating—absolute safety—is met to the full by PDM Steel Grandstands. They conform easily to the most rigid building codes.

KNOWN PHYSICAL FACTORS—No hidden elements. The stand is built of steel with definite, uniform physical properties, to strict applicable codes. Strength and soundness are clearly evident.

STURDY—Steel plates form the deck. Strong steel columns, beams and braces support it, with ample reserve strength for unusual stress conditions.

WATERTIGHT—Weatherproof steel deck permits use of underneath area for dressing rooms, toilets, concessions, storage, etc.

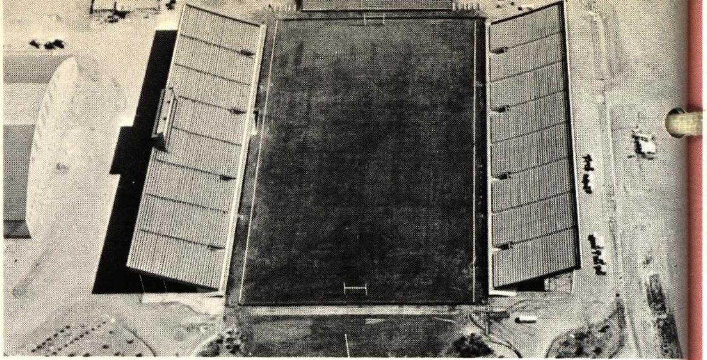
PREFABRICATED — All components of stand are factory-fabricated, permitting simple field construction.

UNIT SECTIONS — Unitized design with standard sections enables construction of stands of any size or arrangement, with easy expansion of capacity at any time.

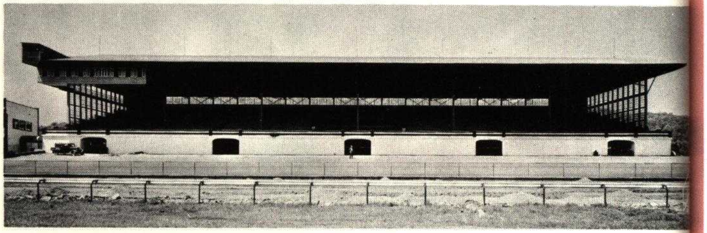
PERMANENCE — The properly-maintained steel stand does not age. It is immune to weather and season—can look like new for a lifetime of service.

ELASTICITY—The steel stand undergoes necessary contraction and expansion without change in steel properties, ideal in severe climatic or earthquake areas.

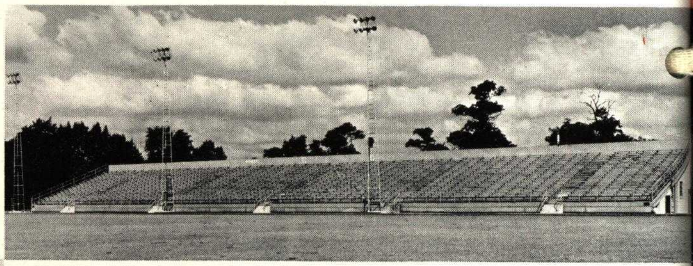
MOBILITY—PDM Stands are easy to dismantle and re-erect at different locations, when desired.



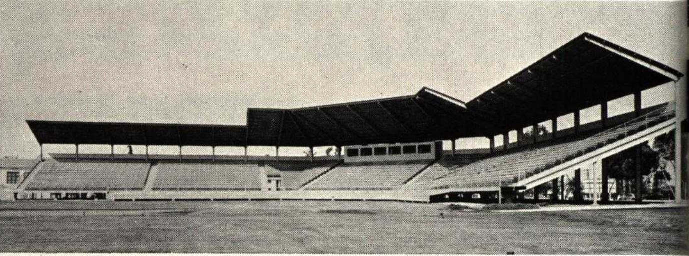
University of Wyoming, Laramie, Wyo., 15,000 seats.



Racetrack Grandstand, Waterford Downs, W. Va. 5,000 seats

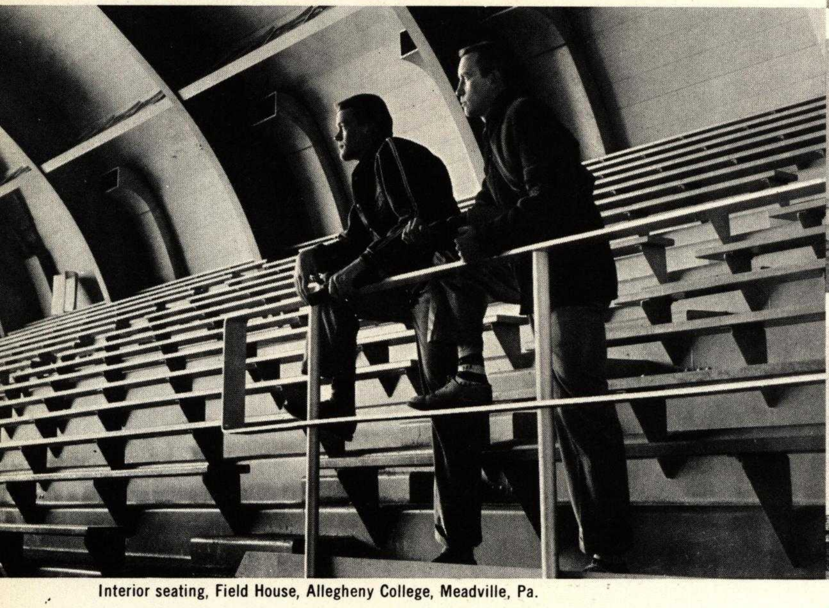


High School Stand, Coraopolis, Pa. 3,600 seats

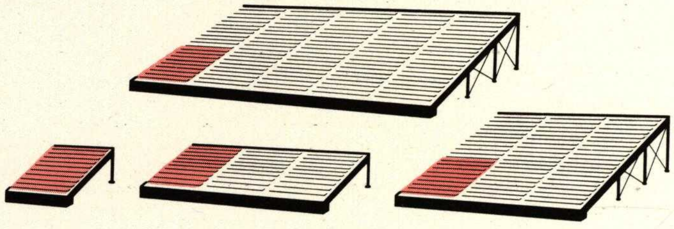


Covered Baseball Stand, Long Beach, Calif. 3,700 seats

Fairground Stand, Merced, Calif. 2,600 seats



Interior seating, Field House, Allegheny College, Meadville, Pa.



Basic design factors

With a basic standard unit section 18 feet long and 10 rows deep, your PDM Stand can be any number of sections long by any number of sections deep—individually engineered to fit your layout. Stands can be on one or both sides of the field, horseshoe-shaped, or full oval. Sections may be added at any time to increase capacity in width, depth, or both—always presenting a finished and substantial appearance.

Expansibility

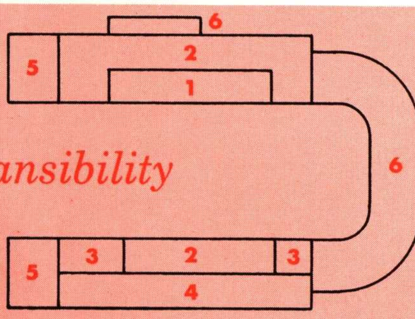


Diagram shows actual 6-step expansion sequence of Pennsylvania State University's PDM Stand from 2400-person capacity in 1934 (1) through additions in 1936 (2), 1937 (3), 1939 (4), 1948 (5) and 1949 (6) to a capacity of 30,000. In 1959-60, the entire structure is being dismantled, moved to a new field and expanded to 45,000 capacity.

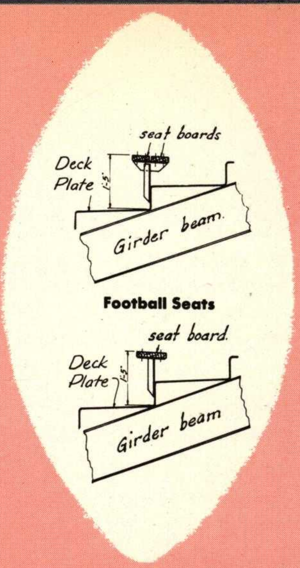
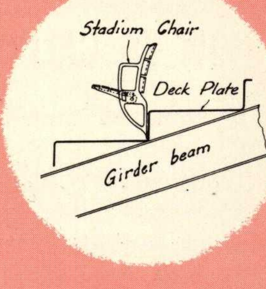
Seat spacing and aisle widths

In stadium layout, seat and row spacing must be considered carefully. Leg room must be sufficient, and seat spacing correct for requirements. For bleacher seats, standard *tread width* is 24″. When stadium chairs are desired for box seats or baseball, a tread width of 27″ to 30″ should be used. *Seat width* for bleachers can be 16½″ or 18″. The narrower width is recommended for mixed adult and children attendance—the 18″ width for adults predominately, as in college stands. *Aisles* vary from 3′ minimum. *Aisle spacing:* length of rows should not exceed 51′ for bleacher seating, nor 36′ when chairs are used. *Standard riser* is 8½″, consisting of 7½″ in riser and 1″ tread slope for drainage. Special situations may require greater slopes.



Football Seats



Baseball Seat Type

weathertight steel deck—a bonus value for economical underdeck development

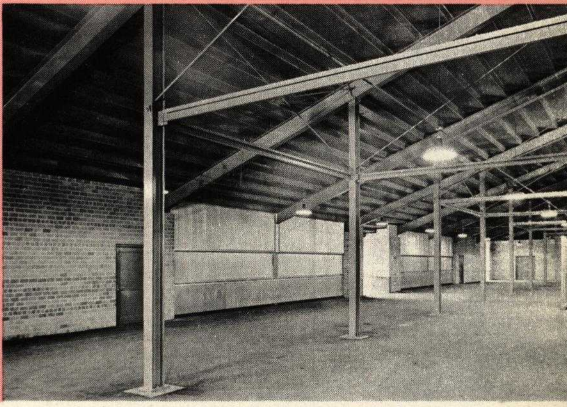
Equipment storage, etc.



Concession stands, telephones, ticket booths.

FOR CALCULATING SEATING CAPACITY—SEE FOLLOWING PAGE

Specification points to check

General—Description of Grandstand, including length, number of rows, and seating capacity desired. Location of site.

Design and workmanship—Design shall be in accordance with the best modern engineering practices. Workmanship shall be equal to the best modern practices, and of such quality as to produce in construction the full strength intended by the designer.

Loadings—The following types of loading must be considered in grandstand design: Dead load. Live load on seats, deck and supporting structures. Sway load (a) in a direction perpendicular to the length of the seats, and (b) in a direction parallel to the length of the seats. Wind load, on a vertical projection of the stand including railings, (a) when stands are fully loaded, and (b) when stands are empty.

Foundations—Give soil conditions. Give depth of frost.

Materials of construction—Steel shall conform to the Standard Specifications of the American Society for Testing Materials (ASTM) and the American Institute of Steel Construction (AISC) for buildings and other structural steel. Give minimum thickness of components. Lumber for seat boards shall be white oak, or vertical grain quarter-sawed fir lumber, finished two sides and two edges with "eased" top corners. Other material shall be suitable, of uniform quality, and without defects affecting the strength or service of the grandstand.

Allowable Stresses—All steel components of the structure shall be so proportioned that the stress shall not exceed the value set forth in the AISC Specification. Other materials where used shall be so designed and proportioned that their stresses shall not exceed the allowable unit stresses generally accepted as safe by engineering practices.

Special Requirements—The grandstand shall be of solid steel deck plates supported by steel girders, columns and bracing. Deck plates shall be flanged or bent into steps for stiffness and shall be shingle-lapped and bolted or welded to make the deck weather tight. The treads shall be not less than 24″ wide and sloped for drainage. Height of riser shall be not less than 7″. The seat lumber shall be securely bolted to steel pedestal supports spaced about 4′6″ center to center. The seat height shall be 17″ above steel treads. A steel apron plate shall be provided along front of stand extending from front treads down to within 4″ of the ground. One steel flashing plate shall be provided for each end of stand and each side of wells. These plates shall be attached to deck plates to conceal both the girders and the end of deck plates.

Hand Rails—Hand rails conforming to local safety codes shall be provided along the front, both ends and the rear of the stand, and for ramps, stairs and wells.

Aisles—consult local building codes. Spacing of aisles (a) seats without backs, (b) seats with backs. Width of aisles. Distance between seats: the horizontal distance back-to-back of seats shall be not less than 24″.

Welds—shall be made only by operators who have been previously qualified by test, as prescribed in the "Standard Qualification Procedure" of the American Welding Society to perform the type of work required, except that this provision need not apply to tack welds not later incorporated into finished welds carrying calculated stress.

Painting—The paint shall consist of two coats applied to all surfaces and one additional coat on top of deck of stand. The first coat shall be applied at place of manufacture. During the application of the first field coat clean white silica sand shall be applied to top of deck. After this paint has dried the excess sand shall be removed by sweeping or blowers and an additional coat of paint applied.

Pittsburgh-Des Moines Steel Grandstands

Pittsburgh-Des Moines Steel Deck Grandstands

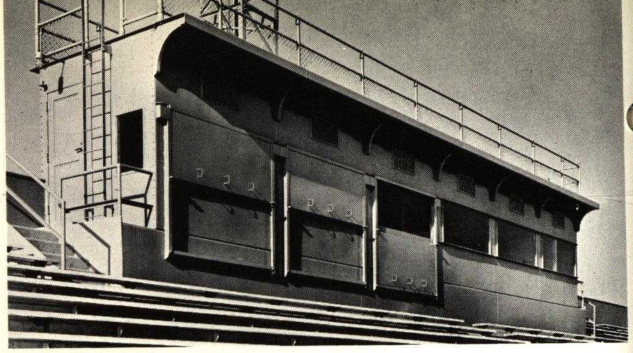
HOW TO CALCULATE SEATING CAPACITY

A standard unit or section of PDM Steel Deck Grandstand is 18'-0" long by 10 rows (20 feet) deep. In calculating seating capacity of a grandstand due allowance must be made for the space required for aisles, wells, etc. It is therefore assumed that, as an average, only 16'-6" of the 18'-0" length of each bay will be used for seating. Thus, with 16½" allowed per seat, each standard section will have 120 seats. If 18" are allowed per seat, each standard section will have 110 seats. The seating capacity of a straight stand may, therefore, be calculated as follows:

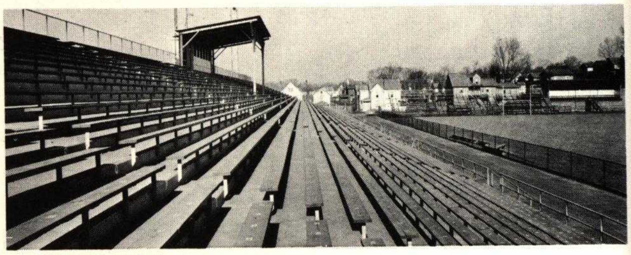
For 16½" Seat Width
Number of seats = length of stand in feet x number of rows x (12/18)

For 18" Seat Width
Number of Seats = length of stand in feet x number of rows x (11/18)

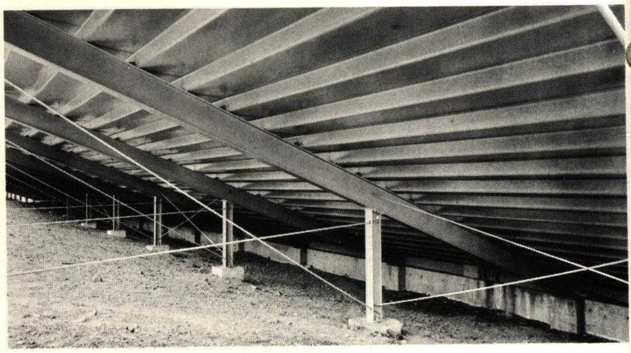
The seating capacities listed in the following table are based on 16½" seat widths. If the stand is to be laid out for 18" seats, the seating capacities listed in the table are reduced by 8⅓ percent.



All-steel press box.



Sturdy steel deck.



Protected, rubbish-free underdeck area.

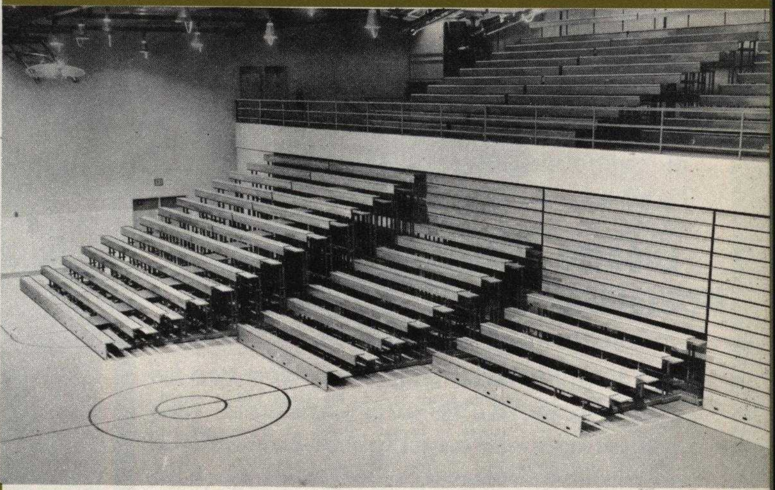
SAFWAY

SPECTATOR SEATING

TELESCOPING GYM SEATS



OPERATION . . . few moving parts and minimum metal against metal friction permit operating Safway Telescoping Gym Seats with the least amount of effort. Extra large wheels, straight line tracking and nylon glides at each point of metal contact help achieve this ease of operation.

SAFETY . . . Eight structural steel columns under each row and extensive steel bracing give Safway gym seats rugged dependability. Three separate exclusive safety devices insure complete reliability under all operating conditions.

APPEARANCE . . . Specially compounded sealer and high gloss varnish on seat and foot boards give Safway's vertical cabinet the finished appearance of fine wood paneling.

COMFORT . . . Extra wide top seat, spacious toe and heel room and inclined seats are some of the Safway features promoting spectator comfort. Choice of seat spacing dimensions lets you plan for your specific gymnasium requirements.

MULTIPLE USE . . . One or any number of rows can be locked open as required, for partial seating capacity for such gym activities as social affairs, chalk talks and lectures. Hydraulically raised movable gym seats are also available.

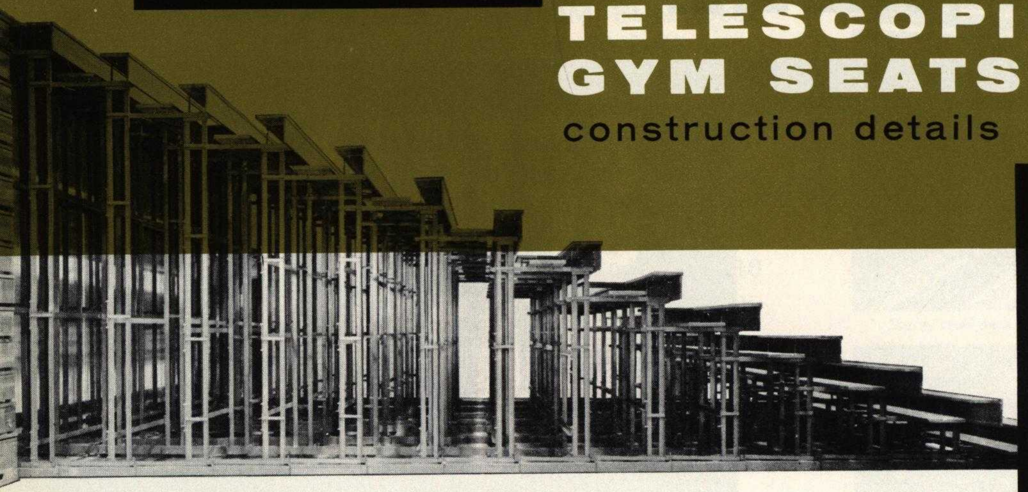
FLOOR PROTECTION . . . Non-marking wheels prevent scuffs and scratches and the wheels roll in adjacent paths to prevent grooving the floor. At no time does bare metal touch the floor. Floating floors are free to expand or contract without hinderance.

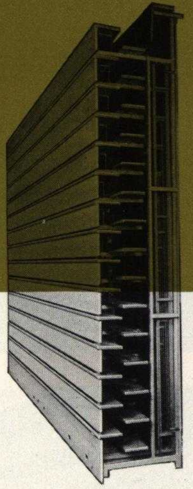
SAFWAY STEEL PRODUCTS, INC.
6228 WEST STATE STREET • MILWAUKEE 13, WIS.

SAFWAY

TELESCOPING GYM SEATS

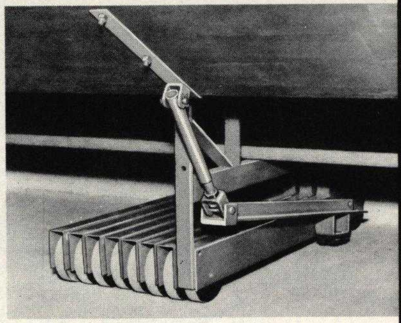
construction details





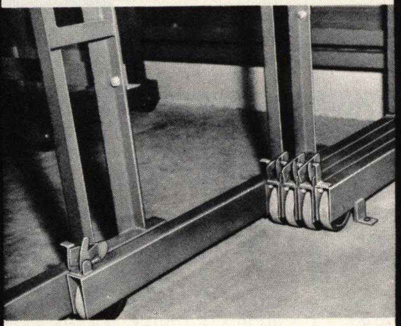
CLOSED CABINET . . . From three to twenty rows, Safway gym seats telescope into a self-contained cabinet just 3-feet deep. When nested, the cabinet face is completely vertical, eliminating projections that might injure players running close to the wall.

LOCKING MECHANISM

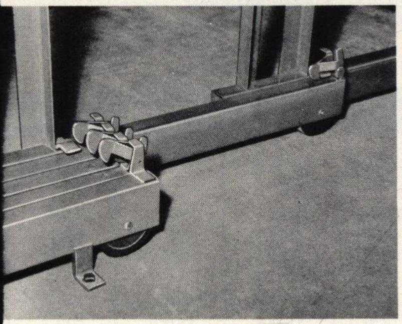


BRAKE RELEASED . . . With the first row apron board raised, the brake pad is raised from the floor, allowing the section to be moved in or out. (Note: 4 brake pads per full section).

BRAKE SET . . . With the apron board in the closed position, the brake pads are forced into contact with the floor, locking the section in any position. The apron board is equipped with a key operated cylinder lock, securing the apron boards, preventing unauthorized operation. (All locks are keyed alike).



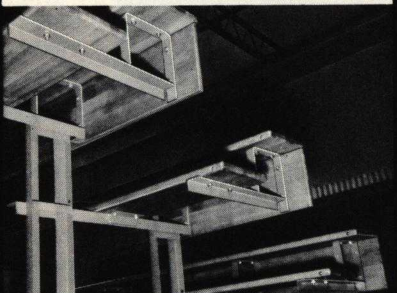
ROW LOCKS ENGAGED . . . As each row is extended individually, the row lock at the front of each wheel carriage engages the lock bar on the adjacent wheel carriage ahead. Each row is locked to the adjacent row in this manner, preventing any movement between rows. Any rearward movement, therefore, would require movement of the entire section.



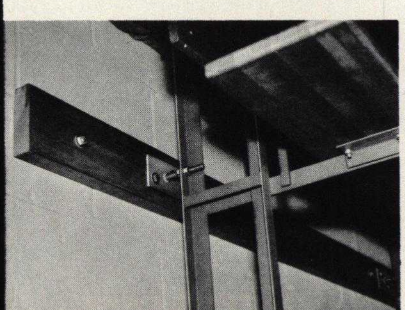
ROW LOCKS RELEASED . . . As the section is closed, the rearmost moving row takes its nested position. The projecting bar from the nested row trips the row lock, allowing the next row to move into its nested position. This process is repeated for all succeeding rows until the section is fully closed. Release of each row lock is automatic, providing a **smooth successive closing action** of individual rows. Since all rows are locked together, the section moves rearward as a unit, eliminating all binding and assuring a uniform closing action.

GENERAL OPERATION

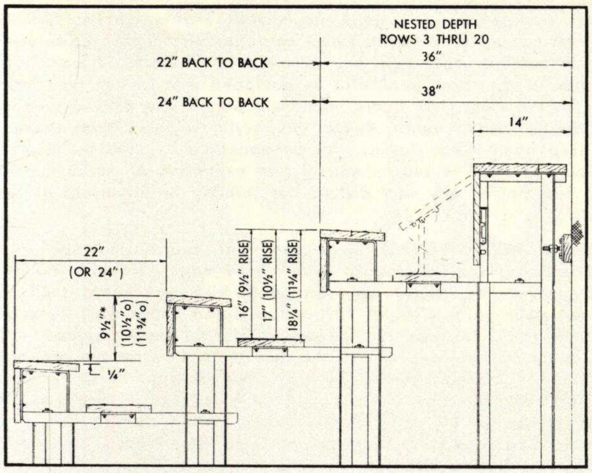
All seat rows are free standing and independent of adjacent rows. As each row is extended to its full open position, the row travels its full open distance before engaging the next row. This action sequence is repeated until the entire section is opened.



OVERHANG SUPPORTS . . . Additional steel support brackets are provided to eliminate flexing action of seat and foot boards on installations where overhang and distance between supports exceed normal design.



WALL AND FLOOR CONNECTIONS . . . The rear member of each section is connected to wood wall liners, anchored to the wall at the top and bottom and fastened with adjustable connectors. These members are mounted on wheels to allow full and free expansion and contraction of the floor. The slip connector fastened to the floor is free to move with the floor, maintaining a constant lateral base alignment of the rear member.



COMFORTABLE SEATING

Depending upon your needs, you may select the best combination of seating dimensions from the diagram above.

Each seat area has comfortably wide leg room with additional space for toe and heel movement. Each seat board slopes slightly to the rear to help spectators achieve their own best balance. And every seat is usable — even the top seats against the wall. Safway provides an extra wide top seat board for sufficient back room.

SMOOTH OPERATION

Nylon glides are provided on the metal structural members to eliminate any metal to metal friction in movement and to assure a smooth operation of the unit without binding.

STEEL COLUMNS

Eight structural steel vertical angles under every standard length row are welded into pairs to the lower wheel carriages. The columns are stabilized by angle steel braces to insure strength and rigidity.

WHEELS AND CARRIAGES

Two large wheels under each column (eight wheels under each row) ride in the industry's longest wheel carriage for extra stability. By interlocking the carriages, the wheels are locked in place under the columns transferring spectator loads directly to the floor. Each rubber wheel is non-marking and equipped with self-lubricating bearings.

MOTORIZED OPERATION AVAILABLE
NONE REQUIRED UNDER 14 ROWS

The exclusive strength, safety and comfort features described have been developed for the utmost in safety and reliability under all operating conditions. With the well-being of your spectators at stake, Safway has spared nothing in the design and fabrication of quality gymnasium seating. Safway Telescoping Gym Seats will give you many years of safe, trouble-free service.

Superior strength and operating ease are built into every Safway Telescoping Gym Seat installation.

Vertically, eight steel columns, welded into pairs, support each row of a standard section. Each row is braced against side sway by angle braces in the vertical plane. The vertical braces are extra efficient through wide spaced bolting to the columns.

Because all rows are interlocked, shock loads are evenly distributed throughout the entire structure. There are no critical parts subject to undue wear.

Safway's exclusive design incorporates a minimum of moving parts, reducing friction, drag and parts subject to malfunction. Nylon glides insure smooth movement. Large 4-inch by 1-inch flat faced wheels are self-lubricating and free moving.

Because opening or closing does not depend upon cross arms, scissors type levers, etc., each row rolls with minimum resistance. Power equipment is unnecessary.

In the open position, each row is locked in relation to the other rows, preventing any row from moving independently. In addition, any number of rows can be fixed in place. This is the most advanced safety device being offered.

From start to finish, every function of Safway Telescoping Gym Seats is designed and built for optimum capability. Every part is quality controlled. Every assembly is subjected to rigid performance testing. And, most important, every installation is guaranteed to meet all your requirements where it counts most—in your gymnasium.

SAFWAY STEEL PRODUCTS, INC.
6228 W. State Street
Milwaukee 13, Wis.

SAFWAY SPECIFICATIONS

SCOPE Furnish and install under factory trained supervision, Safway Telescoping Gym Seats as manufactured by Safway Steel Products, Inc., Milwaukee, Wisconsin, or approved equal, in accordance with plans as follows:

............Group(s) ....feet long ....rows high
............Group(s) ....feet long ....rows high

(Note: A group is any number of sections required for a given length of wall.) Entire installation shall be guaranteed for one year against faulty materials or workmanship.

OPERATION Gym seats shall operate on the telescoping principle and all columns, or foot and seat supports, shall roll on 4-inch by 1-inch flat faced self-lubricating rubber wheels. When closed, the front of the gym seats will present a flush vertical surface. Each row shall automatically and positively lock in relation to the adjacent rows as the gym seats are opened. Any number of rows may be pulled out and locked open by means of a friction brake operating against the floor and actuated by closing the front riser board. The gym seats shall be positively locked in the open or closed position by means of a cylinder lock mounted on the front riser board.

DESIGN (1) Gym seats shall support, in addition to their own weight, a uniformly distributed live load of not less than 100 pounds per square foot of gross horizontal projection. All seat and foot board members shall be designed for live loads of not less than 120 pounds per linear foot. Gym seats shall resist a horizontal sway force applied to the seats in a direction parallel to their length of 24 pounds per linear foot.

(2) Maximum height, open or closed, shall be ....
Maximum extended depth shall be ....
Nested depth for all rows, 3 to 20, shall be 36-inches for 22-inch back to back seat spacing, and 38-inches for 24-inch back to back seat spacing.
On wall-attached gym seats, this distance shall include a top row seat depth of 14-inches to provide as much seating comfort on the top row as on every other row.

(3) Each row shall have a depth of not less than 22-inches back to back of seat boards and a rise between rows of 10½-inches with a distance of 17-inches from seat to foot board. (A row depth of 24-inches back to back of seat boards and a 9½-inch rise with 16-inches from seat to foot board, or an 11¾-inch rise with 18¼-inches from seat to foot board may also be specified.) Horizontal toe room shall be at least 6-inches beyond foot board, and heel room shall be at least 3-inches behind foot board.

CONSTRUCTION All framework shall be of high quality rolled structural steel angles electrically welded during fabrication into the largest components that can be conveniently handled in the field. Bolted field connections will be held to a minimum. Standard sections shall be as near 16-feet in length as conditions permit. Each row of a standard section shall be supported by not less than 8 rolled structural steel angles welded into pairs to form rigid columns. Angle bracing between columns shall be adequate in size and so located that the all steel welded structure shall be entirely self-supporting before addition of wooden members. Each row shall have sets of angle braces. Each column shall be supported by two bronze bushed self-oiling 4-inch by 1-inch flat faced rubber wheels completely enclosed in a metal carriage. Metal against metal friction shall be reduced to a minimum by means of nylon glides located at the front and rear of the wheel carriages and at the top of the seat columns to permit maximum ease of operation. Gravity operated latches attached to the wheel carriages at the base of columns shall positively lock each row out with respect to each adjacent row. Each section of gym seats shall also be equipped with friction type locks operated by the front riser board which will permit any desired number of rows to be locked open. Keyed alike cylinder locks shall prevent unauthorized opening or closing. All permanent units shall be secured to the wall and floor in such a manner that expansion or contraction of the floor will not in any way disturb the stability or alignment of the gym seats.

WOODEN MEMBERS Seat and foot boards shall be solid industrial clear grade Douglas Fir with eased edges, finished 1-1/16-inches by 9¼-inches. The hinged basketball deflector board shall be edge glued clear grade Douglas Fir. Bottom apron board shall be edge glued clear grade Douglas Fir, hinged, reinforced and provided with hand holes for opening and closing the gym seats. A prop support shall hold this apron board, permitting easy access beneath the gym seats for cleaning. All riser boards shall be edge glued clear grade Douglas Fir, 25/32-inches by 7¼, 8¼ or 9½-inches. When closed, risers and seat boards shall form a vertical cabinet. Steel offset doweling is provided on ends of seat and foot boards to prevent end splitting. Laminated seat and foot boards optional.

FINISH All steel parts shall be finished with Gray baked-on enamel. Wood parts shall be factory finished on all exposed surfaces, prime coated with an Epon base finish, and hot sprayed with a final finish coat of a Golden Oak Phenolic varnish, control-dried to a tough wear-resistant hard coating. Completed wood shall be full bodied with protective coating of high lustre hard wax.

MOVABLE GYM SEAT SECTIONS Movable gym seat sections, up to ten rows high, shall be constructed to permit rolling the closed sections from area to area. Each movable section shall be raised onto oversized free-turning swivel casters for easy movement. When opened, the sections shall have the same stable characteristics as wall-attached sections.

ACCESSORIES The following accessories shall be furnished as requested:

GUARD RAILS Cadmium plated guard rails of not less than 1⅜-inches O.D. steel tubing shall be installed on the open ends of all gym seats.

END PANELS End panels shall be installed on all exposed ends of wall-attached gym seats.

AISLE STEPS Aisle steps 36-inches long and 12-inches wide shall be provided at seat level between seat boards and risers to effect a vertical aisle.

REMOVABLE SEAT AND FOOT BOARDS Removable seat and foot boards shall be provided, as required, for additional seating capacity between sections which must be kept separated because of doors, partitions, pilasters, etc.

SCORER'S TABLE A scorer's table with a tilted 8-foot by 16-inch plywood top and having a retaining lip on the lower edge shall be provided. No bolts shall be required for assembly.

NOTE: *Nothing above shall prohibit Safway from offering latest design innovations.*

ACCURATE SLIDE-RULE TYPE CALCULATOR

Designed by *Universal* engineers after years of on-the-job experience, this new slide-rule type calculator will be of valuable aid to you in planning a gymnasium with Roll-A-Way Bleacher seating. It figures seating capacity per gym size, and vice versa. It shows proper balcony height for ideal seating sight line in relation to main floor seating. At the same time, it shows how proper planning can reduce ceiling height to a practical minimum . . . for big savings in both building and heating costs. Send for yours today. There is no cost or obligation.

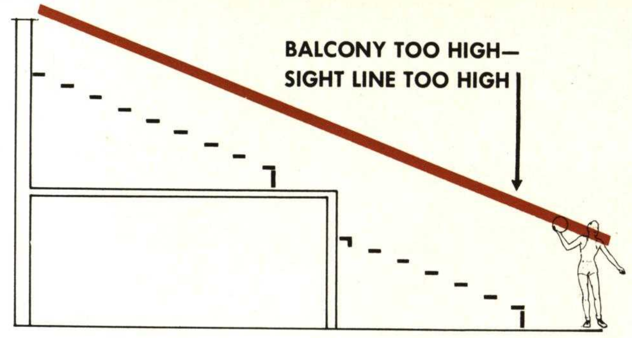
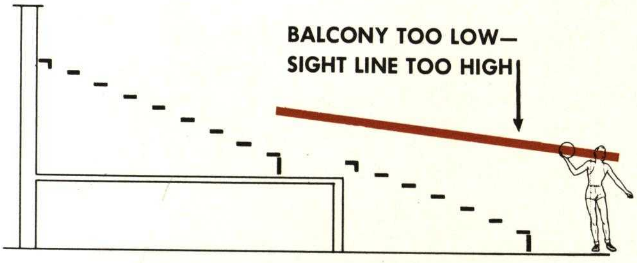
UNIVERSAL BLEACHER COMPANY • CHAMPAIGN, ILL.

How To Reduce Total Gymnasium Cubage . .



BALCONY TOO HIGH—
SIGHT LINE TOO HIGH

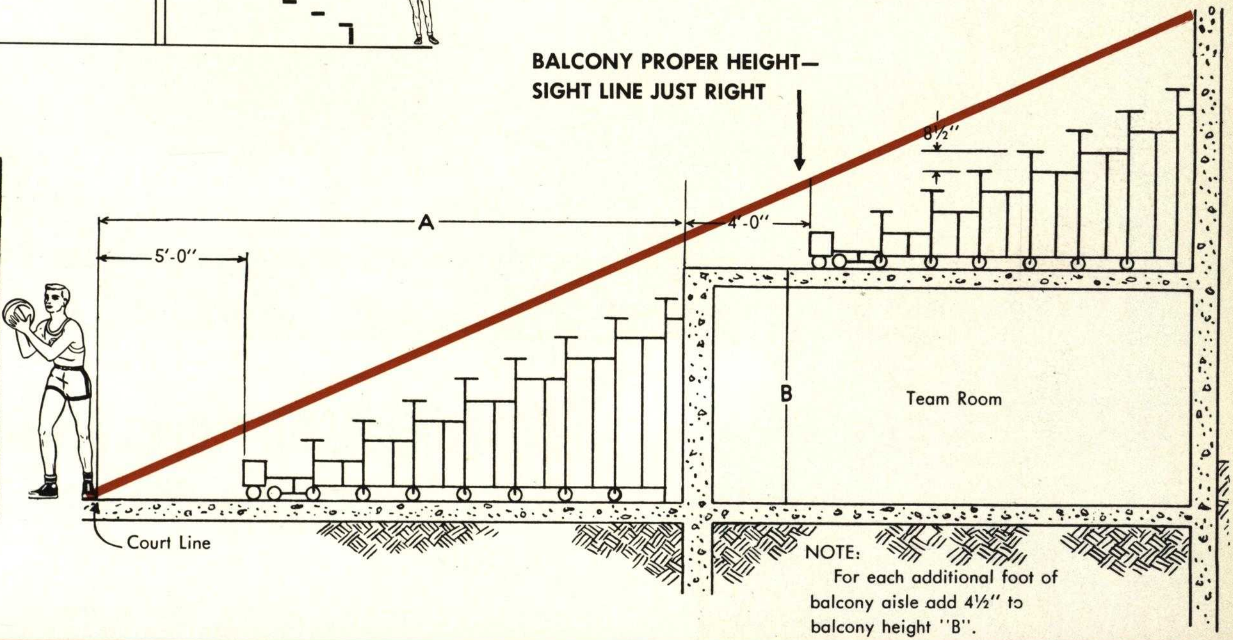


BALCONY TOO LOW—
SIGHT LINE TOO HIGH

Years of experience in gymnasium planning have proved conclusively that the distance from front of balcony to playing court line bears a definite mathematical relationship to height of balcony floor level above main floor level. The 8½″ rise per row on *Universal* Roll-A-Way Bleachers provides the "just right" sight line, proven-in-use, *plus* a saving of up to 2″ per row in wall height. When multiplied by the number of rows on both main floor and balcony, it represents a considerable saving in total building cubage . . . *a very important feature today!*

Using Roll-A-Way Bleachers on the balcony rather than fixed seating will give additional usable space for school activities. The table below (left) gives a quick method of determining the dimensions. Dimensions "A" and "B" bear a relationship to each other . . . so an adequate, proven-in-use sight line can be provided.

No. Rows, Main Floor		
Row	A	B
9	20′ 8″	8′ 0″
10	22′ 6″	8′ 9″
11	24′ 4″	9′ 5″
12	26′ 2″	10′ 2″
13	28′ 0″	10′ 10″
14	29′ 10″	11′ 7″
15	31′ 8″	12′ 3″
16	33′ 6″	13′ 0″



BALCONY PROPER HEIGHT—
SIGHT LINE JUST RIGHT

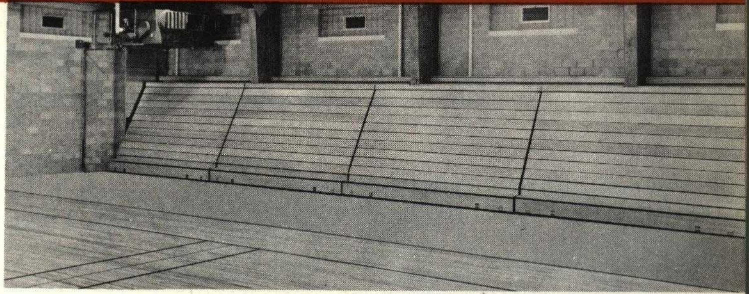
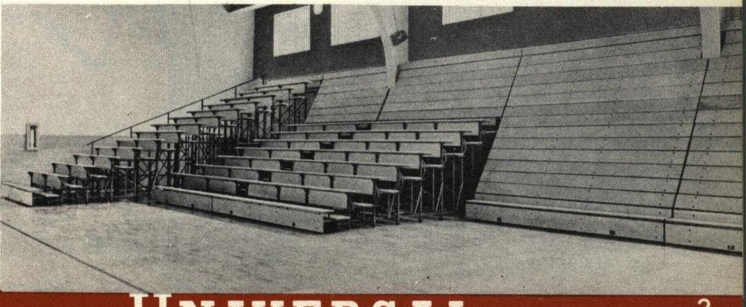
4′-0″
5′-0″
B
Team Room
Court Line
NOTE:
For each additional foot of balcony aisle add 4½″ to balcony height "B".

Roll-A-Way Bleachers are readily adaptable to all conditions of special gymnasium design, construction

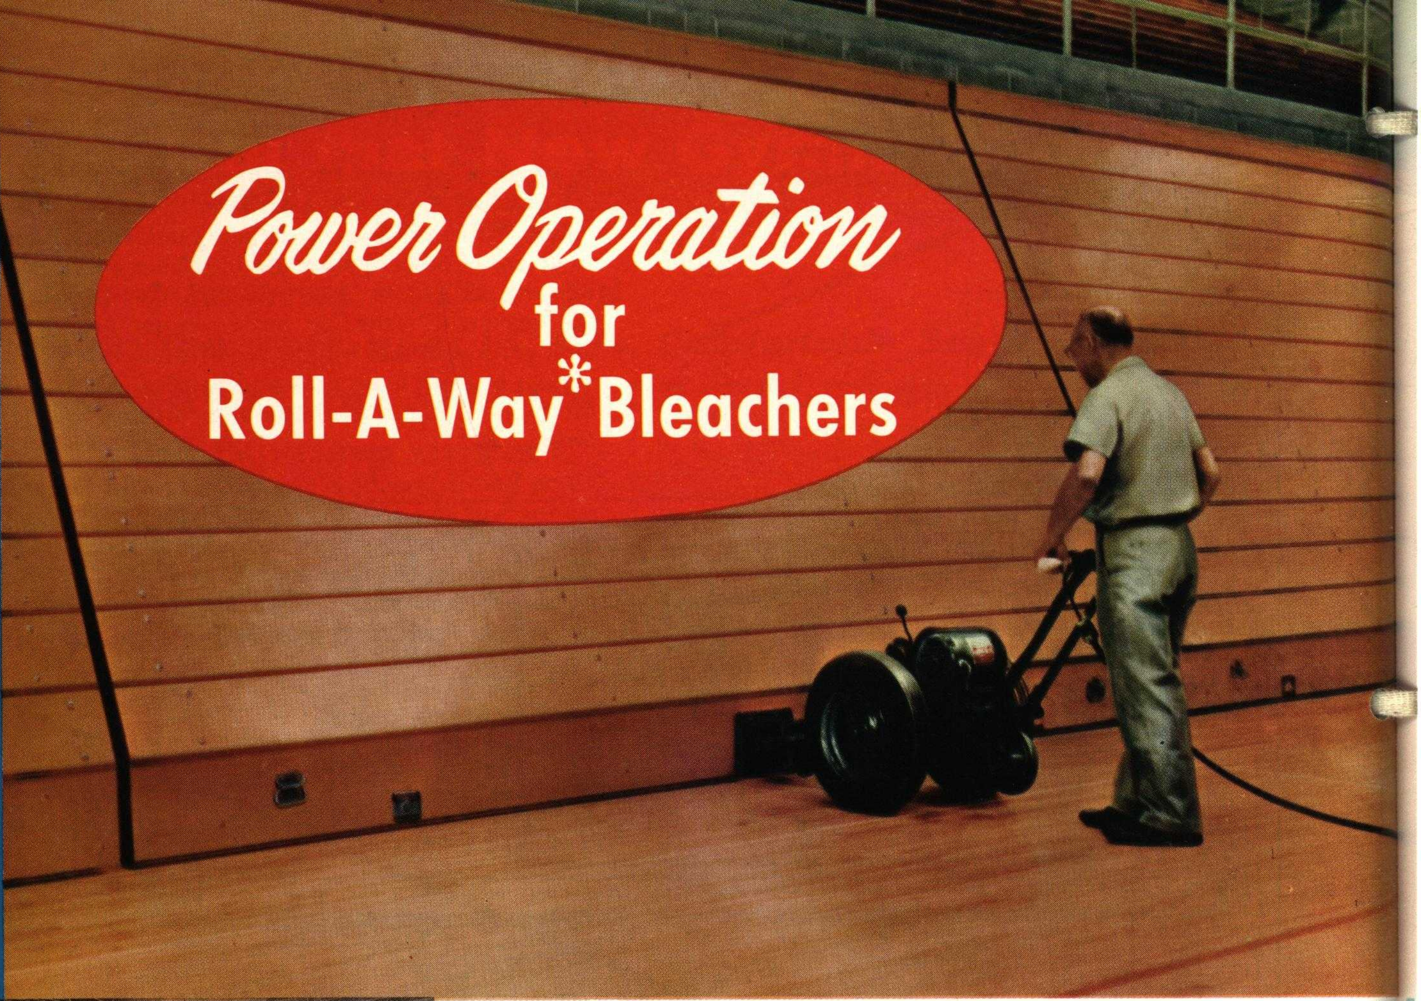


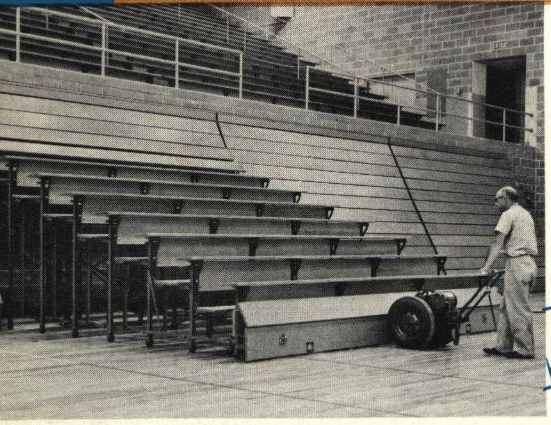


No matter how unusual your gymnasium design may be; no matter what type or dimension the columns, arches or trusses; no matter what the size or location of pipes, air ducts or ventilators . . . Roll-A-Way Bleachers are readily adaptable.

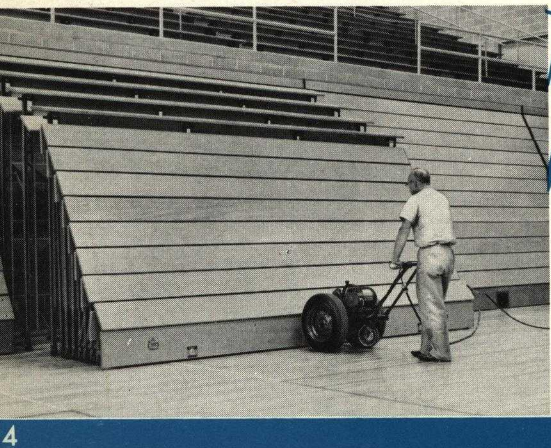
Your local *Universal* representative can suggest a practical solution to any unusual condition . . . backed by *Universal's* engineering department with over 33 years' experience in bleacher arrangements. Write for assistance with your particular problems on special conditions.

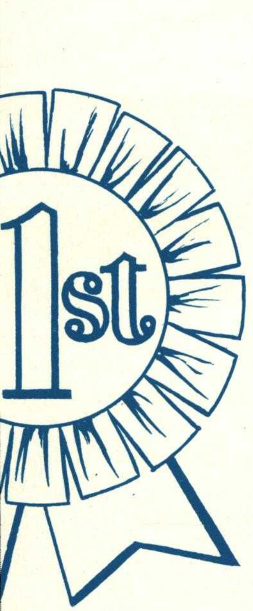
Power Operation for Roll-A-Way* Bleachers





Opening or closing with equal ease, Poweroller not only speeds up operation, but does a more careful job. Safe, accurate operation is guaranteed.





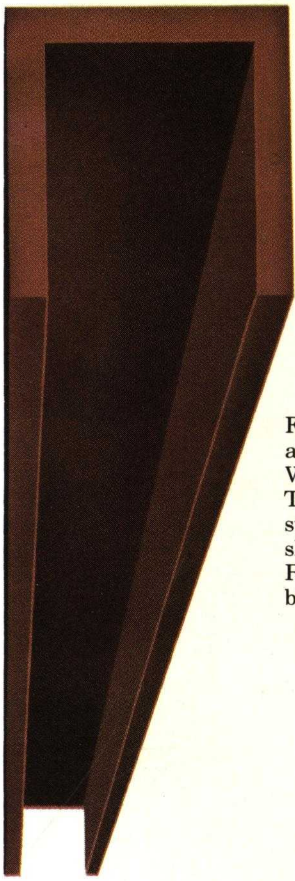
*POWEROLLER** opens and closes 10 to 30 rows quickly, surely, safely

Opening big 20 or 30 row sections of Roll-A-Way Bleachers is a simple, fast procedure with the Universal Poweroller. One man can open or close any section in a few seconds, and it's the economical way, too. No expensive electrical switchgear or wiring is required, and no added building costs are incurred.

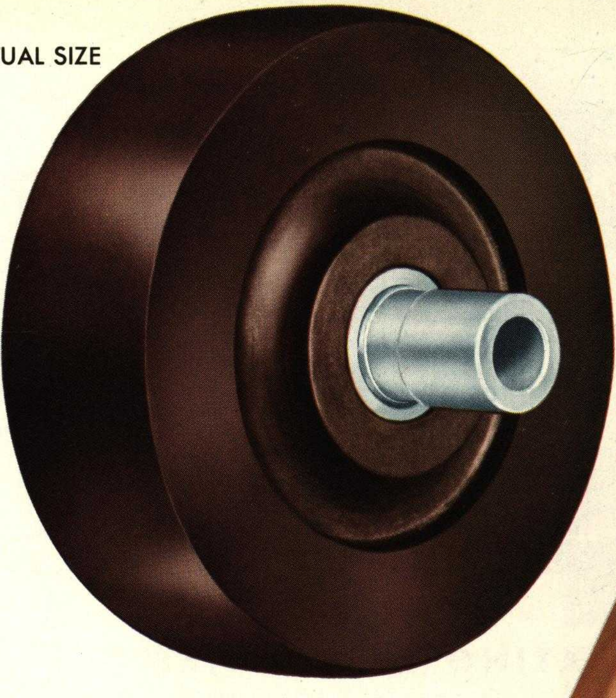
The Poweroller is a compact, mobile electric power unit especially designed for its purpose. There are no complicated cable arrangements or mechanical linkages to get out of order. Just plug its 100-foot detachable cord into any 110-volt, 60-cycle outlet, give the handle switch a slight twist and you're ready to open or close any number of rows quickly. The operator merely guides the unit from section to section and directs its action. High-traction pneumatic tires enable the Poweroller to do all the work while protecting the finish of your gym floor.

Loss of seating by failure of smaller, individual section motors is avoided because the big, heavy-duty motor in the dependable Poweroller assures continued operation of all bleachers. And powered operation of Roll-A-Way Bleachers does not prevent their operation manually. They can be opened or closed by hand if necessary during a power outage.

*T. M. Reg.



ACTUAL SIZE



ACTUAL SIZE

EXTRA-HEAVY STEEL POSTS FOR EXTRA STRENGTH

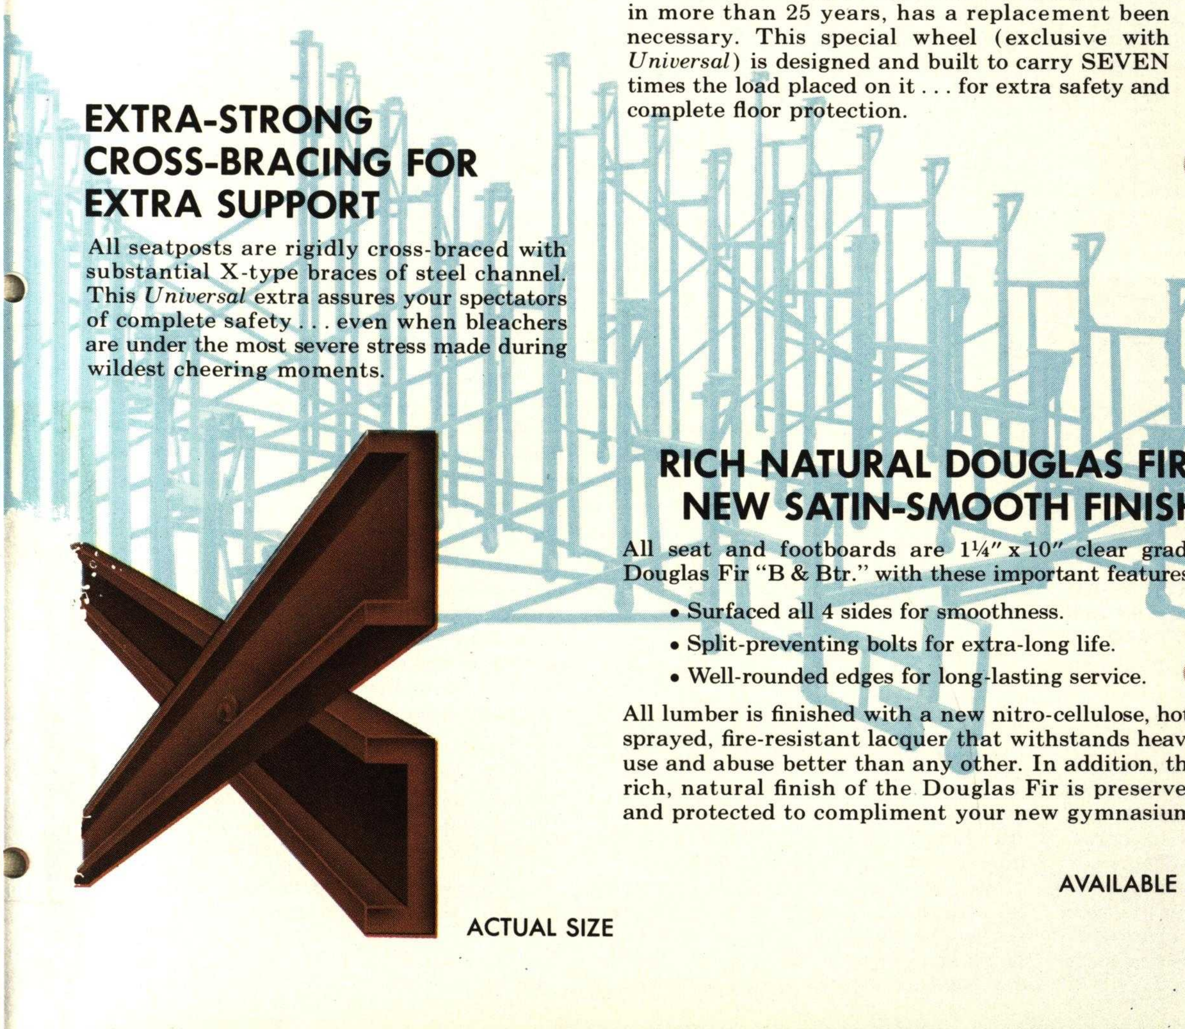
Four steel posts under each seatboard in a standard section give *Universal* Roll-A-Way Bleachers their rugged strength. These posts are 1½″ x 1½″ x 3⁄16″ hot rolled steel channel, stronger than all other shapes of comparable weight. *Universal* Roll-A-Way Bleachers pass every State bleacher code or law that exists.

EXTRA-LARGE WHEELS FOR FLOOR PROTECTION

Roll-A-Way Bleachers roll easily on extra-large 3½″ diameter, 1¼″ flat face, self-lubricating wheels that cannot mark gymnasium floors. These modern mocha rubber wheels contain NO carbon black and are fitted with oilite bearings and case-hardened steel bushings; require no servicing. Never, in more than 25 years, has a replacement been necessary. This special wheel (exclusive with *Universal*) is designed and built to carry SEVEN times the load placed on it . . . for extra safety and complete floor protection.

EXTRA-STRONG CROSS-BRACING FOR EXTRA SUPPORT

All seatposts are rigidly cross-braced with substantial X-type braces of steel channel. This *Universal* extra assures your spectators of complete safety . . . even when bleachers are under the most severe stress made during wildest cheering moments.



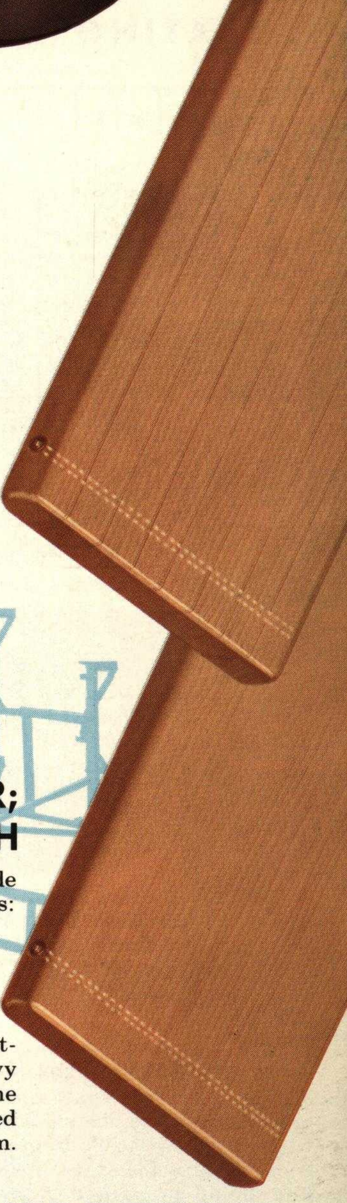
ACTUAL SIZE

RICH NATURAL DOUGLAS FIR; NEW SATIN-SMOOTH FINISH

All seat and footboards are 1¼″ x 10″ clear grade Douglas Fir "B & Btr." with these important features:

- Surfaced all 4 sides for smoothness.
- Split-preventing bolts for extra-long life.
- Well-rounded edges for long-lasting service.

All lumber is finished with a new nitro-cellulose, hot-sprayed, fire-resistant lacquer that withstands heavy use and abuse better than any other. In addition, the rich, natural finish of the Douglas Fir is preserved and protected to compliment your new gymnasium.



AVAILABLE SOLID OR EDGE-GLUED

** For comfort, top seat should be set about 3″ from wall.*
Sizes not included in table also available.

TIPS
ON GYMNASIUM LAYOUT

1. Basketball court dimensions according to 1959-60 Rule Book Rule 1, Section 1, are as follows: 94′ long by 50′ wide for college court; 84′ long by 50′ wide, for high school courts; 74′ by 42′ junior high school courts.

2. The Rule Book calls for minimum 3′ of unobstructed space outside the end or side line of the playing floor. On courts where it is impossible to provide at least 3′ of unobstructed space, a narrow broken line should be marked in the Court parallel with and 3′ inside the boundary lines. On such courts this restraining line shall be the boundary line during a throw-in, on that side or end of the court (until the ball has crossed the line).

3. Remember the face of the basketball backstop shall be 4′ in from the end line of the court, according to the latest rules.

4. If possible, use the full width of the side wall for seating, locating exits in the end walls. Arranging for exits along the side of the playing floor quickly reduces the seating capacity in the most desirable area.

5. Roll-A-Way bleachers are made in standard 16′ sections. Other length sections can also be made if necessary. The most economical method is to use as many 16′ sections as possible with an odd section at the end of the group. (7′ 6″ is the maximum size of a half section.) Remember, bleacher sections are normally placed 2″ apart to allow for opening and closing. It is strongly recommended that rather than detailing the actual size of each section, that the Architect give the complete length of the group and let the manufacturer quote on his most economical section arrangement.

6. Roll-A-Way bleachers are made from 3 to 30 rows (tiers) in height. The standard depth, front to back per row, is 22″. If 24″ depth, front to back, is desired, it can be supplied at a slight extra cost.

7. Standard rise per row of 8½″ provides ideal sight line (proven in use) and allows more flexibility in window arrangement plus a saving in wall height. A higher rise per row is available if desired.

SPECIFICATIONS FOR *UNIVERSAL* ROLL-A-WAY BLEACHERS

1. **GENERAL**—All Roll-A-Way bleachers shall be as manufactured by the Universal Bleacher Company, of Champaign, Illinois, or equal, as approved by the architect and/or owner.

2. **GUARANTEE**—The manufacturer must guarantee the Roll-A-Way bleachers against defects in material and workmanship for one year after the completion of the installation.

3. **QUANTITY**—Deliver and install Roll-A-Way bleachers under the supervision of a factory engineer, in the following quantities:

   (Give total length of all groups, number of rows, depth per row, rise per row, wall-attached or movable or recessed units.)

4. **DESIGN**—Roll-A-Way bleachers shall be designed to support safely, when in use, a live load of 120 pounds per lineal foot of seatboard plus 120 pounds per lineal foot of footboard, with a minimum safety factor of four. All tests will be conducted on steel parts only; wood members will not be used as structural members. Stresses in wood will not exceed those recommended by the United States Forest Products Laboratory. All steel members must conform to American Standards Association specifications.

5. **CONSTRUCTION** — Each standard length (16′) section shall consist of a complete set of foot and seat boards and four complete sets of steel understructure. All steel load carrying members shall be of regular hot rolled steel channel designed to support safely the load carried. All flat operating links shall be of not less than ¼″ thickness. Each set of steel understructure shall consist of sufficient load carrying posts located directly under each seatboard and they shall be connected together by steel angle arms to provide an easy-acting, non-binding folding arm principle of operation. Close fitting slides of any shape shall not be employed in the operation of the bleacher. All vertical load carrying posts shall be "X" type, cross-braced together in pairs in the vertical plane to prevent lateral movement or sidesway. The cross-braces shall be of rolled steel channel properly spaced on the seatposts to give maximum rigidity. Steel scissors action linkage or linkage requiring lubrication periodically will not be permitted. The complete understructure shall be composed of steel channel and angle. Tubular construction will not be permitted.

6. **LOCKING**—(a) Each Roll-A-Way section shall have two cylinder locks, keyed alike, to lock the sections in the closed position and to maintain alignment of the sections. Full units with only one central lock or units that use friction pads to lock the unit open will not be permitted.

   (b) The folding arms in the understructure shall be designed as to automatically lock the sections in the open position and to prevent the accidental closing of the front rows when open and either occupied or unoccupied.

   (c) Old style spring supported casters which require the weight of spectators to lock the bleacher will not be permitted. Each section must lock when open so that persons walking up the bleacher have a firm easy step, without being bothered by the unexpected spring and noise.

7. **WHEELS**—To insure ease of operation and to prevent floor surface marking, the wheels shall be self-oiling not less than 3½″ diameter with a minimum 1¼″ face and each wheel shall be complete with case-hardened spanner bushing. Wheels shall be of a modern mocha rubber and shall contain no carbon black. Wheels of lighter construction, smaller dimension, or of any other material, shall not be permitted.

8. **SAFETY FRONT**—The seatboards when closed shall tip to form the safety sloping front, for physical education activities when the units are closed.

9. **DIMENSIONS**—

   (a) The depth front to back per row shall be ☐ 22″ (☐ 24″ extra cost).

   (b) The rise per row shall be ☐ 8½″ (☐ 11½″ extra cost).

   *(c) The rear seat shall be placed 3″ from the wall for comfort.

   (d) The distance from seat to footboard shall be 18½″ with ample room for movement of feet to the rear for comfort.

10. **LUMBER**—Seat and Foot Boards—Shall be 5/4″ x 10″ best grade B & Btr. Douglas Fir Clear with surfacing four sides, kiln dried, and corners well rounded and edges eased.

    ☐ Solid ☐ Edge Glued

    Vertical Filler Boards—Shall be 1″ x 12″ clear edge glued Douglas Fir centered underneath each seat.

11. **FRONT ROW** — Seat Type Front Row — Shall be provided so that the first row of seats is always open in the closed position. A front seat that requires friction pads to attempt to hold the seat open will not be permitted. A fully closed bleacher that must use a key to obtain the front row for use will not be permitted.

    Folded front row shall be provided so that all rows completely fold up in a safety sloping front.

12. **FINISH**—All steel parts shall be properly cleaned and finished with modern Mocha baked on enamel, dried at 375° for at least 15 minutes.

    All wood parts shall be factory finished with machine sanding, sealed on all sides and edges, hand sanded as required, and finished with 2 coats of a new nitro-cellulose, hot-sprayed, fire-resistant lacquer. The finish shall be dried under controlled temperatures.

13. **PRODUCT IMPROVEMENTS**—Bleachers shall contain all of the latest product improvements that have been made since the writing of this specification.

OPTIONAL ITEMS

14. **END GUARD RAILS**—Shall be removable type of standard 1½″ pipe and shall be so constructed so they may be stored under the bleacher.

15. **END PANELS**—Of a size and shape necessary to conceal the understructure of the bleacher in the folded position; shall be constructed of plywood, finished as other wood parts and firmly fastened in place.

16. **SCORER'S TABLE**—Shall be 8 feet long by 12″ wide and shall attach to the footboard of the second row with standard 1¼″ pipe. The top shall slope for easy writing with a pencil tray at the bottom edge.

17. **POWERIZED ROLL-A-WAY**—Provide a POWEROLLER to open and close the complete installation, with one man operation. The POWEROLLER shall be provided complete with 100′ of rubber cord to utilize any 60 cycle, 110 AC outlet.

18. **MOVABLE ROLL-A-WAY** (Note Maximum 14 rows)—The same basic specifications for regular wall attached units shall apply to movable units. In addition, these units shall be hydraulically raised onto a sufficient number of large 4″ diameter, 2″ face wheels for easy moving. Each unit shall have the compete lifting unit built into the base of each movable unit. The use of floor trucks to move the unit will not be permitted. Rear guard rail shall be provided along the rear row of each unit.

19. **SEATBOARD LEVEL AISLES**—To preserve maximum seating capacity, provide seatboard level aisles with abrasive-faced, non-slip Safety-Walk treads applied to seatboard surfaces.

20. **FOOTBOARD LEVEL AISLES** — Provide footboard level aisles of matching lumber and enameled steel, firmly attached to the basic bleacher assembly, that do not interfere with normal opening or closing of bleachers.

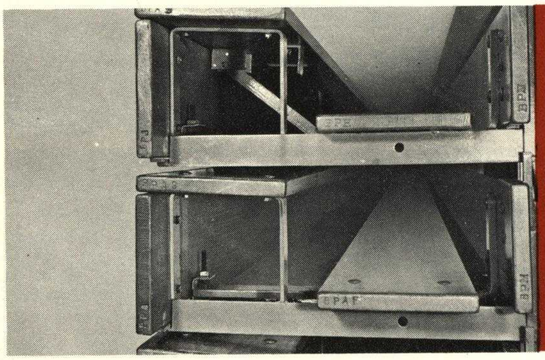
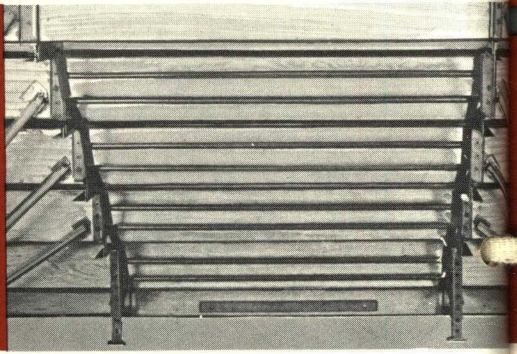
WAYNE MODEL 50 VERTICAL FRONT

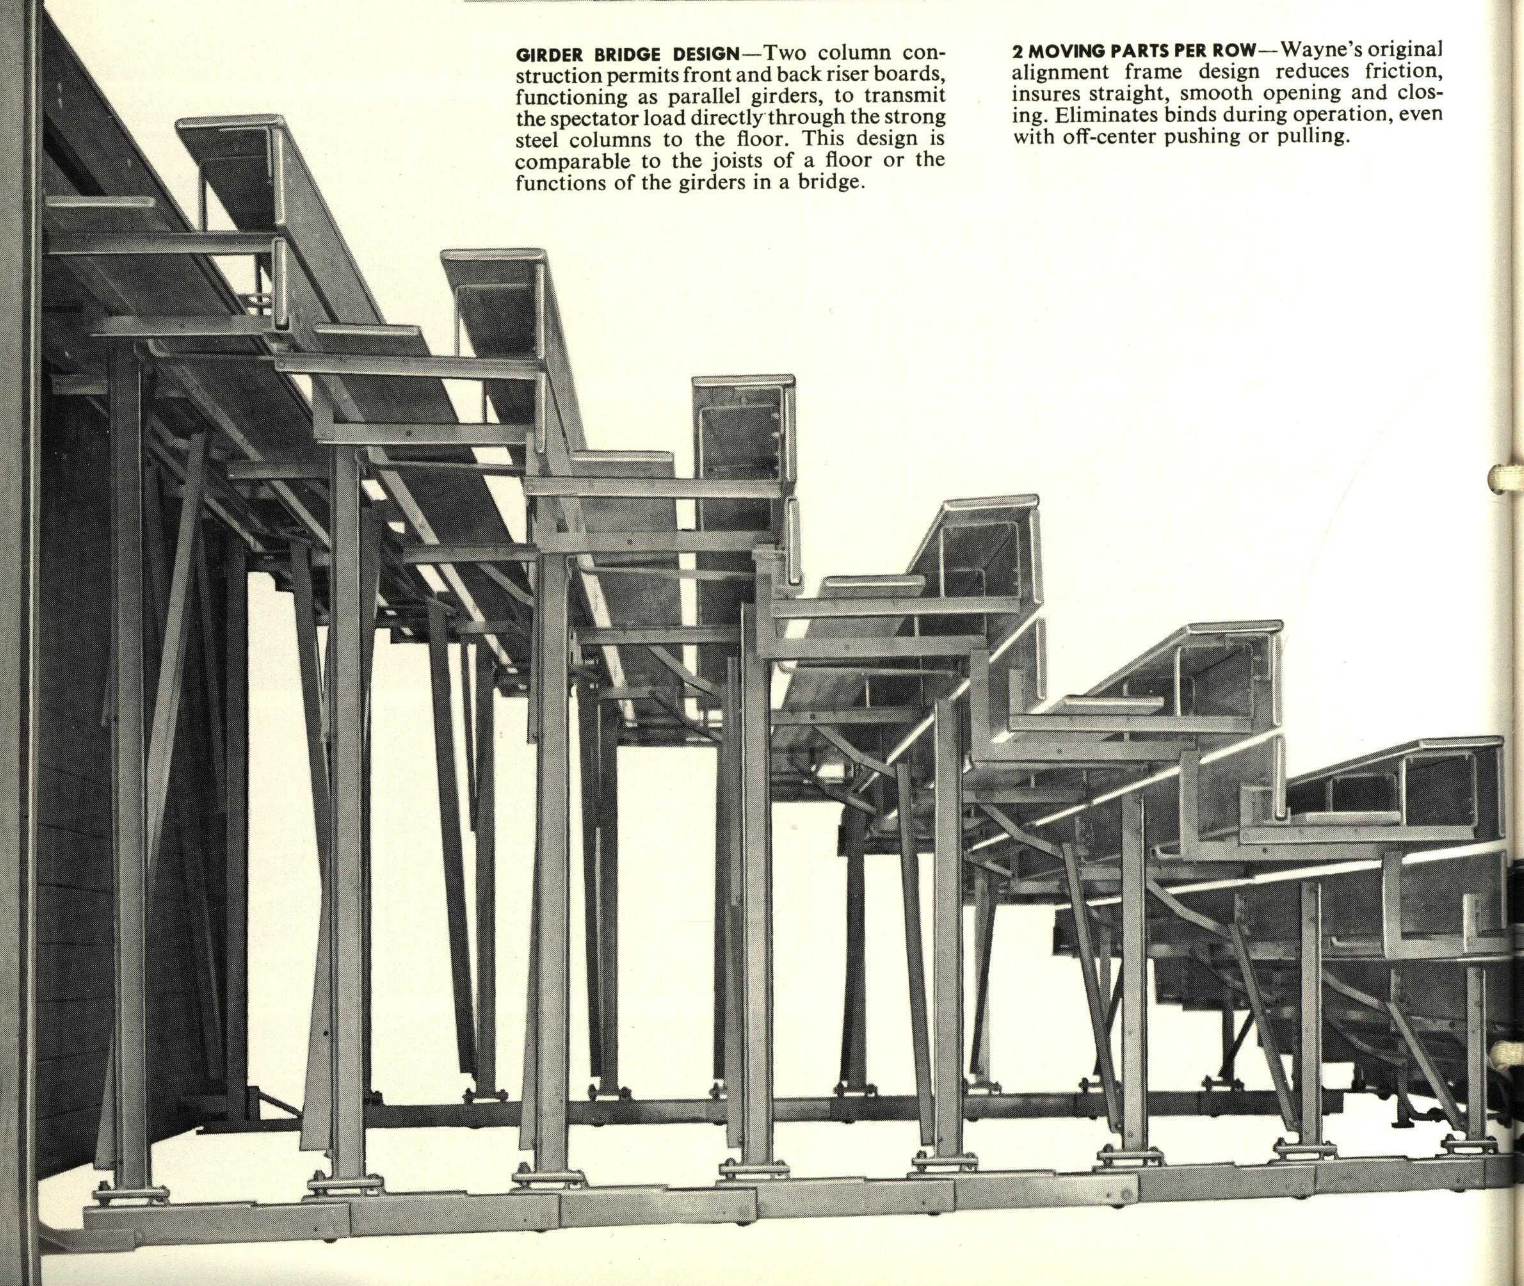
engineering excellence • design efficiency • greater seating value

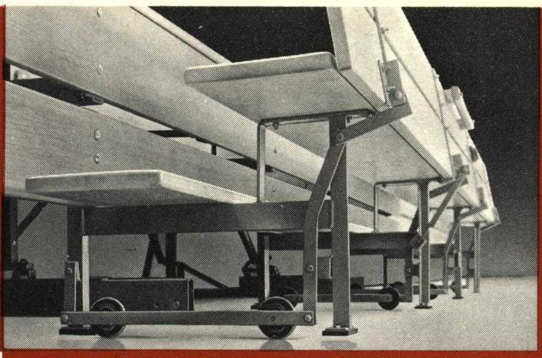




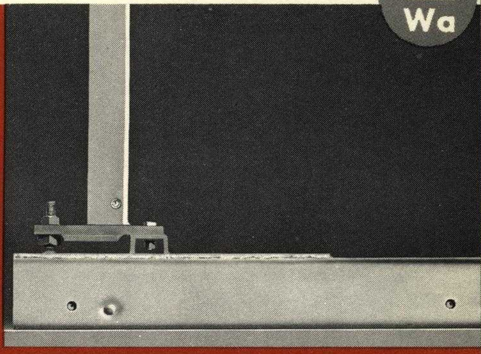
GIRDER BRIDGE DESIGN—Two column construction permits front and back riser boards, functioning as parallel girders, to transmit the spectator load directly through the strong steel columns to the floor. This design is comparable to the joists of a floor or the functions of the girders in a bridge.

2 MOVING PARTS PER ROW—Wayne's original alignment frame design reduces friction, insures straight, smooth opening and closing. Eliminates binds during operation, even with off-center pushing or pulling.

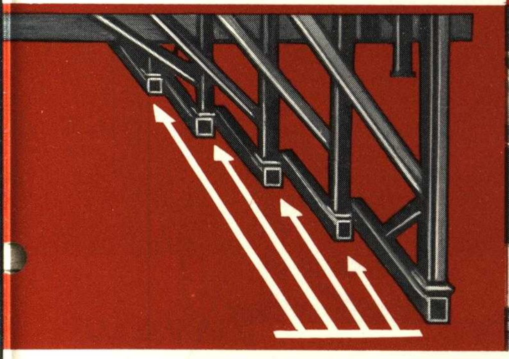


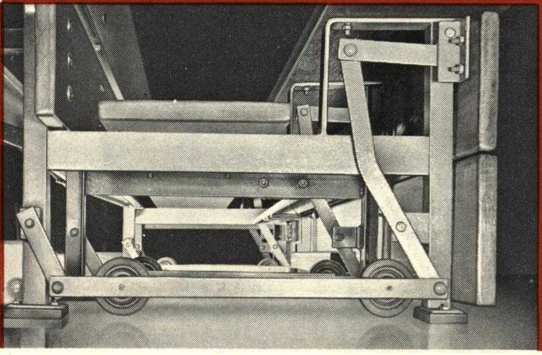


RISER BOARD UP—Brakes off the floor—ready to roll

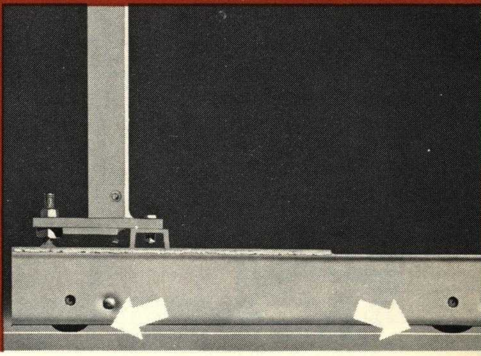


GYMSTAND OCCUPIED—spectator load is on the floor





RISER BOARD DOWN—8 brakes per unit firmly contact the floor

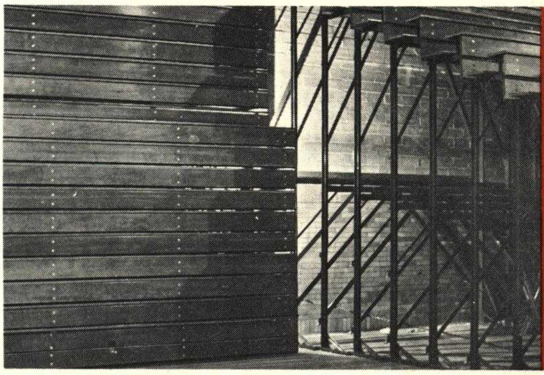


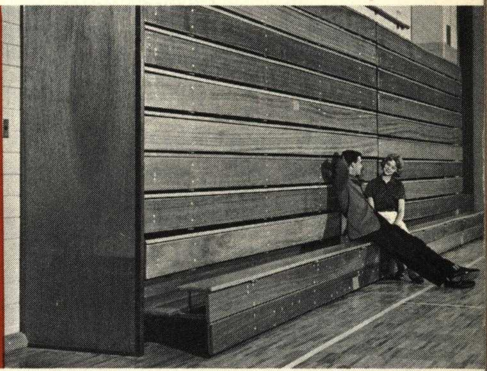
GYMSTAND UNOCCUPIED—load is on the wheels

NON-GROOVE ROLLING SYSTEM—Wayne's wheel assembly, housed in the Rolling Foot, carries the columns of each row separately side by side, not in the same plane. This efficient design distributes the load; eliminates floor grooving; makes the stand easy to open and close.

SELF-LOCKING BRAKES—The hinged front row riser board operates Wayne's efficient self-locking system. When the front riser board is lowered, the locking system automatically makes contact with the gym floor at 8 points. Units cannot shift, slide or lose position. When the front riser is lifted, the 8 brakes automatically lift from the floor.

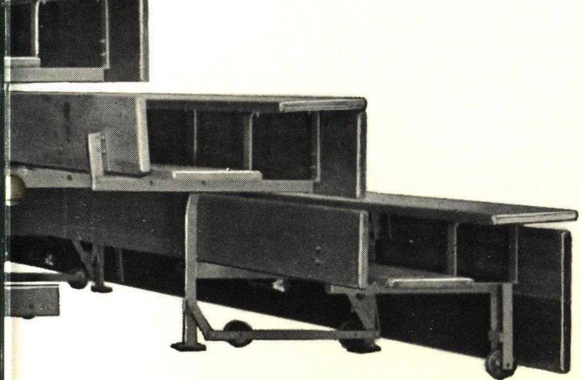
LOAD DISTRIBUTION—When the stand is occupied, the live load is carried directly to the floor through the strong steel columns. Wayne's Rolling Foot, a unique system that provides 65 square inches of floor contact area per row, exceeds by more than 100% any competitive design, distributes the load over a broad area, insures stability.





SWAY BRACES—Two or more diagonal sway braces per row add stability to Wayne Rolling Gymstands. These strong steel angles transmit any sway action to the floor through the column foot

USE ANY NUMBER OF ROWS—Wayne's positive self-row-locking system permits any number of rows to be used. Simply by rolling out the number of rows required and locking the front riser board, the entire assembly locks in position ready for use for social affairs, dances, etc.



STANDARD DIMENSIONS

23	41-3	4-7	44-10	4-10	20-2½	14-3	276

HEIGHT OF SEAT ABOVE FOOTREST IS 17 INCHES

* For comfort, top seat should be set about 3" from wall on all models except model 70 where distance should be 5". 12" top seatboard is provided on model #70 to assure standard 3" offset. Therefore ADD 3" to the dimensions from 3 to 14 rows and add 2" to the dimensions from 15 to 23 rows. Allow 1" to 2" clearance between units and 1½" to 2" clearance between end units and walls or other obstructions.

** (Model 50-S) For 11⅜" rise-per-row, add to height 1⅛" for each row except the front row.

** (Model 50-X) For 13⅜" rise-per-row, add to height 3⅛" for each row except the front row.

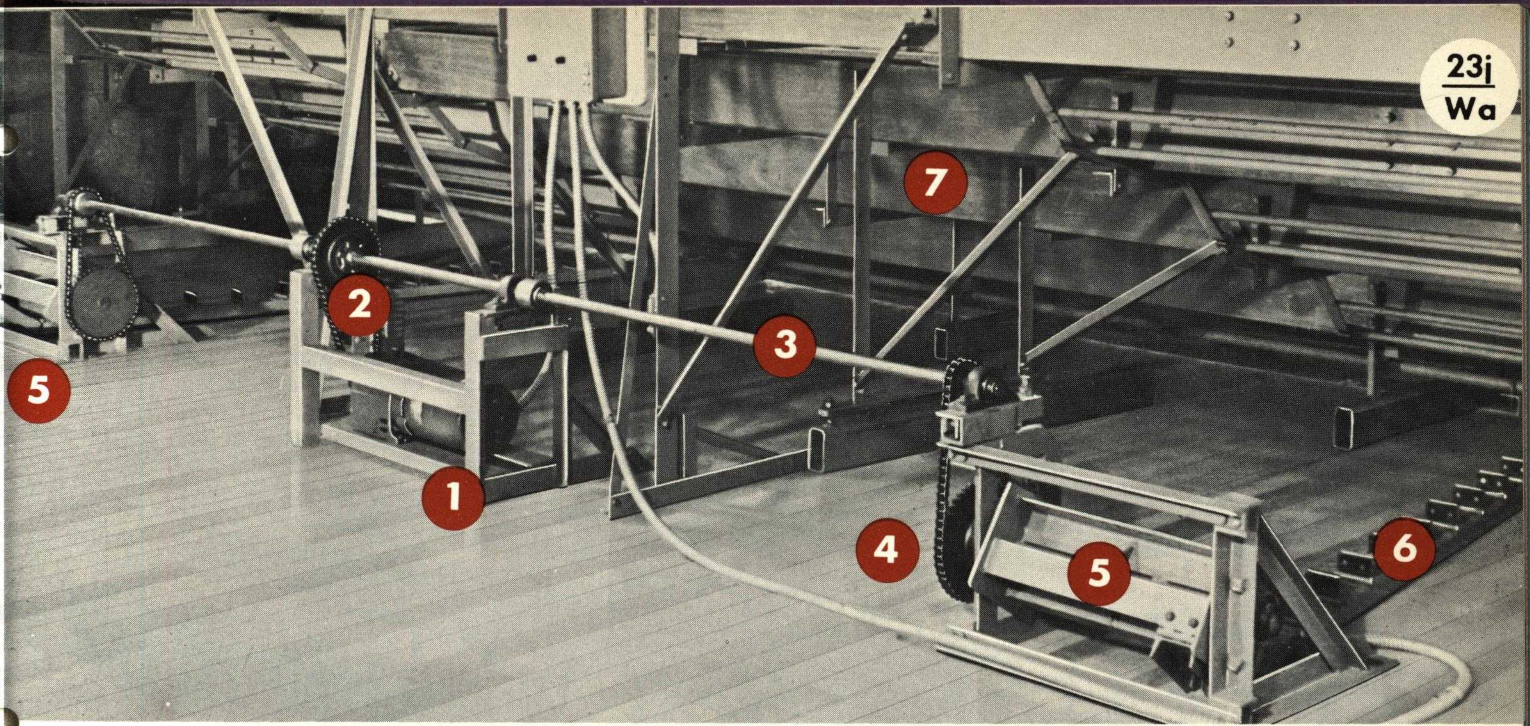
HEIGHT OF SEAT ABOVE FOOTREST IS 17 INCHES

For 11⅜" rise-per-row, add to height 1⅛" for each row except the front row.

For 13⅜" rise-per-row, add to height 3⅛" for each row except the front row.



WAYNE MODEL 70

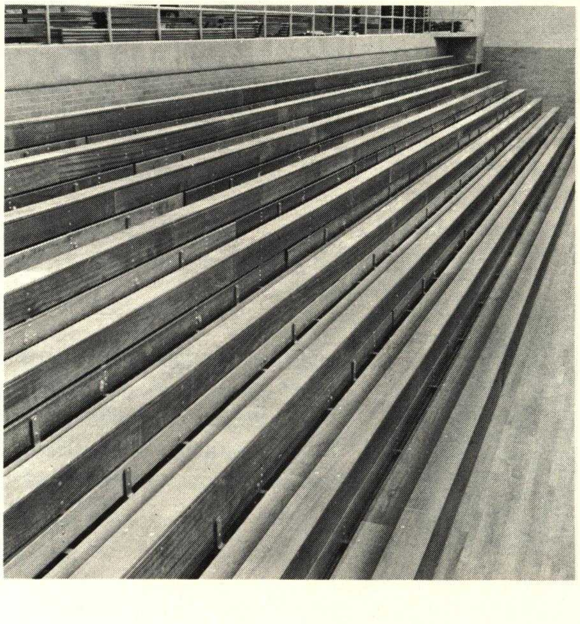
continous seating • automatic power operation

EFFICIENT, NOISELESS MOTORIZED DRIVE SYSTEM*

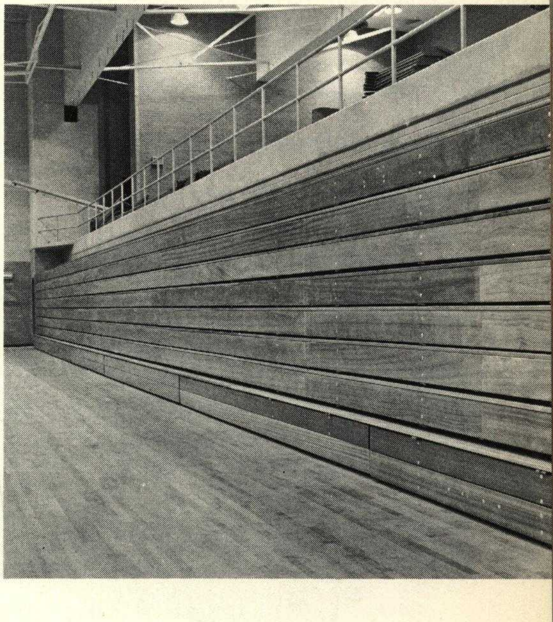
1. Gearhead Reduction Motor
2. Chain Drive and Adjustable Torque-Limiting Safety Coupling
3. Jack Shaft
4. Sprocket and Chain Drive
5. Drive Reels
6. Rigid Pusher Linkage
7. Wayne-Weld Continuous Boards*

Wayne Motorized Rolling Gymstands are opened or closed by a steady force applied to the front row as the hinged links of steel channel wind or unwind and roll smoothly and noiselessly along the floor.

- No floor track required
- No building extras needed
- Operates on 208 or 220 volt power source
- Straight line operation—no binding, wandering or jamming
- Can be stopped and locked in any position during operation



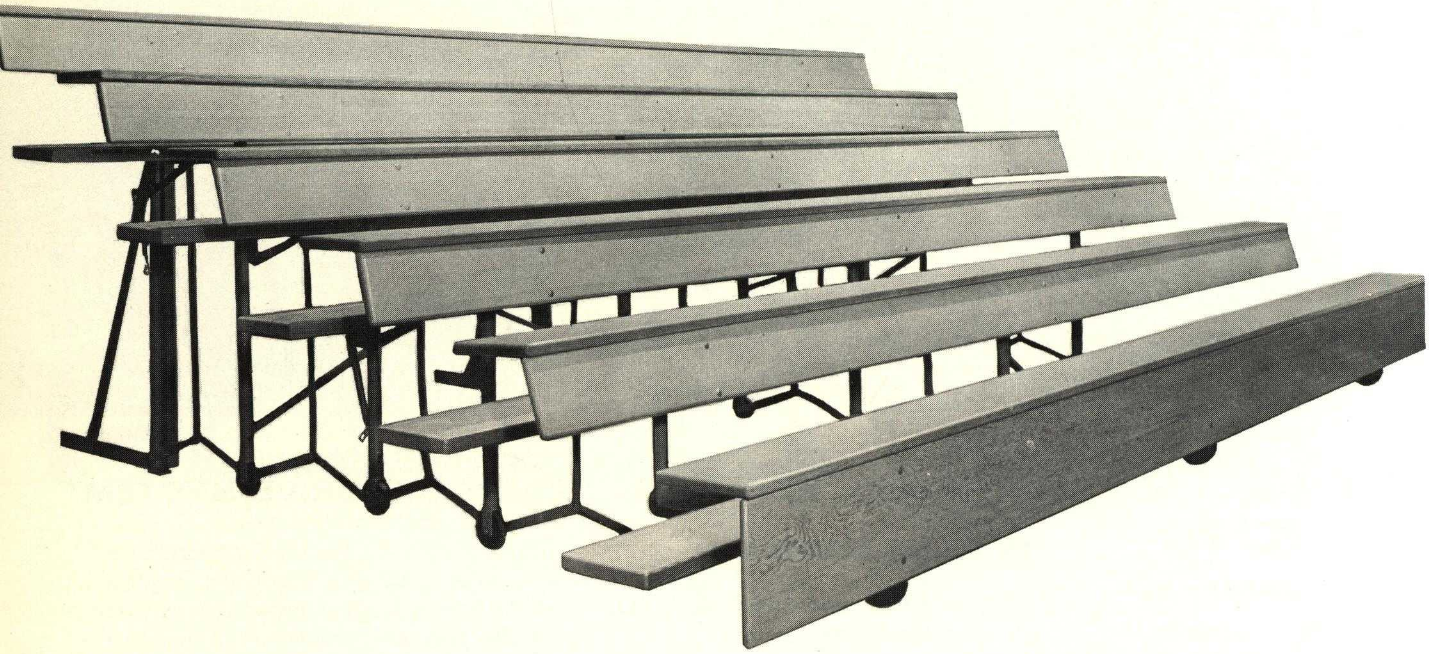
9-row continuous Model 70 in open position



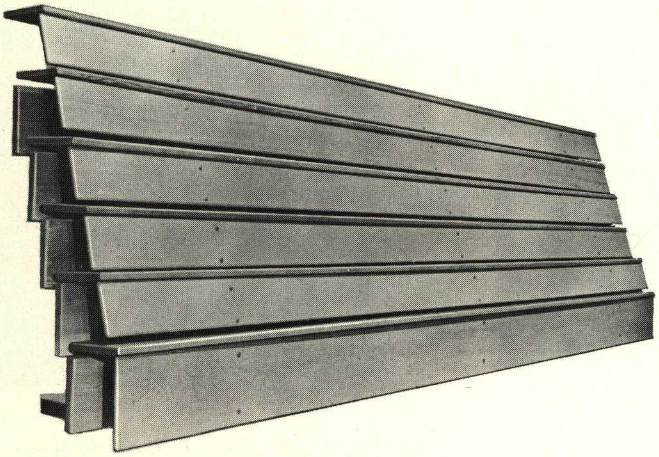
9-row continuous Model 70 in closed position

*Patent Pending

THE WAYNE MODEL 30 FOLDING BLEACHER



EASY ROLLING	ENAMELED TUBULAR STEEL UNDER-STRUCTURE	ATTRACTIVE LACQUERED DOUGLAS FIR WOOD	NON-MARKING, RUBBER FACED, PLASTIC WHEELS	OPENS AND CLOSES IN ONE CONTINUOUS MOTION	CAN BE LOCKED IN ANY POSITION



SLOPING FRONT WHEN CLOSED

SEATING EFFICIENCY AT LOW COST !—Mounted on 4″ diameter wheels under all columns except the stationary rear columns, the Wayne Model 30 Folding Bleacher rolls back against the wall in one continuous operation to form a sloping front.

GENERAL SPECIFICATIONS

1. DESIGN AND CONSTRUCTION

The seating shall be designed and constructed to support, in addition to its own weight, a live load of 120 pounds per linear foot of seatboard, plus 120 pounds per linear foot of footboard, and to resist by adequate diagonal bracing a horizontal sway load applied lengthwise to the seats, of 24 pounds per linear foot of seatboard. Under these loads, stresses in steel shall conform to the Standard Specification of the American Institute of Steel Construction, and stresses in wood shall not exceed those recommended by U. S. Forest Products Laboratory.

2. FINISH

All steel parts of the understructure shall be properly cleaned and finished in gray enamel.

All wood parts shall be sanded and finished with natural hot sprayed lacquer.

3. GUARANTEE

The manufacturer shall guarantee that all work done under these specifications is free from defects in materials and workmanship for a period of one year from date of completion of installation.

INDIVIDUAL MODEL SPECIFICATIONS

Model 30 Folding Bleacher

4. STANDARD DIMENSIONS

Depth per row—22 inches
Rise per row—8½ inches
Seat height—17½ inches

5. UNIT CONSTRUCTION

Each unit shall be complete in itself, consisting of tubular steel understructure, footboards, seatboards and riser boards, connected to form one integral assembly. Each column of the unit (except the stationary rear columns) shall be equipped with a 4 inch diameter wheel, with oil-less bearings, made of a rubber faced plastic composition which will not mark or dent the floor.

When fully closed, the front of the unit shall form a sloping surface.

6. SEATBOARDS, FOOTBOARDS AND RISER BOARDS

All boards shall be Douglas Fir of quality as defined by "Standard Grading and Dressing Rules No. 15" as published by the West Coast Lumbermen's Association. The edges and ends of all boards shall be eased.

Seatboards—clear solid lumber as defined by Rule 151-b., 5/4″ x 10″ before surfacing.

Footboards—solid lumber as defined by Rule 123-a., 2″ x 10″ before surfacing.

Riser boards—clear solid lumber as defined by Rule 151-b., 1″ x 8″ before surfacing.

7. INSTALLATION

Installation shall be done by the manufacturer's regularly authorized representative. Units shall be fastened to the wall with proper attachments. All units shall be adjusted to operate easily.

Model 50 Vertical Front Rolling Gymstand

4. STANDARD DIMENSIONS

Depth per row—22 inches
Rise per row—10¼ inches
Seat height—17 inches

5. UNIT CONSTRUCTION

Each unit shall be complete in itself, consisting of steel understructure, footboards, seatboards and vertical riser boards, connected to form one integral assembly. Each column of the unit (except the stationary rear columns) shall be equipped with two 3 inch diameter wheels, with oil-less bearings, made of a rubber faced plastic composition which will not mark or dent the floor. When live load is applied, the wheel housing (rolling foot) shall establish contact with the floor, to transmit live load directly to the floor.

Each unit shall be equipped with rotating alignment frames to keep the rows parallel at all times.

Each unit shall be equipped with a cylinder lock to lock it automatically in both the open and closed position. In addition, the front row of each unit shall be equipped with self-setting rubber brakes.

When fully closed, the front of the unit shall form a vertical surface.

6. SEATBOARDS, FOOTBOARDS AND RISER BOARDS

All boards shall be Philippine Mahogany equal to FAS and Selects as established by the National Hardwood Lumber Association or Douglas Fir as defined by Rule 151-b of "Standard Grading and Dressing Rules No. 15" as published by the West Coast Lumbermen's Association. The edges and ends of all boards shall be eased.

Seatboards—5/4″x10″ before surfacing.
Footboards—5/4″x10″ before surfacing.
Riser boards—5/4″ x width to fully close the vertical gap between corresponding foot and seatboards.

7. INSTALLATION

Installation shall be done by the manufacturer's regularly authorized representative. Units shall be fastened in place with proper attachments. All units shall be adjusted to operate easily.

Model 70 Continuous Seating-Automatic Power Operation

4. STANDARD DIMENSIONS

Depth per row—22 inches
Rise per row—10¼ inches
Seat height—17 inches

5. CONSTRUCTION OF SEATING SECTIONS

Each section shall be constructed as a continuous, uninterrupted length of seats and shall consist of steel understructure, footboards, seatboards and vertical riser boards connected to form one integral assembly. The boards shall be installed so that no breaks or gaps occur in the entire length of the section.

Each column of the section (except the stationary rear columns) shall be equipped with two 3 inch diameter wheels. When live load is applied, the wheel housing (rolling foot) shall establish contact with the floor.

6. POWER OPERATION

Each section shall be installed with self-contained, automatic power operation. The opening and closing of the sections shall be controlled by a spring loaded key switch conveniently located. The power system shall be designed so that one or more rows may be used at any time. The movement of the section to the extreme open or closed positions shall be controlled by limit switches. Each section shall be powered by a single motor to assure positive alignment at all times. The power shall be transmitted from the motor to drive reels and rigid pusher bars by means of a steel jack shaft and chain drive linkage.

Each section shall be equipped with a simple and positive means for disengaging the drive mechanism so that the section can be opened manually in case of power failure.

7. SEATBOARDS, FOOTBOARDS AND RISER BOARDS

All boards shall be Philippine Mahogany equal to FAS and Selects as established by the National Hardwood Lumber Association or Douglas Fir as defined by Rule 151-b of "Standard Grading and Dressing Rules No. 15" as published by the West Coast Lumbermen's Association. The edges and ends of all boards shall be eased.

Seatboards—5/4″x10″ before surfacing.
Footboards—5/4″x10″ before surfacing.
Riser boards—5/4″ x width to fully close the gap between corresponding foot and seatboards.

8. INSTALLATION

Installation shall be done by the manufacturer's regularly authorized representative. Sections shall be fastened in place with proper attachments. All sections shall be adjusted to operate easily.

PLEASE NOTE: Wayne Iron Works continually pursues a program of design and product improvement for better spectator seating. When such improvements occur, or, when conditions exist over which we have no control, Wayne Iron Works reserves the right to supply equipment considered to be standard at the time of shipment.

PLANNING • SALES • SERVICE

Wayne equipment is planned, sold and serviced by factory trained representatives located throughout the United States. For immediate information or guidance call the Wayne Representative nearest you or write the factory direct.

ARCHITECT'S SPECIFICATIONS for bowling centers

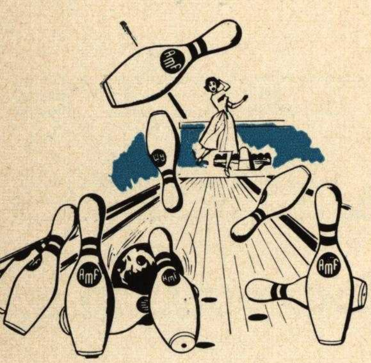
AMF PINSPOTTERS INC.
Subsidiary of
AMERICAN MACHINE & FOUNDRY COMPANY

BOWLING CENTER SUGGESTIONS

building planning

The building should be located on property with plans for future expansion. It should be easily accessible for main traffic arteries with ample parking facilities and entrances adjacent to parking areas. If possible provide canopys over entrances.

planning for bowling equipment



Bowling Lane Area Storage for pins, Pinspotters spare parts, Pinspotter shop area and maintenance supplies should be provided in rear of building.

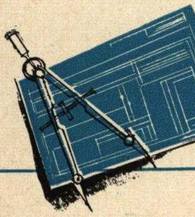
This can be accomplished by either providing rooms in back of the building or by the use of a wide aisle in back of the Pinspotters. If rooms are provided allow a 3′ 6″ aisle in back of the Pinspotters. If no rooms are provided allow at least 6′ 0″ in back of the Pinspotters.

The overall dimensions of bowling lanes (including AMF Automatic Pinspotters) is 83′ 3-5/16″. The number of lanes X 83′ 3-5/16″ plus the aisle should be level and the entire area depressed 13″ below the bowler settee area.

Bowler Settee Area This area should be 10′ 0″ to 10′ 6″ in depth and covered with vinyl asbestos tile or equally suitable material.

Spectator Seating Area This area should be 5′ 0″ in depth (with 3′ 0″ minimum) and the area raised 6″ above the bowler settee area and also covered with vinyl asbestos tile.

Spectator Lounge Area This area is optional and recommended only if food and beverages are being served on a large scale. This area should be raised 6″ above the spectator seating area. Floor covering similar to the spectator area.



Concourse An ample area between the last row of seating and the walls of the toilets, locker rooms, etc. should be provided for access to and from the bowling lanes for bowlers and spectators and oncoming bowlers and spectators. The suggested width is approximately 12′ 0″ and carpeting is recommended in this area. The concourse should be raised 6″ above the last row of seating.

Control Counter The location of the control counter is best determined so the lanes and entrances can be observed at all times.

Toilets The number of fixtures and facilities are determined by 5 persons per lane plus spectator seating plus snack counter seating and governed by local codes. The toilet rooms should be located where they are easily accessible to the bowlers.

Locker Rooms Lockers are 22½″ deep X 30″ wide X 75″ high and have ten openings. Ten openings per lane is suggested for men and ten openings per lane for women.

Snack Counter A small snack counter is recommended as a service to the bowlers. A large food operation is recommended only if the establishment is in an area large enough to support a restaurant.

Bar and Cocktail Lounge A bar and cocktail lounge is recommended if permitted by local laws.

Nursery A nursery room is highly recommended for pre-school children.

All-Purpose Rooms An all-purpose room for league meetings, banquets, luncheons or lounging should be included in all plans. This room can also be used as a nursery if space is limited.

Miscellaneous A janitor's supply room with slop sink, storage rooms, air conditioning room, drinking fountain, phones, etc. should be included.

engineer and design service

AMF's Architectural Design Staff will assist all architects and engineers in the planning of bowling establishments. Architectural design data on planning the installation, AMF bowling lanes, AMF Automatic Pinspotters, lighting and other pertinent factors in the design of the most modern establishment is available upon request.

Bowling, the country's largest participant sport, is currently enjoying an unprecedented boom period.

This popularity has made the bowling center the gathering place for the entire family, for social and industrial leagues, for church and civic groups—for bowlers of all ages. With this new era in bowling has come new architectural concepts, beautiful furnishings, modern and colorful equipment.

Because of this increased popularity and the trend toward more leisure time—plus the impact of television and the Automatic Pinspotters—more and more community and shopping centers are including bowling establishments as part of their facilities. You will very likely be called upon, therefore, to submit plans for bowling centers. If so, you will probably need the friendly advice of AMF.

We are ready to help you with a complete service, including new ideas in interior and exterior design that are both beautiful and practical.

Beautiful setting of 40 Brunswick Automatic Lanes form heart of Bowlerama, Detroit, Mich. Architects: Hawthorne and Schmeideke

only Brunswick offers you 74 years of bowling and billiard architectural experience!

Since 1885, architects have relied on technical data from Brunswick. Here, they find the blend of long experience with an understanding of architectural needs in the technical data and assistance offered by Brunswick. Many of these studies have been coordinated with principal manufacturers and technical consulting organizations throughout the United States.

Far from supplanting the local architect, this essential information offers practical solutions to problems likely to be encountered by the architect, engineer and builder.

In these areas especially will you find this Brunswick service invaluable!

1. *Site orientation*
2. *Acoustical provisions*
3. *Electrical power and wiring requirements*
4. *Required floor construction*
5. *Layout of lane control counters*
6. *Integration of diversified elements*
7. *Suggested layout arrangements and space requirements*
8. *Building and sign identification*
9. *Color schemes and furnishings*
10. *Ventilating, heating, temperature control*
11. *Parking requirements*

Feel free to contact your nearest Brunswick Branch where you'll find full cooperation from men whose life work is bowling and billiards.

technical data from

Brunswick

your "Springboard to Design!"

Depicted here are some of the areas of a bowling installation where this Brunswick service can and has been utilized. Today's bowling centers serve a wide variety of recreation. Restaurants, "pro" shops, cocktail lounges, nurseries, etc. are now part of today's modern bowling centers.

Brunswick's Architectural Research Personnel are highly experienced in the design and planning of these ultra-modern centers. Their understanding of bowling trends coupled with the depth of Brunswick experience in the bowling field has developed numerous plans for bowling and billiard establishments where they handle the problems most likely to be encountered by architects, engineers and builders.

Avail yourself of this most essential information. Skilled individual counselling is also available through the medium of the Brunswick Sales Engineer whom you should contact at the nearest Brunswick Branch Office.

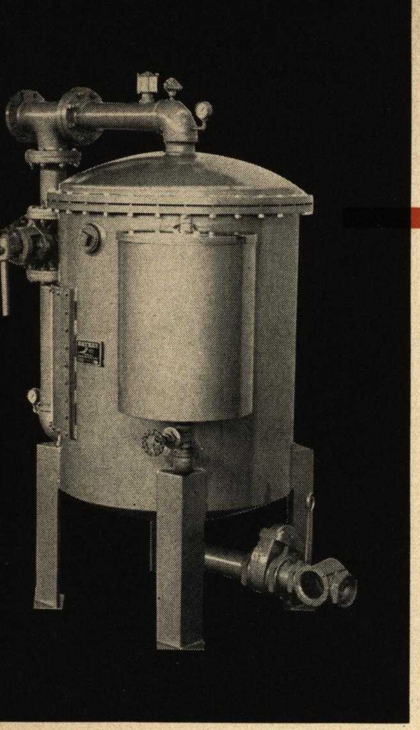
DETREX *"power-flo"*
SWIMMING POOL FILTERS

DETREX CHEMICAL INDUSTRIES, INC.



ALL SWIMMING POOL FILTERS ARE NOT ALIKE .....

A large percentage of Detrex filters are sold as replacements for inferior, inefficient or obsolete systems. Here are some of the many reasons.

Detrex Power-Flo Diatomite filters are designed and engineered by filter experts. They are built by one of the nation's most experienced manufacturers. They are constructed of materials that assure long-life operation with a minimum of "down time" and maintenance. They are shipped completely assembled, and are face-piped for fast, easy installation.

In any major pool installation, the filter is the most important operating part. When you specify DETREX you have asked for the very best.

DETREX diatomaceous earth filters for commercial installations have established new standards for swimming pool filters

Only through the process of modern diatomite filtration is it possible to remove all of the "contaminated" filter media at the end of each filter cycle. A completely new and clean filter surface is therefore always available.

Coagulation, sedimentation and similar controlled chemical processes are unnecessary when water is filtered through Detrex Diatomite Filters.

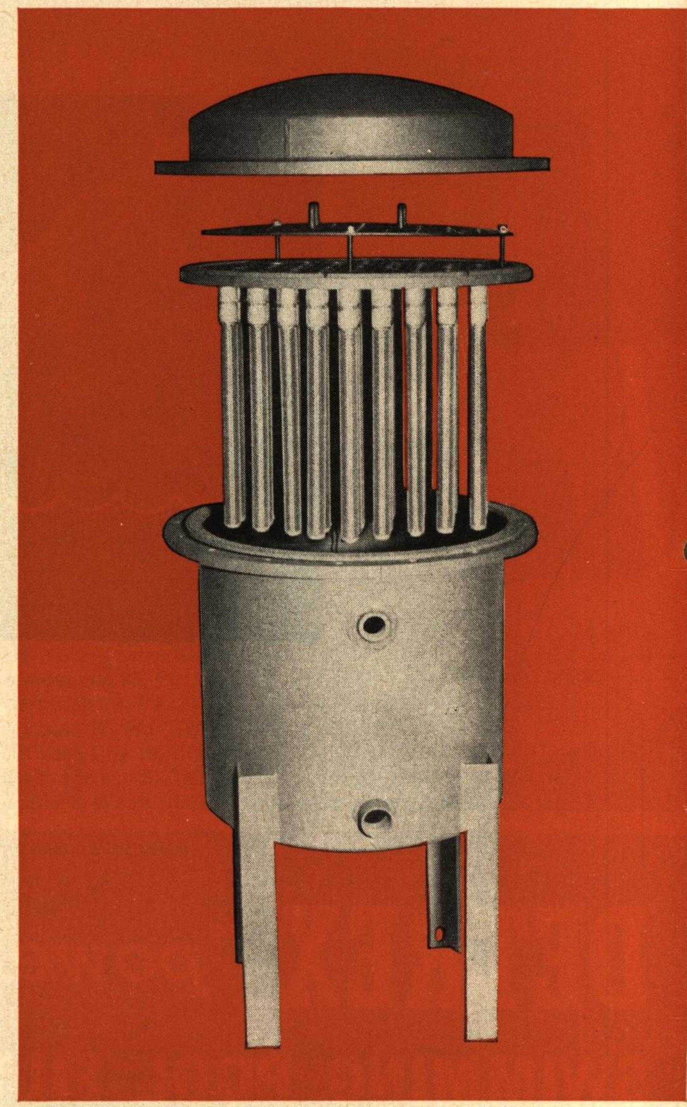
The tiny openings in the diatomite "filter cake" are so microscopically fine that maximum turbidity removal is accomplished during the very first pass through the filter.

additional important features

- Longer operating cycles between backwashings.
- Elements designed for non-fouling operation and positive backwashing.
- Only small amount of water required for backwashing.
- All Detrex filters are designed to occupy less space, yet provide maximum filter area.
- Easy, fast simple to operate.
- Fabricated of heavy-gauge steel with double welded construction.
- Interior completely protected with multiple coats of polymerized phenolic resin.
- Double hammertone bronze, baked enamel finish for long-lasting, rust-free attractiveness.

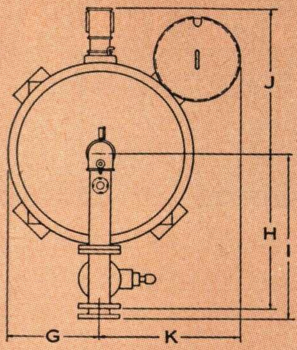
THE DETREX FILTER ELEMENT

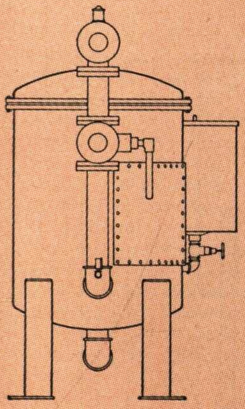
- Tubular all stainless steel filter elements specially designed for long filter cycles and complete cleaning by internal backwash.
- Fast precoat with minimum recirculating time because of Detrex patented tubular element and direct precoat feed.
- Maximum filter area with minimum space requirements because of specially designed filter elements.

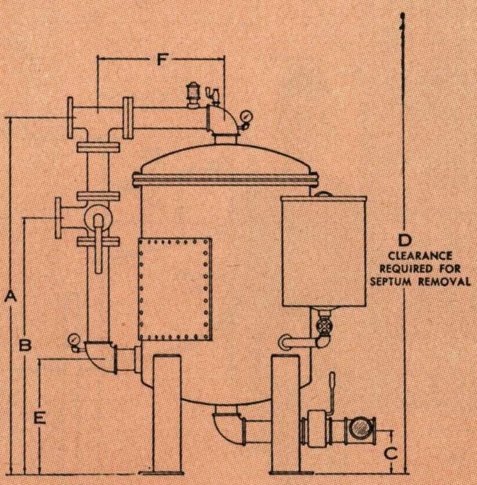


A view showing the component parts of a Detrex Power-Flo Swimming Pool Filter, including the filter dome, element retainer plate, tube sheet with the filter elements hanging from it, and the filter body. The entire assembly is inherently impervious to corrosion—designed and built for long trouble-free service.

SWIMMING POOL FILTERS







THOROUGHLY TESTED . . .
RELIABLY GUARANTEED

Guaranteed by one of America's largest filter manufacturers . . . combining quality, price and performance . . . this new Diatomite Filter establishes new standards for the commercial swimming pool industry. Whether your commercial pool project is large or small, new Detrex Diatomite Filters will measurably reduce costs and increase operating efficiency.

Note: Access door and flanged piping furnished on Models 1-150 and 1-243 only.

- Detrex Power-Flo Filters are shipped factory assembled including elements and manifold piping with valves.
- Longer pump life as precoat slurry does not pass through recirculating pump.
- Pressure vessel constuction with dished heads. Central outlet and drain insure thorough cleaning of filter body during backwash.

Forty years of manufacturing experience in the production of the world's most outstanding dry cleaning and industrial cleaning equipment is your assurance of high quality engineering and performance at a remarkably low cost.

DETREX SLURRY TANK AND BODY FEEDER

operation—During the filter cycle, metered amounts of diatomite slurry are continuously fed into the filter by means of a diaphragm pump. The rate of feed can be varied to meet individual requirements. The slurry additions help to keep the "fiilter cake" porous and assure maximum filter cycles between backwashings.

construction—Detrex slurry tanks are of welded steel construction and have hinged covers. For maximum corrosion resistance, the tank interior is FF-1 coated after sand-blasting. Exterior surfaces are phosphate treated, primed and finished in baked, hammertone enamel.

MODEL FF-1S (above) is the favorite of high schools from Maine to California. Details on Page 2 inside.

Whatever the sport—Basketball, Football, Soccer, Hockey, Swimming, Wrestling, Track, Gymnastics—if timing and scoring are important, Fair-Play has an electric scoreboard for the job.

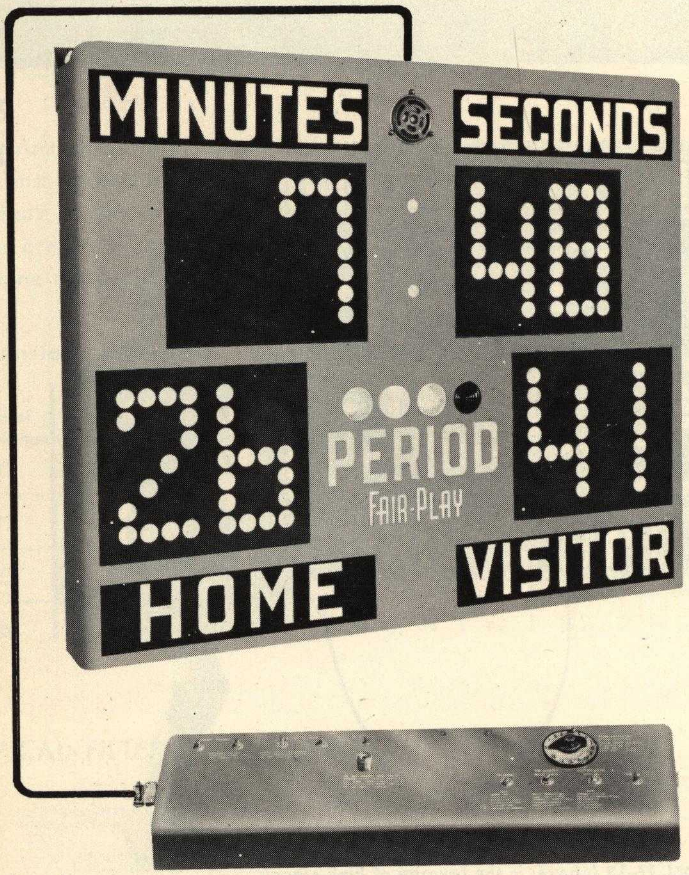
More than a quarter century of experience—and a top-flight engineering staff teamed with men who know spectator sports from coaching through administration—stand back of Fair-Play scoreboards.

Call on Fair-Play's Engineering Department for assistance in either custom or standard installations. No obligation, of course.

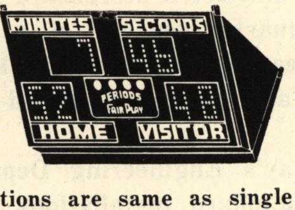
More schools choose Fair-Play electric scoreboards!

FAIR-PLAY SCOREBOARD CO.
PHONE: AM 2-8261 • Box 359 • Des Moines 2, Iowa

FAIR-PLAY FF-1S FIGURGRAM

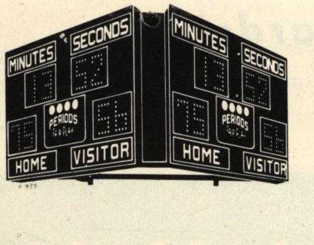


Scoreboard is controlled by portable, single-piece pressed aluminum control panel with baked enamel finish. Panel is 24″x7″x2″. Dual control may be used for one cross-court game and additional single control is required for operation of other game. Standard cord length is 10 feet, special lengths when specified.



This is a V-shaped two-unit scoreboard with each face set at 45 degrees with opposite face. Designed for end-of-court suspension or between stage and court.

Scoreboard is 5 feet long, 3 feet wide at top; weighs 150 pounds. General specifications are same as single unit. Board may be attached to ceiling beams or suspended for raising and lowering by steel cables.



For use where seating is on two sides and one end, this is an arrangement of two FF-1S boards set at 45-degree angles with the wall. Length against wall is 7′ 9″ and distance from front to wall is slightly over 3 feet. Brackets are included for wall mounting.

A typical installation has one FF-1S scoreboard at each end of the court at the right of each basket, with a dual control panel at the officials' table. (Up to four boards may be controlled from one panel.)

With this type of installation, boards may be used separately for cross-court games by providing an extra single control panel and control receptacle.

Fully-enclosed cabinet with non-glare baked enamel finish available in choice of colors: gray, red, green, blue and black, with white lettering. Special colors when specified.

Other arrangements of the FF-1S scoreboard are shown at left below. A 4-sided scoreboard is shown on Page 4.

Suggested Architect's Specifications

CABINET: Constructed of aluminum alloy with fully enclosed back. Scoreboard may be mounted against wall, since all service is from the front. The scoreboard never has to be lowered for service.

Scoreboard has 12″ numerals and is 5′ long x 4′ high x 6½″ deep; weighs 100 lbs.

Panels denoting MINUTES, SECONDS, HOME and VISITORS to be plastic, lighted from the rear, painted black except for letters. To have brackets for hanging, eyebolts for suspension.

CLOCK: Time remaining to play to be shown by four numeral blocks; each block to have 25 No. 57 low-voltage automotive lights with bayonet type base. Numerals 12″ high on red plastic. Mechanism designed so that clock shall read 0:00. After one second of operation a 20 minute clock shall read 19:59, and time to automatically diminish by seconds. Clock shall be quickly set from control for any minute of play within the limits of the movement. The impulse mechanism shall be in desk control unit for ease of service. The Clock Pak including stepping relays to be housed in metal box in main cabinet, and shall be removable by unplugging for ease of service or use in other scoreboards.

SCORE UNIT: Numeral blocks to be same as used in clock. Stepping relays for score units in main cabinet to be contained in cans which shall be removable by unplugging.

PERIOD: To be indicated by four lights behind 3″ lenses of varied colors with word PERIOD beneath.

CONTROL: Control to be single-piece pressed metal suitable for one or two operators. Score and period to have push-button progressive control. Toggle switch for clock control and toggle switch for selective automatic horn. Control shall have ten feet of flexible cable with plug attached, unless otherwise specified.

HORN: Loud 110-bolt buzzer-type vibratory horn installed on scoreboard to sound automatically at end of period, or at will by push button. Outlet for optional horn or lights shall be provided on control.

CURRENT: 115V, 5 amp., 60 cycle; 50 or 25 on request. Where two or more scoreboards are synchronized, it is recommended that they be connected to the same power source.

MULTIPLE INSTALLATIONS: Two or more scoreboards to operate simultaneously from same set of switches on control. Two selector switches are provided on the control for independent operation of either (or any) scoreboard for correction or for cross-court games. An additional single control panel is required for operation of remaining scoreboard.

DE LUXE BASKETBALL SCOREBOARD FF-1S-PF

The newest type of basketball scoreboard presenting the team lineups, fouls charged, next game data, as well as the standard information shown on the FF-1S scoreboard.

Overall dimensions of complete unit: 6′ high, 12′ 4″ wide, 6½″ deep. The assembled unit may be bolted to wall, suspended or mounted on brackets. Weighs 250 lbs. The lowering system for the lineup panels is included.

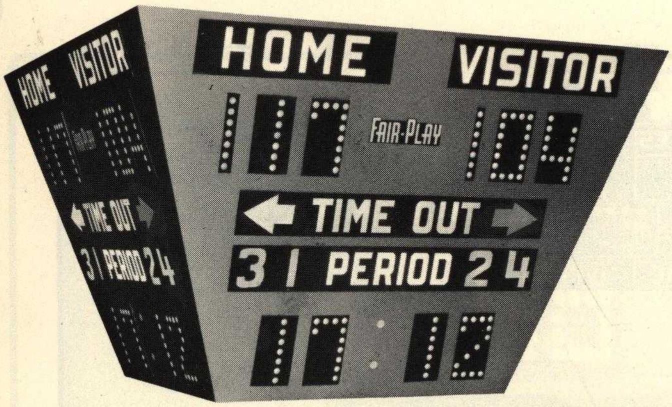
Write for complete specifications.

FOULS
PLAYER
FOULS
2
4
5

TEAM FOUL total is shown by big 9″ numerals placed below the Home and Visitor panels. Fast push button control to change numbers. PLAYER PERSONAL FOUL shown by 9″ numerals located between the team foul numerals with the word PLAYER above. When the foul is called the number of personal fouls on the player is posted by quick telephone dial control. CONTROL PANEL a single small control panel operates both team and player foul numerals. Simple quick operation.

The INDICATOR may be attached to either 9″ or 12″ FF-1S scoreboards. The FOUL INDICATOR may be installed as a separate unit. Brackets for mounting furnished. Order cable and connectors.

Fair-Play models for the large gymnasium, fieldhouse or arena



4-SIDED SCOREBOARD
FF-4S

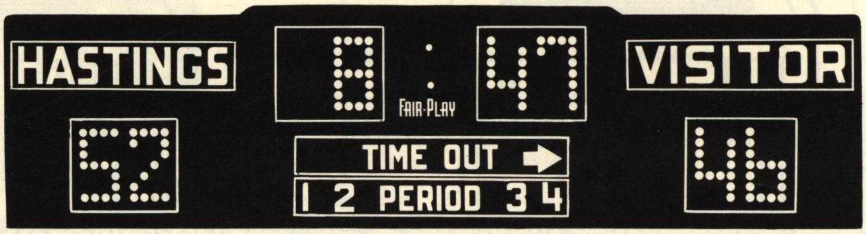
This popular model assures perfect visibility regardless of the seating arrangement. Available with 9″, 12″ or 18″ numerals; sides are slanted for easy reading by players as well as spectators.

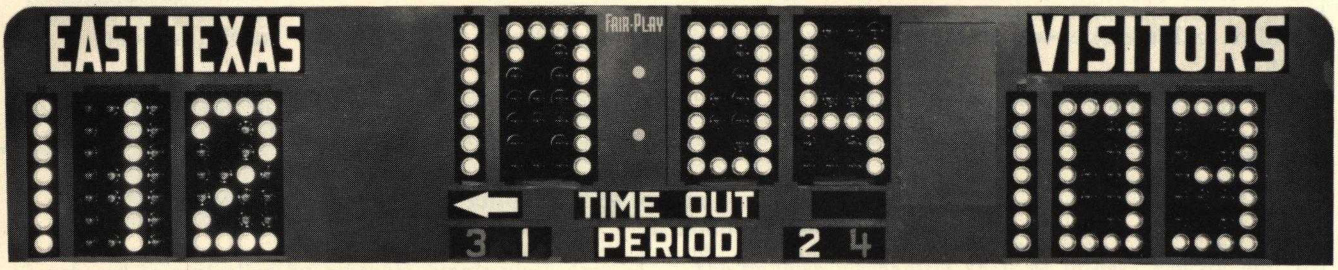
The 9″ numeral FF-4S is 5′ 10″ square at the top, 3′ 4″ square at the bottom and 3′ 9″ high. Eyebolts are attached for suspension. Weighs 400 pounds.

Complete specifications and installation drawings furnished upon request.

FH-55

Basketball scoreboard with 12″ numerals, time-out indicator. All-aluminum alloy cabinet, 11′ long, 3′ high, 7″ deep. Weighs 165 pounds. Suitable for balcony or wall installation.





FK-66 The newest and finest scoreboard made for large fieldhouses and sports arenas. It's 18′ long, 3′ 6″ high, 10″ deep; weighs 250 lbs. Numerals are 24″ high. Two synchronized models recommended for four-sided seating. Send for complete information.

Check these advantages of doing business with Fair-Play . . .

ENGINEERING ASSISTANCE—If you have special scoreboard needs, Fair-Play's Engineering Department will be glad to help. No obligation, of course. Installation drawings and complete specifications furnished on request.

SIMPLIFIED INSTALLATION—Whether single or multiple installation, Fair-Play provides accurate, dependable timing and scoring without intricate or complicated electrical set ups. Installations completed quickly save money all along the line.

UNCOMPLICATED SERVICING—A feature that makes Fair-Play the favorite with users. Anyone who can climb a ladder can maintain and service a Fair-Play scoreboard. Relay and Clock Pak units simply unplug from front of board for replacement. Exchange units immediately available from nearby branch representatives of air express from factory.

TICKAWAY CLOCK—Flashes exact number of minutes and seconds remaining to be played. Fast, accurate, dependable . . . and fascinating—important to coaches, players, officials, school boards and spectators.

BUILT-IN SAFETY—Electrical equipment consistent with standards of National Electric Code. Cabinets are fully enclosed to avoid exposed wiring.

MANUFACTURING REPUTATION—Experience and reputation built on 27 years' service to the nation's schools and colleges. Nation's largest manufacturer and the pioneer in developing electric scoreboards.

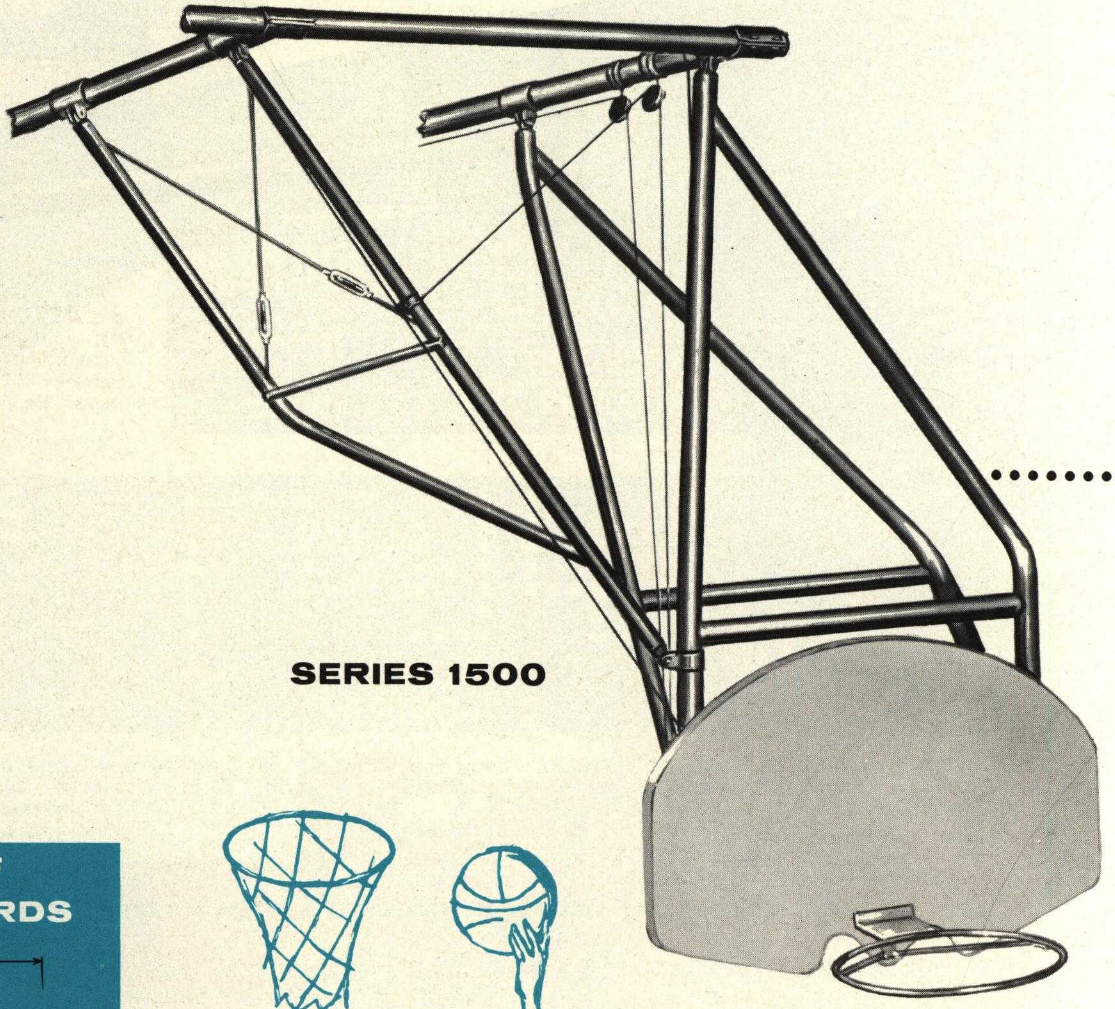
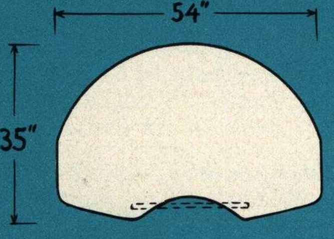
BASKETBALL BACKSTOPS

A UNIQUE CONCEPT IN FOLDING BACKSTOPS

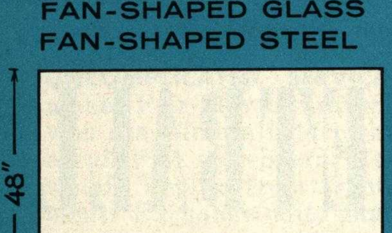


SERIES 1500

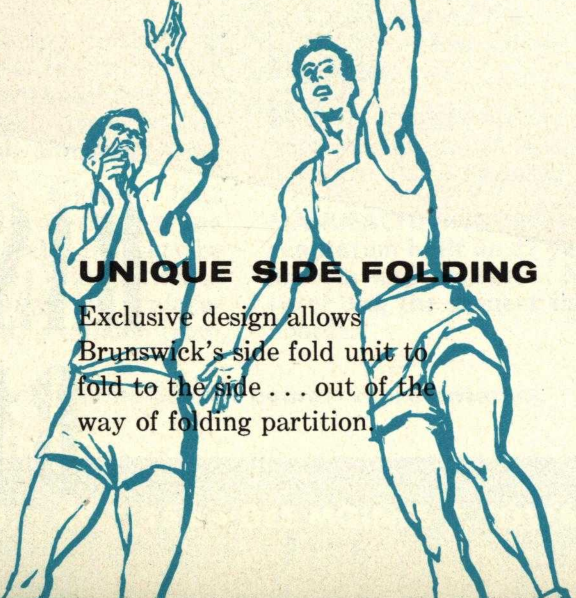
FOUR TYPES OF BANKBOARDS



FAN-SHAPED GLASS
FAN-SHAPED STEEL

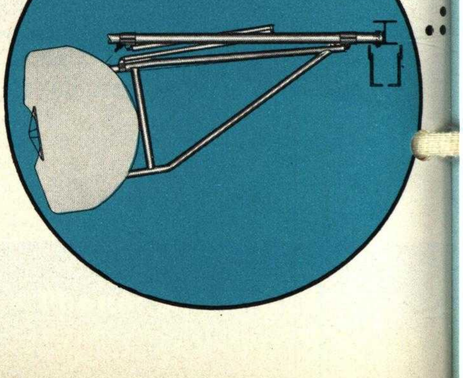


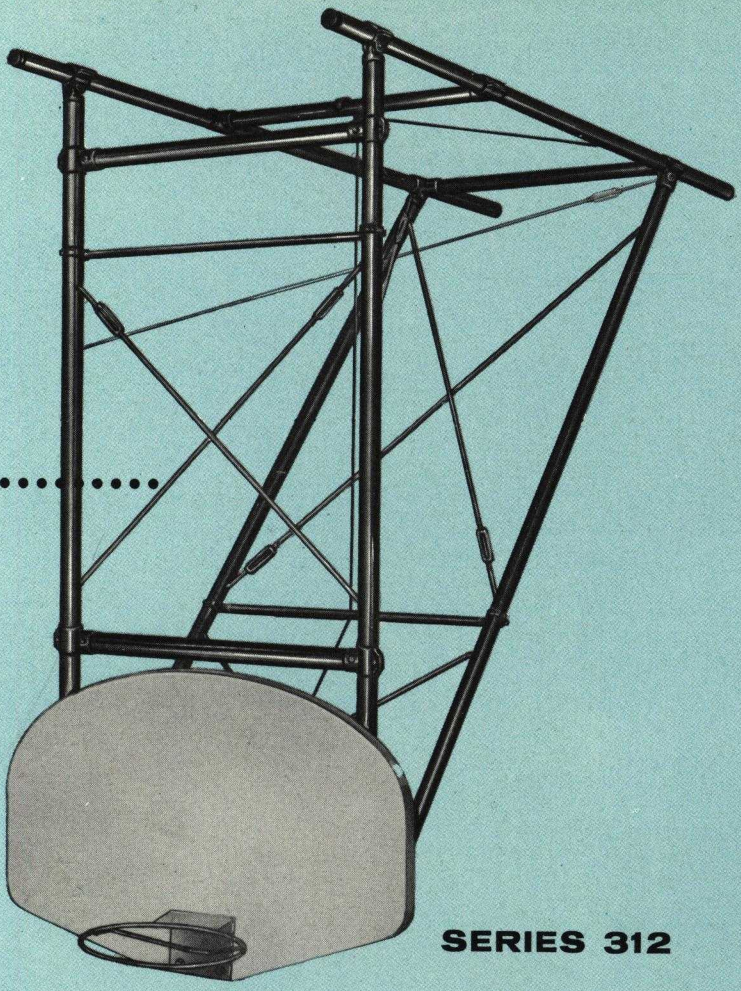
RECTANGULAR WOOD
RECTANGULAR GLASS



UNIQUE SIDE FOLDING

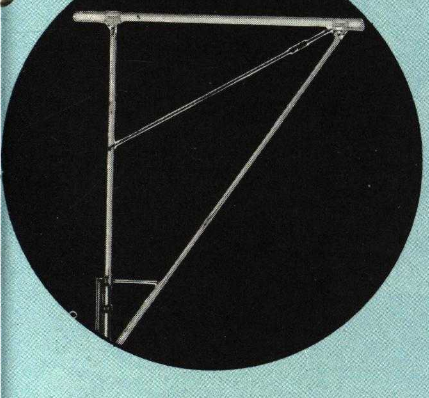
Exclusive design allows Brunswick's side fold unit to fold to the side . . . out of the way of folding partition.





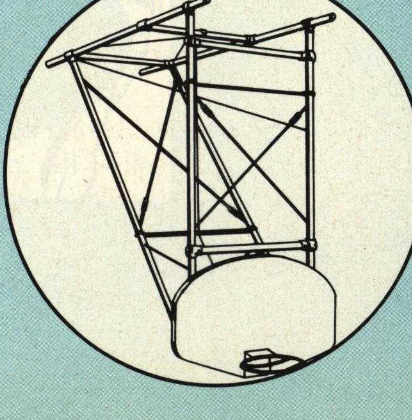
SERIES 312

- No cables in playing area
- No cable pull ropes required
- Minimum folding space
- Extra stabilizer cables
- Economical electric operation
- Self-locking safety winch
- All types of goals and nets
- Nine models to choose from
- Steel guy rods
- No unauthorized operation



MAXIMUM RIGIDITY

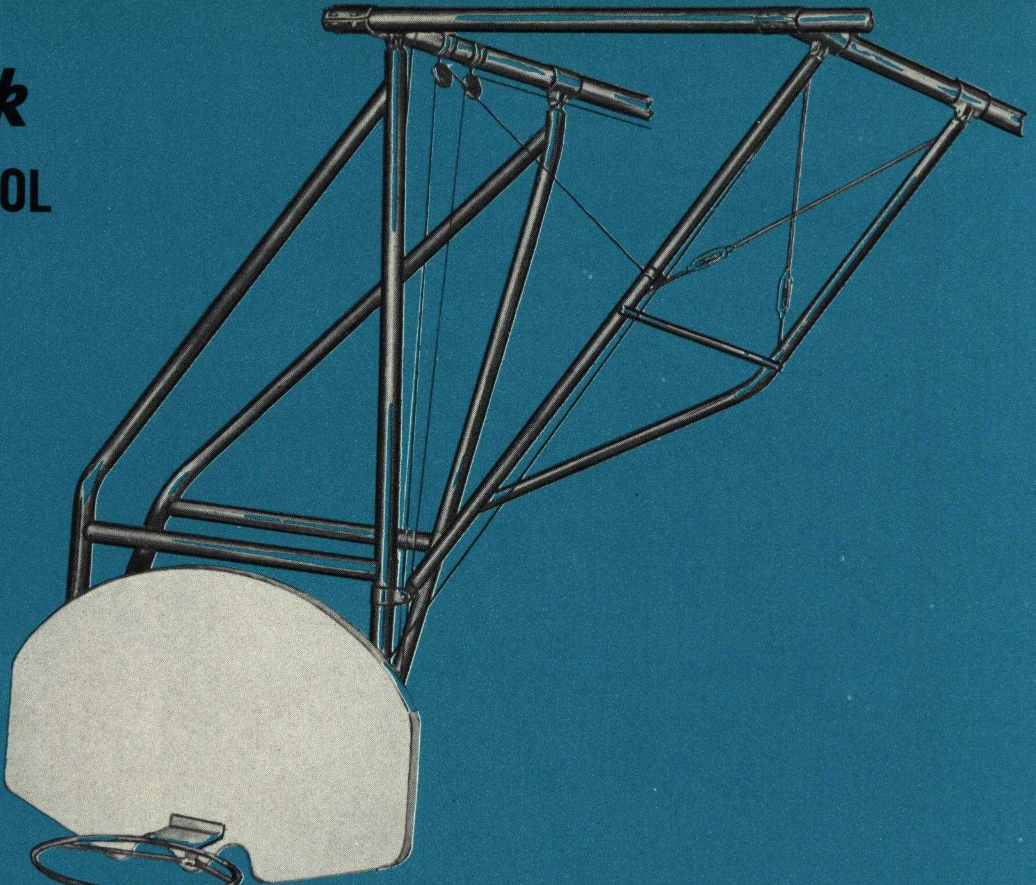
Maximum rigidity is assured by placement of stabilizer cable between front drop pipes and the upper frame . . . minimizes vibration when in playing position.

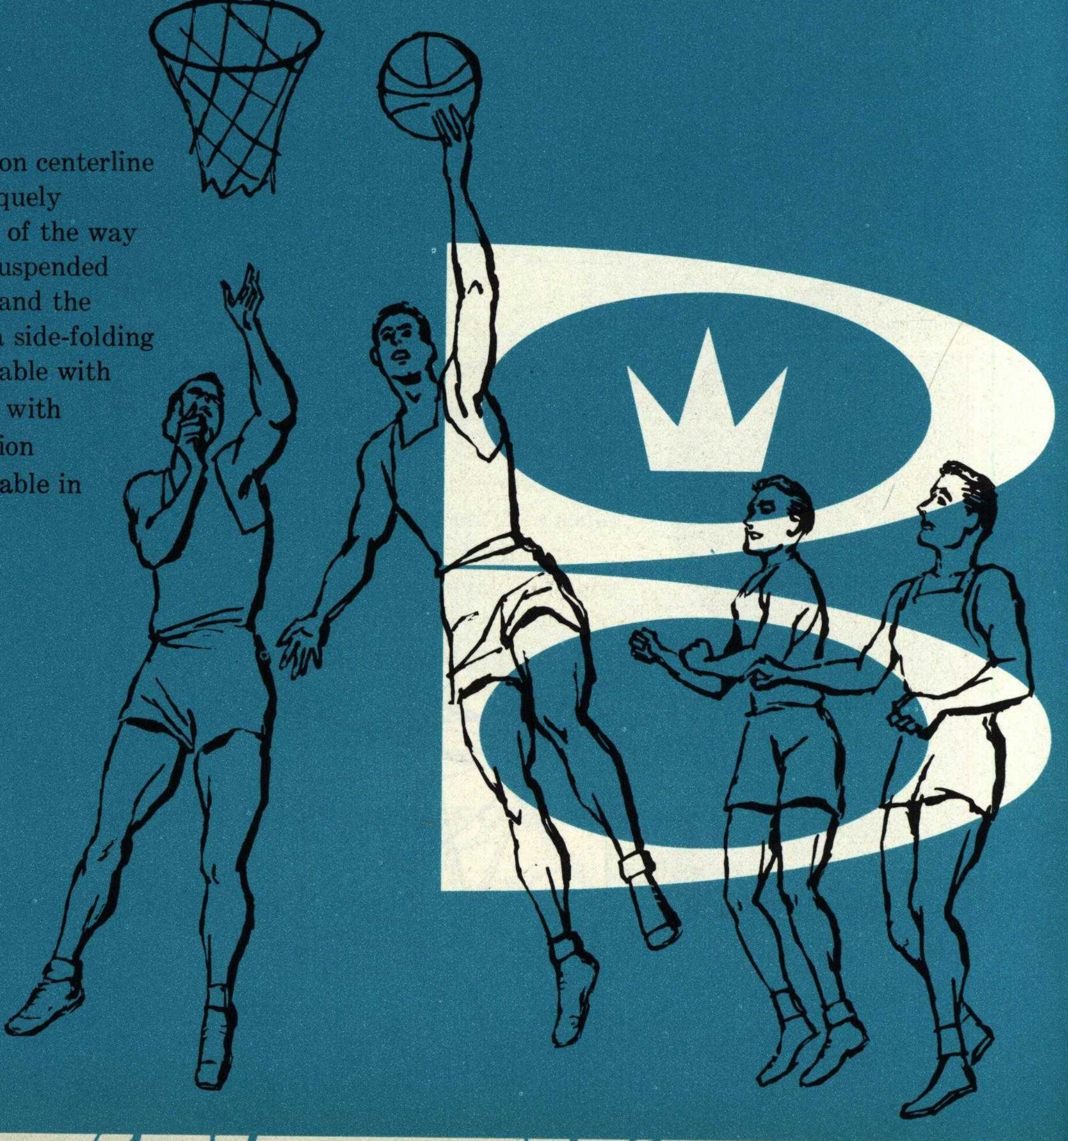


ONCEALED CABLES

ll cables are located inside the folding ructure thus eliminating unsightly ull ropes needed in the forward lding types.

Brunswick
REMOTE CONTROL
SIDE FOLD
BACKSTOP





SERIES 1500

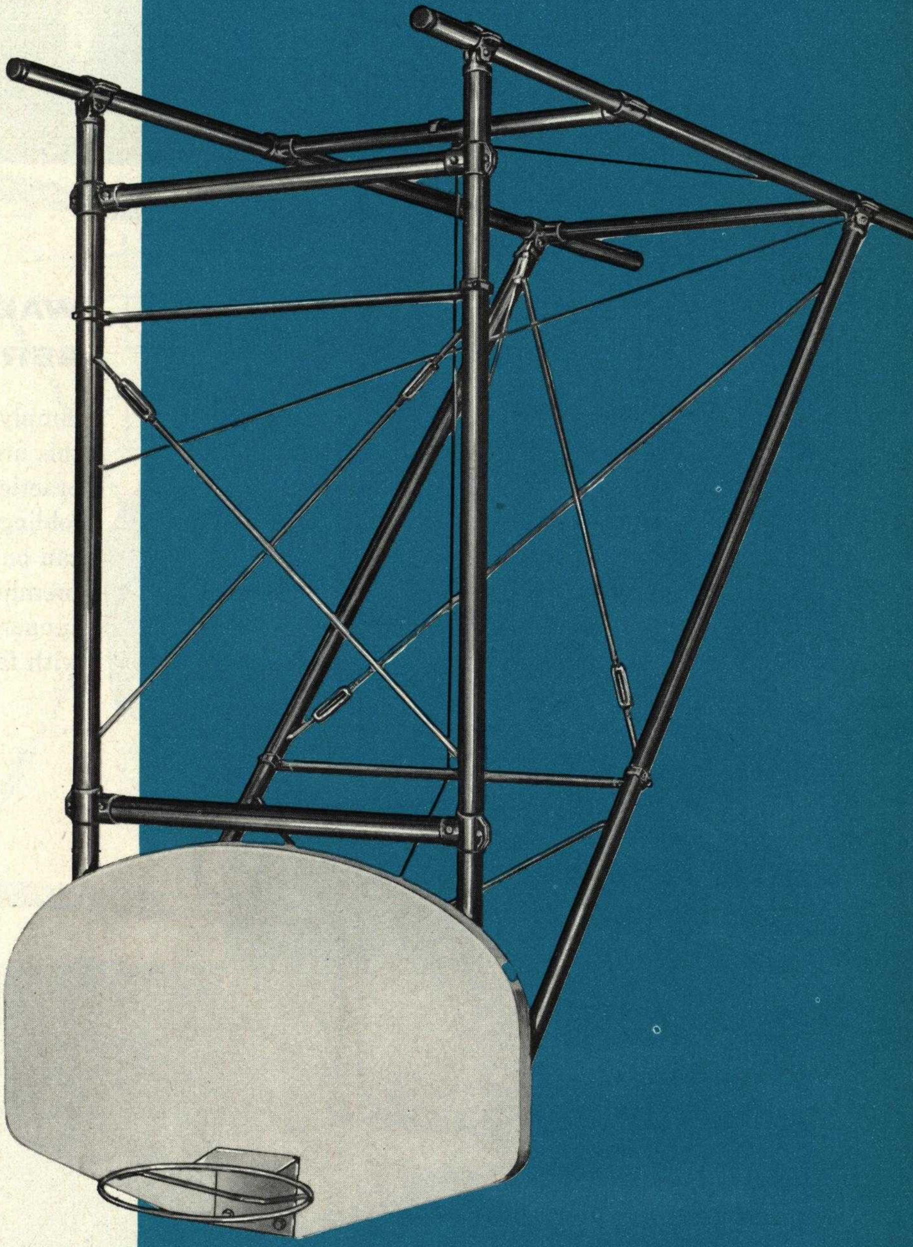
unit especially adapted to hang on centerline folding partitions. And this uniquely esigned unit folds to the side out of the way folding partitions. The unit is suspended n one side of the door centerline and the ankboard is held in position by a side-folding race. This rigid structure is available with l type of bankboards. Available with conomical portable power operation using ½″ drill motor). Also available in ost-saving manual operation.

Brunswick

REMOTE CONTROL ELECTRICALLY OPERATED BACKSTOP

SERIES 312

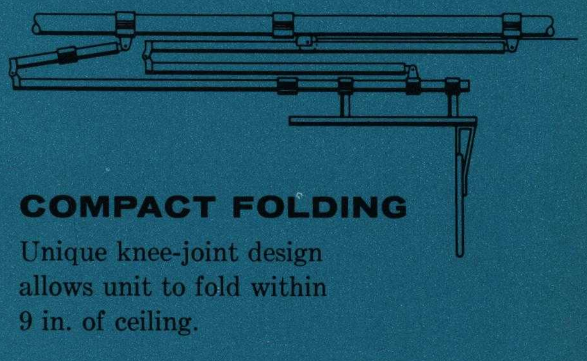
THE ONLY BACKSTOP THAT FOLDS WITHIN ITSELF



Brunswick

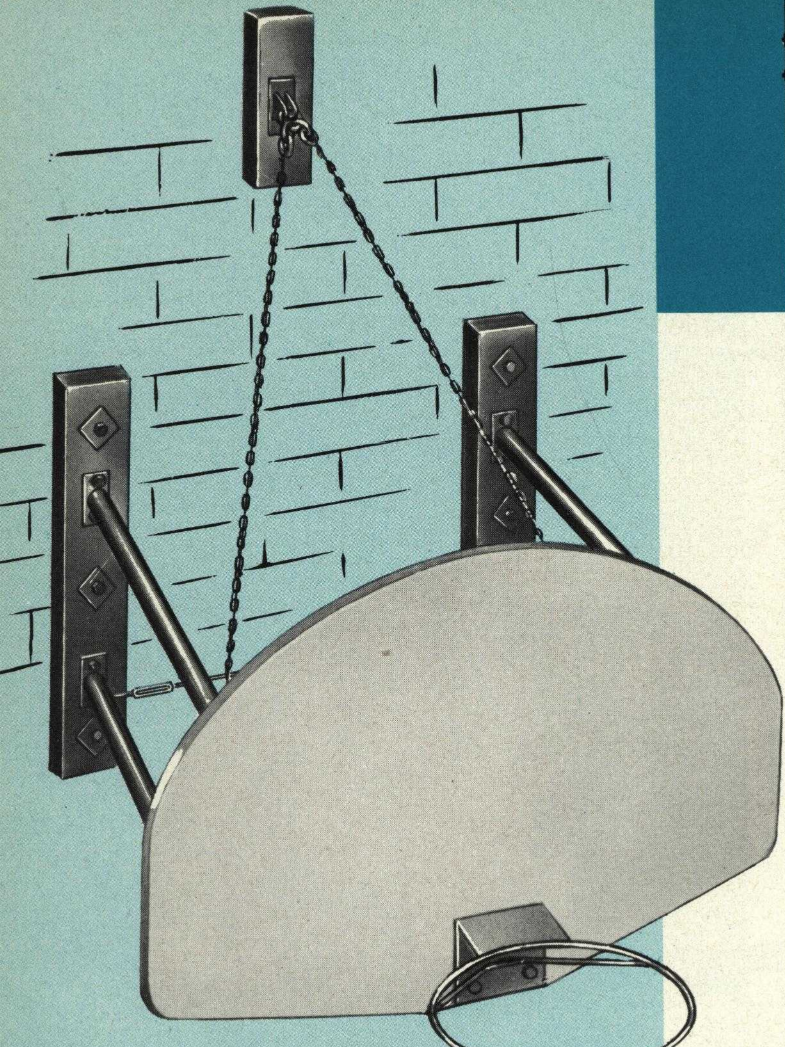
Here's a revolutionary method of folding basketball backstops that not only insures a maximum of rigidity, but permits units to be folded in a minimum of space. Ideal for use in front of stages, over balconies, or in any gymnasium where a compact method of folding is desired, and it's shipped preassembled for easy installation.

Folding is accomplished by placing knee-joints in the front drop pipes as well as the back braces. When winch is operated unit folds straight up instead of in a space-wasting back or forward motion. Stabilizer cables are placed between two predetermined points on front drop pipes and upper framework. Proper tension is maintained in the stabilizer cables in the playing position and is automatically released when the unit is folded, thus reducing unit vibration to a minimum. All cables are located inside the folding structure thus eliminating the unsightly pull ropes needed in the forward folding types. Available with economical portable power operation (using ½″ drill motor). Also available in cost-saving manual operation.

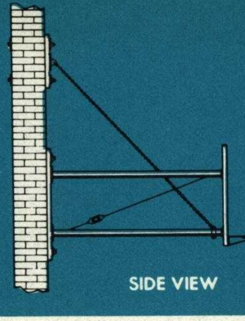


COMPACT FOLDING

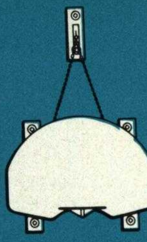
Unique knee-joint design allows unit to fold within 9 in. of ceiling.



SERIES 100



SIDE VIEW



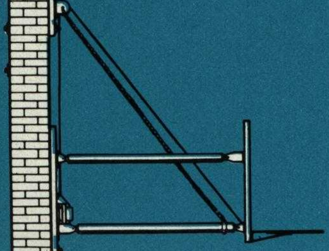
FRONT VIEW

WALL-BRACED BACKSTOP SERIES 100

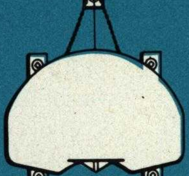
Simply designed for maximum performance, this unit is ideal for small gymnasiums or as practice units where walls are strong and folding is unnecessary. This strong, rigid unit can be mounted flush where space is at a premium, or can be mounted on 8 ft. extended supports. Either mounting can be furnished with fan-shaped bankboards of wood, steel or glass.

WALL FOLD-UP BACKSTOP SERIES 150

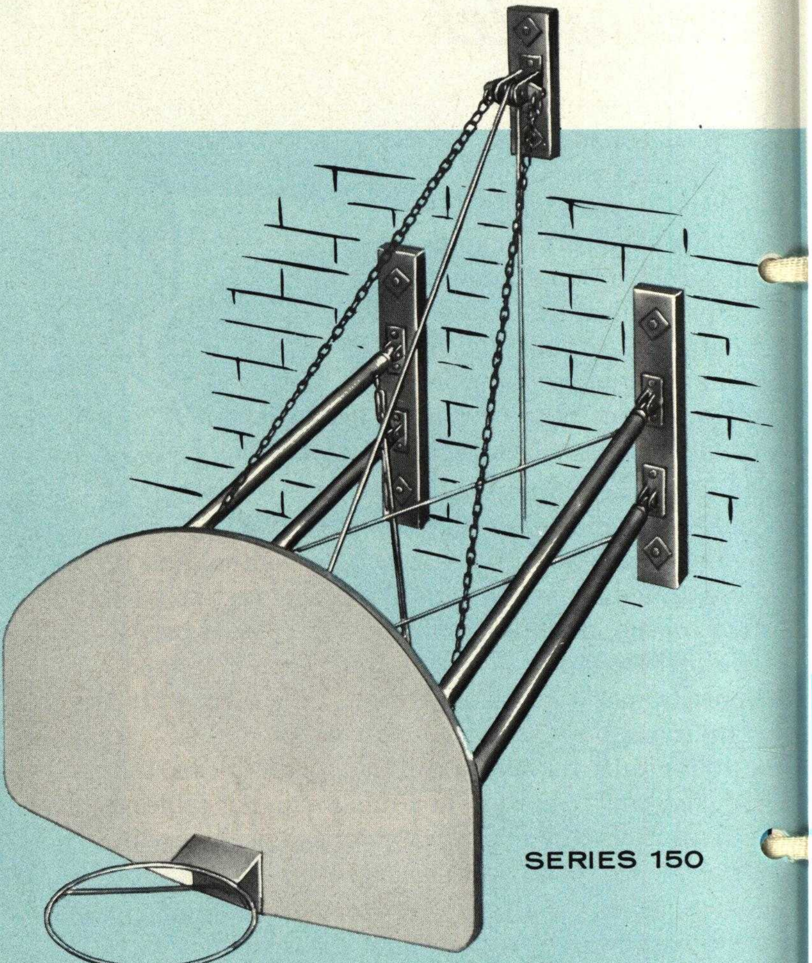
Ideal as a space-saving unit in small gymnasiums where folding is necessary. This strong, rigid backstop is also ideal as a practice unit. It can be mounted up to 8 ft. from the wall. Either mounting can be furnished with fan-shaped bankboards of wood, steel or glass.



SIDE VIEW

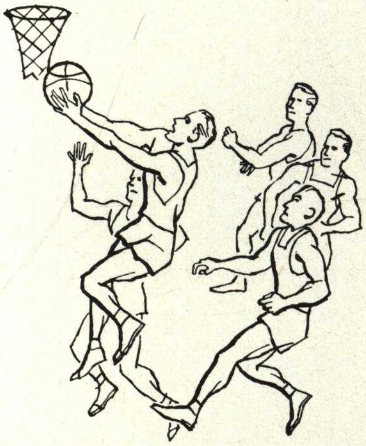


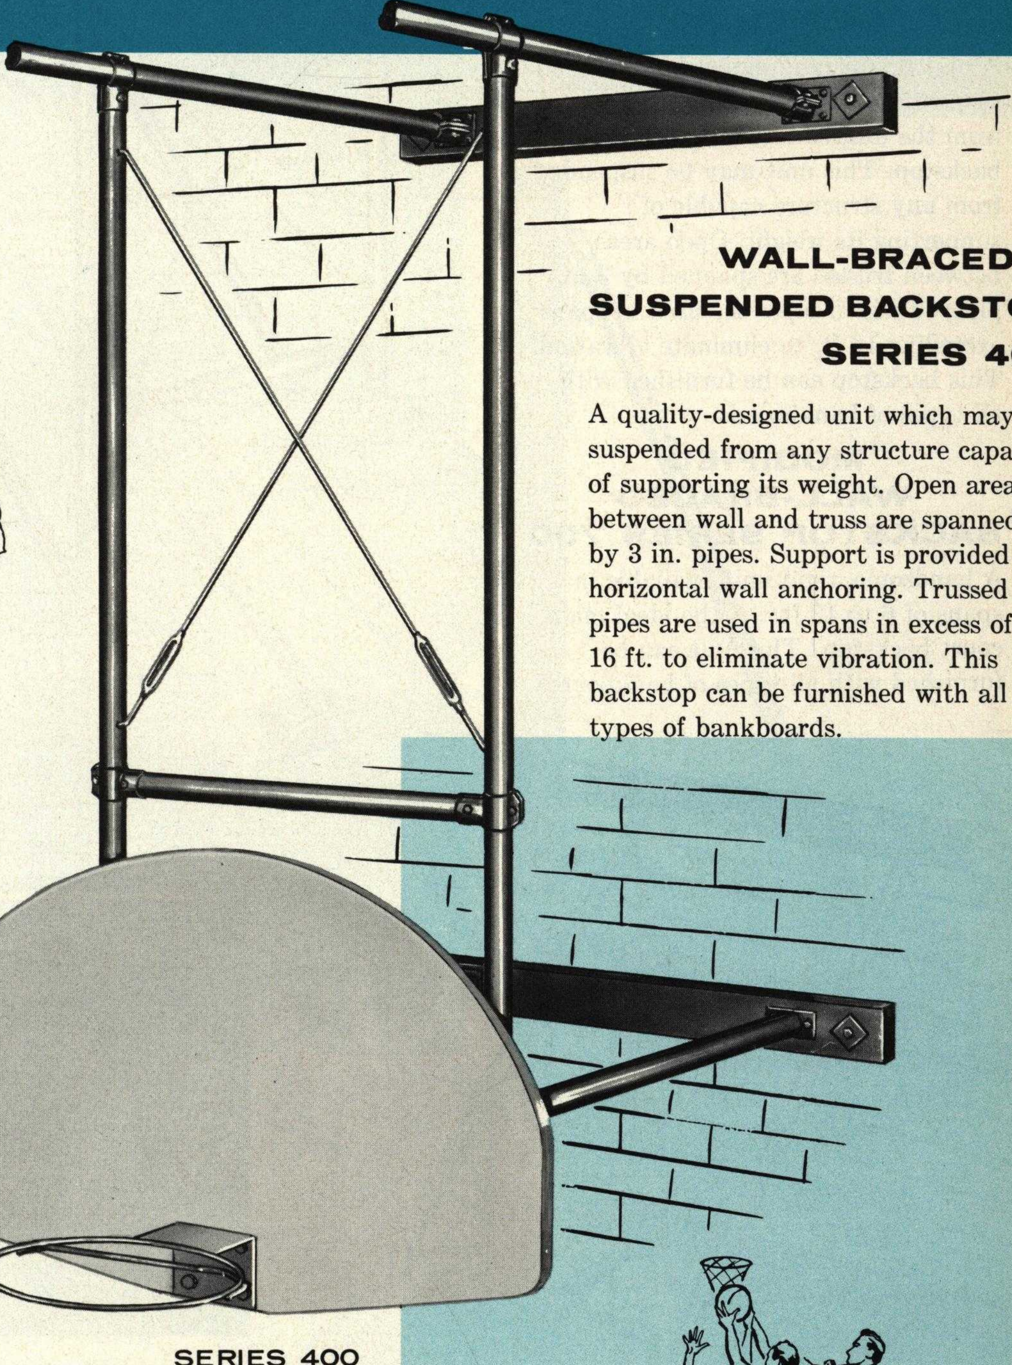
FRONT VIEW

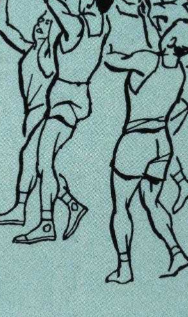


SERIES 150

Brunswick OFFERS A BACKSTOP TO MEET EVERY GYMNASIUM REQUIREMENT



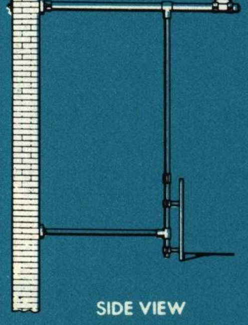




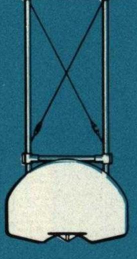
WALL-BRACED... SUSPENDED BACKSTOP SERIES 400

A quality-designed unit which may be suspended from any structure capable of supporting its weight. Open areas between wall and truss are spanned by 3 in. pipes. Support is provided by horizontal wall anchoring. Trussed pipes are used in spans in excess of 16 ft. to eliminate vibration. This backstop can be furnished with all types of bankboards.

SERIES 400



SIDE VIEW



FRONT VIEW

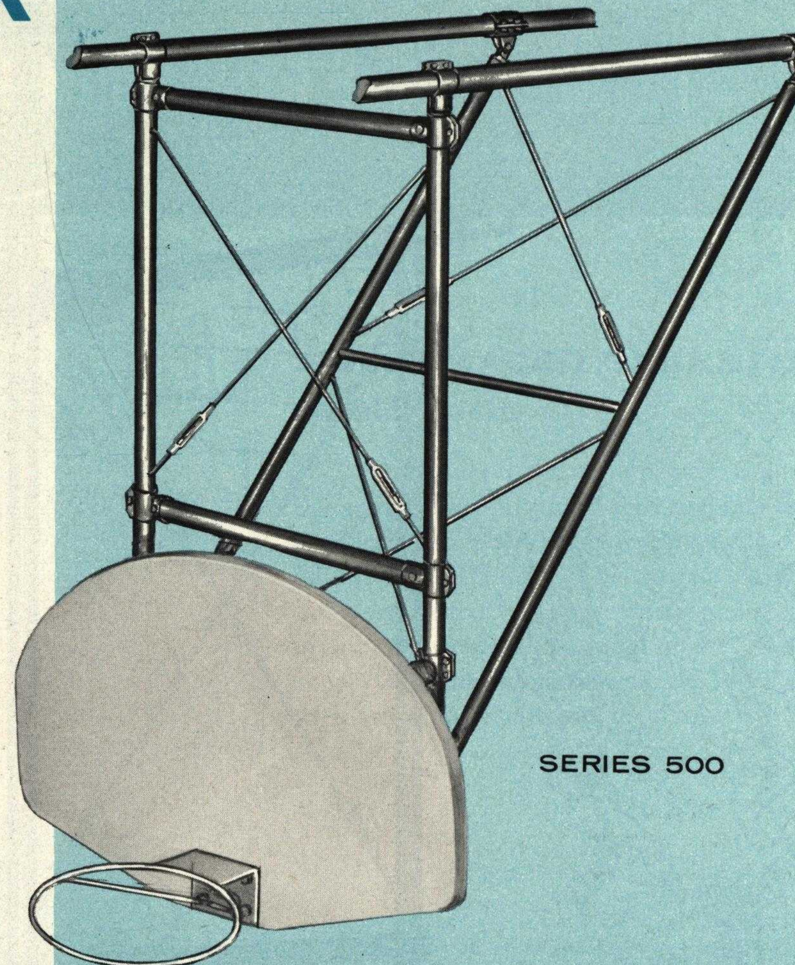
Brunswick

STRUCTURE SUSPENDED AND BRACED BACKSTOP SERIES 500

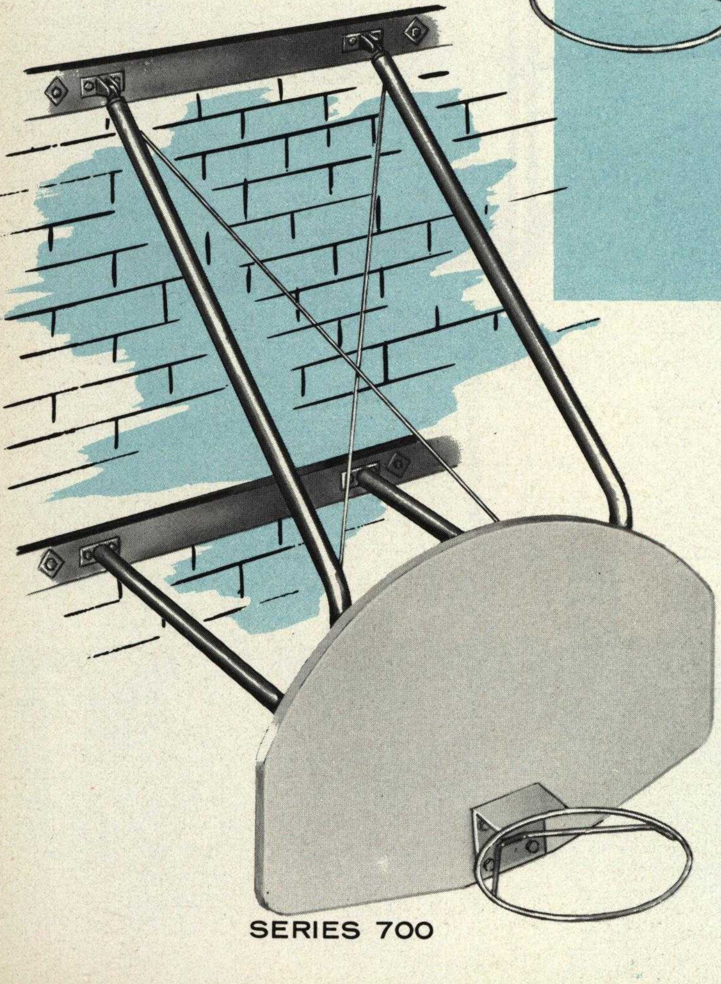
A unit uniquely designed for overhead suspension when the wall is too far from the desired location of the backstop. This unit may be suspended from any structure capable of supporting its weight. Open areas between trusses are spanned by 3 in. pipes. Trussed pipes are used in spans exceeding 16 ft. to eliminate vibration. This backstop can be furnished with all types of bankboards.

MODIFIED WALL-BRACED BACKSTOP SERIES 700

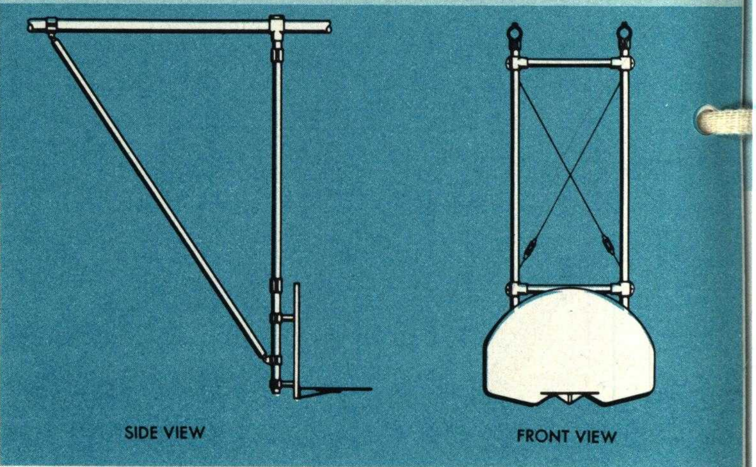
A handsome, rigid unit available in spans of 6 to 12 ft. . . . the ideal main court backstop! This unit can be furnished with all types of bankboards.

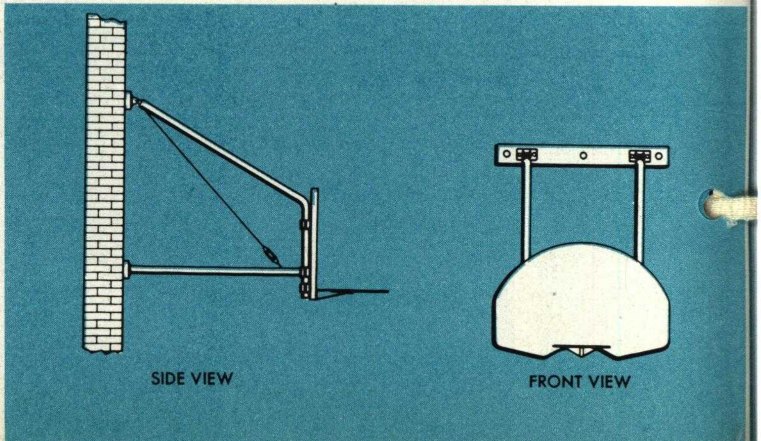


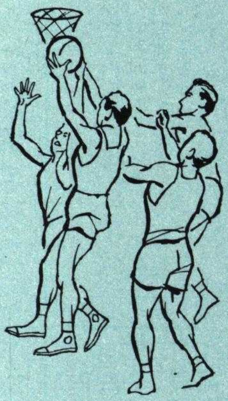
SERIES 500

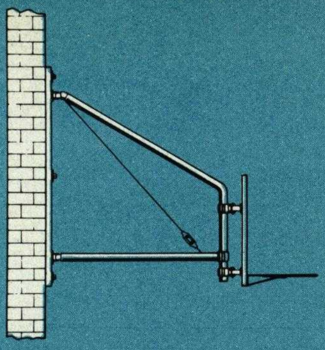


SERIES 700

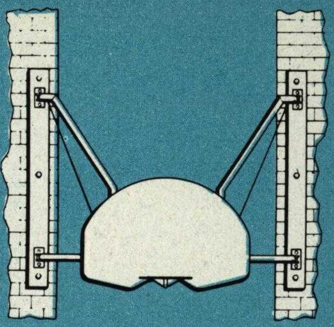




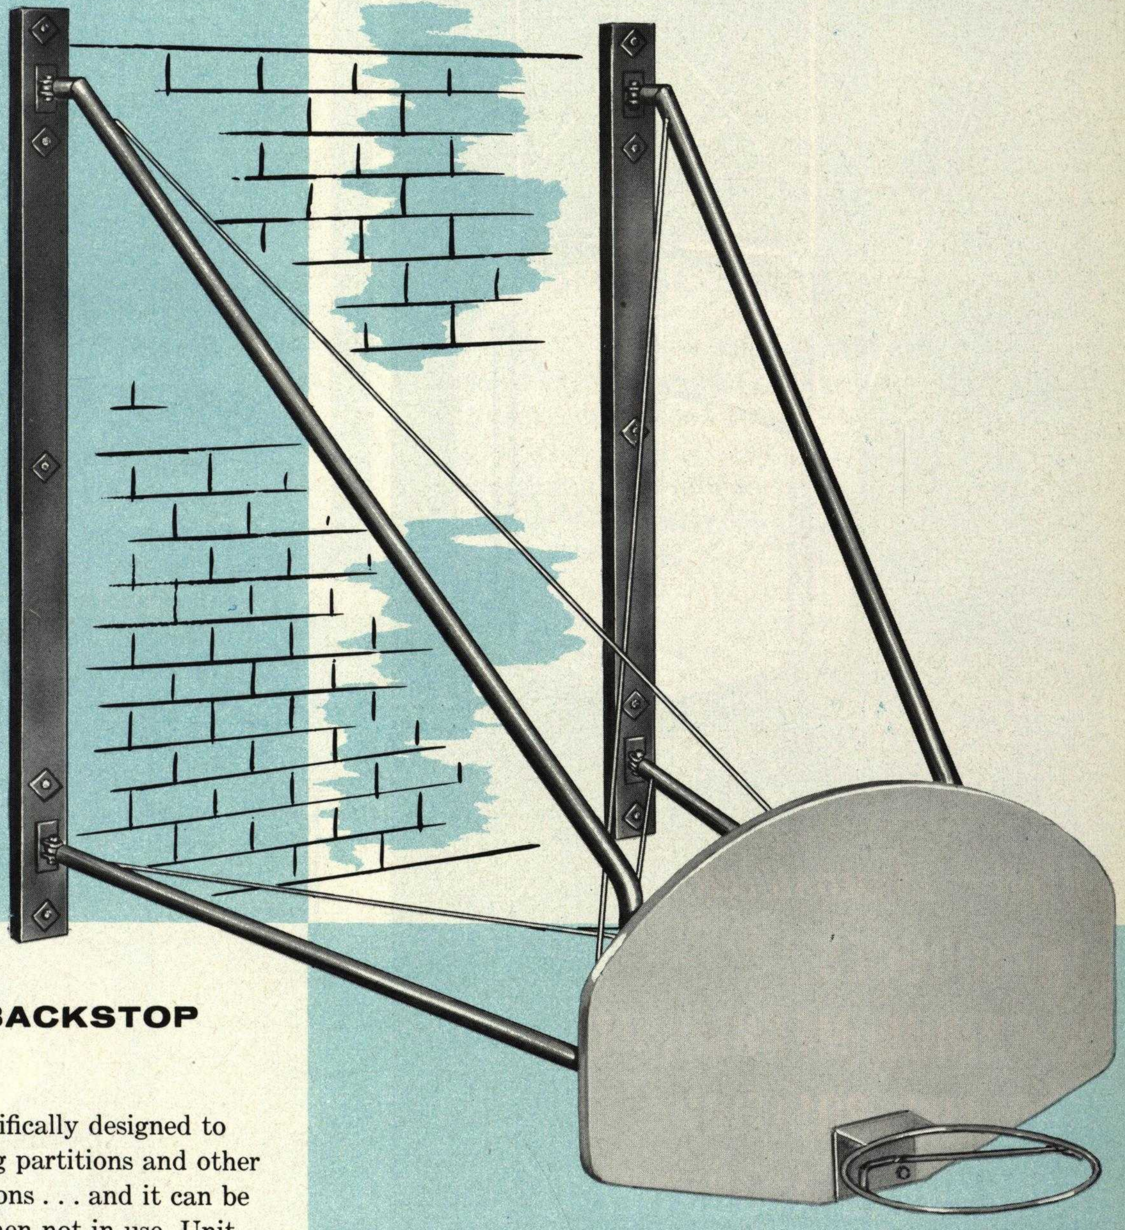




SIDE VIEW



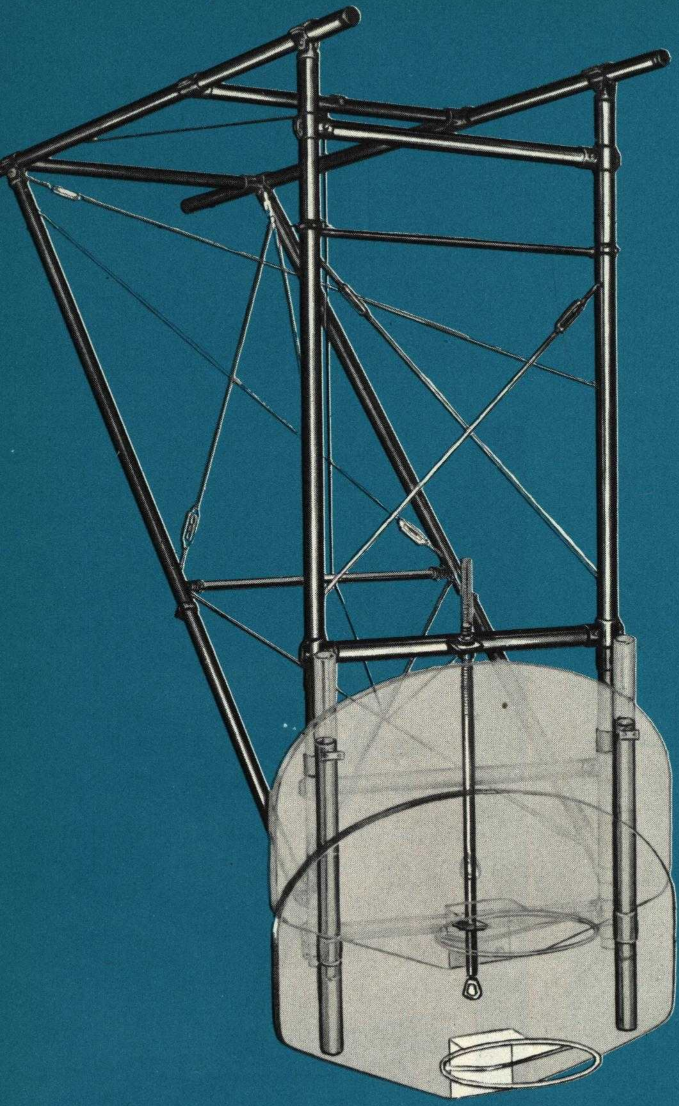
FRONT VIEW

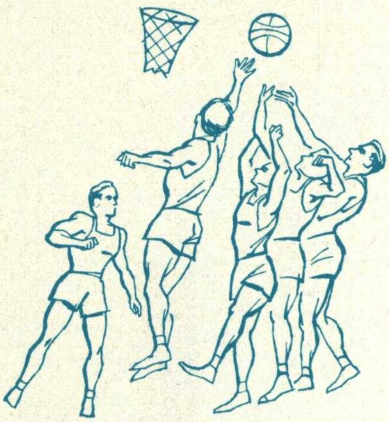


SERIES 750

GATE TYPE BACKSTOP SERIES 750

A wall type unit specifically designed to span windows, folding partitions and other gymnasium obstructions . . . and it can be easily swung aside when not in use. Unit works well when basket must be hung on centerline of folding partition. Side frames swing against the wall on each side of the obstruction with the bank facing out on one of the frames. It may be used as a practice unit in this position. Furnished with wood or steel bankboards. By adding an exterior folding brace, it is possible to adapt this unit to support glass bankboards.



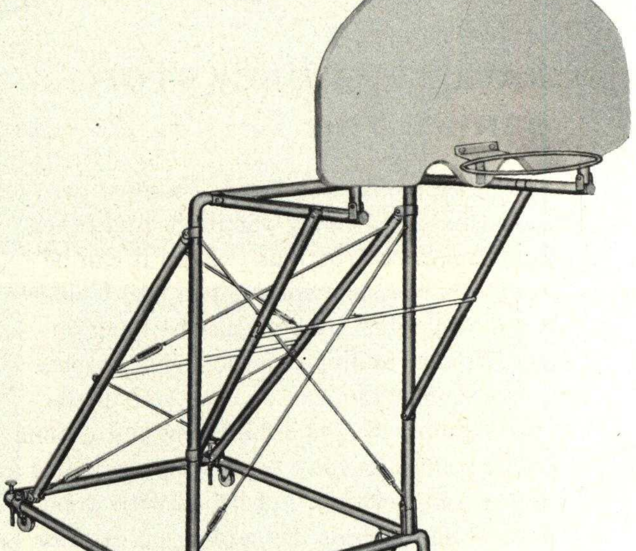


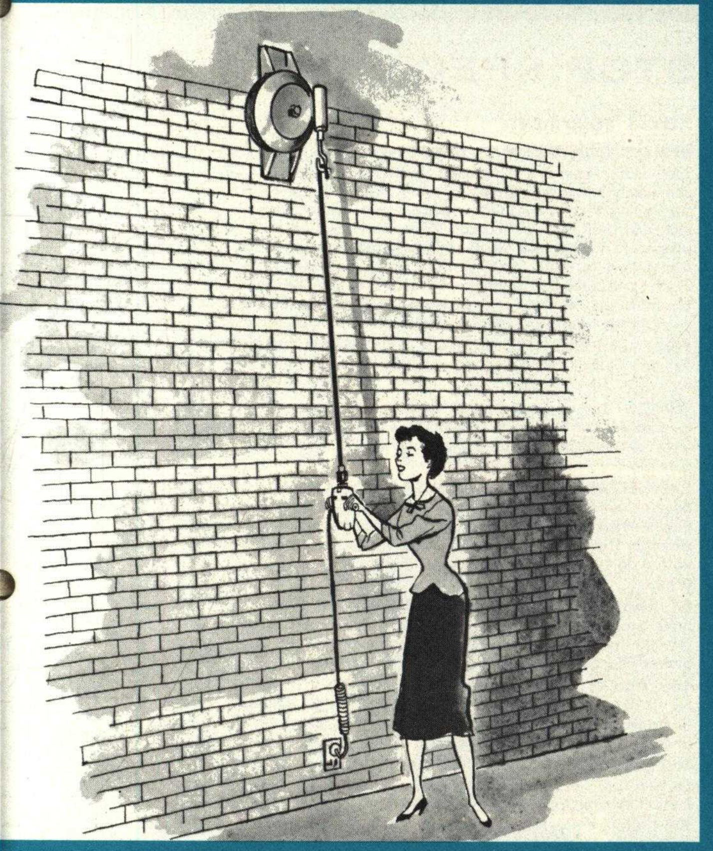
STAGE TYPE BACKSTOP
SERIES 1100

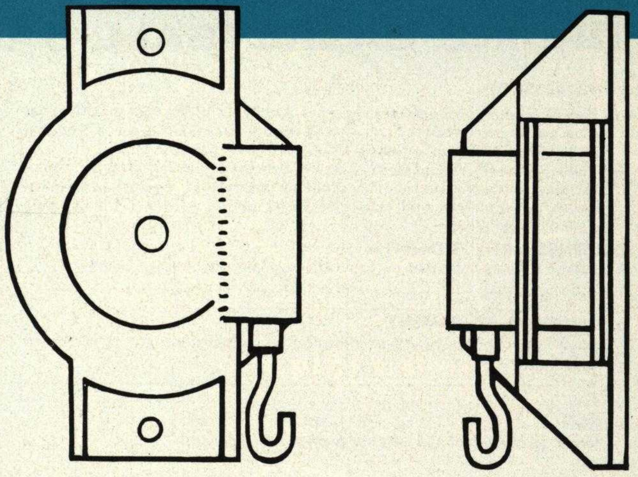
Designed for small gymnasiums or recreation halls where folding or wall-braced units are impractical. Units are anchored to the floor of the stage or gymnasium floor and are easily folded and rolled away for storage. Frames are welded for maximum strength; bolted fittings are used at all adjustment and dismantling points. It is available with fan-shaped bankboards of wood, steel or glass.

NOW – *Brunswick* INTRODUCES A UNIQUE MECHANISM FOR TWO-POSITION BANKBOARD ADJUSTMENT

An exclusive Brunswick telescoping drop pipe design provides for easy manual adjustment to either the "Little League" 8 ft. standard height or to the 10 ft. N.B.A. standard height. This unique mechanism, available on the 312, 400 and 500 series units, allows the use of all types of bankboards.

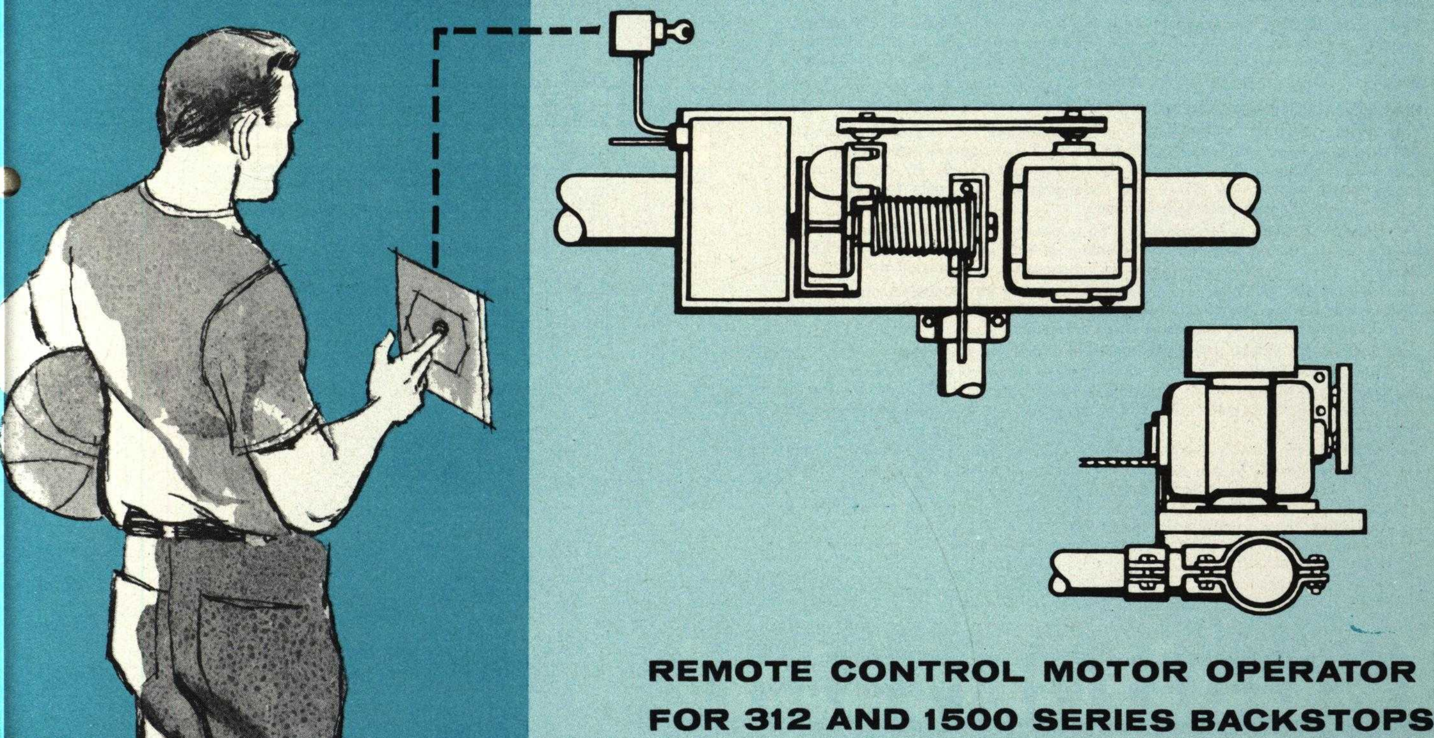






ECONOMICAL SAFETY WINCH

Designed for safety as well as appearance. Fully enclosed and self-locking in any position. Operates with removable extension handle to rule out unauthorized operation. Designed for portable power operation using ½″ drill motor. Series 304 is designed for higher lifting, series 305 is for use on standard height units.



REMOTE CONTROL MOTOR OPERATOR FOR 312 AND 1500 SERIES BACKSTOPS

The Brunswick 312 Backstop is now available with a variety of remote control motor types designed to operate 3 specific types of bankboard styles. Each motor operator is complete with speed reducer and three-position key control switch for fast, dependable service.

Brunswick SERVES YOU ACROSS THE NATION

FOLDING BASKETBALL BACKSTOP SPECIFICATIONS

1. GENERAL SCOPE:

A. Folding Basketball Backstops shown in Architect's plans and specifications shall be as manufactured by The Brunswick-Balke-Collender Company, Kalamazoo, Michigan, or equal as approved by the Architect.

B. Folding Basketball Backstops shall be delivered and installed by manufacturer. The entire installation shall be guaranteed against faulty materials, workmanship and operation for a period of one (1) year from date of installation.

2. EQUIPMENT REQUIREMENTS:

A. Furnish units as indicated on drawings and/or as scheduled below:

1.______________________________

2.______________________________

B. OPTIONAL EQUIPMENT:

Furnish optional equipment as indicated on drawings and/or as scheduled below:

1.______________________________

2.______________________________

3. DESIGN:

(Refer to individual numbers for proper specifications)

4. FINISH:

A. Backstop pipes, fittings and bolts shall be finished in black enamel at Factory.

B. Bankboard finish to be baked-on white enamel. Wood bankboard finish to be flat white enamel.

C. Goals shall be finished in orange enamel.

TOP SUSPENDED BACKSTOPS:

OVERHEAD SUPPORTS: Backstops shall be supported by 3" pipe attached to structural members. For spans greater than 16'-0" pipe shall be reinforced by rigid trussing and cross pipes. When support members are higher than 22'-0" above floor drop frames of 2" pipe shall be used to suspend 3" pipes at 22'-0" level. Diagonal bracing of ⅜" rods with turnbuckles shall be included.

312 DOUBLE FOLDING BACKSTOP: 2" drop pipes shall have knee joints to allow unit to fold within length of mounting. Knee joints to be locked by stabilizer cables which shall automatically release when unit is folded. Spreader pipes and "X" bracing of ⅜" rods with turnbuckles to hold front frames rigid. Oblique braces of 1½" pipe to include knee joint for folding. Spreader pipes and guys of ⅜" rods with turnbuckles included for rigidity. In folded position bankboard shall face down with frame folded to level of overhead supports.

400 SUSPENDED AND BRACED: 2" drop pipes suspended from overhead support shall be braced to wall at bottom by 1½" pipe. Frame shall be reinforced with pipe spacers and guys of ⅜" rods with turnbuckles.

500 MODIFIED SUSPENDED AND CEILING BRACED: 2" drop pipes suspended from overhead supports to have oblique braces of 1½" pipes. Spreader pipes and guys of ⅜" rods with turnbuckles included for rigidity.

1500 SIDE FOLD: 2" drop pipes suspended from overhead support with oblique bracing of 1½" pipes. Knee joint in oblique bracing shall allow unit to fold sideways and up to clear center line of folding partition. Guys of ⅜" rods with turnbuckles included in open panels for rigidity.

WALL BRACED BACKSTOPS:

100 WALL BRACED: Bankboards shall be suspended into position by four (4) 1½" pipes securely attached to wall. Frame shall be equipped with guys of ⅜" rods with turnbuckles. Bankboard to be supported vertically by oblique chain brace attached to lower pipes and extending at 45° angle to wall plates centered between and above pipe frame.

150 WALL FOLDUP: Bankboards shall be suspended in position by four (4) 1½" pipes securely attached to wall. Hinge fittings at ends of pipes shall permit backstop to fold up against wall when winch is operated. Frame shall be equipped with guys of ⅜" rods and turnbuckles. Bankboard to be supported vertically by oblique chain brace attached to lower pipes and extending at 45° angle to wall plates centered between and above pipe frame.

700 MODIFIED WALL BRACED: Bankboard shall be suspended vertically on 2" pipes shaped to run obliquely from top of bankboard to wall. Lower horizontal braces of 1½" pipe attached to bottom of 2" pipe for rigidity. Horizontal guys of ⅜" rods with turnbuckles and oblique guys of ½" rods with turnbuckles to be included.

750 GATE TYPE OR WINDOW SPAN: Bankboard shall be suspended vertically on 2" pipes shaped to run obliquely from top of bankboard to wall. Lower horizontal brace of 1½" pipe attached to bottom of 2" pipe for rigidity. Bankboard shall be hinged to pipe frame with unlatching fittings to permit folding against frame, then against wall. Removable horizontal guys to hold unit rigidly in playing position. Non-removable oblique guys shall be of ½" rods with turnbuckles.

OPTIONAL EQUIPMENT:

1. REMOTE CONTROL MOTOR OPERATOR: Backstop unit shall be equipped with motor operator controlled by three (3) position key control switch conveniently located. Operator shall include magnetic reversing starter with 24 volt control circuit and prewired limit controls integrally mounted within unit. Unit shall include 110 volt, 60 cycle instant reversing capacitor motor of proper H.P. with built in over load protection and automatic reset. Power transmitted to cable drum through worm type reduction gear. Cable drum shall be grooved to insure positive lay of ¼" lift cable during operation. Operator unit shall be self-locking at any position. Power outlet, conduit, and wiring from operator to key control switch by others.

2. PORTABLE ELECTRIC MOTOR FOR STANDARD WINCH: Standard ½" electric drill with reversing switch shall be provided with 4'-9" removable extension drive.

3. WINCH: Backstop winch shall be enclosed type with worm gear designed to provide self-locking in any position. Winch shall be placed 10'-0" above floor and operated with removable hand crank (awning type) with 6'-0" extension.

4. BANKBOARDS: 50 STEEL FAN-SHAPED BANKBOARDS: Series 50 bankboard shall be 35" high and 54" wide fabricated from one (1) piece of 12-gauge steel with 1½" flanged sides. Reinforced frame welded to back to maintain flat and rigid face. Bolting connections located at four points with slotted holes for adjustment. Holes for attaching goal must be free of playing area.

5. 55 FAN-SHAPED GLASS BANKBOARDS: Series 55 bankboard shall have over-all dimension of 39" high and 54" wide. Glass shall be ⅜" Herculite set into steel frame lined with Neoprene. Holes for mounting goal shall be bushed. Border and center target to be white enamel on back side of glass.

6. 150 WOOD RECTANGLE BANKBOARDS: 150 Series bankboard shall be of one (1) piece 48" x 72" x ¾" 5-ply fir plywood with a 1" by 5" fir frame glued and screwed to back side. Two intermediate braces of 1" x 4" fir to be placed vertically in center of boards on 5" centers for bolting goals.

7. 160 GLASS RECTANGLE BANKBOARDS: Series 160 bankboard shall be Herculite set into pressed steel frame lined with Neoprene. Goal mounting plates shall be placed front to rear with Neoprene sheeting between Herculite and plates. Holes for mounting the goals shall be bushed. Border and center rectangular target to be of white enamel on back surface.

8. GOALS: Series 10 goal used with 45 and 55 series bankboards. Series 20 goal used with 150 and 160 series bankboards. Goal shall be of ⅝" round steel, rolled to 18" inside diameter and braced and welded to steel frame so that inside of goal is 6" from face of bankboard. "No tie" hooks shall be welded to underside of goal to accommodate heavy duty net.

SWIMMING POOL CORPORATION
COMMERCIAL POOL DIVISION

THE COMMERCIAL POOL DIVISION
OF INTERNATIONAL SWIMMING POOL CORPORATION . . . .

provides a fully integrated manufacturing, design, and service facility for the swimming pool industry. In addition to offering a complete line of high quality swimming pool equipment, International's staff of engineers, specialists in the field of pool design and construction, offers without obligation an advisory service to architects and engineers, aimed at bringing the most modern engineering practices to the following aspects of pool design:

site planning—Grade and layout problems, consideration of soil conditions in connection with the foundation design of the pool structure.

structural design—Reinforced concrete and gunite pools, in addition to specialized designs of diving towers in reinforced concrete and steel. Working specifications and drawings for all types of installations.

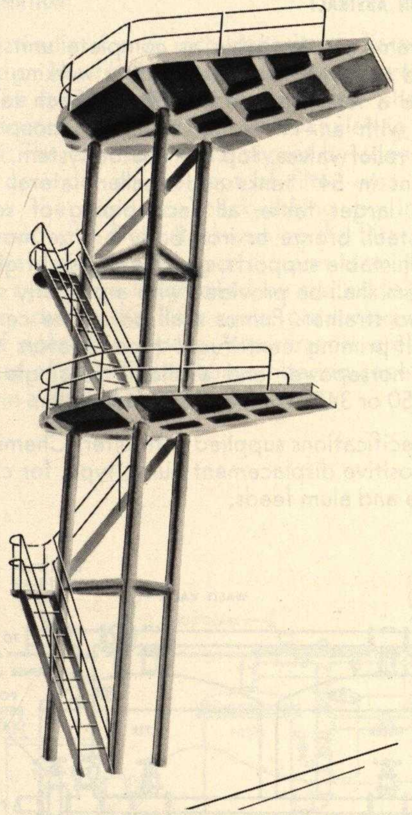
hydraulic design—The design of peripheral piping systems. Filter house planning and layout for maximum space utilization and efficiency, in either rapid sand pressure or diatomaceous earth filtration systems. The application of the governing codes to specific design problems.

general service—A service having as its objective the prompt rendering of technical advice on such diverse subjects as pool modernization and repair, equipment specification, pool maintenance and water treatment problems.

International Swimming Pool Corporation seeks to increase the scope and variety of swimming pool technology by a program of research for the improvement of equipment and construction methods, through an organization equipped to satisfy the most exacting technical needs of the architect and engineer.

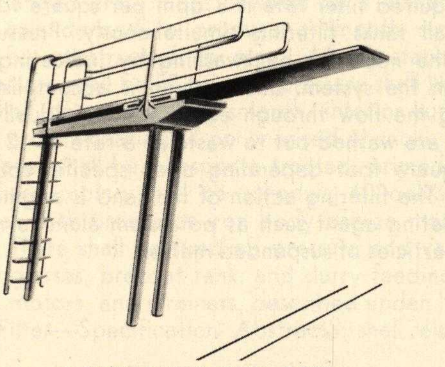
DECK EQUIPMENT

"500" GROUP



5 AND 10 METRE TOWER, F-501

Prefabricated of structural steel with lightweight concrete platforms, select vertical grain prefinished redwood steps and intermediate platforms. Available as a complete structural steel unit, with precut redwood. Shop drawings for concrete platform and foundation work included. Deck space requirements, 6' x 7'.

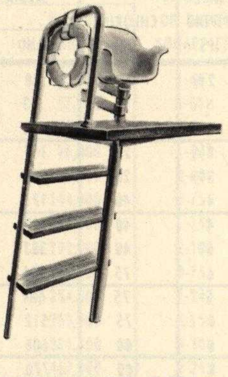


3 METRE DIVING STAND, F-502

Prefabricated of structural steel and aluminum, select vertical grain prefinished redwood steps and two sets of stainless steel handrails. The safety handrail for public use is quickly disengaged and replaced with a lower handrail which will, for competitive diving, not interfere with the diver's arm movements. Available with foot adjustable fulcrum or lock-nut fulcrum, and a choice of colors and finishes. Supplied with wood or aluminum diving boards (see page 7).

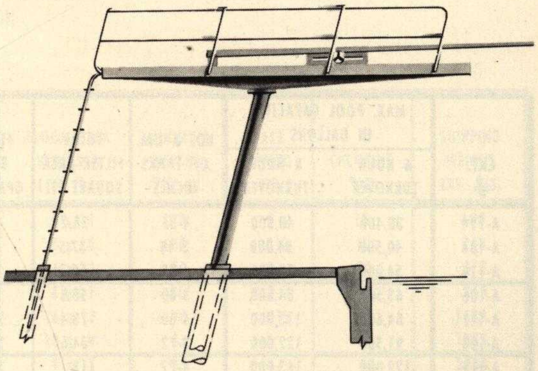
1 METRE DIVING STAND, F-503

Identical to the 3 Metre Diving Stand, F-502. Differs only in height above water. Deck space requirements, 2' x 7'.



LIFE GUARD CHAIR, F-504

Prefabricated of structural steel, aluminum, and redwood, complete with umbrella rack, life ring, stainless steel handrail, and contoured fiberglas seat. Available in choice of colors and finishes.



1-5 METRE HYDRAULIC PLATFORM, F-533

Hydraulic diving tower adjustable for 1 to 3 metre springboard diving, and 3 to 5 metre platform diving. The springboard is offset to side of the 8' x 16' platform and pivots back for unobstructed platform space. The adjustable front fulcrum is readily removed. The hydraulic platform is a requisite for the instruction of board and tower diving. The diving pupil may be gradually acclimated to the use of the 5 metre platform and the 3 metre board. Lightweight concrete and steel platform, available with handrails to individual specification.

FILTERS

SWIMMING POOL FILTRATION

The efforts of the American Public Health Association, dating back to 1918, in promulgating high standards of pool water sanitation have resulted in recommended specifications for filter systems of the highest efficiency. The importance of pool water clarity demands standards of filtration in excess of those for drinking water. Today, almost all state and public

RAPID SAND PRESSURE FILTERS

GENERAL INFORMATION

The filter media consists of a layer of fine sand usually 20 to 24 inches deep, supported on layers of graded gravel. The required filter rate is 3 gpm per square foot of filter area, all tanks filtering simultaneously. Pressure gauges show the need for backwashing by indicating head loss through the system. Backwashing is accomplished by reversing the flow through each tank individually; dirt and debris are washed out to waste at a rate of 12 or 15 gpm per square foot depending upon specific code requirements. The filtering action of the sand is augmented by a coagulating agent such as potassium alum to remove the finer particles of suspended matter.

SPECIFICATION ABSTRACT

Filter systems are available as complete units. Tanks are fabricated to ASME standards with a working pressure of 50 psi and a test pressure of 200 psi. Each tank shall be provided with an 11" x 15" manhole, couplings, drain plugs, air relief valves, top distributor system, dome type underdrains in 54" tanks and smaller, lateral underdrain system in larger tanks, all face piping of schedule 40 wrought steel, bronze or iron body bronze mounted gate valves, adjustable supports, gauges and sight glasses. Each filter system shall be provided with a properly sized pump, motor, and strainer. Pumps shall be of the centrifugal or of the self-priming centrifugal type. Motors shall be of sufficient horsepower and available in single and three phase, 1750 or 3450 rpm, and 220/440 volts.

Media specifications supplied with filter. Chemical feeders shall be positive displacement pump type, for chlorine, pH corrective and alum feeds.

(2) Based on application rate of 3 GPM/square foot of filter area.
(3) Based on backwashing tanks individually at 12 GPM/square foot of filter area.
(4) Chlorinator capacity in pounds per day. 8 hour turnover.
(5) Weight ot tank & face piping only.

NOTE: Intermediate size vertical tanks and horizontal tanks made to order.

health regulations require that the entire water content of the pool be filtered and treated in at least 8 hours, or often six, and the requirements for chlorination and pH control are equally explicit. International filter systems, either rapid sand pressure filters, or diatomite pressure filters are designed to meet the most rigid requirements.

international
SWIMMING POOL CORPORATION
COMMERCIAL POOL DIVISION

PRESSURE DIATOMITE FILTERS

GENERAL INFORMATION

The filtering media is a ⅛ inch deposit of diatomaceous earth coated on the filter element by the pressure of flowing water. The resultant effluent is clear and "sharp" due to the fine porosity of the media. A coagulating agent is not required. The filter rate is usually set by code requirements at 2 gpm per square foot of filter area. Pressure gauges show the need for backwashing by indicating head loss through the filter. Backwashing the filter removes the spent diatomite media and requires a minimum of water. Filter cycles are lengthened by the addition of diatomite slurry during the filter cycle, producing maximum efficiency of operation. Space requirements are approximately ½ that of sand filters. Large filtering capacity may be installed in a limited area.

SPECIFICATION ABSTRACT, THE "AquaKleer" FILTER

Diatomite filters shall be of the pressure upflow type employing vertically suspended rigid elements consisting of perforated flanged brass tubes covered by a monel wire mesh cloth calenderized to produce a smooth surface. Tanks shall be constructed to meet ASME standards. Working pressure shall be 50 psi, test pressure shall be 200 psi. Tanks shall be sandblasted smooth, interior surfaces shall receive a 6 mil coating of polymerized phenolic resin; exterior surfaces shall be phosphate treated, primed, and enameled. Face piping shall be schedule 40 galvanized wrought steel, with bronze or iron body bronze mounted gate valves. There shall be supplied pressure and vacuum gages, sight glasses, precoat tank, and slurry feeding system. Pumps, motors, and strainers, described under "Pressure Sand Filter—Specification Abstract" shall also be supplied.

Chemical feeders shall be positive displacement pump type, for chlorine and pH corrective.

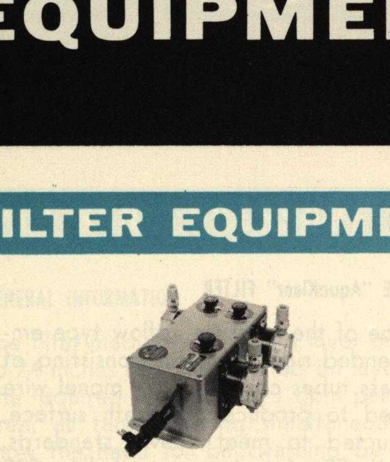
NOTES: (1) Includes average operating area, pump, motor, slurry tank and precoat tank.
(2) Based on application rate of 2 GPM/square foot of filter area.
(3) Weight of tank & face piping only.
(4) Chlorinator capacity in pounds per day. 8 hour turnover.
(5) Minimum ceiling height required for septa removal.

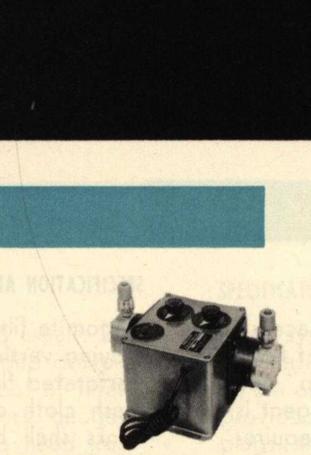
GENERAL EQUIPMENT

international
SWIMMING POOL CORPORATION
COMMERCIAL POOL DIVISION

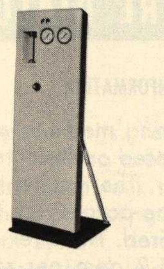
FILTER EQUIPMENT



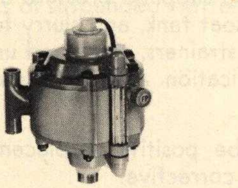
CHEMICAL FEEDER, D-104, TRIPLEX. Precision Model S3, positive displacement pump, operates against back pressure of 125 psi. Used simultaneously as hypochlorinator, pH regulator, and alum feeder. Recommended for rapid sand pressure filter systems.



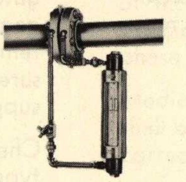
CHEMICAL FEEDER, D-105, DUPLEX. Precision Model SD, positive displacement pump, operates against back pressure of 125 psi. Used simultaneously as hypochlorinator and pH regulator. Recommended for diatomite filter systems.



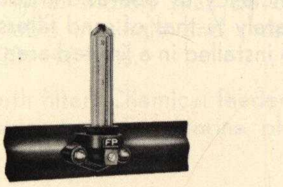
GAS CHLORINATOR, D-102. Maximum capacity 200 lbs. per day. Fischer & Porter Model 70C1110, manual and semi-automatic control. Corrosion-proof inside and out. Gas flow rate is maintained by positive-acting spring-opposed diaphragm regulators and built-in flowmeter.



GAS CHLORINATOR, D-103. Maximum capacity 50 lbs. per day. Fischer & Porter Model 70C1010, manually operated, solution feed, vacuum type, designed to feed chlorine gas at a controlled rate. Also equipped with positive-acting, spring-opposed diaphragm regulators.

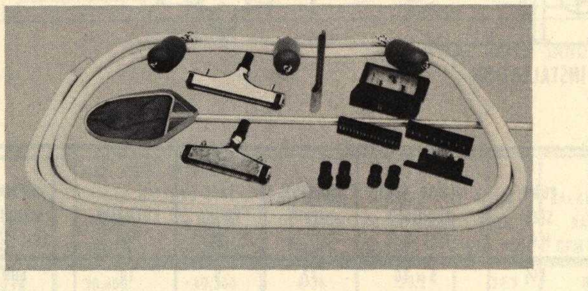


FLOWMETER—MANOMETER TYPE, D-110. Fischer & Porter No. 735-560 complete with orifice flanges and plates. Recommended for large installations.



FLOWMETER—ROTAMETER TYPE, D-109. Fischer & Porter No. 71K1000, direct reading; orifice plates and flanges not required. For pipe sizes through 8″.

MAINTENANCE EQUIPMENT



VACUUM CLEANERS. 18″ vacuum head, H-101. 12″ vacuum head, H-102. Complete with sectional extension handle, hose, and float assembly, and connector to vacuum outlet fitting. Also available with tow-line assemblies for large commercial pools.

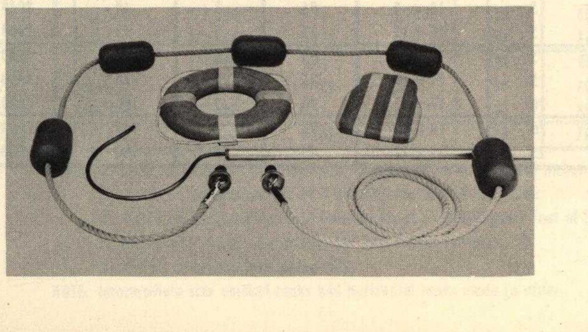
WATER TEST KIT, H-107. Color standards for pH and chlorine tests to meet the most exacting code requirements. Chlorine residual standards from 0.0 to 1.0, pH ranges from 6.3 to 8.4.

POOL THERMOMETERS. Chrome plated brass case, H-108. Rigid plastic case, H-109.

LEAF SKIMMER, H-110. Lightweight with replaceable screen and 14′ aluminum handle, G-110.

The equipment shown is part of a complete line of maintenance equipment. Individual items are recommended by International engineers to conform to the operating requirements of a specific pool.

SAFETY EQUIPMENT



LIFE LINE AND FLOAT ASSEMBLY. ¾″ nylon rope (G-101) with 5″ x 9″ plastic floats (G-104) secured with chromed bronze terminals (G-105). This assembly is used in conjunction with life line sockets and eye bolts to separate diving and play areas.

LIFE RING, G-108. High buoyancy, surface finished foam rubber.

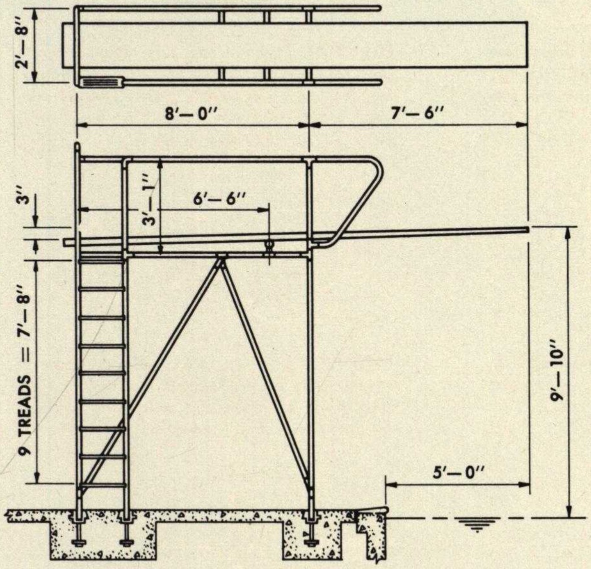
KICKBOARDS, G-107. 12″ x 18″ fiberglas covered styrene foam. For swimming instruction.

LIFE HOOK, G-109. 14″ diameter hook with 14′ aluminum handle (G-110) for life saving and instructional purposes.

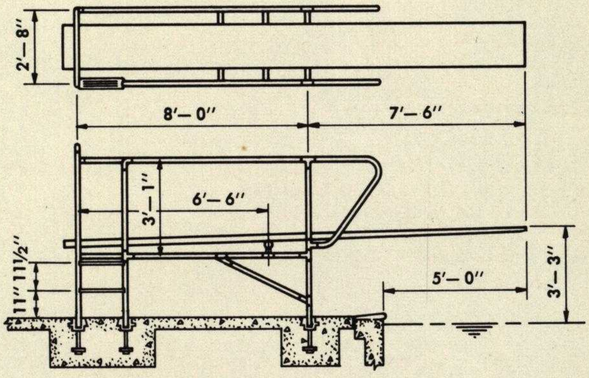
The equipment shown is for minimum swimming pool safety. A complete line of safety equipment is available for all types and sizes of pools.

DECK EQUIPMENT

"100" GROUP

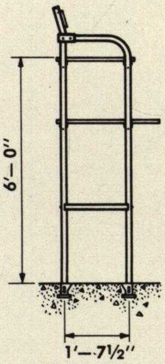


3 METRE DIVING STAND—OFFICIAL, F-105



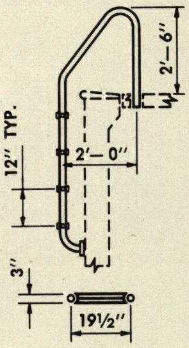
1 METRE DIVING STAND—OFFICIAL, F-106

Removable type. Formed 1.9" O.D. stainless steel complete with deck anchors, adjustable rubber fulcrum, and non-slip treads. split bronze, brushed chrome plated fittings.



LIFE GUARD CHAIR, F-107. Hardwood seat and footrest. Chair is standard height, 6 feet above the deck for maximum view and unobstructed take-off. Removable type.

LADDERS. 3 TREAD, F-109. 4 TREAD, F-110. Stainless steel assembly of 1.9" O.D. rails and formed non-slip treads available in specialized shapes to fit any pool, or as grab or stair rails for integral pool wall steps, complete with deck anchor sockets.



DIVING BOARDS

Diving boards are available in 12, 14, and 16 foot lengths, fabricated of prime, clear, vertical grain Douglas Fir, laminated under pressure, coated with fiberglas and polyester resin with integral sand tread for weather resistance and long life. Diving boards are also available in aluminum.

DOUGLAS FIR BOARDS		ALUMINUM BOARDS

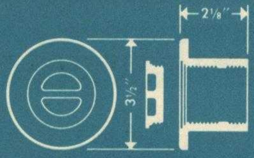
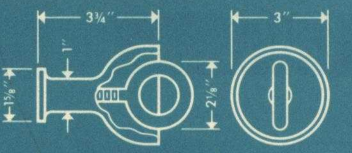
POOL FITTINGS

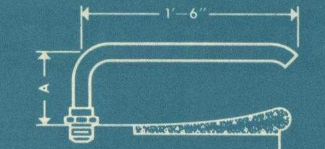
international
SWIMMING POOL CORPORATION
COMMERCIAL POOL DIVISION



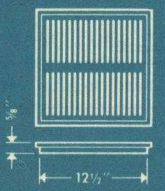
VACUUM OUTLET FITTING. Chromed bronze with removable plug for connection of the vacuum cleaner hose to the recirculating pump. E-108.



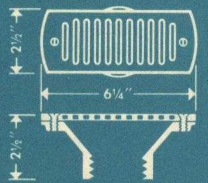
LIFE LINE SOCKETS AND EYE BOLT. Chromed bronze concrete insert with removable chromed steel eye bolts. Fitting and eye bolt are flush with the pool wall for maximum safety. E-120.



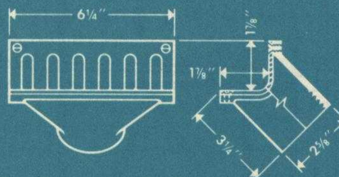
FILL SPOUT. Chrome plated brass spout eliminates cross connections to water supply by an air break over the pool coping, and is usually installed under diving stands. F-123, 1½" ips. ("A" dim. is 6"). F-124, 2" ips. ("A" dim. is 8½").



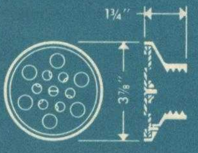
MAIN DRAIN FRAME AND GRATE. Chromed bronze removable grate and fixed chromed bronze frame. A 12 x 12 grate gives 63 square inches of open area, a 15 x 15 grate gives 98 square inches. The main drain well is formed in concrete. E-110, 12" x 12". E-122, 15" x 15".



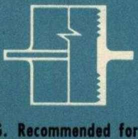
GUTTER DRAIN. Chromed bronze removable grate on cast bronze 2" ips body. Grate orifice insures proper drainage. E-117.



GUTTER DRAIN—ANGLE TYPE. Chromed bronze removable grate on cast bronze 2" ips body. The vertical section will continue to drain if the bottom of the grate is covered with debris. E-118.

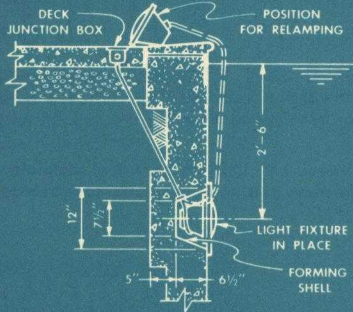


ADJUSTABLE INLET FITTING. Chromed bronze with adjustable face plate for equalizing the flow through multiple inlet installations. E-104, 1½" ips. E-105, 2" ips.



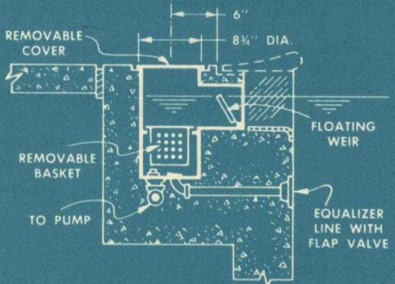
NO-LEAK FITTING. Recommended for formed concrete construction to prevent seepage at thru-the-wall piping. Available in cast bronze to 2" ips, and in galvanized cast iron from 2½" to 4" ips.

Cast Bronze		Cast Iron	
E-111	1"	E-114	2½"
E-112	1½"	E-115	3"
E-113	2"	E-116	4"



UNDERWATER LIGHTS. Wet niche type of chromed bronze and copper construction complete with forming shell, conduit, deck junction box, and wiring. Light units are manufactured under UL and CSA approval. Provide approximately one watt per square foot of pool surface.

E-101	400 watt
E-102	500 watt
E-103	1000 watt



AUTOMATIC SKIMMER. Cast aluminum, with plastic flap-type weir, perforated brass basket, brass throttling plug, equalizer line, anti-air lock flap valve, and chromed bronze pool fitting. Operates from pump suction, effectively skims water surface and removes floating debris. Self-adjusting weir over a 5" differential in water depth. A skimmer is usually provided for approximately each 500 square feet of pool surface. E-119.

THE ITEMS LISTED IN THIS CATALOG ARE OF THE SIZES AND TYPES MOST FREQUENTLY USED. INTERNATIONAL CAN SUPPLY A COMPLETE RANGE OF SIZES AND TYPES FOR ANY SWIMMING POOL NEED.

Adolph Kiefer

SWIMMING POOLS and EQUIPMENT

ADOLPH KIEFER & COMPANY
GLENVIEW, ILLINOIS (Chicago Suburb)

ADOLPH KIEFER EQUIPMENT

Founded in 1946, Adolph Kiefer and Company was organized to provide a complete service in all phases of the then infant swimming pool industry.

Design and manufacture have been based on the specific requirements needed for every type of swimming pool installation, whether for private or public use.

PUBLIC POOLS

It is necessary that the design and layout of any public or municipal installation conform to the sanitary rules and regulations set up by governing state or other health departments.

PRIVATE POOLS

Although the requirements for the private pool are less stringent, particular attention should be paid regarding local zoning ordinances which are becoming more prevalent as the number of new pools are increasing at such a rapid rate. Correct initial planning will avoid any possible future problems and will result in greater economy, both in construction and maintenance.

POOL DESIGN FACTORS

After familiarization with state and local codes, the size and shape of the pool is then determined, taking into consideration limitations governed by topographical and other features. Particular care should be given in placing the filter room, especially for a private pool, so that the motor sounds are not objectionable and also to allow ease of accessability.

SERVICES OF ADOLPH KIEFER & COMPANY

DESIGN AND LAYOUT ASSISTANCE

Our engineering department prepares complete layouts and plans of swimming pools and filtration systems and assists architects in formulating complete installations—municipal, motel, private club and residential. Over-emphasis cannot be made in respect to proper planning and this consideration we try to convey to all concerned from the architect, contractor, to the ultimate owner and operator. Our service extends to supplying complete shop drawings and installation data on all deck equipment, both standard and specially built, as well as for details of the pool, filtration equipment and housings.

WATER CONDITIONING EQUIPMENT

Filters. We furnish complete filtration systems using either sand and gravel, diatomaceous earth, both pressure types and those using automatic skimmers and also filter skimmers, using diatomaceous earth as a filter media.

Chlorinators. Available are three units using liquid chlorine for greatest economy for large pools, solution feeders and dry feeders for the medium sized and smaller pools.

Chemical Feeder. Provided where necessary for equal distribution of chemicals for perfect residual balance.

Pool Heater. Now recognized as a "must" — greatly extends the season that a pool can be used and increases comfort all-around.

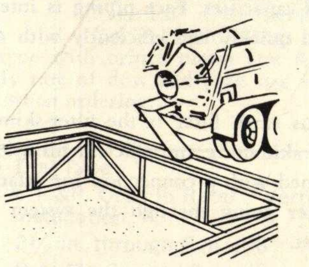
Pumps and Motors. These as specified and used with our equipment are of the best quality and specifically designed to suit the requirements of the particular job.

Deck Equipment. The most comprehensive, complete, and properly engineered line of deck equipment in the United States. Diving board stands, life guard chairs and pool ladders available in a variety of materials ranging from galvanized iron, chrome plated brass to several grades of stainless steel. Diving board construction is of Douglas Fir, Fiberglass or aluminum.

Pool Fittings. A complete line of fittings provided to suit any and all requirements. General composition is of heavy brass, chrome plated.

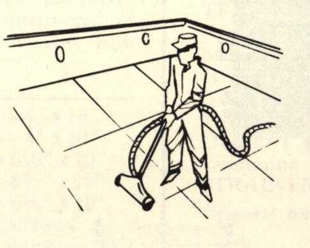
Miscellaneous Equipment. Dedicated to supplying "Everything But The Water," we manufacture and make available a great variety of articles directly related to swimming pools and water sports. Ask for our catalogs.

CONSTRUCTION



Adolph Kiefer & Company offers a pool construction supervision service by a highly trained and experienced staff of engineers and pool maintenance personnel. Our technical people are carefully selected and are specially trained in swimming pool and bathhouse construction techniques. Our staff is especially capable at it represents many man-years of experience in this highly specialized field. Our men are in the field constantly keeping abreast, and in most cases ahead, of the latest pool construction trends. Full information about this service is available for the asking.

POOL SERVICE AND MAINTENANCE



By conducting an actively operating pool service and retaining a year-around maintenance staff, we have had the opportunity to study and experience all of those occurrences and problems attendant to swimming pool construction and care.

This in effect is a "field laboratory" allowing us to continuously inaugerate new systems, products and to keep ahead of the many developments in this rapidly growing industry.

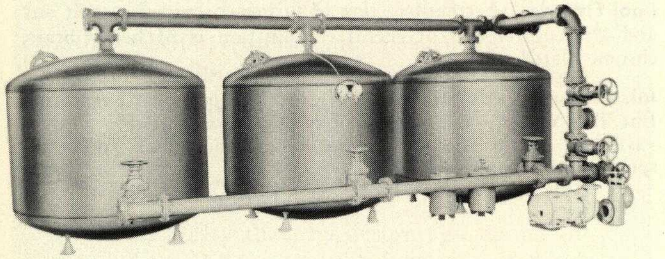
ADOLPH KIEFER WATER CONDITIONING EQUIPMENT

1 FILTER SYSTEMS

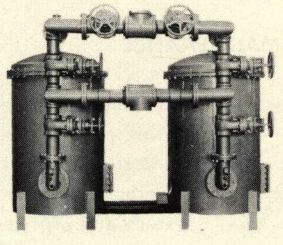
PRESSURE SAND AND GRAVEL TYPE

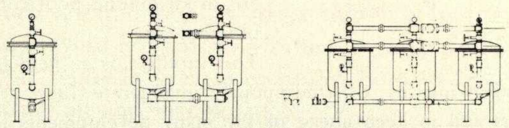


PRESSURE SAND AND GRAVEL TYPE

Supplied in single and multiple units, both vertical and horizontal. The sand and gravel filters are the simplest of all types of filters available, easy to operate, and are the most economical. While specifically designed to suit individual applications in multiple versions, we maintain large stocks of residential types in sizes from 24 to 42 in. dia. to take care of the immediate needs of volume purchasers. In all cases, however, we can offer prompt delivery service on all types. For further details on sizes, capacities and range data, please ask for our filter bulletin.

DIATOMACEOUS EARTH TYPES



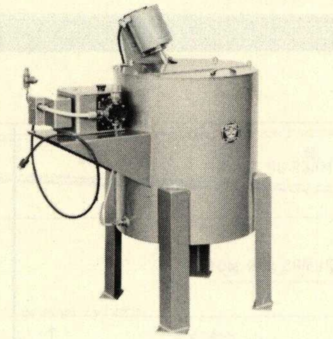


DIATOMACEOUS EARTH TYPES

In the pressure versions we have designs available featuring compact tanks incorporating relatively large filter areas. This reduces floor space requirements by a good margin. Combining similar sizes allows increased capacities. Face piping is integral. Backwashing is accomplished quickly and efficiently with minimum of wash water.

Another type of diatomaceous earth filter is the filter-skimmer, combining automatic surface skimming and efficient filtration in one unit. This unit is designed with a connection for attaching a pool vacuum cleaner, water going through the system with no waste. Bulletin on request.

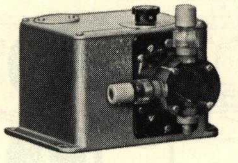
1 SLURRY TANK & BODY FEEDER



Available in four sizes to deliver up to 70 lbs. per 24 hour period. Rugged construction eliminates maintenance problems. Adaptable to any type or size diatomite filter system.

	Capacity — gal.	Feed Rate — gph
T1	20	1.75-3.5
T2	50	1.75-3.5
T3	100	1.75-3.5
T4	150	1.75-3.5

2 POSITIVE FEED CHEMICAL FEEDERS



Designed to feed up to 60 gallons of chemical solution per day. Effective for pressures up to 125 psi. Bulletin on request.

Model S-SIMPLEX With suction and discharge tubing, foot valve, strainer and line injection valve.

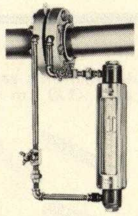
Model S-DUPLEX With two heads for feeding two chemicals.

2 DRY TYPE CHEMICAL FEEDERS

Used to create Alum floc on top of filter media. Feeder should be sized for approximately 1/3 lb. of Alum per square foot of filter area. Also used for the feeding of soda ash to control alkalinity of water. Made of 125 lb. A.W.W.A. fine grain cast iron with O-ring seal and a lid which can be easily removed.

No.	capacity — lb.
1400	5
1402	10
1406	25
1410	50
1414	75
1418	130
1422	170

3 FLOW INDICATOR



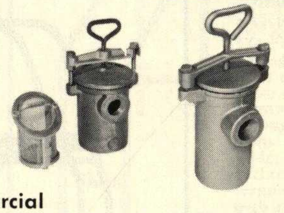
1454-A

FLOW INDICATOR

Used to check filter, backwash and flow rates. Available in dial type and two types of Pyro-Flo gauges, "vertical" (No. 1454) and "swivel" (No. 1456). Order dial type with orifice plates and flanges. Specify rate of flow and pipe size for all types when ordering.

No.	
1450	Dial Type
1454-A	F.&P. Ora-Flo Rater "Vertical" installation. 2½ in. through 6 in. IPS
1456	Pyro-Flo Gauge "Swivel" installation. 1½ in. and 2 in. IPS

4 SUCTION STRAINERS



commercial
Designed with flared pipe apertures and top and bottom openings to distribute water evenly over entire basket area. These strainers have larger basket area per pipe size than any other strainer. All strainers have positive O-ring seal and quick release lid.

residential
The exclusive O-ring feature provides a positive seal by merely tightening handle with hand pressure. All strainers are equipped with a rubber coated basket. This basket is so designed that the area of the openings is many times that of the pipe size to insure adequate flow in the event the basket becomes partially clogged. All strainers are constructed of 125 lb. A.W.W.A. fine grain cast iron with bronze yoke.

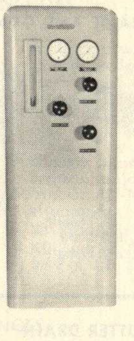
5 POOL HEATER

Heavy-Duty Automatic Gas Pool Heaters. LAARS Models AFJ are completely automatic, for natural and mfd. gas, available in 35 sizes from 103,000 to 7,125,000 BTU. "ULTRA-SENSITIVE" THERMOSTAT cuts gas bills, controls pool temperature to 0.1 degree. HIGH LIMIT SWITCH protects against overheating. "PRESSURE-FLOW" SWITCH protects against any abnormal condition. ELECTRIC GENERATOR, built-in no wiring expense. ELECTRIC MAIN GAS VALVE is safe and reliable. AUTOMATIC SAFETY PILOT prevents gas flow unless pilot is lighted. GAS PRESSURE REGULATOR maintains constant gas pressure. PRESSURE RELIEF VALVE, ASME approved, steam-rated. OUTLET THERMOMETER has special swimming pool calibration. SAFETY-T-STRAINER, cleanable, stainless steel.

Request on other gas, oil or steam types.

		Natural and Mfd Gas	
No.	Model	BTU Input	BTU Output
3003	AFJ-3	103,000	82,400
3064	AFJ-64	2,800,000	2,240,000

6 CHLORINATOR • gaseous type

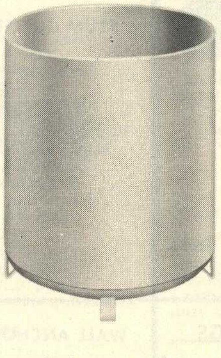


Chlorination is the most satisfactory means for preventing bacterial contamination of swimming pool water. Bulletin on request.

Hypochlorinators are best used for private pools and some commercial pools where gas is not suitable. Bulletin on request.

No.		
2120	10-100 lb. capacity	Wall Model A677
2124	10-100 lb. capacity	Floor Model
2140	Hypochlorinator	S1 Single Head
2144	Hypochlorinator	S2 Double Head

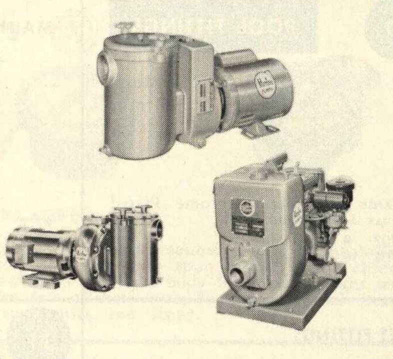
7 MAKE UP TANK



Make up on balance tanks available in any size or capacity. Used to break any direct connections between the potable water lines and the filter system. When also used as a balance tank proper valving must be utilized. Made of ¼ in. steel plate with dished bottom overflow outlet. Red lead finish. Specifications on request.

3 x 5 ft. tank
5 x 6 ft. tank

8 PUMPS and MOTORS



Adolph Kiefer & Co. pumps are expressly designed for swimming pool use. The self-priming types have a large integral hair and lint strainer basket of heavy perforated brass.

Heavy duty regular commercial centrifugal pumps, 1700 to 1750 Series, are available to 50 hp. 1750 Series self-priming pumps are available to 15 hp. Bulletins available: specify discharge rates and heads when requesting information.

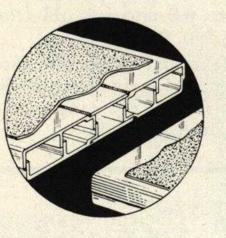
No. 803-14
14 ft. x 20 in.
No. 803-16
16 ft. x 20 in.

ALUMINUM

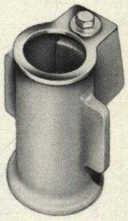


High strength and flexibility, combined with light weight. Top of the board is a solid surface covered with durable non-slip brick-red enamel. Bright aluminum anodized color.

No. 804-14
14 ft. x 20 in.
No. 804-16
16 ft. x 20 in.

SOCKET ANCHORS

standard



Furnished with bronze wedgedog, washer and cap screw. Positive locking of pipe frames and ladders. Polished or chrome plated bronze, galvanized iron or All-Mag aluminum.

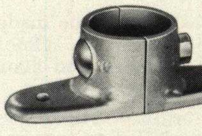
No. 850-15 for 1½ in. I.D. pipe No. 850-16 for 2 in. I.D. pipe

special

Designed for rear legs of diving stands where leverage pressure is greatest. Throughbolt joins anchor to rear frame uprights for complete rigidity. Polished or chrome plated bronze, galvanized iron or All-Mag aluminum.

No. 850-17 for 1½ in. I.D. pipe No. 850-18 for 2 in. I.D. pipe

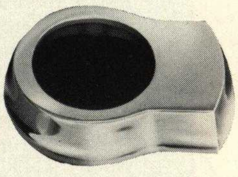
FOOT FLANGES



Used with expansion anchors to secure stand and anchors where concrete deck is already in place. Can also be used with bolts for mounting on wood platforms.

No. 850-19 for 1½ in. I.D. pipe, with expansion anchors
No. 850-20 for 2 in. I.D. pipe, with expansion anchors.

ESCUTCHEON PLATES



Covers anchor tops for "dressy" appearance. Available in polished or chrome plated brass or bronze.

No. 850-21 for 1½ in. I.D. pipe
No. 850-22 for 2 in. I.D. pipe

12 POOL LAMPS

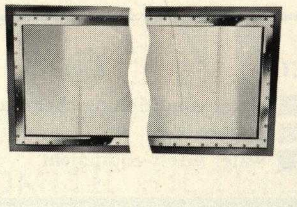
Deluxe No. K510 Wet Niche

No. K580 Deck Box

No. K568 Deck Box

Flush mounted lamps complete with bronze mounting ring for anchoring light into poolwall. The lamp units are heavy spun copper with a chrome plated bronze face ring attached to the light body for a water tight seal. Lamps are equipped with ten feet of three wire, Neoprene covered, heavy-duty cord. Underwriters' Laboratories, Inc. listed.

UNDERWATER OBSERVATION WINDOWS

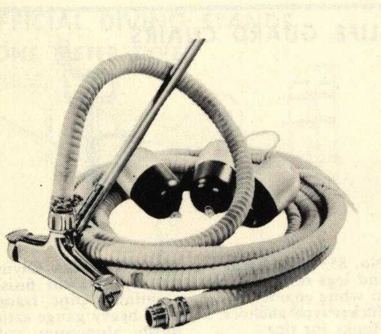


Brass frame castings with polished face flange of bright nickel-silver. Glass is ¾ in. thick Herculite polished plate with ground edges. Gum rubber gaskets, galvanized Z-bar anchoring with bolts. Knife-grade caulking furnished with each unit.

Cat. No.	Glass Size — in.	Flange Size — in.	Wall Opening Size — in.
984	13½ x 21	28½ x 21	25 x 17½
985	20 x 20	27½ x 27½	24 x 24
986	24 x 60	31½ x 67½	28¾ x 64¾

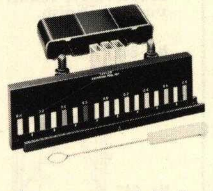
SWIMMING POOLS

MAINTENANCE/POOL CLEANING EQUIPMENT



Well designed and efficient maintenance and pool cleaning equipment is necessary for the appearance and sanitation of the swimming pool. Adolph Kiefer and Company manufactures seven different models of pool cleaners with head sizes ranging from 7 to 24 in., designed especially for the small private pool and the largest of commercial type installations. Also available is a complete line of pool skimmers, leaf rakes, floor and wall brushes, and other allied items to take care of any maintenance responsibility.

WATER TESTING OUTFITS



No. 992

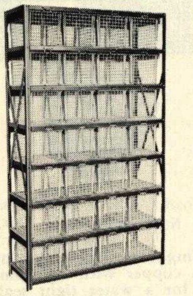
To determine the proper chlorine residual and to control irritating acidity a water test set is necessary for every swimming pool, large or small. Test set readings allow economical application of chemicals to maintain a proper balance—prevents overdosing.

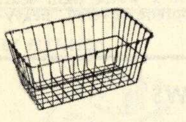
Economy Test Set—For simple testing—contains a 2-oz. bottle of phenol red, 7.2 and 7.6 color standards (pH) and test tube, a 2-oz. bottle of orthotolodine, 0.3 and 0.8 color standards (chlorine) and test tube. No. 990

Midget Tester—Unbreakable polyethelene carrying case. Range for chlorine from 0.1 to 0.8 and for pH from 6.8 to 8.0. Complete with tubes and reagents. No. 991

Model "K"—"Professional" type test set—for the most accurate reading gradations. Four chlorine standards, five phenol red standards. Chlorine range 0.0 to 0.8, pH range 6.8 to 8.4. Complete with tubes, reagents and wood case. No. 992

LOCKER ROOM EQUIPMENT





Efficient, economical clothing storage for swimming pools. Durably built to give years of trouble-free service. Racks can be mounted on casters for maneuverability. Finish: baked on green enamel or gray finish. Special racks can be made up for specific conditions.

No. 633 Basket rack with baskets 40¼ in. wide, 13¼ in. deep, 68¼ in. high; 21 No. 626 baskets.

No. 634 Basket rack with baskets 40¼ in. wide, 13¼ in. deep, 68¼ in. high; 28 No. 625 baskets.

Heavy Duty Checking Basket designed specifically for locker room use. Durably built to provide years of service.

No. 625 Bright zinc plated, 1 in. square mesh wire, 9 in. wide, 13 in. deep, 8 in. high.

No. 626 Bright zinc plated, 1 in. square mesh wire, 12 in. wide, 13 in. deep, 8 in. high.

No. 627 Zinc chromate plated, mesh of No. 12 wire with top rim of No. 6 wire. 10 in. wide, 18 in. deep 7½ in. high.

OTHER EQUIPMENT/PRODUCTS

- portable pumps & motors
- underwater diving equipment
- lockers and benches
- water conditioning chemicals
- pool paints
- water safety equipment

ADOLPH KIEFER EQUIPMENT

SPECIFICATIONS

The following typical specifications are intended to be used as a guide when directly specifying Adolph Kiefer Swimming Pool Equipment. For planning assistance or architectural service (including furnishing of complete and detailed specifications on the entire line of equipment) contact our Engineering Dept. These services are available for the asking.

All Swimming Pool Equipment shown on plans or covered by the specifications shall be as manufactured or furnished by Adolph Kiefer & Company, Glenview, Illinois, or architect-approval equal, and shall be installed in accordance with the manufacturer's instructions.

water conditioning equipment

FILTERS. All filters shall be completely assembled and tested in the factory. Filter shall comply with the requirements of the State Health Department and the local Board of Health (including inspection after installation), and shall be (choose one) . . . (a pressure sand and gravel type) or (a diatomaceous earth type).

The filter surface area shall allow a rate of water flow of..........GPM per sq. ft. of filter area, and shall have a minimum working pressure rating of.......... PSI. The filter shall be Cat. No. ...., Size..........

CHLORINATORS. Shall be furnished in cabinets for (floor) or (wall) mounting, and shall provide satisfactory means for preventing bacterial contamination. Chlorinator shall be (vacuum type gas) or (solution-hypochlorinator feeder type), Cat. No..........

CHEMICAL FEEDERS. Shall be equipped with brass pipe manifold for making connection to filter recirculating system. (Gravity) or (Pressure Pot) type, Cat. No. ....

POOL HEATER. Laars MVMJ gas pool heater shall be Cat. No. ...., rated..........BTU Input,.......... BTU Output, for use with..........BTU natural or manufactured gas.

PUMPS AND MOTORS. Pumps shall be (self-priming) or (centrifugal) type, rated..........ft. of water,.......... GPM; pump motor shall be rated..........HP,.......... Volts,..........Cycles,..........Phase; Cat. No..........

deck equipment

DIVING STANDS/BOARDS. Stands shall be (one) or (three) meter type, and shall be (..........in. OD pipe) or ("Exceptional") type; shall be (galvanized iron) or (chrome plated brass) or (stainless steel); Cat. No........... Fulcrum shall be (single) or (double) or (adjustable) type, and shall be provided with super-cushion rubber contact bars; Cat. No........... Diving board shall be.......... type,..........ft. long, Cat. No. ....

POOL LADDERS. Shall be (galvanized iron) or (Chrome plated brass) or (stainless steel); treads, (number) ....provided, shall be extra wide with non-skid surface; Cat. No..........

LIFE GUARD CHAIRS. (Standard) or ("Exceptional") type shall be furnished in (galvanized iron) or (stainless steel) or (chrome plated brass . . . rails only in "Exceptional"); Cat. No. ....

POOL FITTINGS..........shall be.......... material, size.........., Cat. No..........

miscellaneous equipment

MAINTENANCE/CLEANING. Provision shall be made for maintenance and cleaning equipment. (Pool vacuum cleaner) or (skimmer) or (wall and floor brush) shall be Cat. No. ....

WATER TESTING OUTFITS. Shall be furnished to determine proper chlorine residual or to control acidity. Shall be Cat. No..........

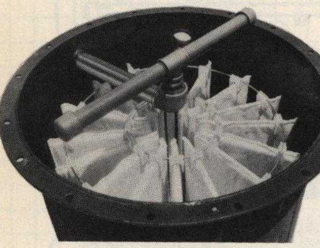
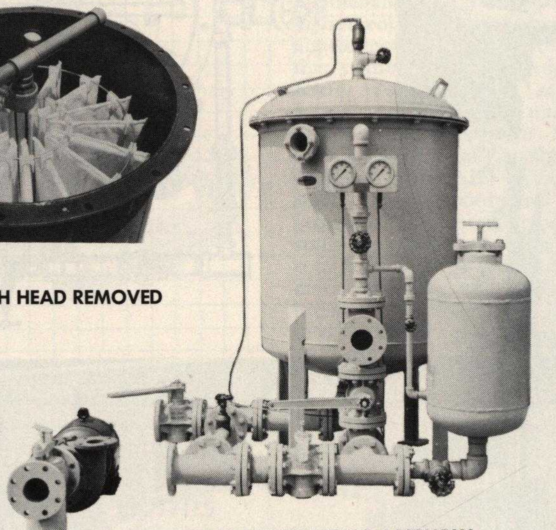
LANDON DIATOMITE PRESSURE FILTERS - SERIES 600



TOP VIEW WITH HEAD REMOVED



TYPICAL FLANGED PIPING ASSEMBLY

The Landon Diatomite Pressure Filter, another product of Landon's long experience, represents filtration at its finest. Designed primarily for public type pools, outstanding advantages of this filter over sand filters of equal capacity include: (1) more effective turbidity removal, (2) less waste of water for cleaning, (3) lighter shipping and handling weight, (4) far less housing space, (5) lower initial cost.

Particular advantages of the Landon single-tank system include: (1) ease of operation, (2) high-tensile steel tank with Lantex resilient epoxy lining, (3) corrosion and rust-proof laminated plastic filter septum, (4) felted synthetic element fabric for longer filtration cycle, (5) with filter tank emptied, rotating jet-spray down-washes elements clean of dirt and spent filter aid, (6) head removable without disturbing face piping, (7) light weight elements individually removable.

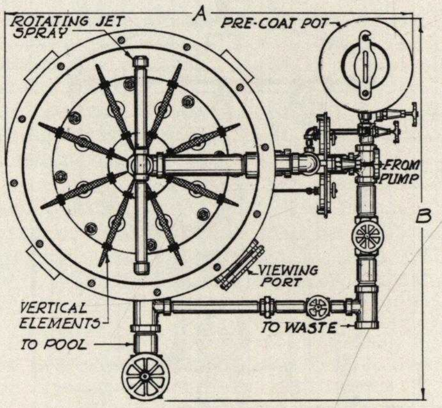
These filters utilize volcanic or diatomaceous earth as a filter aid, and may be operated with or without a constant slurry feeder. They may be installed at the pool deck elevation or below grade, depending on site conditions or preference. They are particularly adaptable as a replacement for worn out sand filters where access for bulky and heavier equipment would be costly and impractical. For gallonages larger than shown in the Chart below, multiple batteries may be used, or the Landon Diatomite Vacuum Filter may be preferable.

Complete installation and operating instructions are supplied with purchase. With the pool gallonage, the rate of flow and turnover requirements of the local and State Boards of Health known factors, see Chart below for selection of the proper size filter.

Brief Filter Specifications:

Available as assemblies only. Tank designed for a working pressure equal to the shut-off head of the pump, with a safety factor of 4. Both heads flanged and dished, the spherical radius of the dish to be equal to the diameter of the tank. Welding as specified in current edition of A.S.M.E. Code for unfired vessels. Tank heads and side sheets of high-tensile steel having a yield point of 75,000 psi, all excessive mill scale to be removed prior to finish rolling. Tank interiors coated with Lantex resilient coal tar epoxy, coating not less than .005 inches in thickness. Top head bolted to shell flange and gasketed. Filter face piping standard-weight galvanized steel; if 3" or under, connected by screw-type fittings; if 4" or over, connection shall be by means of cast iron flanges with cloth-inserted gaskets. Face piping valves 3" and under are screwed, all-bronze; 4" and over are semi-steel, flanged-type lubricated plug valves. Assembly includes multiple vertical filter elements, rectangular in shape and individually removable, septum support and frame of high impact cross-laminated corrugated plastic covered with felted synthetic fabric. Assembly also includes built-in rotating jet-spray, influent baffle, viewing port, gauges in aluminum panel with sampling cocks, automatic and manual air relief, precoat feeder with interconnecting piping and valves, Fischer & Porter Mighty I rate-of-flow indicator, bracket-mounted pump and motor unit, motors 3500 rpm, 60 cycle, 110/220 V, 1-phase through 2 HP, 220/440 V, 3-phase if 3 HP or larger, pump strainer with basket, vacuum gauge, 3 cubic foot bag of Lancomite filter aid.

NOTE: Because of job site variations, the piping between pump and tank is not included with the assembly. This piping to be supplied by installer. Motor switch not included. Order separately. 50 cycle motors available.



Top view, head removed, showing elements and rotating jet-spray.

See Chart for A and B dimensions. H dimension equals overall height of filter tank to top of air relief.

DIATOMITE PRESSURE FILTER CHART—PUBLIC POOLS

NOTE: Filter rates shown for both 2 gpm and 3 gpm per square foot of filter area. Under Pump & Motor heading, S.P. indicates Self-Priming, and Std. indicates Standard. Constant slurry feeder recommended for 100 sq. ft. and larger filters. Check local and State Board of Health codes for turnover requirements and rates.

LANDON DIATOMITE VACUUM FILTERS - SERIES 800

The Landon Diatomite Vacuum Filter, also accomplishing filtration at its finest, is designed for the filtration of large capacity swimming pools, large volumes of water otherwise unpotable, and has many other uses. This filter also uses volcanic or diatomaceous earth as a filter aid, and in most cases the use of a constant slurry feeder is recommended. The layout drawing on this page illustrates a single 10-element unit designed for below pool deck installation. This facilitates its use with either standard or roll-over type recirculating gutters, from which the pool water flows by gravity directly into the concrete filter tank, which also serves as a fresh water make-up tank. With an additional pump & motor unit, these filters may be installed at deck level.

A distinct advantage of the open-top vacuum diatomite filter is that the elements are at all times in full view to observe their condition. To clean the elements, the filter tank is drained by gravity, then the elements are scoured of all dirt and spent filter aid by a strong spray of fresh water. In the event filter flow is obstructed by deposits such as hardness scale, each element may be individually removed for acid washing. In addition, with these filters there is no steel tank to ship or handle, as the required concrete filter tank is constructed on the job by the contractor, who also supplies and installs all piping and valves other than the collector header included with the filter unit.

The largest filter listed in the Chart below is of more than ample capacity to filter the water content of a 75 ft. by 50 meter Olympic size pool in a 6-hour period at a filter rate of 2 gpm per sq. ft. of filter area. For larger gallonages, in order to avoid excessive sizes of piping, valves and pump units, use separate batteries of filters.

For specific applications, please supply us with complete data, including gallonage, required flow rate, turnover, and proposed use.

DIATOMITE VACUUM FILTER CHART—PUBLIC POOLS

NOTE: Filter rate based on 2 gpm per sq. ft. of filter area. Filter Catalog No. refers to filter element assembly only. Slurry Feeder Catalog No. denotes size required. Pump & Motor shown is capacity required at 40 foot head.

Filter Cat. No.	Sq. Ft. Area	Filter GPM	Filter GP/Hr.	Turnover Capacity		Motor HP & RPM	Slurry Feeder	
				6 Hour	8 Hour		Cat. No.	Cap'y
810-240	120	240	14,440	86,400	115,200	3-3500	630SF	110 gal.
820-480	240	480	28,800	172,800	230,400	7½-3500	630SF	110 gal.
830-720	360	720	43,200	259,200	345,600	15-3500	636SF	160 gal.
840-960	480	960	57,600	345,600	460,800	20-1750	636SF	160 gal.
850-1200	600	1200	72,000	432,000	576,000	20-1750	2-630SF	220 gal.
860-1440	720	1440	86,400	518,000	691,200	30-1750	2-630SF	220 gal.

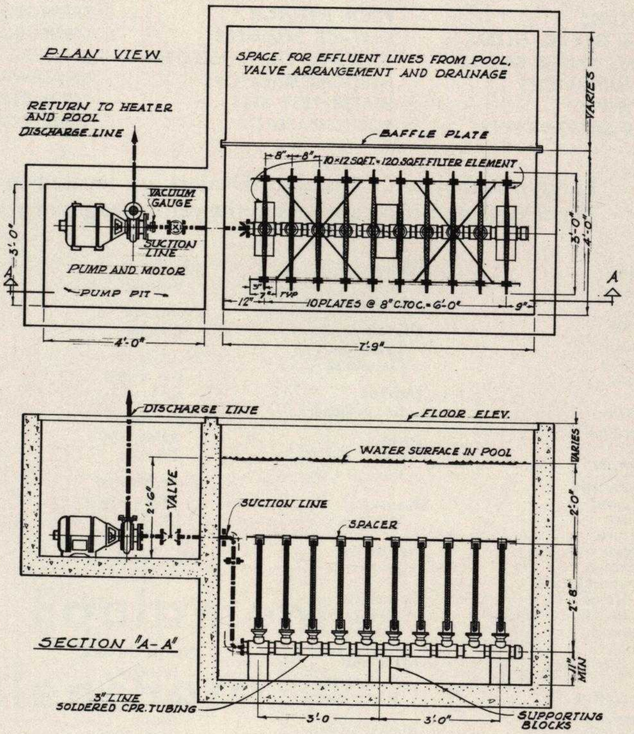
Brief Filter Specifications:

Filter Catalog Numbers include only the vertical 10-plate fabric-covered 2′ x 3′ plastic elements, with spun copper ferrules hard-soldered to a 3″ copper collector header, "O" ring seals, and copper positioning X-braces to hold the elements in alignment. Available as a single 10-element unit, or in batteries of 2, 3, 4, 5 or 6 ten-plate units. Septum plates are of acrylontrile-butadiene-styrene, ⅞″ pitch corrugations, cross-laminated, fixed at bottom with channel and outlet pipe with "O" ring seals. Filter fabric is felted synthetic of .065″ thickness, weighing 10 to 12 ounces per square yard.

Other Required Filter Equipment: (See Chart for Pump and Motor selection):

Cat No.	Item Description
1632	Pressure gauge, 4½″ dial, 0/60 lbs.
1634	Vacuum gauge, 3½″ dial
1660	Fischer & Porter Mighty I rate-of-flow indicator
1897	Pump & motor, 3 HP, 3500 rpm, 220/440 V, 3 Ø, 60 c
1899	Pump & motor, 7½ HP, 3500 rpm, 220/440 V, 3 Ø, 60 c
1900-15	Pump & motor, 15 HP, 3500 rpm, 220/440 V, 3 Ø, 60 c
1819-20	Pump & motor, 20 HP, 1750 rpm, 220/440 V, 3 Ø, 60 c
1819-30	Pump & motor, 30 HP, 1750 rpm, 220/440 V, 3 Ø, 60 c
1976	Magnetic switch, 3 HP, 220 V, 3 Ø
1978	Magnetic switch, 7½ HP, 220 V, 3 Ø
1980	Magnetic switch, 15 HP, 220 V, 3 Ø
1981	Magnetic switch, 20 HP, 220 V, 3 Ø
1983	Magnetic switch, 30 HP, 220 V, 3 Ø

Other Landon equipment, including pump & motor with strainer for vacuum cleaning, chlorinators, pool fittings, and deck equipment quoted on request, also listed in Landon General Catalog.



TYPICAL LAYOUT OF 10-ELEMENT FILTER

LANDON CONSTANT SLURRY FEEDERS

Brief Slurry Feeder Specifications:

Available as assemblies only. Tank of 10-gauge mild steel, interior coating Lantex, dished bottom head with drain plug, tank fitted with liquid-level gauge, four angle iron supports. Assembly includes agitator powered by 110 Volt, single phase, drip-proof motor. Also includes positive-displacement type slurry feed pump with solution hose and terminal connections.

For the continuous introduction into either pressure or vacuum type diatomite filters of filter aid in solution in order to lengthen the filtration cycle. Refer to applicable Filter Chart for proper Slurry Feeder selection. Check local and State codes for requirements.

Cat. No.	Tank	Motor	Cap'y.
624SF	24″x36″	¼ HP	70 gals.
630SF	30″x36″	¼ HP	110 gals.
636SF	36″x36″	⅓ HP	160 gals.

THE COLD ECONOMICS OF ONE-SOURCE BUYING...

All too often, the mere mechanics of bidding a commercial or public swimming pool job costs the owner cold cash for something he doesn't get! Whenever the products of a half dozen or more suppliers are specified, every bidder must wade through the tedious task of getting equipment prices together, and this needless *overhead* cost must be reflected in his final bid. Moreover, when even the smallest replacement part is needed, the owner must dig into stale records to find the original supplier . . . if, indeed, he is still in business. From the beginning, *this is not sound buying*. Architects, engineers and purchasing executives can perform no better service for their principals than by specifying all equipment from one manufacturer . . . one of high standing in the industry . . . one with a history of competence, stability and integrity. In all respects, Landon, Inc., is one of the few pool equipment manufacturers meeting these qualifications.

In addition to the Diatomite Filters presented herein, Landon, Inc., manufactures and distributes throughout most of the Free World a complete line of swimming pool equipment. We invite you to call or write for current catalogs.

BASKETBALL BACKSTOPS

ceiling suspended
winches

dimensions required

1. Distance from wall to truss.
2. Height from floor to bottom of truss.
3. Size of flange width—thickness.
4. If stage is present, height from floor to proscenium arch.
5. Face of bank from wall line.
6. Construction of wall or stage arch.
7. Distance from center of bank to wall on which winch is to be placed.

specifications

Ceiling Suspended Basketball Backstops shall be Model Number 1700-60 as manufactured by the Narragansett Gymnasium Equipment Company, Centralia, Missouri.

supporting framework

Backstop shall be suspended from 3″ ID overhead pipe attached to ceiling members in accordance with approved engineering, by means of steel I beam clamps. When truss spacing exceeds 16′0″ centers, overhead pipe shall be reinforced to minimize vibration. Backboard supporting pipes shall be 2″ I.D. with fittings for fastening to overhead or cross pipes by means of hinge joints or non-hinge as required. Brace pipe shall be 2″ I.D. pipe. Front to back bracing shall be of 1¼″ pipe. Drop pipes shall be rigidly braced with 1¼″ spacer pipes and shall be provided with 1¼″ x ¼″ flat steel cross bracing as required. Backstop furnished complete with bank, goal and net and all hoisting cable. Electric winch furnished with backstop upon request at additional charge.

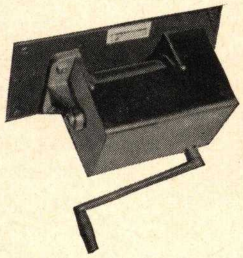
bracing

Forward Swing: 2″ pipe extends back from the drop pipe at an angle of 30° up to the overhead 3″ pipe and fastened with pipe clips. No. 1700-50 ceiling suspended same as 1700-60 except that backstop is rigidly hung and will not raise. No winches or cables are needed.

banks and goals

Refer to page 7 and insert here selected type and specifications for each. When backstop braces are already in place, new banks and goals may be attached easily. Specify the type of backstop in place *(refer to the various types shown in this catalog)*. It is necessary that information be supplied as to the type of bank (wood, steel or glass) for which the backstop is built.

winches available



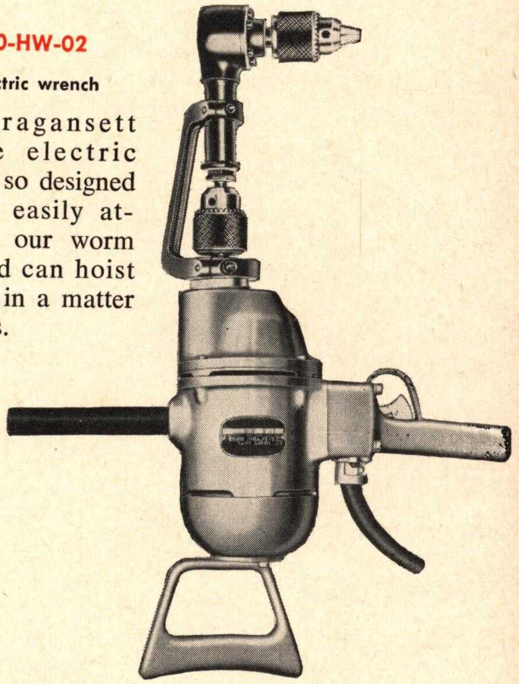
Model 1700-HW-01

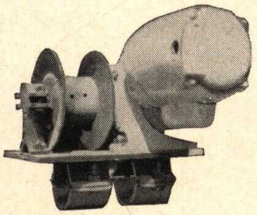
Winch operated by hand or portable electric wrench. Automatic self-locking worm gears to hold unit at any one point when lowering or raising backstops. Fully enclosed for safety. Roller type grip, removable crank.

Model 1700-HW-02

portable electric wrench

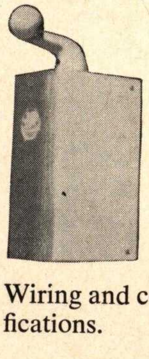
The Narragansett portable electric wrench is so designed that it is easily attached to our worm winch and can hoist backstops in a matter of minutes.





Model 1700-EW-03

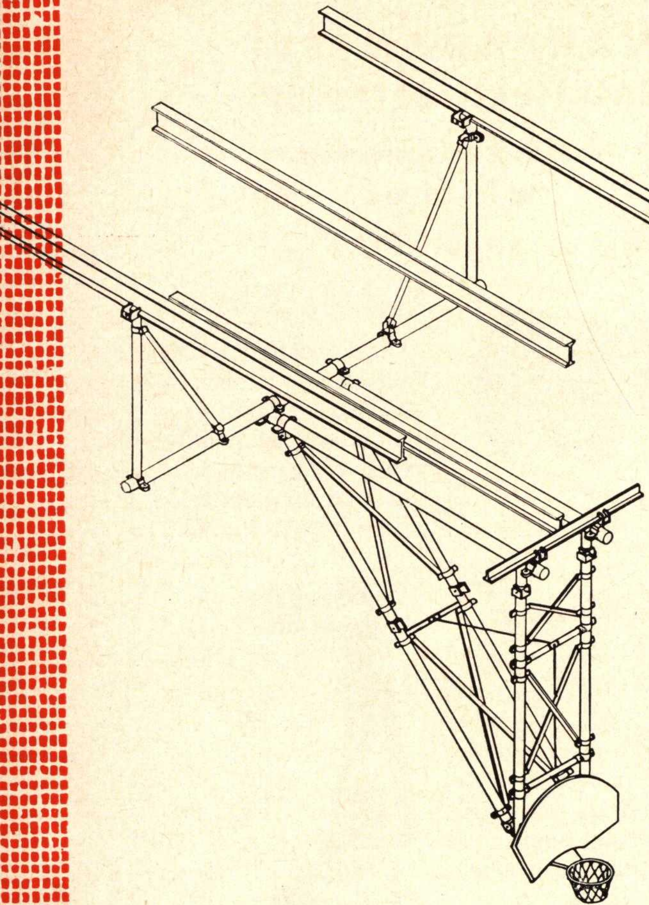
Electric power driven winch concealed on backstop superstructure. Lifts one or a battery of backstops.



Switches

Conveniently located control switch. Cover reads: lower—off—raise.

Wiring and conduit shall be called for in electrical specifications.



Backward Swing

Model 1700-13F

recommended use

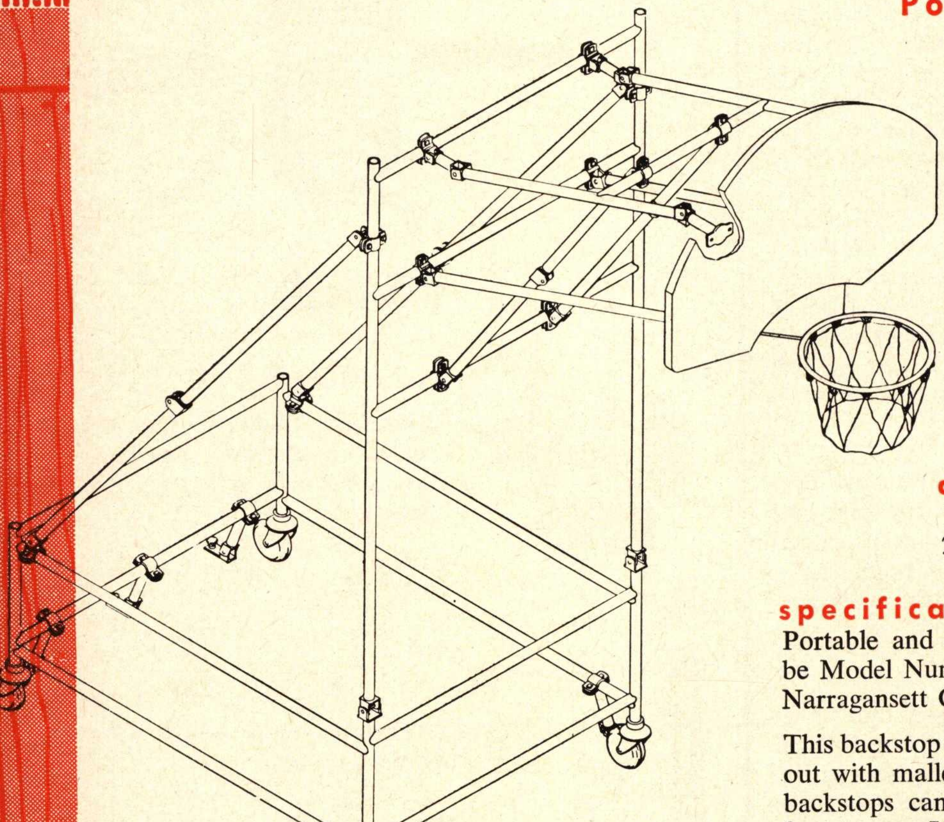
When structural conditions permit, it may be placed to serve the long major court, or the transverse minor courts. With its backward swing up action, it avoids confliction with other gymnasium activities. By the nature of its design, the action of the hoisting cable automatically "breaks" the brace joints and "jacknife" folds the braces, as the board is raised by its worm-geared winch. Thus, when raised, it presents a compact, self-contained arrangement.

dimensions required

1. Distance from wall to truss.
2. Height from floor to bottom of truss flange.
3. Size of flange—Width—Thickness.
4. Face of bank from wall line.
5. Construction of wall.
6. Distance from center of bank to wall on which winch is to be mounted.

specifications

Same as those for Model 1700-60F (refer to page 3).



Portable

Model 1700-35F

Stage Portable

Model 1700-37F

recommended use

The Narragansett Portable Model is used in auditoriums and armories where it is impractical to use any of the attached backstops. It is particularly applicable to stage front use, being fastened to the floor, strapped to the stage front, and braced to the stage floor.

dimensions required

1. Distance from floor to stage.
2. Distance from stage to face of bank.

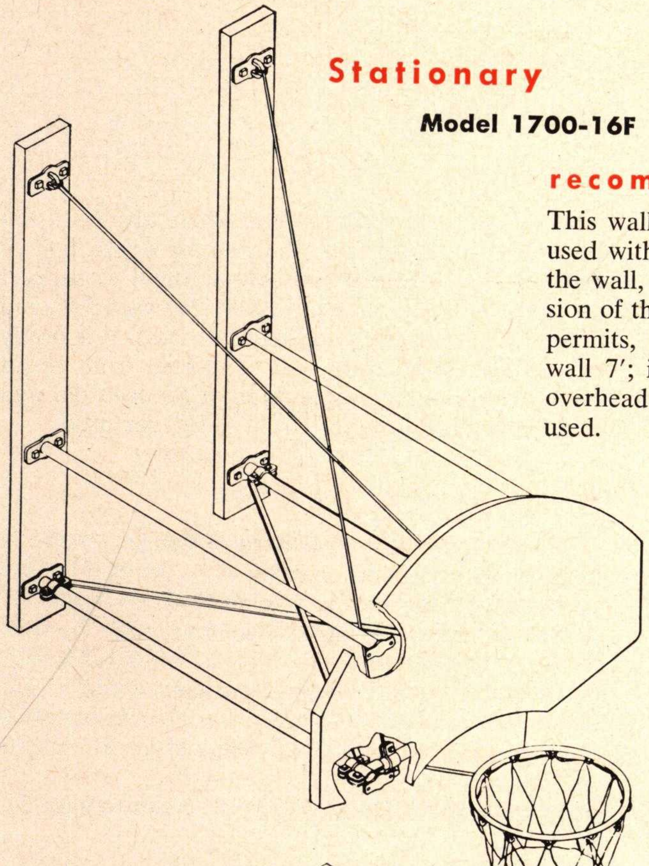
specifications

Portable and Stage-braced Basketball Backstops shall be Model Number.......... as manufactured by the Narragansett Gymnasium Equipment Company.

This backstop shall be constructed of 1¼″ pipe throughout with malleable iron hinges in such a manner that backstops can be completely folded and rolled away for storage. It shall roll into position on rubber tired casters and lock into position by means of flush floor plates and hand locking screws. The backstop shall be furnished complete with bank, goal, and net.

NARRAGANSETT BASKETBALL BACKSTOPS

ceiling – portable – wall



Stationary

Model 1700-16F

recommended use

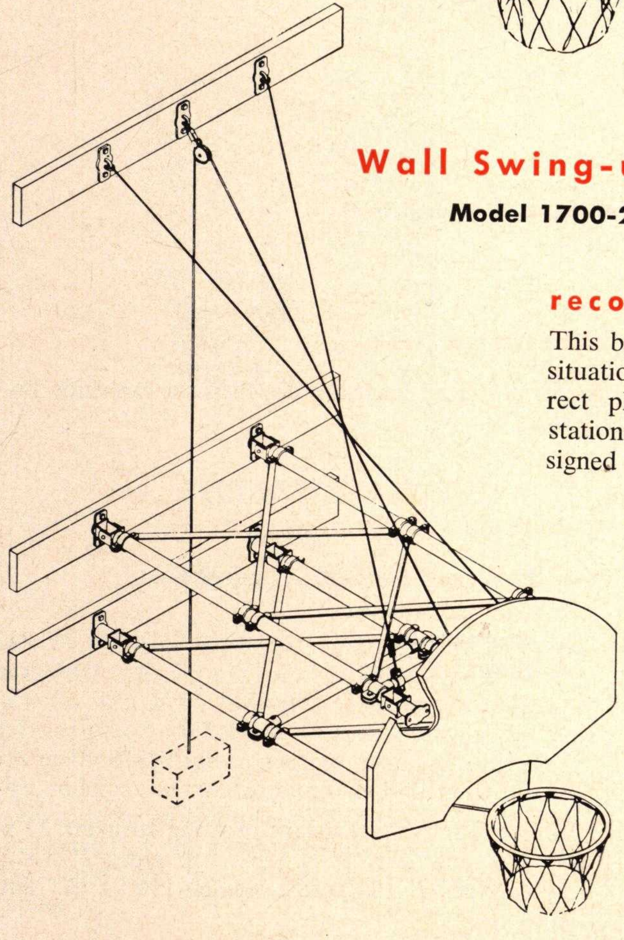
This wall supported backstop conforms to official rules and may be used without reserve for actual play. It is braced out 5′ or 7′ from the wall, allowing for 3′ space outside the court plus 2′ or 4′ extension of the backstop into the playing area. Where size of playing area permits, backstops of this type may be used braced out from the wall 7′; it is recommended that, when the distance exceeds 7′, an overhead suspension type of backstop similar to the #1700-15 be used.

dimensions required

1. Distance from face of bank to wall.
2. Wall construction.
3. Complete measurements of any offsets or projections of the wall affecting the placement of the backstop.

specifications

#1700-16F—Shall consist of two 2″ x 8″ x 6′ wood stringers, four 1¼″ I.D. brace pipes attached with malleable iron castings, 1¼″ brace pipes supported by ¼″ steel guy cables with turnbuckles. 1¼″ x ¼″ F.M.S. steel braces crossed to prevent side sway. Generally used where backstop can be hung up to 7′ extension from wall.



Wall Swing-up

Model 1700-20F

recommended use

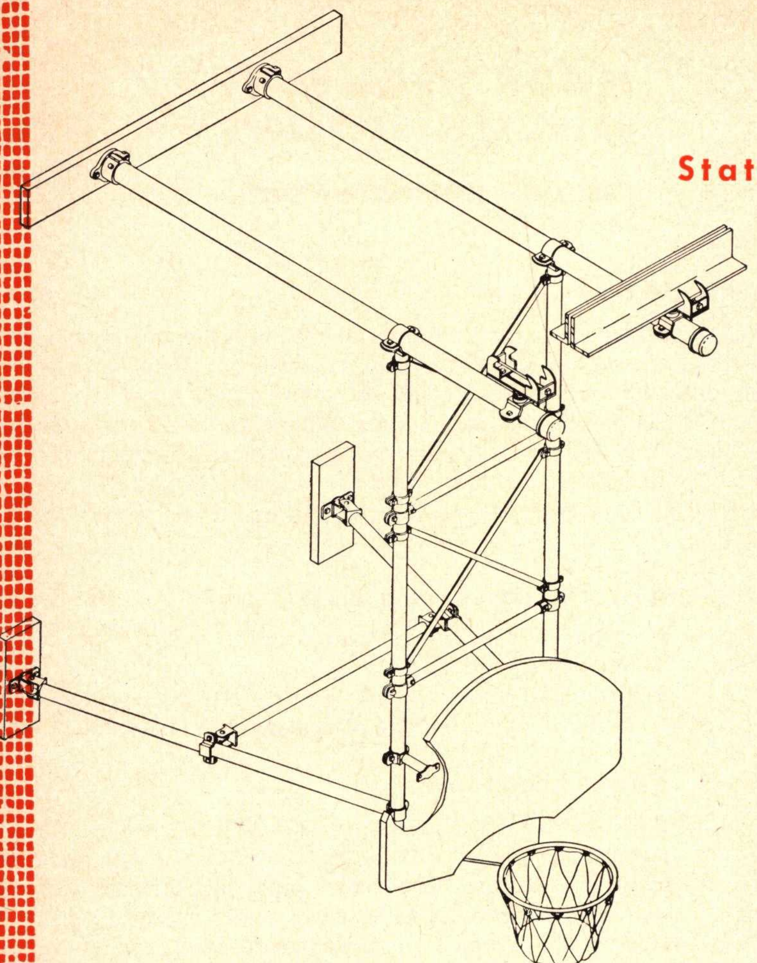
This backstop is braced from the wall but can be swung up as the situation warrants. In many cases, the wall braced type meets correct playing conditions, but projects into the room so that, if stationary, it interferes with other activities. This backstop is designed expressly to provide this flexibility.

dimensions required

1. Distance from face of bank to wall.
2. Wall construction.
3. Wall obstructions, if any.

specifications

#1700-20F—Shall consist of brace pipe 1¼″ I.D. attached with hinge fittings to wall pads and the bank. Horizontal pads to be on 2″ x 8″ x 6′ complete with hardware for attachment. Brace pipes crossed braced with 1¼″ x ¼″ flat mild steel. Backstop shall be hoisted to wall by means of worm geared winch and ¼″ preformed steel cable.



Stationary

Model 1700-15F

recommended use

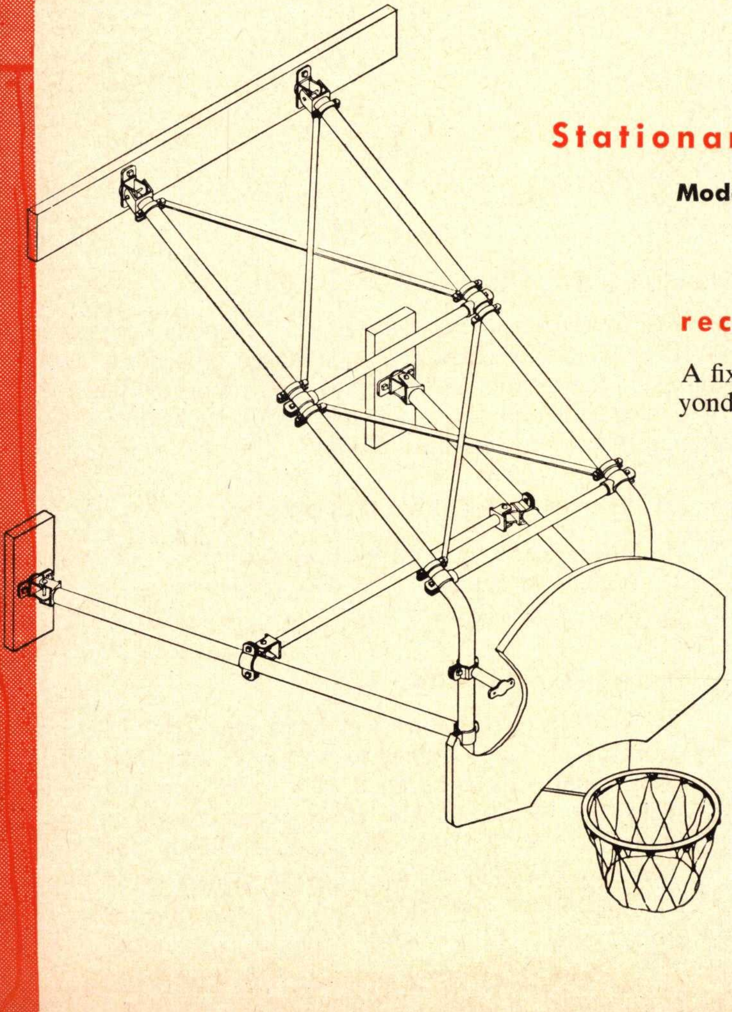
This is an ideal type for use where the backstop must extend far out from the wall, or where wall or balcony face is not of sufficient strength to support alone the ordinary backstop strain. Between 5 ft. and 7 ft., this suspended style should be used. It is firmly braced against the wall, but supported from above on 3″ overhead pipe supports hung between the wall and the nearest girder, or from the girder itself.

dimensions required

1. Height from floor to bottom of flange.
2. Distance from wall to truss.
3. Distance from wall to face of bank.
4. Size of flange—Width—Thickness.
5. Wall construction.
6. Height of closed ceiling, if present.

specifications

Same as those for Model 1700-60F (refer to page 3).



Stationary

Model 1700-15F (modified)

recommended use

A fixed type wall braced backstop designed for extension beyond 7′ up to 12′.

dimensions required

1. Distance from wall to face of bank.
2. Wall construction.
3. Wall obstructions.
4. Height of wall.

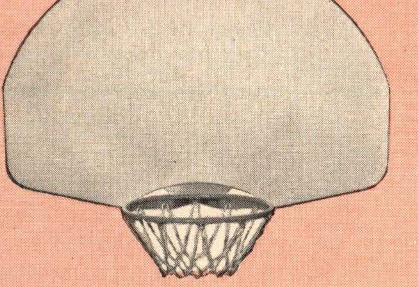
specifications

Attached to wall by means of wood stringers 2″ x 8″ x 6′ and 2″ x 8″ x 20″. Top pipes 2″ I.D.; brace pipes 2″ I.D.; cross bracing 1¼″ x ¼″ flat mild steel.

NARRAGANSETT BASKETBALL BACKSTOPS

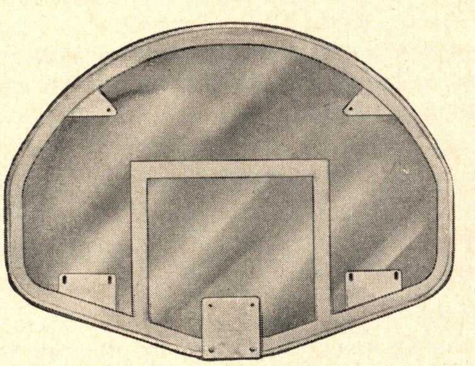
ceiling – wall banks and goals

23k
Na



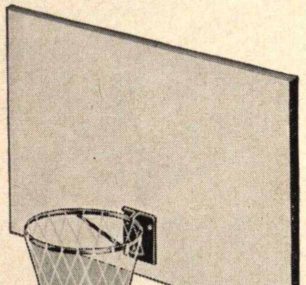
FAN SHAPED
model 1700-30F
steel bank

Fan shaped all steel bank with face drawn from one piece #12 gauge rolled steel. A flange 1½″ wide will completely surround the face and be free of projections or sharp edges. Bracing of the face shall be reinforced channel assembled and arc welded to rear of face. Attachment plates shall have ½″ slots for adjustment. Finish will consist of a prime coat and two coats of white eggshell enamel.



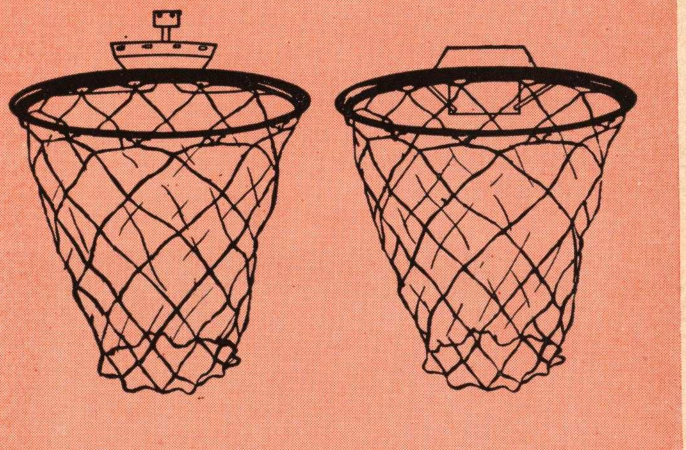
FAN SHAPED or RECTANGULAR
glass bank

Glass—⅜″ Herculite, the tempered glass that is four to five times stronger than ordinary glass of the same thickness. The edges and holes in the glass are completely protected. The frame is specially designed steel with rust preventive zinc chromate. Light grey frame is flush with glass face, leaving no projections to interfere with play.



RECTANGULAR
wood
model 1700-30

Face of the bank shall be ½″ five-ply fir plywood reinforced with 2″ x 5″ fir framework, building the back up to a 2⅛″ thickness. Two pieces of 2 x 5 and two pieces of 2 x 2½ fir reinforced by the tennon method and interspaced to insure true rebound. This panel is surrounded by moulding neatly mitered at all corners, glued and nailed to the panel. The entire surface of the bank shall be finished with one plain coat and two finish coats eggshell white enamel.



Official Goal for Fanbanks (left)—Goal shall be designed to fasten to the bottom and rear of the bank and secured by four ⅜″ x 1″ machine bolts. The ring will be of ⅝″ diameter C.R.S., two braces of ¼″ x 1″ flat stock, bracket of ³⁄₁₆″ x 6″ strip steel for good fastening. Orange color.

Standard Goal for Wood Banks (right)—Goal shall be designed to fasten through the face of the bank and secured by four ⅜″ x 2½″ machine bolts. Make up of the goal is the same as that of the official goal. Net of seine twine and regulation size secured to ring by "no-tie" clips.

Accessories

hand and end rails

When required, removable hand and end rails are supplied for use at the exposed ends of the seats. These rails are so constructed that they can be put in place easily by slipping their posts into steel sockets. When removed, they can be folded and stored upon a footboard of the unit before closing it.

end panels

End closure panels are for covering the exposed ends of the seats when in closed position. The plywood end panels are permanently attached in place and are finished in natural wood finish.

rear seat filler boards

When the location of pilasters or other obstructions makes it necessary to install the top seat 5″ or more away from the wall, filler boards, permanently installed level with the top seat, can be supplied to close the space for safety reasons.

scorer's table

Scorer's table furnished optional.

aisles

Aisles furnished optional.

grilles

Ventilating grilles can be furnished optional if required for ventilation.

removable seat and foot boards

Removable seat and foot boards supplied, if desired, for obstruction in wall or for folding partitions to pass through when space does not exceed 5′0″ between seats. Removable seat and foot boards are set in place after seats are extended and removed before seats are closed. Removable boards can be stored on foot boards before units are closed.

Table of Sizes

22″ depth—10¼″ rise per row

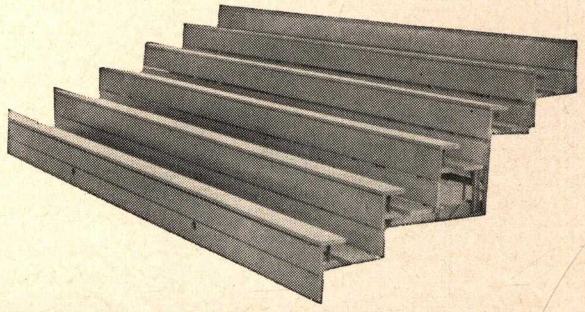
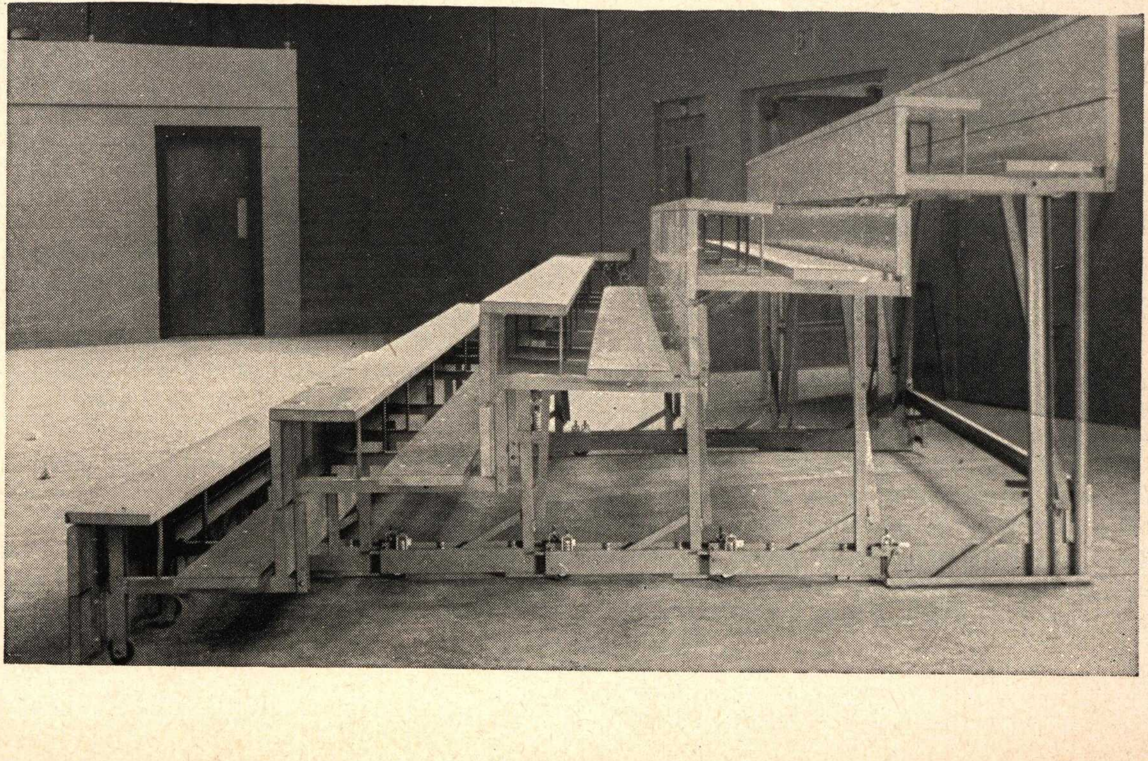
23	41′- 5″	4′-11″	20′- 2½″

Depth dimension includes 3″ between seat board and wall.





folding bleachers

Specifications

general scope

All folding bleachers shall be as manufactured by the Narragansett Gymnasium Equipment Company, Centralia, Missouri, or equal as approved by the architect or owner.

warranty

Folding bleachers shall be guaranteed by the manufacturer against defects in material and workmanship for a period of one (1) year from date of installation.

quantity

All equipment shall be delivered and installed in good condition under the supervision of a factory-trained engineer.

design

Steel understructure parts for folding bleachers shall be designed to safely support when in use and in addition to their own weight a live load of 120 pounds per lineal foot of seat and foot board. Steel structural strength and stresses must conform to A.S.A. specifications. Stresses in wood shall be as those recommended by the U. S. Forest Products Laboratory.

construction

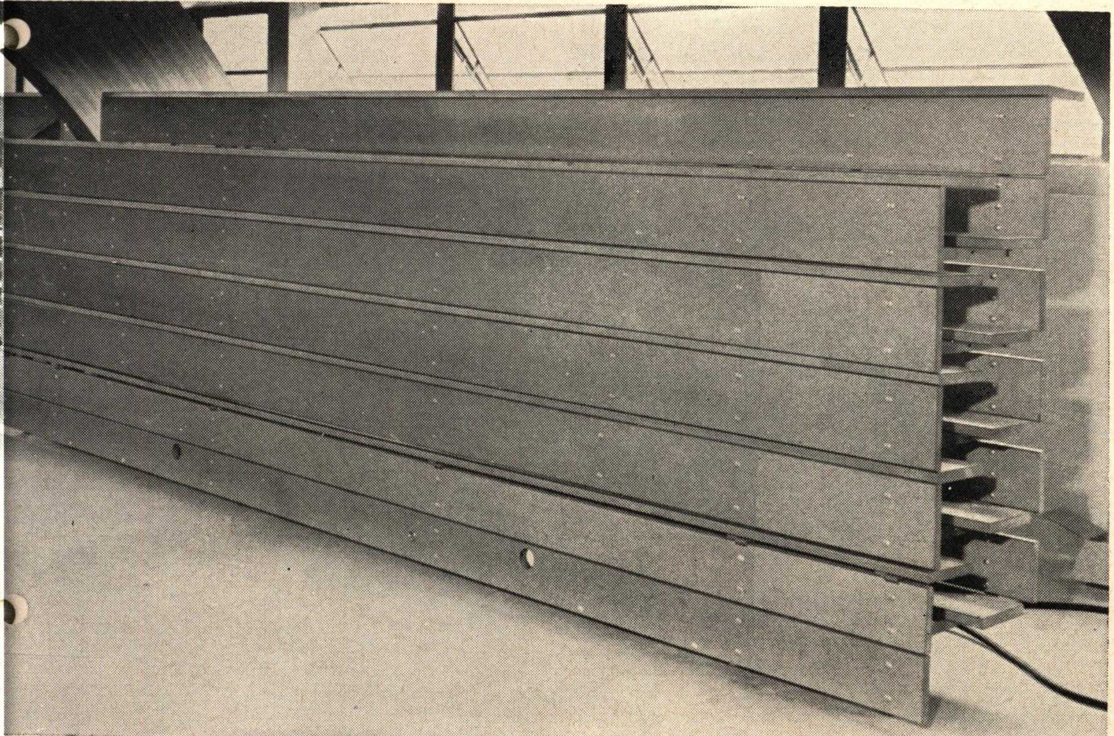
Each unit shall consist of steel understructure, columns, foot boards, seat boards, and vertical riser boards to form one complete assembly; each column except rear column shall be equipped with two (2) 3″ diameter, NO MAR rubber wheels. Rear column to be fastened stationary to wall and floor with proper hardware as appropriate wall and floor conditions permit. To transmit live load directly to the floor, the column shall establish contact with the floor. The front seat shall lock automatically by lever action by the weight of the front riser board; each unit equipped with yale lock and key to lock bleachers in open and closed position. Each row of seats starting from the front seat shall be so designed to pull completely out for seating position before the next row starts from its closed position. Rise per row 10¼″, depth per row 22″, height per seat 17″.

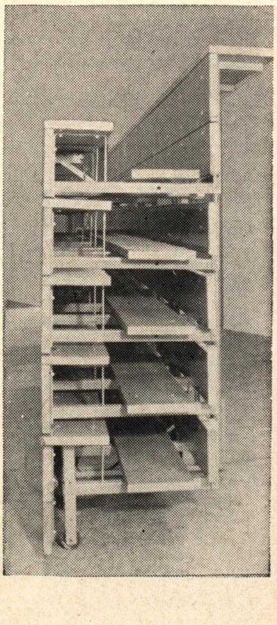
boards

Foot, seat and riser boards shall be of best grade clear lumber of solid or glued laminated boards; finished size shall be 1¼″ x 9″ for seat and foot boards, 1¼″ x 7″ for riser boards with edges and ends beveled and sanded smooth. Foot, seat and riser boards shall be surfaced both sides with an ⅛″ thick, 4500 lbs., P.S.I. (to prevent splinters) average tensile strength, industrial WEYTEX hardboard as manufactured by WEYERHAUSER.

finish

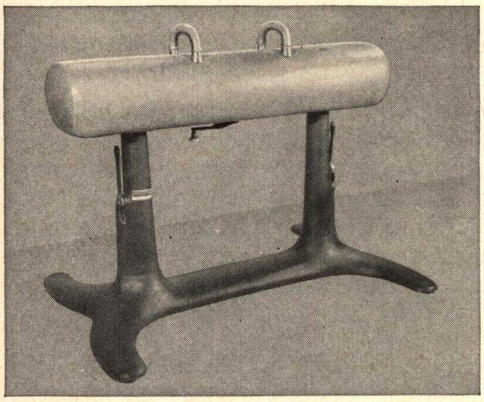
All steel parts shall be finished in gray, school brown or black enamel as chosen by architect or owner. All wood parts and WEYTEX shall be sanded and finished sprayed with two (2) coats of hot lacquer after sealing all surface against moisture. Exposed carriage bolt heads in seat, foot, and riser boards shall be CADMIUM plated.





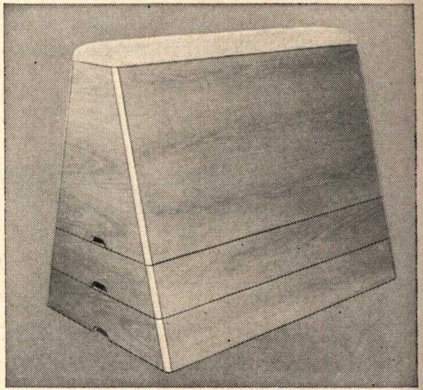
physical training equipment

Items on pages 10 and 11 illustrate the most popular types of equipment of our manufacture. For any item not listed please contact the factory.

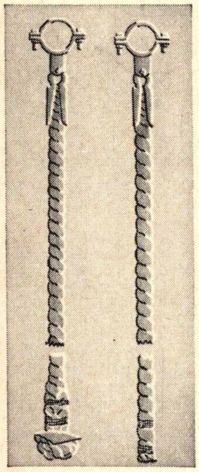


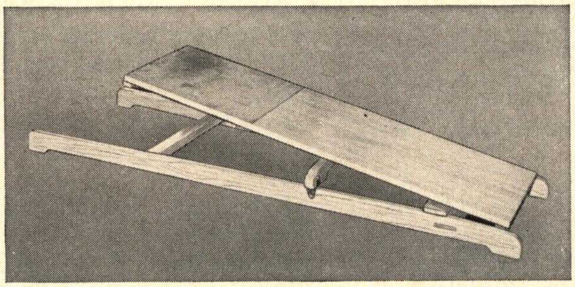
standard horse—no. 600
For gymnasium and physical education centers, the standard horse is one of the basic apparatus used in physical development.

standard buck—no. 620
The large base with its weight low makes a particularly stable support for the adjustable buck.



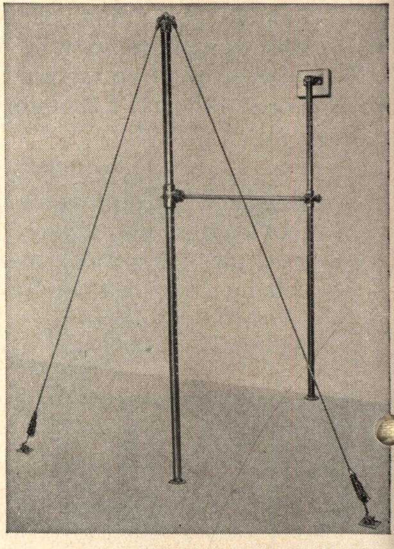
vaulting box—no. 900
Made of light, strong wood with three lifts for adjustment of height. Top lift padded with hair felt, and covered with best grade leather reversed to give permanent non-slip surface. Top lift is 33" high and each of the two under lifts 8"; total height, 49".



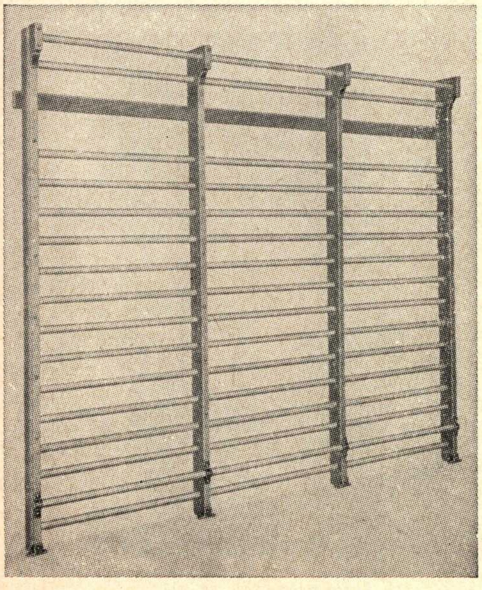


inclined spring board—no. 649
Made of New England ash. It is light and can easily be moved, yet stands firm without fastening. Rubber shod and covered with cork carpet on upper end.

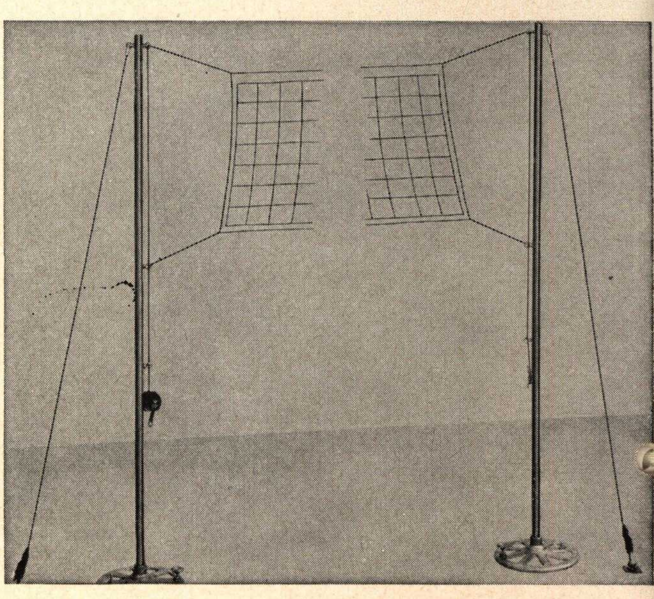
climbing ropes—no. 550 and no. 551
Manila ropes are designed for durability, correct size and safety. Knot is leather covered. Made of best grade pure manila or cotton rope.



horizontal bar—no. 376A
Permanently attached to side wall. Can be folded flush when not in use. Safety clamping sleeve holds bar in any position for vaulting.



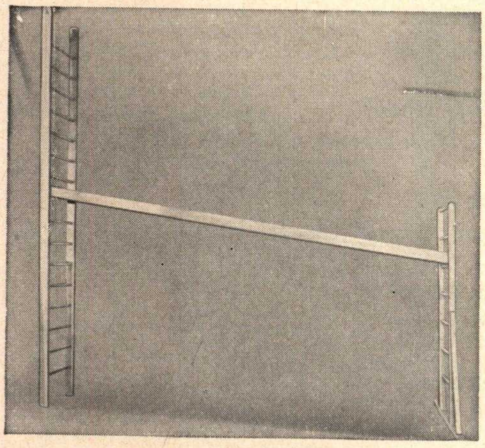
stall bar—no. 920
Swedish stall bars in three foot sections are made of fine hardwood. Order by number of sections desired.



volleyball standards no. 1729-11
Combination volleyball, tennis and Badminton standards (all steel) with guys, floor plates and reel.

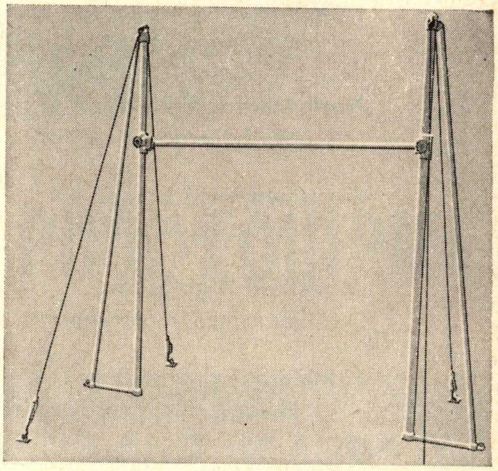
NARRAGANSETT
GYMNASIUM EQUIPMENT

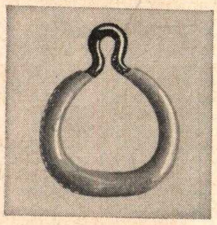
miscellaneous



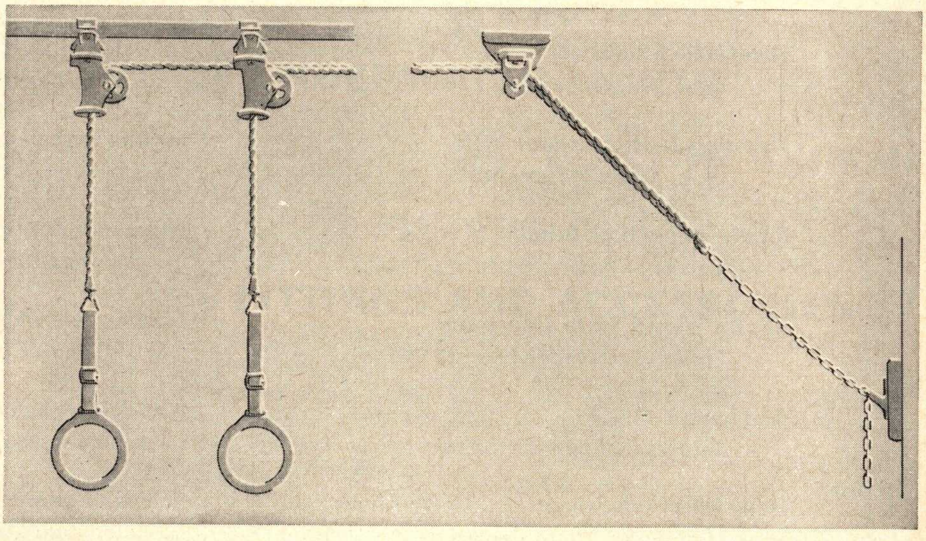
adjustable ladder—no. 813
Adjustable ladder including foot ladder.

horizontal bar—no. 378A
This bar can be quickly put up or taken down. Does not occupy much floor space and it is very rigid, the uprights being held firm by braces.



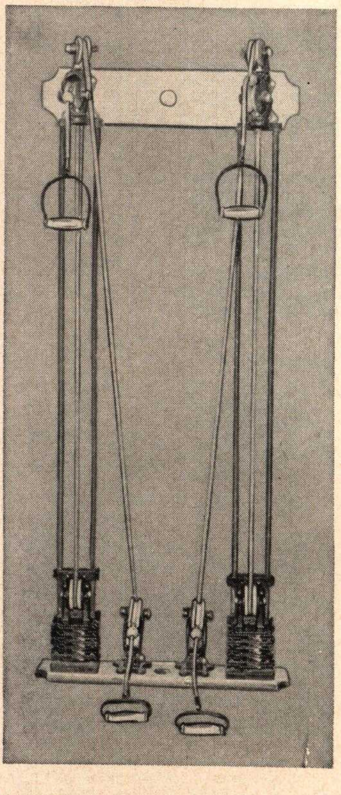


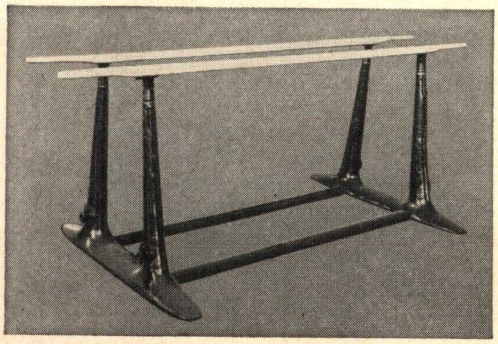
traveling ring—no. 700
Leather covered metal ring.



adjustable flying rings—no. 725
May be lowered to floor and used as swing, or hoisted to ceiling. The pivot blocks in which the ropes swing are bell mounted.

chest weight—no. 265
Used in many homes and gymnasiums, this is one of the most popular pieces of equipment. It is noiseless and self lubricating.





parallel bar—no. 838
This bar insures rigidity and security. It is necessary for all complete gymnastic equipment. Adjustable for both height and width.

bicycle trainer—no. 330
For interest value and excellent exercise, this bicycle trainer is suited particularly to the complete gymnasium.

PARAGON SWIMMING POOL CO., INC., manufactures more than 400 products for building, maintaining and improving all types of swimming pools.

The company has gained wide recognition among architects and engineers engaged in the planning and design of public, commercial and municipal pools. Specifying "PARAGON" represents an assurance of highest quality and dependable trouble-free service.

PARAGON's large, up-to-date manufacturing facilities are located in Pleasantville, N. Y. Huge warehouse stocks of all standard items are constantly maintained, ready for immediate shipment. The PARAGON Technical Department, staffed with trained engineers and technicians, is always ready to assist the architect in his selection of standard or custom-designed pool equipment to meet specific requirements.

PARAGON AUTHORIZED DISTRIBUTORS

PARAGON's Authorized Distributors, located throughout the United States, can provide the fastest delivery and most efficient service on all products. The names of local distributors are listed in the Yellow Pages Classified Telephone Directory under "PARAGON SWIMMING POOL PRODUCTS." Where there is no listing in an area, the PARAGON home office at Pleasantville, N. Y., should be contacted for the name of the nearest distributor.

ADVISORY SERVICE

Your questions and inquiries are welcomed — and answered promptly. Our Technical Department is always at your service for all problems relating to pool equipment.

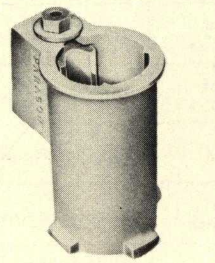
PLAN OF SOCKETS

Strong and rigid with many built-in safety features including flat, non-slip mounting treads and non-slip surface on foot rest for fast, easy take-off. Umbrella holder and life ring holder included. Four anchor sockets furnished with galvanized chair. Order anchor sockets separately for chrome and stainless chairs. Order escutcheon plates separately for all chairs. Life ring not included.

CHROME-PLATED BRASS	**C-133-C**
GALVANIZED	**C-133-G**
STAINLESS	**C-133-S**



anchor sockets

Simplify installation and removal of PARAGON deck equipment. Made to accommodate 1.900" O.D. pipe. Exclusive, locking bronze wedge prevents sidesway on ladders and stands.

ALUMINUM	**B-120-A**
BRONZE	**B-120-C**
GALVANIZED	**B-120-G**

escutcheon plate

Adds elegance to ladders and stands by covering anchor sockets. Durable, rugged, one-piece casting. Made for 1.900" O.D. pipe.

CHROME	**C-121-C**
GALVANIZED	**B-121-G**
STAINLESS	**C-121-S**

PARAGON UNDERWATER LIGHTS

SPECIAL FEATURES

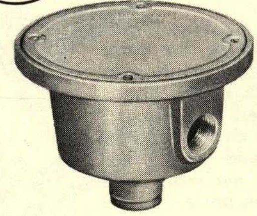
Bronze and copper construction with outside faces of gleaming chrome. ALL MOLDED GASKETS ONLY—No soldered joints or flat gaskets.

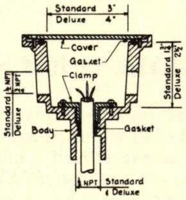
LIGHT CAN'T POP OUT—Special PARAGON locking device keeps light in niche.

Every light, before shipment, is tested for water tightness.

Lights are wet niche type to be recessed into wall. Extra long electrical cord is supplied so light can be lifted to deck for changing bulb without disturbing electrical connections. APPROVED and listed by Underwriters' Laboratories and Canadian Standards Association.

250-Watt Light	**B-550**
400-Watt Light	**B-552**
500-Watt Light	**B-555**



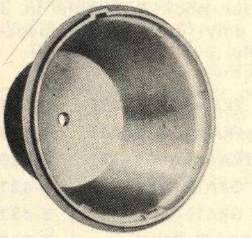


deck box

ABSOLUTELY LEAK-PROOF. Has new PARAGON water seal. Positively prevents entry of water into box. Eliminates possibility of short circuits due to flooding. Molded gasket seal under cover stops surface seepage. Cast bronze throughout with molded gaskets.

STANDARD DECK BOX, Plain Bronze	**B-580**
STANDARD DECK BOX, Chromed Bronze	**B-580-C**
LARGE DECK BOX, Plain Bronze	**B-582**
LARGE DECK BOX, Chromed Bronze	**B-582-C**

pre-formed niches for concrete pools



For speedier, simpler, lower cost installation of underwater lighting.

PRE-FORMED COPPER NICHES are a PARAGON FIRST and a PARAGON EXCLUSIVE. These niches are brazed to mounting rings and have threaded outlets for conduit connections. Assembled units are permanent, water-tight and non-corroding.

For economy purposes, aluminum niches with mounting rings attached are also available. Aluminum niches can be used ONLY for installations where concrete can completely surround it.

DETAILED INSTALLATION SHEETS ARE FURNISHED WITH EACH NICHE—AND ARE AVAILABLE UPON REQUEST.

Niches available in either copper (for permanence) or aluminum (for economy). Come completely assembled *with mounting ring attached*—ready for installation. Just set in place and pour the concrete.

COPPER NICHE, complete—250- and 400-Watt	**B-560**
COPPER NICHE, complete — 500-Watt	**B-561**
ALUMINUM NICHE, complete—250- and 400-Watt	**B-563**
ALUMINUM NICHE, complete—500-Watt	**B-564**
MOUNTING RING, only—250- and 400-Watt	**B-566**
MOUNTING RING, only—500-Watt	**B-567**

Preformed niches also available for vinyl, fiberglas and metal pools

BUILT-IN SKIMMER

Eliminates need for time-consuming hand skimming. Removes all floating debris while pool is being used.

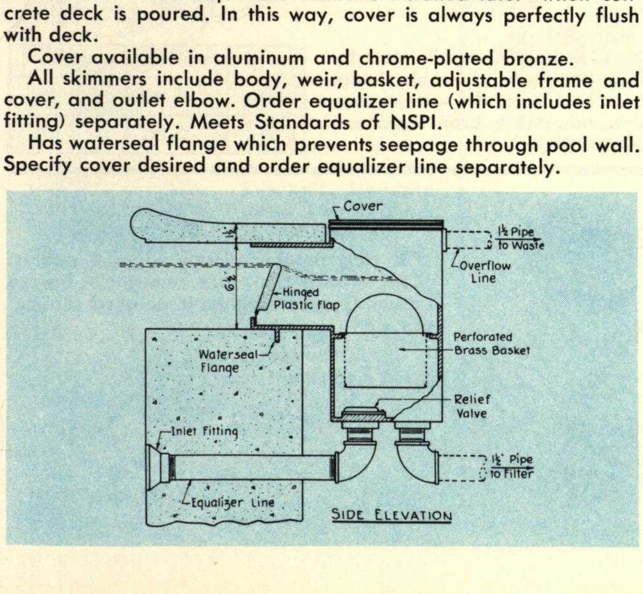
One-piece all aluminum construction with self-adjusting plastic weir. Heavy perforated brass basket catches debris, is easily removed for cleaning. Threaded outlet for direct connection of vacuum cleaner hose eliminates need for separate vacuum line. Overflow connection provided.

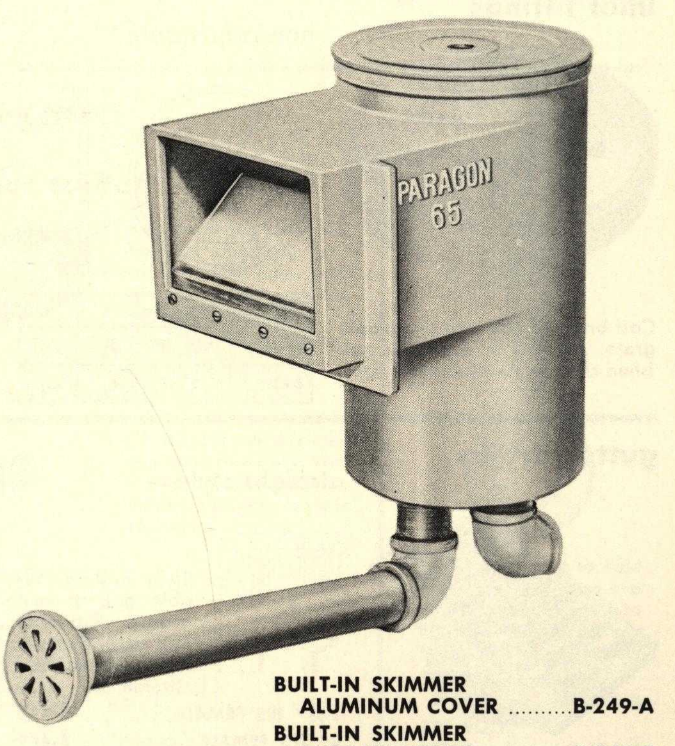
Brand new, exclusive PARAGON feature is the adjustable frame for the cover. The adjustable frame is installed later—when concrete deck is poured. In this way, cover is always perfectly flush with deck.

Cover available in aluminum and chrome-plated bronze.

All skimmers include body, weir, basket, adjustable frame and cover, and outlet elbow. Order equalizer line (which includes inlet fitting) separately. Meets Standards of NSPI.

Has waterseal flange which prevents seepage through pool wall. Specify cover desired and order equalizer line separately.





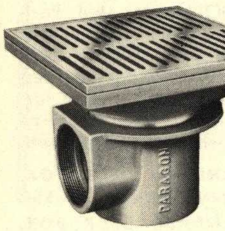
BUILT-IN SKIMMER ALUMINUM COVER	**B-249-A**
BUILT-IN SKIMMER CHROME COVER	**B-249-C**

PARAGON

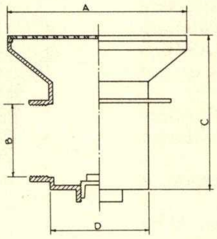
FITTINGS FOR CONCRETE POOLS

(COMPLETE LINE OF FITTINGS FOR VINYL, FIBERGLAS AND METAL POOLS ALSO AVAILABLE)

cast main drain

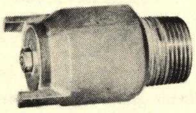


Finely machined galvanized cast iron body with waterseal flange, manual relief plug, threaded outlet, cast bronze chrome-plated frame and grate.
Also available with cast iron body.



Cat. No.	A	B	C	D	
B-420	6"	2" IPS	6½"	4"	Cast Iron Body
B-420-G	6"	2" IPS	6½"	4"	Galvanized Iron Body
B-421	11"	4" IPS	9"	6"	Cast Iron Body
B-421-G	11"	4" IPS	9"	6"	Galvanized Iron Body

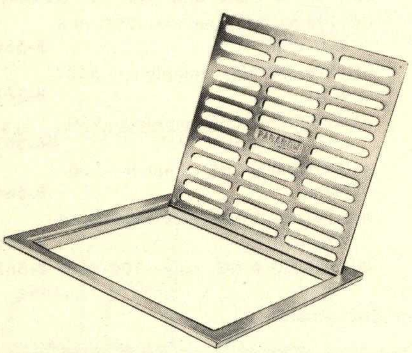
hydrostatic relief valve for cast main drain

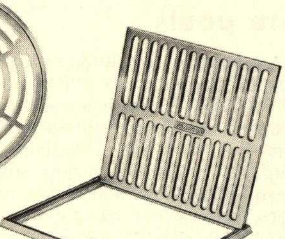


The cheapest insurance any pool owner, operator or builder can buy. Should water pressure, created by saturated earth, ever start to exert itself while pool is empty for painting, repairs, etc.—the HYDROSTATIC RELIEF VALVE opens—permitting water in ground to enter pool—thereby equalizing the pressures and preventing heaving of the floor.

FOR 2" CAST MAIN DRAIN	B-422
FOR 4" CAST MAIN DRAIN	B-423

frames and grates



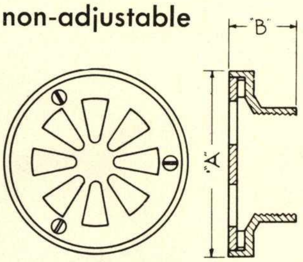


Sturdy cast bronze with removable grates. Gleaming chrome plated finish glamorizes your pool. Available in 3 sizes. Grates only for each size available separately.

12" SQUARE, FRAME & GRATE	B-425
8" SQUARE, FRAME & GRATE	B-428
6" ROUND, FRAME & GRATE	B-430
12" SQUARE, GRATE ONLY	B-431
8" SQUARE, GRATE ONLY	B-432
6" ROUND, GRATE ONLY	B-433

inlet fittings

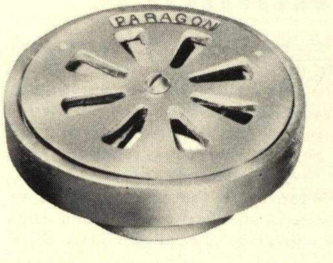
non-adjustable

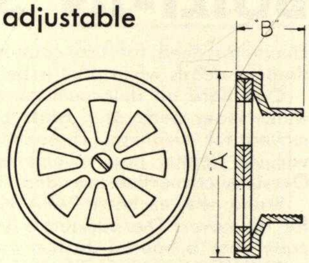


Cast bronze body with removable grate. Finished in attractive polished chrome. Available in 2 sizes.

Cat. No.	Outlet Size	A	B
B-435	1½" IPS	3½"	1¼"
B-436	2" IPS	4"	1¾"

adjustable



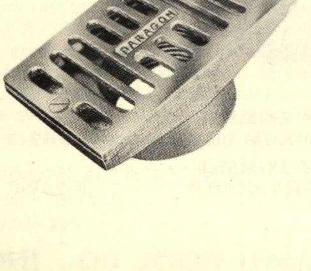


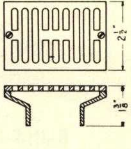
Equalize flow from all inlets by using this easily adjustable fitting. Cast bronze body with removable, adjustable, bronze grates—chrome plated.

Cat. No.	Outlet Size	A	B
B-440	1½" IPS	3½"	1¼"
B-441	2" IPS	4"	1¾"

gutter drains

straight style

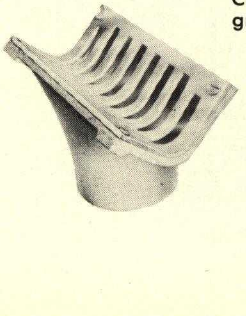




Body and removable grill of cast bronze. Available in 2 sizes. Grate is finished in polished chrome.

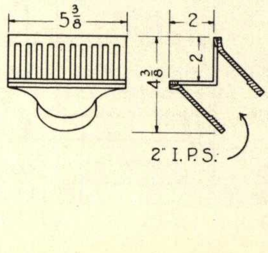
1½" IPS FEMALE	B-480
2" IPS FEMALE	B-481

angle style



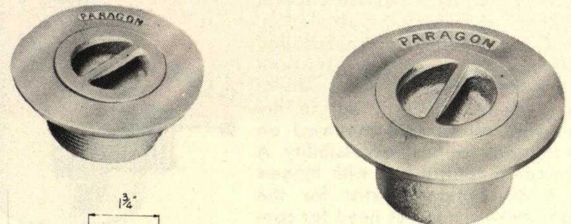
For clog proof drainage of pool gutters. Cast bronze body has removable bronze grate. Grate is finished in polished chrome.

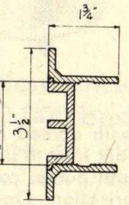
B-482



vacuum fittings

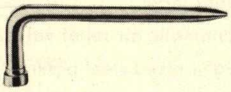
Precision machined bronze fittings with removable plug. All parts cast bronze . . . finished in attractive polished chrome. Available in 2 sizes for pipe connection — both sizes have 1½" IPS female connection for vacuum hose.



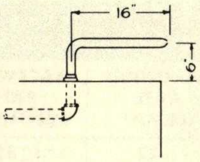


Cat. No.	Pipe Size	Hose Size
B-455	1½" IPS Female	1½" IPS
B-456	2" IPS Male	1½" IPS

fill spouts

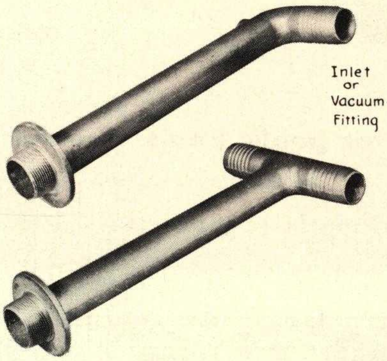


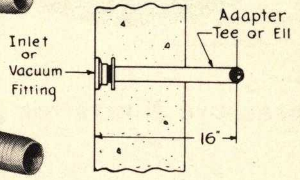
Health regulations in most areas require the use of a FILL SPOUT for filling your pool. Chrome plated brass tubing and fittings with lower end threaded for connection to water pipe. Fish tail spout sprays water clear of coping and walls. (Install FILL SPOUT underneath diving board). Available in 3 sizes.



¾" FILL SPOUT	B-489
1½" FILL SPOUT	B-490
2" FILL SPOUT	B-491

no-leak adapters

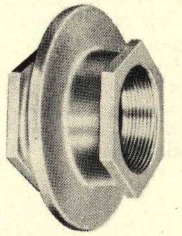




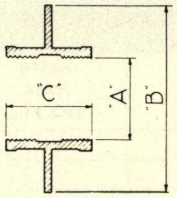
A PARAGON EXCLUSIVE — A combination of No-Leak Fittings, elbow (or tee) and hose adapter plus piping to extend through pool wall. Saves installation time and money. Galvanized cast iron construction. Available as ell or tee.

1½" Adapter Ell	B-497
1½" Adapter Tee	B-498

no-leak fittings



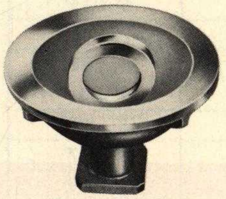
Eliminate all possibility of leakage through pool wall at fittings. The waterseal flanges of the NO-LEAK FITTINGS effectively prevent water seepage. Heavy cast bronze with wide, waterseal flange. Available in 2 sizes.

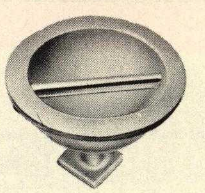


Cat. No.	A	B	C
B-495	1½" IPS	4¼"	2"
B-496	2" IPS	4¾"	2¼"

WALL ANCHORS

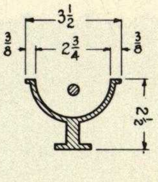
recessed cup type



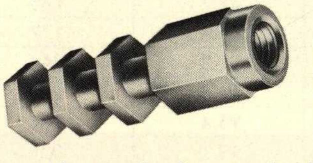


Cast bronze, chrome-plated. Sets flush in wall. Deluxe model has rugged, chromed bronze, removable eye bolt. Standard model has brass rod to hold rope hook.

Cup Anchor, deluxe	B-469
Cup Anchor, standard	B-470



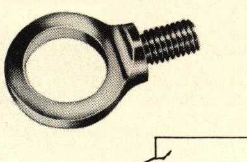
wall anchor socket



Inexpensive socket is set flush with pool wall. Perfect for racing lanes and safety lines that may be changed or moved.

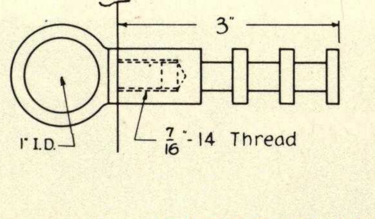
B-471

threaded eye bolt

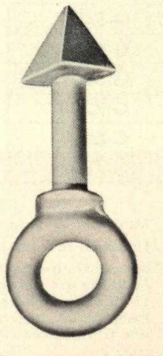


Chrome plated—threaded eye bolt screws into Wall Anchor Socket. Can be removed in seconds for lane changing.

B-472



eye bolt



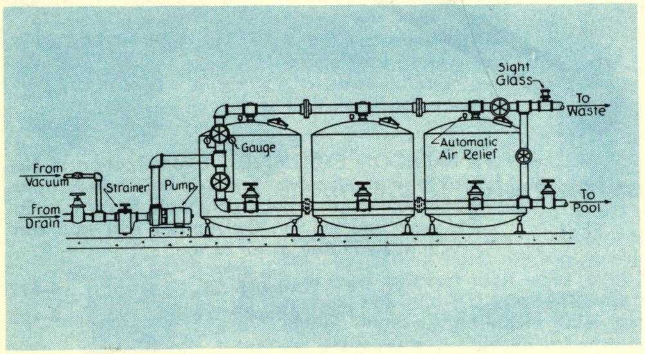
Set in pool wall to hold hand lines, life lines and racing lane markers. Cast bronze—available in plain finish or chrome plated.

EYE BOLT, Bronze	B-499-B
EYE BOLT, Chrome Plated	B-499-C

PARAGON

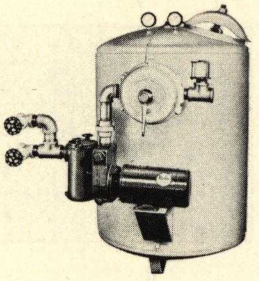
SWIMMING POOL FILTERS

pressure filters for public pools



PARAGON manufactures a full range of multi-cell filters for larger private pools and public pools. Filter battery includes tanks on jack legs with non-corrosive underdrains and automatic air relief, centrifugal pump and motor, strainer, 2 pressure gages, sight glass, galvanized steel piping and fittings, gate valves. Auxiliary equipment includes chlorinators, chemical feeders, solution crocks, flow meters and orifice flanges. Our experienced engineering department will be happy to make recommendations and offer prompt quotations upon receipt of plans, specifications and details.

residential pool filters



Available in two styles: Above Ground Installation and Buried Installation. Above Ground Filter can be installed anywhere — cellar, garage or bath house. Buried Style is ideal where space is limited. Filter is set in the ground with all controls mounted on top of the tank for easy accessibility. A prefabricated control box with hinged cover is an optional extra for the buried filter — eliminates need for construction of an enclosure.

SYSTEM INCLUDES:

- Welded steel tank of structural steel plate with domed heads, non-corrosive underdrain and splash plate under inlet to prevent furrowing of filter bed. Self-priming centrifugal pump, continuous duty, sealed bearings with lifetime lubrication. Operates on household current.
- Oversized strainer with heavy gage perforated brass basket.
- 2 pressure gages.
- Sight glass.
- Automatic air relief valve.
- Galvanized steel piping.
- Single lever PARA-PORT VALVE.

Suction manifold available as optional extra.

PRESSURE FILTERS FOR PUBLIC POOLS

*Maximum pool capacity is given in gallons and based on 8 hour turnover.

**Filtration rate based on 3 gpm per sq. ft. of filtration area.

***Backwash rate based on 12 gpm per sq. ft. of filter area for one tank.
All tanks are constructed of 3/16″ structural steel plate with domed heads.
11″ x 15″ manhole, adjustable jack legs, automatic air relief valve.
Pumps with motors 1½ H.P. or smaller are self priming pumps and motors are 110/220 V, 1 phase, 60 cycle, 3450 rpm. Pumps with motors 2 H.P. and larger are straight centrifugals with motors 220/440 V, 3 phase, 60 cycle, 1750 rpm. Single phase available upon request.

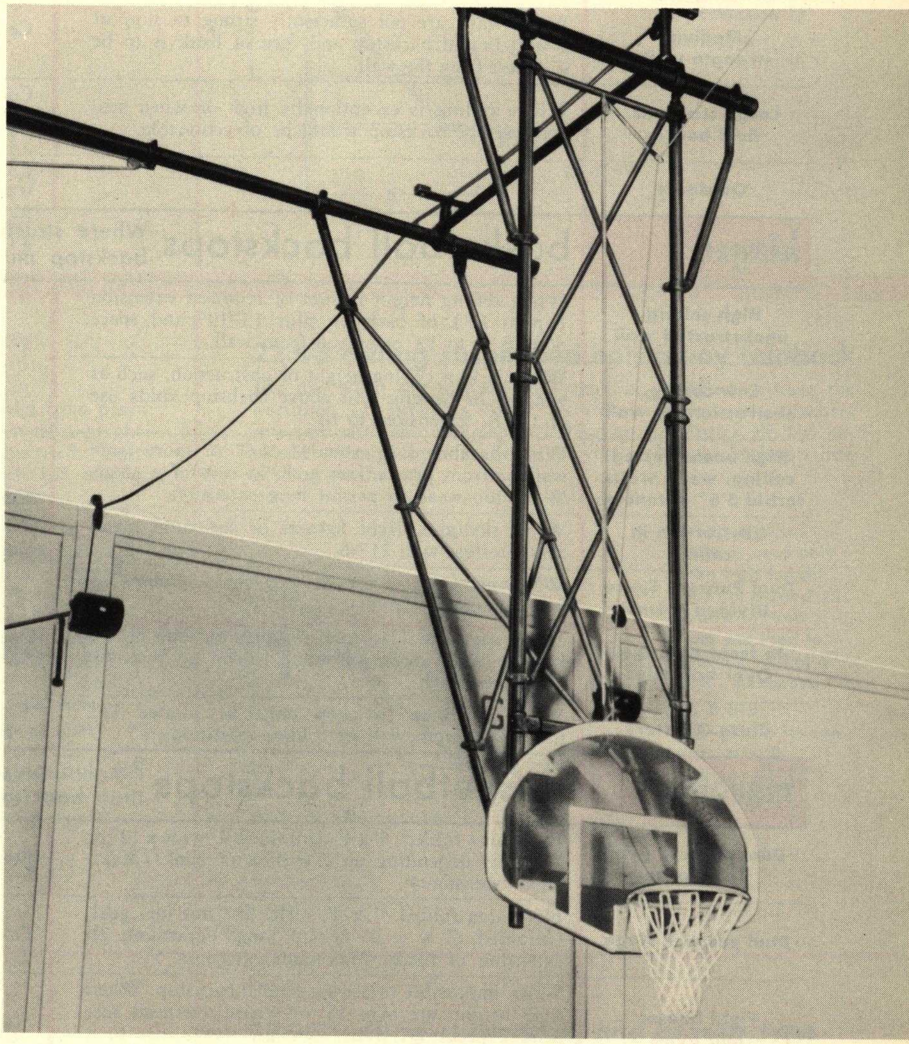
Por

Porter

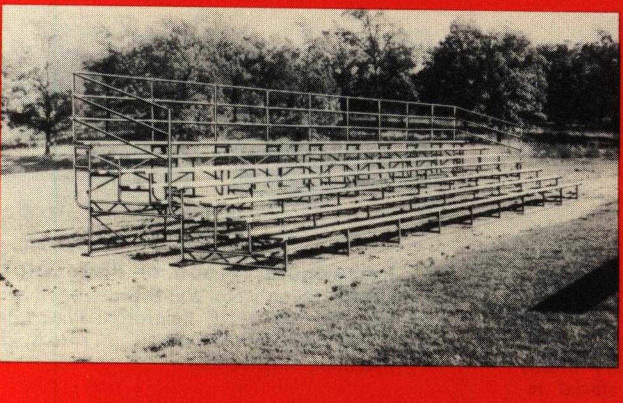
ATHLETIC EQUIPMENT CO.

A Division of Waco Manufacturing Company

Basketball · Gymnasium · Playground · Corrective Equipment



- **Performance-proved . . . Over 100,000 basketball installations alone in over 25,000 schools.** Proof that when you buy Porter, you can be sure. . . . Nearly a Century of Quality Manufacturing.
- **Quality Plus** . . . Porter's "53,000 lbs. p.s.i. test" malleable castings, first quality new pipe plus stress-tested quality gives years of trouble free service to every building, every builder and architect.
- **Custom Installations** . . . For buildings requiring "specialized" backstops, Porter's engineering staff will design to meet the most rigid requirements. Contact your Porter distributor or write giving your requirements.
- **New Architect's Reference File Available** . . . Write for complete architect's tracing details; also gives complete wall and ceiling stress information.
- **Planning Service**. . . For gymnasium layout available to answer any questions on type, planning or installation of equipment.



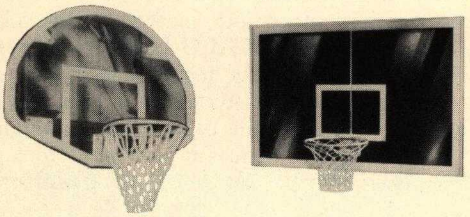
Portable Steel Frame Bleachers

WACO Portable Bleachers, manufactured of high carbon steel tubing feature the patented speed lock method of assembly, plus self locking plank fasteners. WACO bleachers offer the utmost in versatility. For example a ten row bleacher unit may be partially dismantled and re-erected as a four row or seven row unit without disturbing the balance of the original bleacher. These features do not detract in any way from the use of WACO Bleachers for permanent or semi-permanent installations.

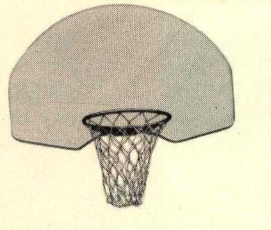
WACO Bleachers are available in non-elevated and elevated styles, with and without a front cross walk. All WACO Bleachers are completely load tested and are covered by more than one million dollars worth of product liability insurance. Use our engineering service to solve your seating problems without obligation.

A COMPLETE LINE • • • there's a Porter Backstop engineered for every building condition

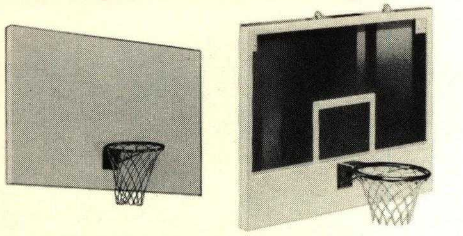
Where To Use	When To Use	Mounting	Type	No.
fixed	**basketball backstops** Recommended where structure or contemplated use of space renders it unnecessary to remove or reposition backstops.			
Unobstructed wall	When bank is extended 12′ or less from wall.	Wall braced	Fixed	**212-B**
Where bank is far from walls	When distance from the face of the bank to the wall is greater than 9′.	Ceiling suspended and braced	Fixed	**226-B**
Window span	When bank is positioned in front of window or an obstruction that must be spanned.	Wall braced	Fixed	**212-WS**
Balcony wall	When balcony is 9′ to 13′ high.	Wall braced balcony	Fixed	**213-B**
Medium strength walls	When walls are not sufficiently strong to support a wall braced backstop and face of bank is to be 9′ or less from the wall.	Ceiling suspended wall braced	Fixed	**218-B**
Large stadiums, field houses	Where ceiling is exceptionally high or when suspended type backstop would be objectionable.	Concrete anchored floor pedestal, ceiling cable braced	Fixed	**228-B**
Outdoors		Concrete anchored single pedestal	Fixed	**58-F** **59**
hinged	**basketball backstops** Where structure and contemplated use of space dictate that backstop must sometimes be repositioned, but not removed.			
High ceiling, unobstructed wall	When ceiling height is sum of required extension (up to 12′) of backstop plus 12′-10″ and space permits 3′ to 12′ extension from wall.	Wall braced	Wall fold-up	**219-B**
Low ceiling, obstructions in wall	When lack of ceiling height or obstruction, such as window or heating unit above backstop voids use of 219-B. Extensions to 10′.		Side fold	**220-B**
High unobstructed ceiling, weak walls forbid 5′6″ extension	When backboard is extended 5′-6″ or more from wall or from proscenium arch, in case of a stage. Walls too weak to permit long extension.	Ceiling suspended	Hoistaway forward fold	**217-B**
Obstruction in ceiling	When skylights, light fixtures or structural members interfere with 217-B.		Hoistaway backward fold	**223-B**
Dual Purpose Space Divided rooms	When gymnasiums are divided into 2 rooms by folding door.	Wall braced	Side swing gate	**247-B** **248-B**
In front of stage. Over balconies	When complete "Jacknife" folding through use of knee joints to make minimum folded up backstop area is required.	Ceiling suspended	Hoistaway double fold	**251-B**
Close Quarters	When swing-up backstop must be located less than 5′-6″ from wall or folding partition.	Ceiling suspended forward braced	Wall or Partition swing-up	**249-B**
movable	**basketball backstops** For dual purpose space where it is sometimes desirable that backstops be completely moved or relocated.			
Dual purpose gym floor space	Floor area folded, 8′ x 4′. Unfolded 4′ wide x 12′ or 13′ long, depending on extension of bank. Maximum extension 5′.	Floor plates, casters	Folding rollaway	**235-B**
Dual purpose stage	Floor area folded 5′ x 4′. Ht. 38″ not inc. goal. Unfolded 6′ w x 9′ or 10′ long, depending on extension of bank. Maximum extension 5′.	Floor plates, casters	Folding rollaway	**236-B**
Field houses and gyms	When impossible to use suspended backstop. When truss heights are over 25′ or where overhead suspended backstops would obstruct sight lines to a decided disadvantage.	Floor plates, casters	Rigid structure with rollaway base; stores in 2 parts.	**225-B**
Field house, stadiums, gyms where storage is problem	Exceptionally high ceilings or where overhead suspended backstops would be objectionable. Rolls into opening 6′ w x 7′-6″ high.	Lifting screws, casters	Detachable extension, rollaway base. Hinged in 2 sections.	**227-B**



Herculite Backboards . . . Choose either Porter's No. 231-B Fan Shaped or No. 232-B Rectangular Backboard. Both official and carefully heat tempered glass to ensure strength and improve end-court visibility.



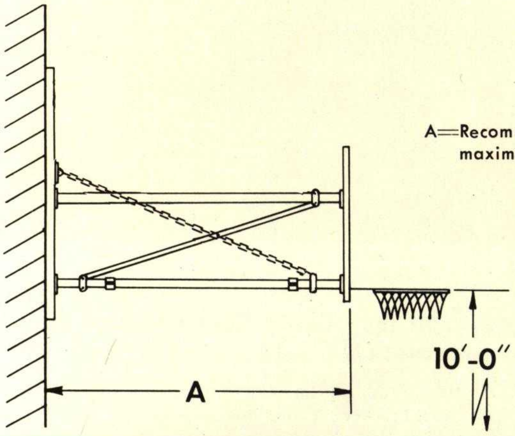
Steel . . . Porter's No. 237-B Fan Shaped Backboard of one piece, 12 gauge, hot rolled sheet steel . . . rigidity braced . . . meets all official requirements.



Rectangular Wood or Plate Glass. Choose Porter's No. 208-B panel-wood backboard or No. 211-B Reinforced Plate Glass Backboard. Both are official . . . sure to give maximum satisfaction.

212-B wall braced type

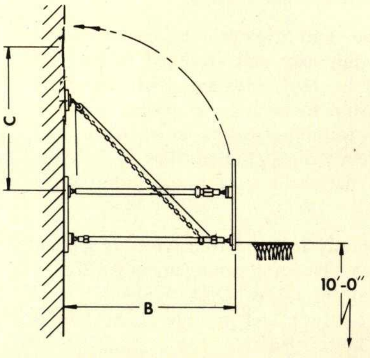
Use where walls are unobstructed. Bank may be installed flush or extended 12′ or less from wall. Naturally, as the distance extended increases, structural additions must be made to insure a rigid installation.



A=Recommended maximum is 12′.

219-B wall braced wall fold-up

Designed for use with high ceiling and unobstructed wall. Ceiling height must be the sum of the required extension of backstop plus 12′-10″. To retract, the frame work and backboard are simply raised to a position flush against the wall by means of a cable and Porter PF-750 worm-gear winch.

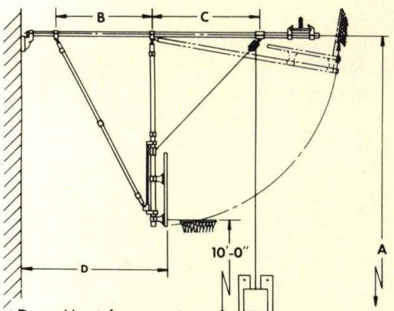


B=Maximum Recommended Extension 12′

C=Is to B

217-B ceiling suspended hoistaway forward fold

Install where conditions require backstop be removed from playing position to accommodate other activities. When truss height is more than 25′, a special superstructure must be used. Unit features enclosed Porter PF-750 worm-gear winch for raising structure to ceiling quickly and almost without effort.



D = Must be great enough to permit 30° brace angle

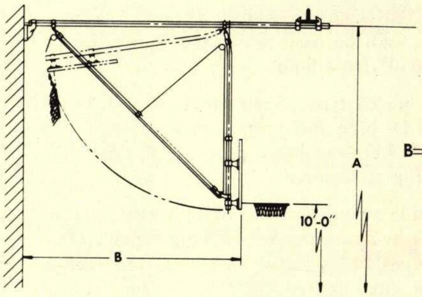
A=Arrangement as shown is used only when truss height does not exceed 25′. Otherwise drop pipes are used to maintain "A" at a 24′-9″ maximum.

B=Location of backstop must allow for 30° angle between diagonal brace pipes and drop pipes.

C=A—(13′-2¼″)

223-B ceiling suspended hoistaway foldback

For use when the forward fold can't be installed because the positions of skylights, light fixtures or structural members interfere with the backstop swinging up. A Porter PF-750 enclosed worm-gear winch hoists, lowers and locks backstop into playing position.

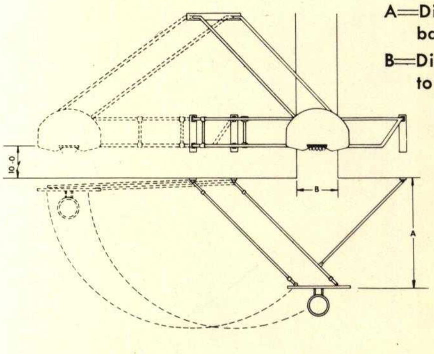


A=Arrangement as shown is used only when truss height does not exceed 25′. Otherwise drop pipes are used to maintain "A" at a 24′-9″ maximum.

B=Min. B Dim. =A—(9′-3″) for fan bank. Min. B. Dim.=A—(8′-10″) for rect. bank

248-B wall braced gate side swing

For dual purpose space, when gymnasiums are divided into two rooms by folding door. Also permits practice courts. Usually the folding door and the center line of the main court coincide. The "gate" containing the backboard simply swings to one side to permit the door to operate.

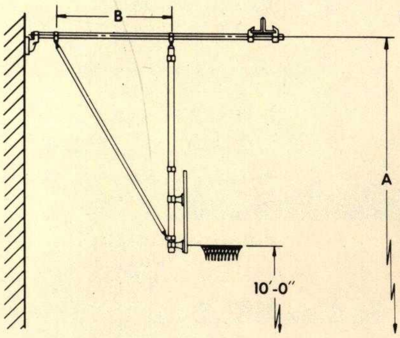


A=Distance face backstop to wall.

B=Distance of opening to be spanned.

226-B ceiling suspended and braced type

Use when walls are obstructed or distance from the face of the bank to the wall is excessive or when walls are too weak to accept the weight of a wall braced backstop. This permanently rigid structure may be placed almost anywhere in the gymnasium, independent of wall bracing.



A=Arrangement as shown is used only when truss height does not exceed 25′. Otherwise drop pipes are used to maintain "A" at a 24′-9″ maximum.

B=Location of backstop must allow for 30° angle between diagonal brace pipes and drop pipes.

SPECIFICATIONS

For backstops shown on page three.

Write for specifications of backstops on page two.)

(Incorporate the following sentence and applicable clause.) Any substitutes for the bracing herein specified, including "U" bars, or steel channels, or wire and turnbuckle cross-bracings shall not be considered acceptable.

212-B—Wall braced type. 2' to 12' extended (specify). Shall be constructed with four (4) 1½" I.D. brace pipes terminating in malleable iron flanges for attachment, cross braced with ¼" x 1¼" flat steel braces secured with bolted clamp fittings.

219-B—Wall braced fold-up type. 3' to 12' extension (specify). Shall be complete with all hoisting equipment and arranged to fold up against wall. Brace pipes shall be 1½" I.D. and shall attach by means of hinged fittings. Backstop to be held in proper position with two lengths of chain each attaching at top to wood batten, and at bottom to extended end of brace pipe. Brace pipes to be cross braced with four ¼" x 1¼" flat mild steel braces and bolted steel fittings.

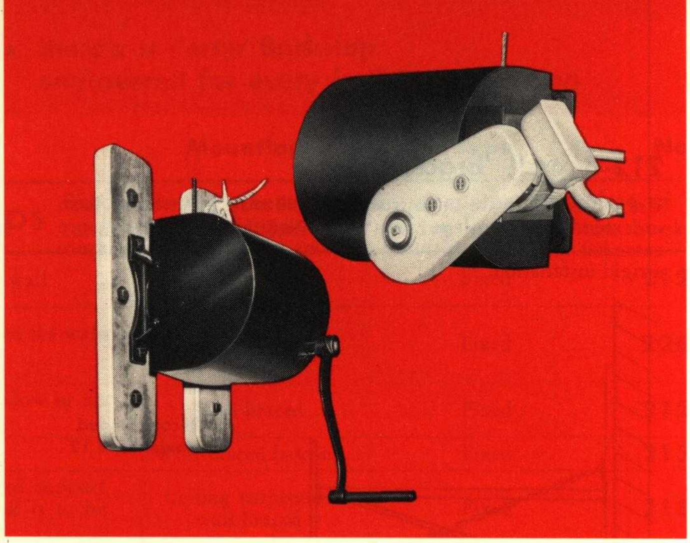
217-B—Ceiling suspended hoistaway forward fold type. (Incorporate clauses marked 217-B below). Hoisting arrangement consisting of malleable iron collar operating on 1-1/6" O.D. Slide rod shall permit raising and lowering of backstop and provide positive locking without additional latching mechanisms.

223-B—Ceiling suspended hoistaway fold back type. (Incorporate clauses marked 223-B below.) Each inclined brace shall consist of two lengths of pipe joined with special malleable iron hinge fitting, rigid when closed, and allowing brace members to fold for hoisting.

(217-B, 223-B)—Shall be furnished complete with all hoisting equipment and rigid superstructure constructed with 3" I.D. pipe, and required cross bracings and guider clamps. Vertical drop pipes 2" I.D. and incline braces 1¼" I.D. pipe, each attaching to superstructure with malleable iron hinged fittings, and 1-5/16" O.D. threaded cold rolled steel rod 12" long to permit adjustment of backstop for height, plumb, and level. Drop pipes and inclined braces shall be cross-braced with ¼" x 1¼" flat mild steel braces, attaching to pipes and joined at all intersections with bolted fittings. Two 1½" I.D. sway braces shall be used if backtop is fan shaped and suspended more than 20'-0" from floor.

226-B—Ceiling suspended braced type. Shall be constructed with rigid superstructure of 3" I.D. pipe and proper girder clamps and cross braces. Drop pipes 2" I.D. and brace pipes 1¼" I.D. with cross bracing and sway bracing as required.

248-B—Wall-braced gate side swing type. Shall be constructed to permit disconnection of bank by floor operated latching arrangement, allowing bank and brace pipes to swing in horizontal arc against wall. Brace pipes shall be cross braced with 1½" spacer pipes attaching to brace pipes with bolted steel fittings.



PF-750 manual winch

Load Capacity—750 lbs.; Cable Capacity—36' approx., Overall Dimensions—11⅝" x 11⅝" x 12" long.

Winch shall be designed to hold unit at any point when raising or lowering backstop. Two side brackets, drum and crank shall be of sturdy malleable iron castings. Drum shall be 9" in diameter and have serrations for cable lay. Crank, removable when not in use, shall be 12" long with a 5½" revolving hand grip. Worm shall be cold rolled steel. Worm gear cast bronze. Ratio between crank and drum shall be 40 to 1. A 16 gauge welded sheet steel cover shall enclose entire winch.

257 portable electrically operated winch (not shown)

Direct drive unit consists of a ⅓ hp universal motor driving a set of totally enclosed, permanently lubricated gears. The drum is grooved for even winding and is supported by metal brackets and a 1" diameter steel shaft. Oilite bronze bearings are used in the worm gear reducer.

258 Permanent Electrical Winch. With Porter's Electric Winch, the operator merely inserts a "yale type" key into the lock of the switch and turns it in the up position to raise the backstop or the down to lower it. As a safety feature, the switch is spring loaded in both directions . . . no danger of the electricity being left on. The key prevents operation by an unauthorized person. Also a limit switch automatically disconnects the backstop at the highest position. And with Porter's universal motor, starting torque is so high that there are no limitations on reversing our backstops. Cycle can be interrupted and reversed or resumed at any time in the cycle. One switch will operate any number of backstops simultaneously.

SELECTOR GUIDE

description	suggested use	model no.	page
CEILING SUSPENDED • fold up types			
Forward fold up	In front of stage or bleachers where fixed backboard would obstruct view.	112F	4
Backward fold up	Where trusses or other obstructions interfere with 112F operation.	112B	4
Forward fold up	Where backboard sets too close to wall to permit use of standard 112F.	110F	5
CEILING SUSPENDED • stationary types			
Stationary ceiling suspended	Where backboard is located 10 ft. or more from wall, or wall will not support wall mounted types.	113T	6
Stationary ceiling suspended and wall braced	Where backboard is located 10 ft. or less from wall, and wall will not support wall mounted types.	113W	6
Ceiling suspended wall braced gate type, stationary	Where backboard location coincides with folding partition travel, backboard only swings around.	18T	7
Ceiling suspended gate type, fold up	Where backboard location coincides with folding partition travel, and backstop must swing up.	18TF	7
WALL MOUNTED • stationary and hinged types			
Wall mounted swing up	Where necessary to swing up backboard and wall conditions are suitable, backboard located 10 ft. or less from wall.	15	8
Wall mounted stationary	Where backboard to wall is 10 ft. or less, and wall is suitable.	12	8
Wall mounted side fold	Where swing around type can be used, folds in space equal to distance from backboard to wall.	16	8
Wall mounted stationary	Where unobstructed wall permits wall mounting, or with glass backboard extended to 12 ft. from wall.	120	8
Wall mounted window span, stationary	Where backstop is located in front of window, or must straddle heat pipes, etc.	17	9
Wall mounted gate type	Where backboard location coincides with folding partition travel, backstop folds against wall.	18	9
PORTABLE TYPES			
Portable folding floor type	Where necessary to remove backstop from gym. (Requires storage space.)	22	9
Portable folding stage type	Where small gym requires backstop to be located on stage. (Requires storage space.)	23	9
Pedestal type stationary	In large structures where truss height is too great to permit truss suspended types.	312P	9

planning assistance

We will gladly place the resources of the Recreation Engineering Department at your disposal to assist you in selecting the proper backstop, or in designing special equipment to suit your needs.

Upon receipt of backstop order, Recreation's engineering department will design equipment and furnish shop drawings for approval before shipment is made on any backstop apparatus. Overhead backstop supports vary greatly with building construction and are designed to fit each building. When ordering backstops send along architect's blueprints and specifications for our use in designing supports.

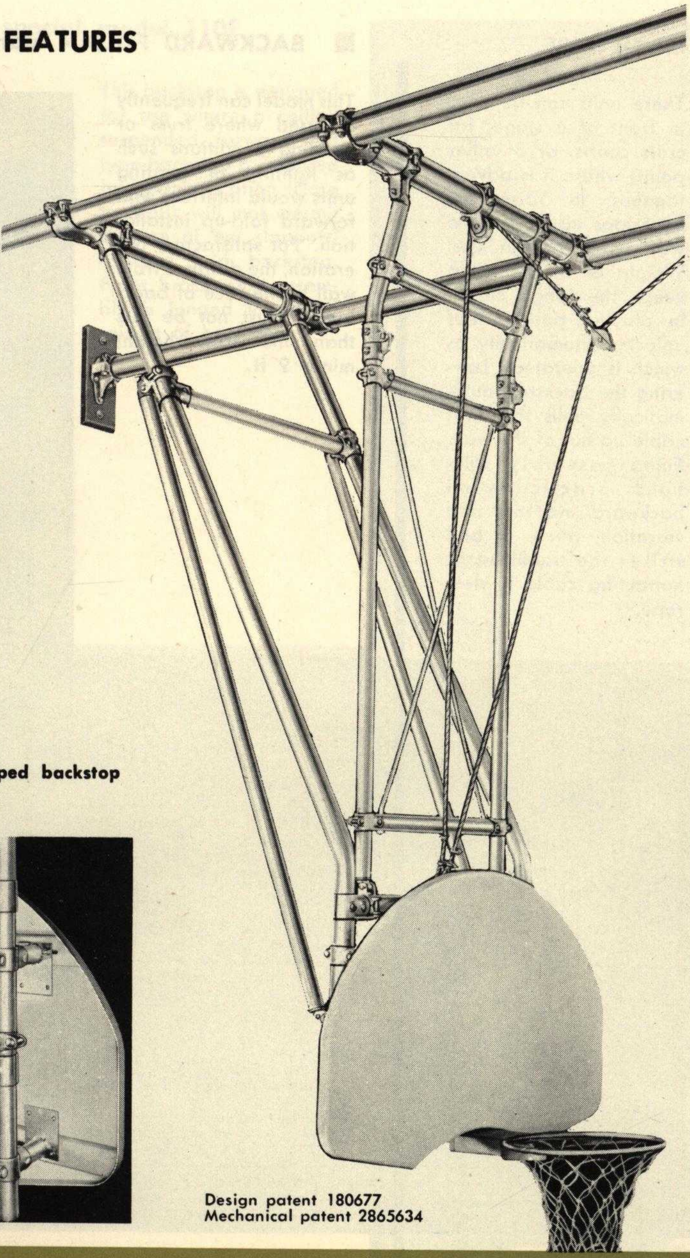
information required for quotations

1. Height from floor to bottom of truss flange.
2. Type of truss.
3. Spacing of trusses and distance from wall.
4. Distance from wall to face of backstop.
5. Construction of wall or stage arch.
6. Height of finished ceiling, if present.
7. Type of backstop and backboard required.
8. If available, architect's blueprints and specifications can be sent; instead of items 1 thru 7.

- selector guide
- construction features

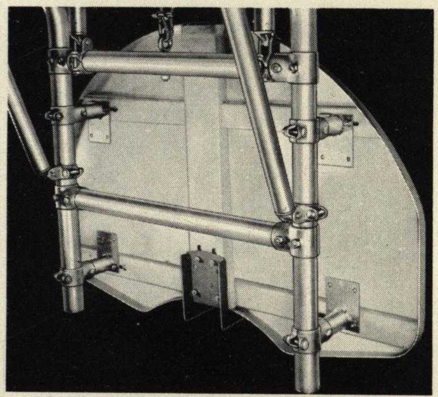
CONSTRUCTION FEATURES

- New patented principle in backstop construction. Weight of backstop locks hinged vertical assembly. Nothing to wear out or get out of order. Unlocks automatically when backstop is hoisted. Hoist cable automatically retracts out of playing area as backstop is lowered.
- Main oblique support assembly constructed of 2″ I.D. pipe.
- Extra 1½″ I.D. pipe braces connected to back of each 2″ I.D. main support pipe for additional rigidity.
- Fittings are malleable iron. Spacer pipes connected at intersections with fittings of steel stampings.
- Vertical assembly cross braced with 7/16″ diameter guy rods with locknuts.
- Backboard attaches to main frame by adjustable fittings for goal height adjustment. Other adjusting points for plumbing backboard.
- Precision manufactured and factory assembled. Can be installed more easily in less time.

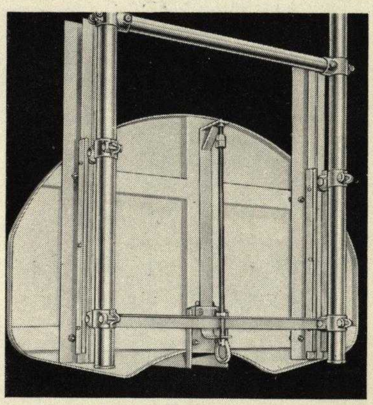


Design patent 180677
Mechanical patent 2865634

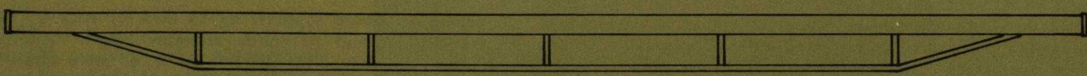
Rear view showing fan shaped backstop attached to superstructure.



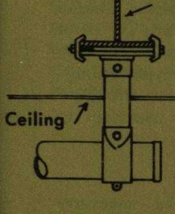
New adjustable backboard. Height of backboard above floor is adjustable to accommodate all age groups. Operated with removable crank from floor for 8′ to 10′ goal height. Fits most types of backstop apparatus.
MODEL 810



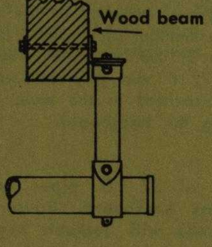
typical details of overhead superstructure



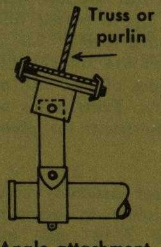
Bridged 3″ I.D. overhead pipe
Recommended when distance between suspension points are 16 ft. or more apart



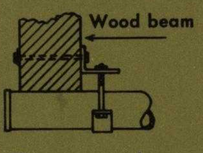
Ceiling drop



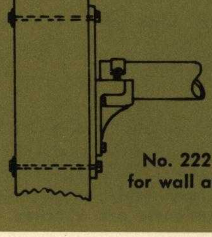
Pipe suspended below wood beam



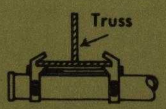
Angle attachment can be used when truss or purlin sets on angle



Pipe connected directly to wood beam

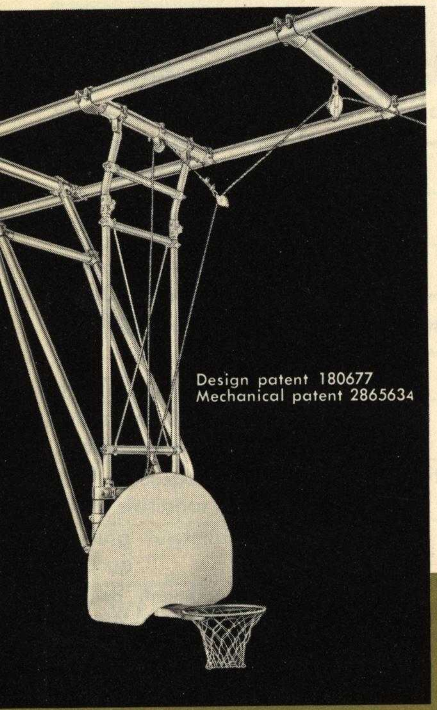


No. 222 bracket for wall attachment



No. 184 beam clamp for standard truss connection

FORWARD FOLD • standard model 112F

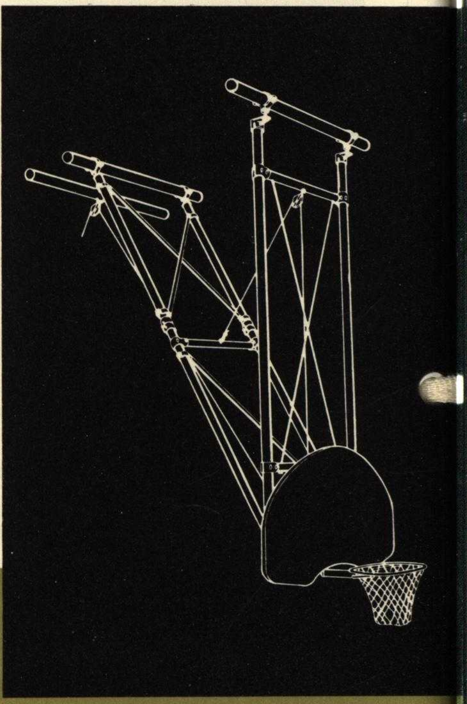


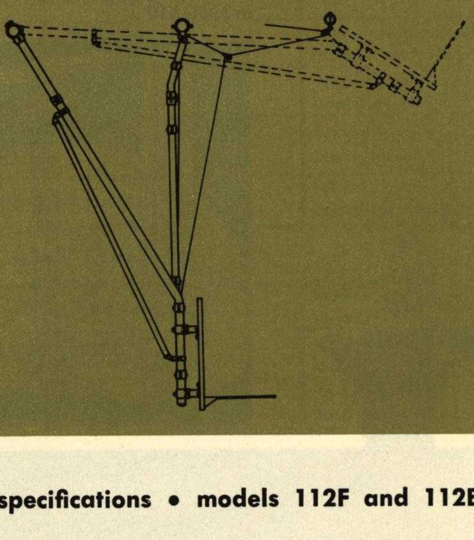
Design patent 180677
Mechanical patent 2865634

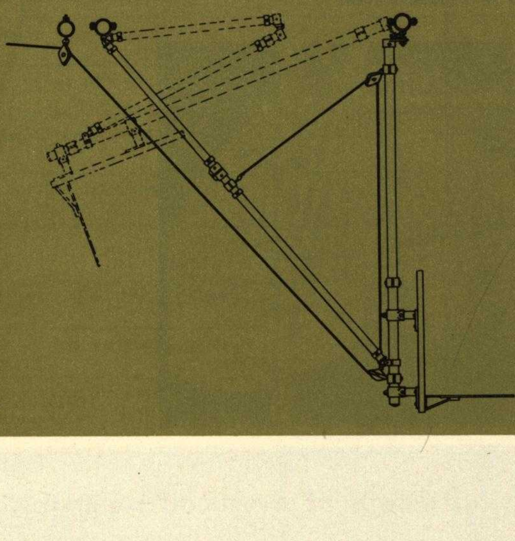
These units can be used in front of a stage, for cross courts, or at other points where it is advantageous to raise the backstops up out of the way when not in use. Weight of the backstop keeps the hinge closed in playing position but unlocks automatically as winch is operated. Lowering the backstop automatically pulls the hoist cable up out of the way. Entire assembly withstands practically all backward motion and vibration when a ball strikes the backboard. Retracting cable is steel rope.

BACKWARD FOLD • standard model 112B

This model can frequently be used where truss or building conditions such as lighting or heating units would interfere with forward fold-up installation. For satisfactory operation, the distance from wall to the face of backboard must not be less than the truss height minus 9 ft.







general specifications • models 112F and 112B

Overhead supports—Unless otherwise stated on quotations all ceiling suspended backstops are furnished with all pipe and fittings for a complete installation. Horizontal support pipe 3″ I.D. attached to roof trusses with extra heavy malleable iron beam clamps. Wall brackets are furnished where pipe attaches to wall.

Bank extensions—6″ extension standard—2 ft. extension furnished upon request at slight additional cost.

Fittings—Certified malleable fittings tested to more than 50,000 psi tensile strength.

Hoist cable—5/16″ 6x19 plow steel wire hoist cable. 3.7 tons tensile strength.

Backstop frame—Shipped assembled.

No. 112F

Main support assembly, consists of two 2″ I.D. pipes bent 30° from vertical, pivot around a 3″ I.D. pipe. Spaced to accommodate the selected backboard by two 2″ I.D. pipe spacers located near the lower end and one 1½″ I.D. adjustable spacer located about 3 ft. from the pivot end. Additional stiffeners are attached midway between the backboard supports to the back of each 2″ I.D. support pipe and extend up about two-thirds assembly length. Additional cross pipes are provided when pivot point is 24 ft. or more above floor.

The vertical support assembly consists of two 1½″ I.D. pipes, hinged near the top to permit folding and attached at the lower ends by pivot type supports to a 2″ I.D. cross member of the main support assembly. The upper ends are attached to a 3″ I.D. pipe with the same type fittings. Spacer pipes of 1½″ I.D. and 7/16″ dia. guy rods with locknuts are used for rigidity. Extra holes are provided in the main support assembly to permit adjustment for plumbing the backboard.

No. 112B

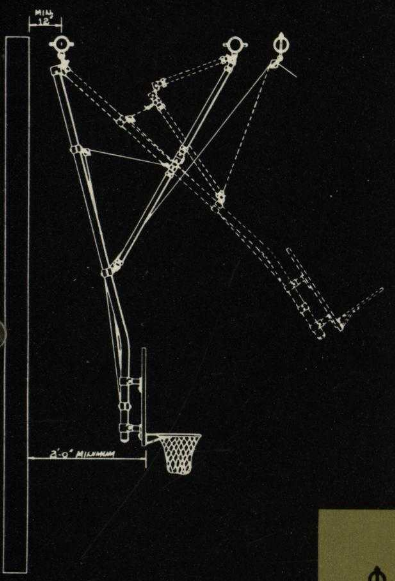
The vertical assembly consists of 2″ I.D. pipes spaced the necessary distance apart to accommodate backboard. Spacer pipes of 2″ I.D. pipes and 7/16″ dia. guy rods with locknuts are used for rigidity. Vertical assembly is hinged at the top to permit raising the backstop.

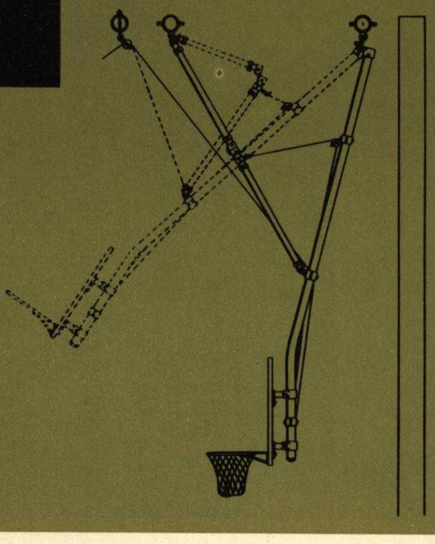
The brace assembly consists of 1½″ I.D. pipes and spacers hinged on both ends and near center to permit folding. Cross bracing, ¼ x 1¼″ steel straps.

- ceiling suspended
- swing-up and stationary types

FORWARD FOLD • special model 110F

This backstop is designed for use where a ceiling suspended, forward fold type backstop is required and bank location (close to wall) will not permit the use of our standard forward fold backstop. Front brace pipe assembly is hinged to permit raising of backstop.



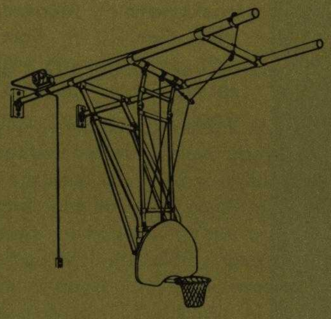


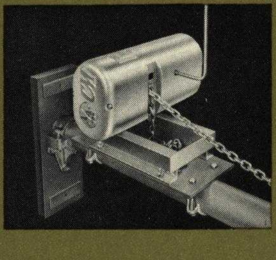
general specifications • model 110F

Main assembly constructed of 2" pipe and 1½" pipe bracing. Hinged assembly is 1½" pipe. Aluminum finish on all pipe and fittings. Brace pipe is equipped with positive lock. Automatically locks or unlocks at playing position by proper arrangement of hoist cable. Fittings for all assemblies are of malleable iron type. This unit furnished complete with WG-53 winch, cover, pulleys, 5/16 in. steel cables, etc., for a complete installation. Backstop frame shipped assembled.

HOISTING EQUIPMENT

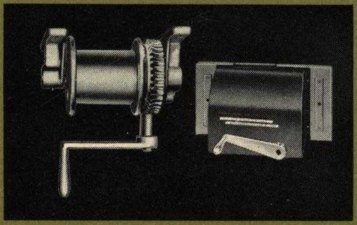
No. 190 automatic electric hoist (optional)

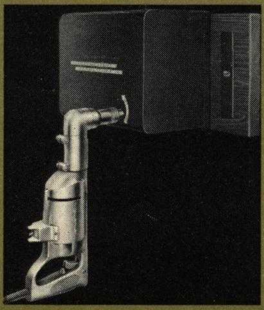




Completely automatic electric hoist. Push button control raises or lowers backstop. Control stations can be grouped in one location for operating several backstops. (Wiring not included.)
Electric hoist is fully enclosed in a die cast aluminum housing.
Precision double shield ball bearings used throughout the load lifting mechanism.
Electric hoist is designed to operate for an extended period without additional lubrication. Gears are packed with a non-oxidizing grease which need not be replenished. Moulded nylon gears and nuts in limit switch need no lubrication.
Heavy duty, vertical disc type brake, responds to push button. Brake holds in all positions. Will not release in case of faulty adjustment, excessive wear, or power failure.
Upper and lower safety limit switches are built in hoist. Can be set easily to shut off at both upper and lower positions.
Flexible link chain of hardened alloy steel pulls freely in all directions. It will not jam, kink, or fray. Extremely strong.
Each hoist is tested with 25% overload. Designed with a safety factor of 5. Operates on 110 volt, single-phase current.

standard winch hoists

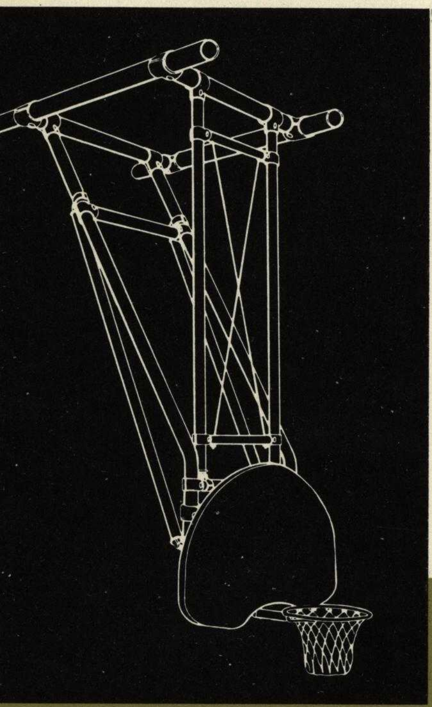




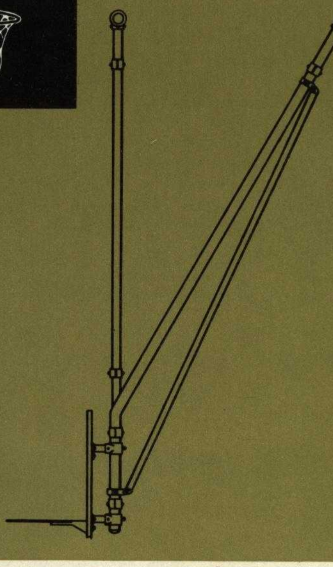
(Left) No. WG-53 Winch with No. 21 Cover.
Fully enclosed safety worm gear winch has removable handle with roller type grip. Gear ratio of 36 to 1 holds backstop in any position. Furnished with 2 x 12 x 24 in. mounting board with 2 anchoring holes reinforced with steel battens. Finished in dark gray enamel. Special gear lubricant furnished with winch when purchased with backstop. Weight 60 lbs.

(Right) No. 19 Electric Winder with No. WG-53 Winch.
Light weight of 11 lb. makes operation easy. Winder has reversing switch to permit use in both raising and lowering. Right angle drive for easy handling. Motor is a heavy duty single phase 115-120 volt A.C. ⅓ horsepower. One winder can be used to operate several backstops.

CEILING BRACED • stationary model 113T



This type is suggested when moving the backstop out of the way is not necessary. It is also recommended where the backboard is located more than 10 ft. from wall, or where wall will not support wall mounted types.



general specifications • model 113T

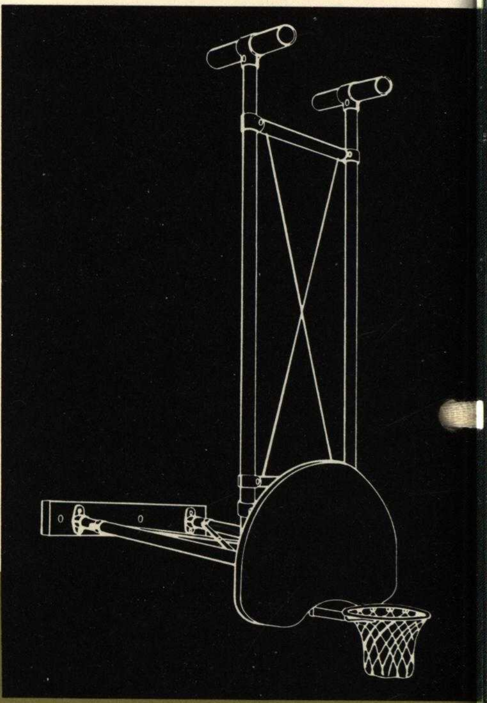
The main support assembly, consisting of two 2″ I.D. pipes bent 30° from vertical, clamp around a 3″ I.D. pipe. They are spaced the necessary distance apart to accommodate the proper backboard by two 2″ I.D. pipe spacers located near the lower end and one 1½″ I.D. adjustable spacer located about 3 ft. from upper end. Additional stiffeners are attached midway between backboard supports to the back of each 2″ I.D. support pipe and extend up about two-thirds assembly length.

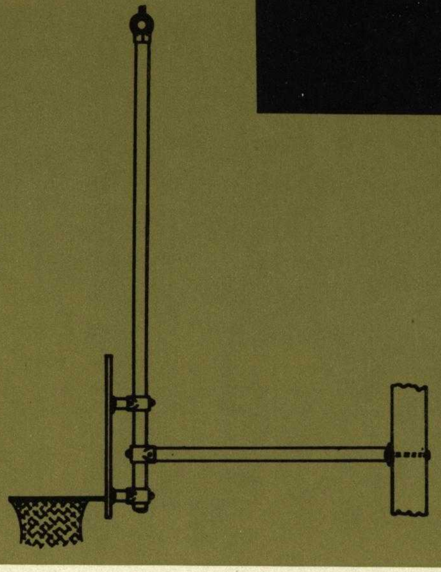
The vertical assembly consists of two 1½″ I.D. pipes, attached at the lower end by tee clamps to a 2″ I.D. cross member of the main support assembly. The upper ends are attached to a 3″ I.D. pipe with similar type fittings. Spacer pipes of 1½″ I.D. and 7/16″ dia. guy rods with locknuts are used for rigidity. Extra holes are provided in the main support assembly to permit adjustment for plumbing the backboard.

Backboard attachments are anchored to the main frame with slip-type fittings and have extra backboard attachment holes to provide vertical adjustment. Backstop frame shipped assembled.

WALL BRACED • stationary model 113W

Recommended where backboard is located 10 ft. or less from wall, and wall will not support wall mounted types, and where it is not necessary to move backstop out of the way.





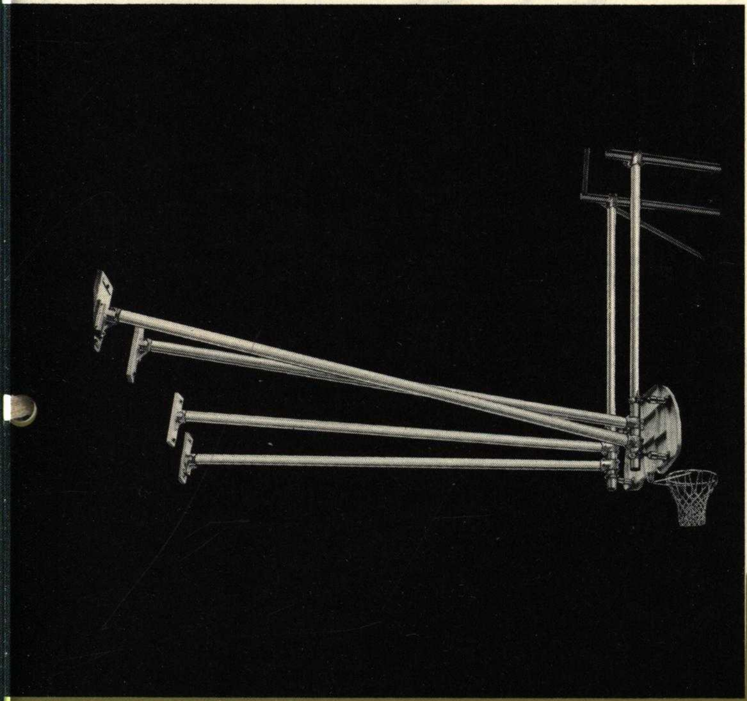
general specifications • model 113W

Vertical assembly consists of 2″ I.D. pipes spaced the necessary distance apart to accommodate backboard. Spacer pipes of 2″ I.D. pipes and 7/16″ dia. guy rods with locknuts are used for rigidity.

Horizontal braces consist of two 1½″ I.D. pipes anchored to wall on one end and to the vertical assembly on the other. Cross bracing, ¼ x 1¼″ steel straps. Furnished with fir wall pad and anchors. Backstop frame shipped assembled.

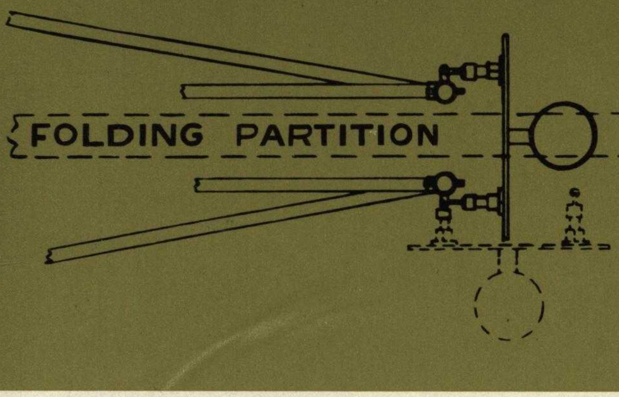
■ WALL BRACED • gate type model 18T

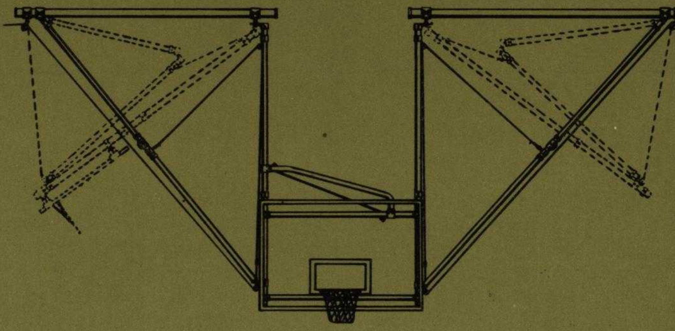
This type can be used to advantage when it is necessary to place the backboard directly in the path of a folding partition or curtain. The backboard itself is mounted on hinges and when released, can be swung to one side. Main framework remains stationary. Constructed of 2" I.D. pipe and malleable iron fittings. Furnished complete with wall brackets, etc. Aluminum finish on pipe and fittings.



■ SWING-UP • special gate type model 18TF

When conditions require a fold-up backstop and also permit folding partition travel (folding partition at right angles to stage), here is a backstop designed to fulfill both needs. Actually a double backward fold backstop consisting of two (2) units similar to the 112-B shown on Page 4. When in playing position, the backboard is attached to both folding assemblies. Before hoisting, disconnect one side of backboard, swing around and attach to one folding assembly. Requires two (2) winches. Aluminum finish on pipe and fittings. Furnished complete for installation. Backstop frame shipped assembled.





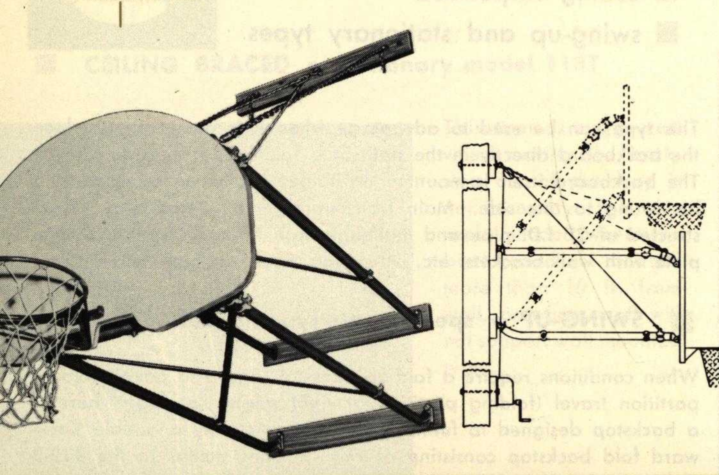
general specifications • model 18T

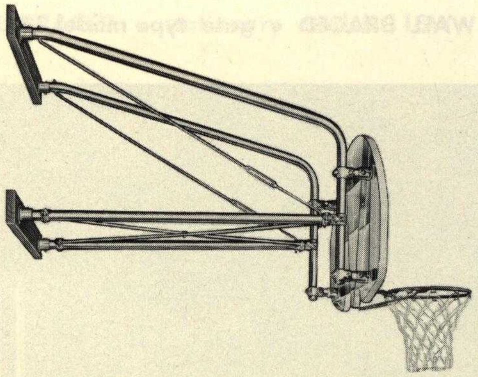
Vertical and horizontal supports consists of 2" I.D. pipe. Four horizontal supports are spread far enough apart at the wall to permit anchorage to the wall at both sides of folding door recess. Backboard is mounted on hinges to permit it to swing out of folding partition path. Furnished complete with wall pads, anchors, etc. for a complete installation.

general specifications • model 18TF

Vertical assemblies consists of 2" I.D. pipe spaced the necessary distance apart to accommodate backboard. Spacer pipes of 2" I.D. pipe and 7/16" diameter guy rods with locknuts are used for rigidity. Oblique brace assemblies consists of 1½" I.D. pipes hinged on both ends and near center to permit folding. Cross bracing is ¼ x 1¼ steel straps. When not in use backboard swings around and connects to opposite side of one frame. Entire unit can then be folded up. Furnished complete with winches, cables, etc. for a complete installation.

WALL MOUNTED MODELS





SWING-UP • model 15

A more economical type swing-up backstop that can be used if the backboard is not more than 9 ft. from the wall. To swing up properly, a ceiling height of 12′-8″ plus the length of extension is necessary. Constructed of 1½″ I.D. pipe and malleable iron fittings. Cross bracing ¼ x 1¼″ flat mild steel. Safety chains are #8-0 attached to upper wall pad and behind backboard. Douglas Fir wall pads finished in two coats clear varnish. Aluminum finish on all pipe and fittings. Furnished complete with #WG53 winch and cover, cables, anchors, etc. for a complete installation.

WALL MOUNTED • stationary model 12

This is the simplest type of mounting and can be used where the backboard is not located over 10 ft. from the wall. Constructed of 1½″ I.D. pipe and malleable iron fittings. Cross bracing ¼ x 1¼″ flat mild steel. Guy rods ⅜″ dia. steel with turnbuckles. Douglas Fir wall pads are finished in two coats clear varnish. Aluminum finish on all pipe and fittings. Furnished complete with wall anchors. Extensions less than 3 ft. modified as required.

WALL MOUNTED • side fold model 16

This model is very similar in appearance to the wall mounted swing up type, but is less expensive since a winch is not required. Folds sideways against the wall simply by pushing on the backboard which unlocks diagonal brace. Folds in space equal to distance from backboard to wall. Constructed of 1½″ I.D. pipe and malleable iron fittings. Telescoping diagonal braces hold backstop firmly in playing position. Guy rods ⅜″ dia. steel with turnbuckles. Safety chains #8-0. Douglas Fir wall pads finished in two coats clear varnish. Aluminum finish on all pipe and fittings. Furnished complete with wall anchors.

16K—9 Ft. Extended

WALL BRACED • stationary model 120

This model is recommended where the upper wall pad is located above wall obstructions such as windows etc. The lower pads can also be set on either side of doors or windows. Constructed of 1½″ I.D. pipe, malleable iron fittings and steel stampings. Cross bracing ¼ x 1¼″ flat mild steel. Douglas fir wall pads are finished in two coats clear varnish. Aluminum finish on all pipe and fittings. Furnished complete with wall anchors.

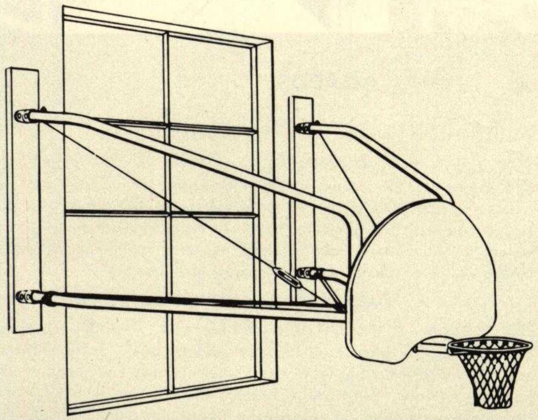
■ portable ■ pedestal



■ WALL BRACED • window span model 17

Especially designed for spanning window openings or other obstructions. Douglas fir wall pads can be located to suit building conditions. Constructed of 1½'' I.D. pipe, malleable iron fittings, and steel stampings. Cross bracing ¼ x 1¼'' flat mild steel. Side guy rods ⅜'' dia. steel rod and turnbuckles. Aluminum finish on all pipe and fittings. Furnished complete with wall anchors.

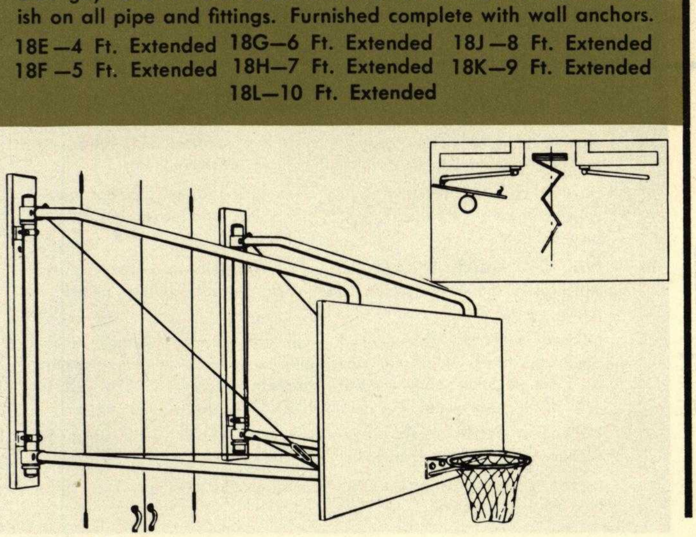
17G—6 Ft. Extended	17K—9 Ft. Extended
17L—10 Ft. Extended	

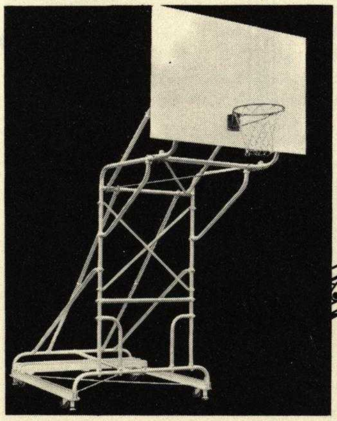
■ WALL MOUNTED • gate type model 18

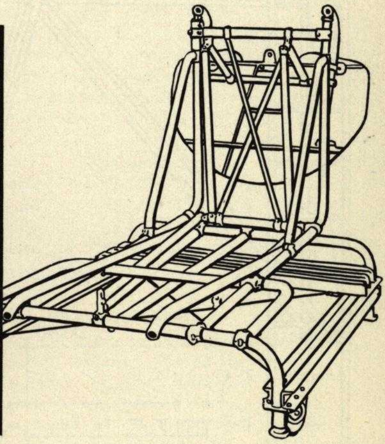
Where the backboard is located in the path of a folding partition and the backboard is located 10 ft. or less from the wall, this is the most economical folding type backstop. Lower cross bracing is steel cables which can be disconnected easily by snap-open type connectors. This enables the backstop to swing apart easily to permit folding partition travel. No bolts to be removed. Douglas fir wall pads can be set to span opening. Constructed of 1½'' I.D. pipe, malleable iron fittings, and steel stampings. Side guy rods ⅜'' dia. steel rods and turnbuckles. Aluminum finish on all pipe and fittings. Furnished complete with wall anchors.

18E—4 Ft. Extended	18G—6 Ft. Extended	18J—8 Ft. Extended
18F—5 Ft. Extended	18H—7 Ft. Extended	18K—9 Ft. Extended
	18L—10 Ft. Extended	



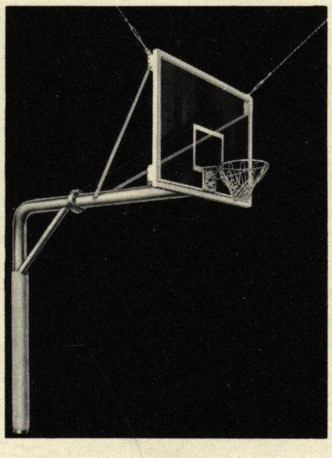
■ PORTABLE MODELS • model 22

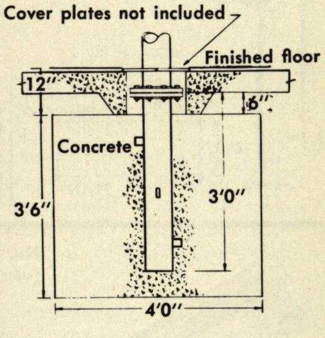




Standard portable backstops are recommended where other types are not practical or where it is desired to remove out of sight. These units are equipped with weight racks for anchoring (Weights not included). Rubber shod screw adjustments raise rubber tired casters off the floor, adjust height and level goal. Base size is 6 ft. 3 in. wide by 6 ft. 9 in. long. Backboard overhang is 5 ft. Length in playing position 11 ft. 9 in. Overall folded size 6¼ x 6 ft. If stage type is desired (#23), give height of stage above floor.

■ PEDESTAL TYPE • model 312P





A permanent type backstop for high school or field-house use, and recommended where truss heights preclude use of overhead suspended types. Single pipe construction holds obstruction of view to a minimum. Rigidly constructed of 6 in. I.D. pipe with 3 in. I.D. pipe brace.

Furnished complete with padding and 5/16'' steel guy cables to roof. Pipe finished in aluminum. Distance from center of vertical pipe to face of backboard, 9 ft. Entire pipe assembly, including base, should be assembled and located in gym, with pipe braced firmly in position, before concrete is poured. This insures proper alignment of sections. CONCRETE BASE AND COVER NOT INCLUDED.

No. 1475-2 1-meter (2.375" frame)

DIVING BOARDS

Laminated wood diving boards

No. 7216—16' board; No. 7214—14' board—Made of the highest grade straight grain Douglas Fir. Skid-proof safety enamel tread with abrasive material suspended in pigment. Tips reinforced with a "blind" stitch bolt. Also available with multiple layers of fiberglas. Scientifically tapered from tip to center of board to give official action as well as durability.

Townsend "dual action" aluminum diving boards

No. 9116—16' board; No. 9114—14' board—Constructed of special alloy aluminum tubular sections, especially engineered to give official action with every dive. Ends the broken diving board problem. Skid-proof safety enamel tread with abrasive material suspended in pigment. 3-year warranty. (Pat. Pend.)

features

Frames made of new hot galvanized structural steel pipe or Type 304, 320 grit finish stainless steel. Available in 1.9" O.D. or 2.375" O.D. sizes. Frames rigidly locked together by split clamp fittings. Stair treads have 20 grooves running full width for extra non-slip safety. Engineered for "heavy duty" use.

three meter frame

No. 1481 galvanized; No. S-1481 stainless—Handrails looped forward of front legs for utmost safety. Choice of fulcrum (single, dual, or quick adjustable). Can be made for 14' or 16' boards. For permanent installation in concrete with anchor rods (for removable frame, specify socket anchors).

one meter frame

No. 1684 galvanized; No. S-1684 stainless—YMCA style with anti-slip step on each side bar. Especially designed to accommodate quick adjustable fulcrum, but can be supplied with single or dual fulcrum. Can be made for 14' or 16' boards. For permanent installation in concrete with anchor rods (for removable frame, specify socket anchors).

No. 1475 galvanized; No. S-1475 stainless (stainless available in 1.9" O.D. only)—This frame especially made to fit narrow walkway conditions. Only available with single or dual fulcrum (quick adjustable fulcrum will not fit). Can be made for 14' or 16' boards. For permanent installation in concrete with anchor rods (for removable frame, specify socket anchors).

Specifications

All swimming pool equipment shall be as manufactured by Recreation Equipment Corporation, Anderson, Indiana, and shall be installed in accordance with manufacturers instructions. FRAME: Shall be .... meter frame No. .... constructed of (galvanized iron; or stainless steel type 304, 320 grit finish) .... in. O.D. Frame shall be *(permanently installed* in concrete using anchor rods; or shall be *removable* using socket anchors). State which. SOCKET ANCHOR: Shall be installed in concrete, adhering strictly to spacing of frame legs. DIVING BOARD: Shall be .... (laminated wood; or aluminum) No. ...., length (14 or 16 ft.). (Aluminum board shall carry 3 years warranty). FULCRUM: Shall be (single, dual, or quick adjustable) No. .... with 5/8" live rubber. HAND RAIL and STEP: Shall be Type HRS .... (galvanized or stainless steel.) COVER PLATE: Shall be No. .... and satin chrome finish.

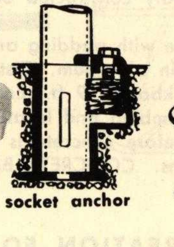
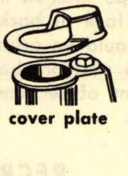
No. D dual fulcrum

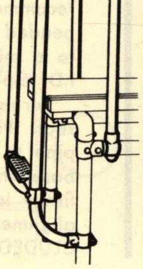
No. QA quick adjustable



socket anchor



cover plate



HRS handrail and step

FULCRUM • SOCKET ANCHOR

No. S single fulcrum—5/8" thick live rubber, 22" long. Adjustable—hand wheels lock unit in one position.

No. D dual fulcrum—Same as single fulcrum, except has 2 rubber rollers 14" apart, which broadens and eases bending of boards.

No. QA quick adjustable—For championship use—readily adjustable between dives, does not permit diving board to move up or down.

socket anchor—Galvanized iron with bronze wedge secures pipe legs firmly in place, yet allows easy removal of equipment. Can be shipped ahead when concrete is poured. No. 70 for 1.9" O.D. pipe. No. 201 for 2.375" O.D. pipe.

HRS handrail and step—Makes it easier and safer for swimmers to mount frame.

cover plate—Satin Finished Chrome. No. 69 for 1½" pipe, No. 65 for 2" pipe.

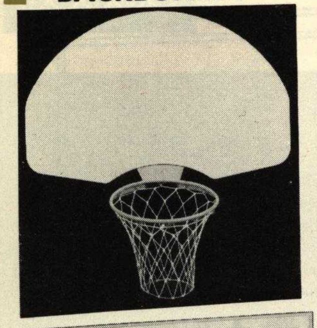
■ POOL CLEANING EQUIPMENT

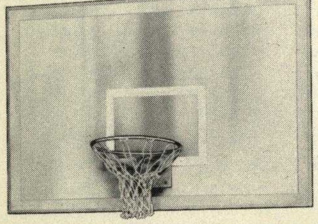
No. 1000 diving mask outfit—Includes aluminum mask (wt. 7#) with soft pneumatic face tube to fit any face comfortably, 100' air hose, air compressor with ⅓ h.p. 110 volt motor, and waterproof canvas jacket with 6 galvanized iron weights. Quickest and best way for lifeguard or other personnel to clean deep end of large pools.

No. 2002 suction cleaner—Rustproof bronze suction cleaner is rugged and simple. Silt stirred by the brush is drawn out through the hose. It will pick up stones, silt, leaves, and most ordinary pool refuse without clogging. Cleaner measures 2½'' wide x 20'' long. The two-row stiff nylon brush is fitted with brass springs to maintain positive contact with surface. Firm rubber wheels on ball bearing swivels can be adjusted for height. 5' handle for use with diving mask.

No. 2010 gasoline powered pump—Simplified, compact design with self-cleaning action, 1½'' pump with dual volutes for fast automatic priming, 4000 GPH capacity for use with No. 2002 suction cleaner. Available either as gasoline or electric powered units. Gasoline engine is 1½ h.p. 4-cycle, single cylinder air cooled. Electric motors are 1½ h.p., 110/220 volt single phase or 220/440 volt 3-phase.

BACKBOARDS





fan shaped

14FM with "MG" goal and 60 thread net

Steel: This single sheet 12-gauge steel backboard has smooth 1½ in. wide rolled edges; and arc welded reinforcing channels. The finish is eggshell non-glare enamel. Uses No. MG goal with 60 thread white seine twine net.

14FS with "AG" goal and 60 thread net

Plywood: The face of this bank is ¾ in. 5-ply fir. Reinforcing consists of three 1¼ in. x 6 in. stiffeners fastened to the back. It is finished in eggshell non-glare enamel. Uses No. AG goal with 60 thread white seine twine net.

14FG with "GG" goal and 120 thread net

Glass: Heat tempered glass, ⅜ in. thick, is set in a steel frame. Glass assures livelier rebounds and improves end-court visibility. A 2 in. wide white border and center rectangular target can never wear off. Uses No. GG goal with 120 thread white seine twine net.

rectangular

14RP with "AG" goal and 60 thread net

Plywood: One piece, ¾ in. 5-ply, backed by a reinforcing frame of 2 in. fir built to regulation dimensions. Eggshell white, non-glare enamel gives it an attractive finish. Uses No. AG goal with 60 thread white seine twine net.

14RG with "GG" goal and 120 thread net

Glass: Heat tempered glass, ½ in. thick is set into 2 in. x 2 in. x 3/16 in. angle iron frame. This glass is three to five times as strong as ordinary plate glass. A steel face plate bolted to the bottom center has lugs for attaching the goal. Uses No. GG goal with 120 thread white seine twine net.

GOAL RINGS

Regulation goal rings made of ⅝ in. dia. cold rolled steel. The net is easily attached by means of "no-tie" welded loops. Front or rear mounting rings are available. Finished in official bright orange baked on enamel.

TYPICAL BASKETBALL BACKSTOP SPECIFICATIONS

All basketball backstops shown on plans or covered by the specifications shall be as manufactured by Recreation Equipment Corp., Anderson, Indiana or approved equal.

Overhead supports

Backstops shall be suspended from 3" I.D. pipe anchored to roof or ceiling members by means of extra sturdy malleable iron beam clamps. Cross pipes of 3" I.D shall span overhead pipe when latter is parallel to longitudinal center line of backstop. Superstructure of cradle type design shall be used when truss height is excessive. When anchoring points are more than 16 ft. on center, overhead pipe shall be reinforced 3" I.D. pipe. Truss anchors shall be installed prior to installation of finished ceiling to provide suspension points below ceiling for 3" I.D. pipe.

Ceiling suspended backstops (See selector guide on page 2)

No. 112F forward fold—Main oblique support assembly shall be 2" I.D. pipe, spaced to accommodate selected backboard by two 2" I.D. pipe spacers located near lower end one 1½" I.D. adjustable spacer located in upper section of frame. Additional 1½" I.D. pipe stiffeners shall be attached midway between the backboard supports to the back of each 2" I.D. support pipe and extends upward two-thirds assembly length attaching at upper end to main supports. Vertical supports shall be 1½" I.D. pipe hinged near the top and at upper and lower ends to permit folding. Spacer pipes shall be 1½" I.D. cross guyed with 7/16" dia. rods with locknuts.

No. 110F forward fold—Main oblique support assembly shall be 2" I.D. pipe, spaced to accommodate selected backboard by 1½" I.D. pipe spacers. Intermediate 1½" I.D. pipe stiffeners shall connect to lower spacer pipe and to spacer pipe located near center of assembly. Front oblique assembly shall be 1½" I.D. pipe hinged on both ends and near center. Cross bracing shall be ¼ x 1¼ mild steel straps.

No. 112B backward fold—Vertical assembly shall be 2" I.D. pipe spaced to accommodate selected backboard by 2" I.D. pipe and cross guyed with 7/16" dia. rods with locknuts. Assembly shall be hinged at top to permit folding. Oblique brace assembly shall be 1½" I.D. pipe and spacers hinged on both ends and near center. Cross bracing shall be ¼ x 1¼ mild steel straps.

No. 113T stationary self braced—Main oblique support assembly shall be 2" I.D. pipe, spaced to accommodate selected backboard by two 2" I.D. pipe spacers located near lower end and one 1½" adjustable spacer located in upper section of frame. Additional 1½" I.D. pipe stiffeners shall be attached midway between the backboard supports to the back of each 2" I.D. support pipe and extend upward two-thirds assembly length attaching at upper end to main supports. Vertical assembly shall be 1½" I.D. Pipe with spacer pipes and cross guyed with 7/16" dia. rods with locknuts.

No. 113W stationary wall braced—Vertical assembly shall be 2" I.D. pipe spaced to accommodate selected backboard by 2" I.D. pipe and cross guyed with 7/16" dia. rods with locknuts. Horizontal braces shall be 1½" I.D. pipe connected to wall and vertical assembly. Cross bracing shall be ¼ x 1¼ mild steel straps. Wall pad shall be fir with wall anchors.

No. 18T gate type—Vertical and Horizontal supports shall be 2" I.D. pipe spaced to accommodate selected backboard and to permit folding partition travel. Backboard attachments shall be hinged to permit backboard to be swung to one side. Wall pads shall be fir with wall anchors.

No. 18TF folding gate type—Vertical and oblique assemblies shall be as specified for Recreation Model 112B. Backboard supports shall connect across the two folding assemblies and hinged to permit backboard to be swung around and attached to one frame for hoisting. Provide winch for each folding section.

Wall mounted backstops

No. 15 wall mounted swing up—Four 1½" I.D. extension pipes shall extend backboard ...... ft. ...... in. (specify distance) from wall. Extension pipes shall have pipe spacers to accommodate selected backboard and cross bracing of ¼ x 1¼ mild steel straps. Provide fir wall pads and anchors. Safety chains shall support outer end of extension pipes and extend upwards at 45° to upper wall pad. Provide wall mounted winch and hoist cable.

No. 12 wall mounted stationary—Four 1½" I.D. extension pipes shall extend backboard ...... ft. ...... in. (specify distance) from wall and spaced to accommodate selected backboard. Lower horizontal extension pipes shall be cross braced with ¼ x 1¼ mild steel straps. Diagonal bracing shall be ⅜" dia. rods with turnbuckles. Provide fir wall mounting pads and wall anchors.

Other wall mounted, portable, and field house backstops

(See selector guide and respective catalog pages for description)

Winch and hoist cable—Winch shall be fully enclosed type, wormgear design, to permit backstop to be automatically held in place at any point during raising or lowering. Winch shall be furnished with removable roller type grip handle. Furnished complete with mounting board and wall bolts. Hoist cable shall be 5/16" diameter, 6 x 19 plow steel wire rope of sufficient length to permit locating the winch as directed.

Sheaves—All swing up backstops shall be equipped with sheaves and all fittings to permit easy hoisting of backstop. Sheaves shall be of sufficient diameter to prevent damage to hoist cable. Provide swivel type where required.

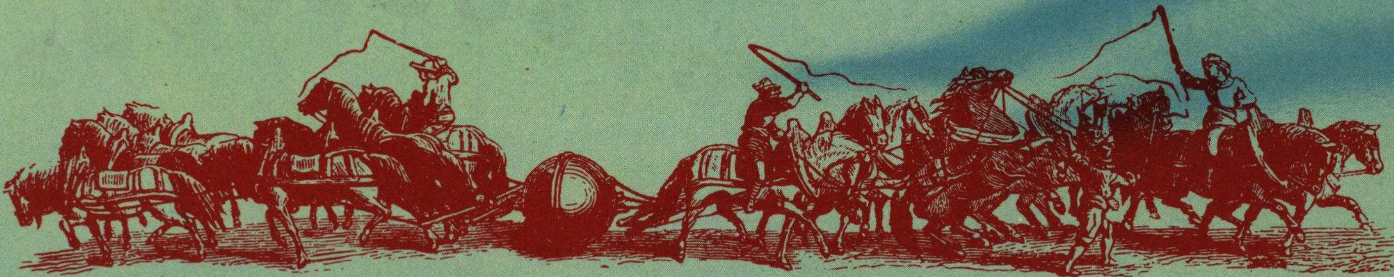
Finish—All backstops, except backboards, goals, cables, winches, bolts and nuts shall be given one (1) coat of aluminum paint at factory. If other finish is desired, specify final painting at job site by painting contractor.

Backboards and goals (See top of page for specifications)

RECREATION EQUIPMENT CORP. ANDERSON • INDIANA

DEPARTMENT SF

PRINTED IN U.S.A.



OVER 300 YEARS AGO Otto von Guericke, the German physicist, dramatically demonstrated with his "Magdeburg Hemispheres" the strength of a vacuum.

Vacumite

SWIMMING POOL *filters*

MAKES THE MOST OF NATURAL FORCES

LOW HORSE POWER REQUIREMENTS

LONG FILTER RUNS

EASY INSTALLATION

SELF HOUSED (REQUIRES NO FILTER BUILDING)

New Vacumite Filters

Excel in Performance and Economy

Vacumite swimming pool filters overcome the costly problems encountered with old-fashioned pressure systems, whether sand or diatomite. With no high pressure required to force water through filter elements, Vacumite eliminates the tendency to pack diatomite and dirt which so often clogs elements. Vacumite also eliminates the inconvenience of "blind" operation, being an "open" system with the filter cell always visible . . . simple to check, easy to clean.

Vacumite's most notable feature is its lower cost, from installation to operation. It requires no special-built housing and a minimum of space. Hydraulics for Vacumite need only a total of 35 ft. head, as against 50 ft. for sand pressure and 100 ft. for pressure diatomite filters. Vacumite pumps only filtered water, preventing excessive wear on the pump impeller from foreign matter. Actual comparisons prove that it requires 50% more power to operate a sand pressure filter and up to 300% more to operate a pressure diatomite filter. With less cost and less trouble, the swimming pool equipped with a Vacumite filter can be certain at all times of having water that is the clearest possible to attain.

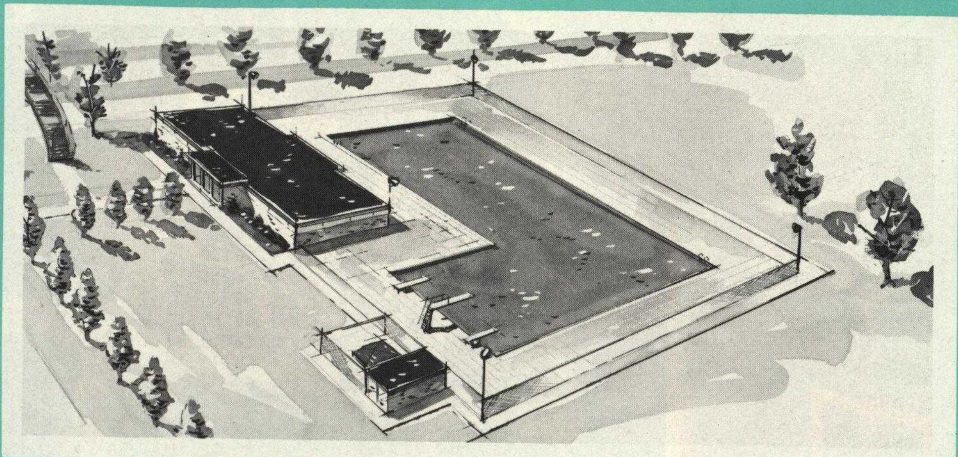
VIP's* Prefer Vacumite

Across the Nation . . .

* Very important pools from coast-to-coast are swinging to Vacumite filtration. Important savings in installation and maintenance, plus crystal clear water and trouble-free operation are deciding factors in Vacumite's favor. Its efficiency and economy appeal to designers and builders of new pools.

Where old pool rehabilitation has taken place, Vacumite cuts over-all costs as much as one-half. Entire rebuilding jobs have been done for substantially less than the original estimates which employed a conventional sand pressure type filter. Make this very important decision *now* for *your* Very Important Pool. Make the filter VACUMITE and have the best!

MUNICIPAL POOLS SELECT VACUMITE



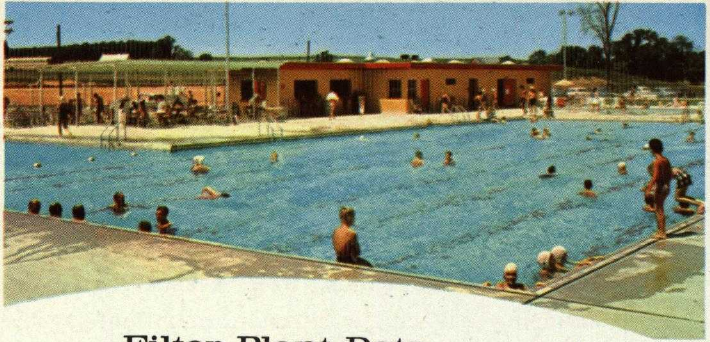
SINTO POOL, SPOKANE, WASHINGTON, 500,000 gal. volume; Vacumite RU-750 • Stanley Witter, Recreation Superintendent • J. J. McInerny, Colfax, Washington, Engineer

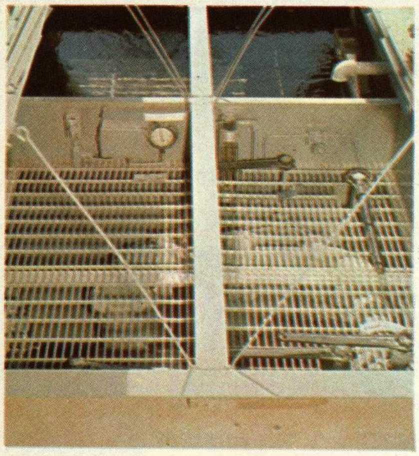
SAUCON PARK POOL, CITY OF BETHLEHEM, PA. • A. Newton Wiegner, City Engineer • 675,000 gal. vol.; Vacumite RU-720

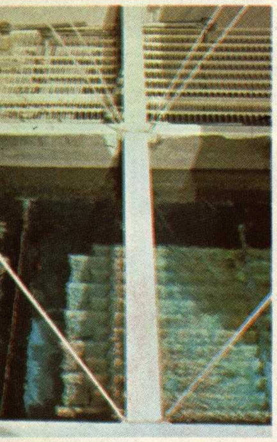
JUNIATA POOL, CITY OF ALTOONA, PA., 400,000 gal. volume, Vacumite CU-420 • Robert R. Smay, Director of Water, Parks and Public Property

A VACUMITE FILTER TO FIT ANY SIZE POOL from large municipal pools shown above to the following smaller recent Vacumite installations: a Vacumite RU-195 for **ROXBURY CLUB POOL** built by E. L. Wagner & Co., Darien, Conn. Vacumite CU-75 for **MAWINGO HOTEL POOL** built by Atlas Machinery Supplies Ltd., Nairobi, Kenya, Africa. Vacumite CU-135 for **WAYNESBORO COUNTRY CLUB,** Waynesboro, Virginia. Vacumite CU-150 for **NORTHERN VIRGINIA AQUATIC CLUB, LEE HIGHWAY,** Arlington, Virginia

RIGHT: Borough of Manheim, Pa.: Vacumite keeps the water sparkling in this large, modern community pool. **BELOW:** Lincoln Park, Reading, Pa.: Vacumite was chosen for this Public Pool, where the importance of pure water cannot be overemphasized.







ABOVE: Vacumite's "open system" filtration eliminates a major problem of maintenance. Just raise the hatches for observation of the operation at any time.

LEFT: Engineered to do a big job in a small area, Vacumite is a compact unit with easy access to all elements. Note the simplified arrangement of filter leaves and pump.

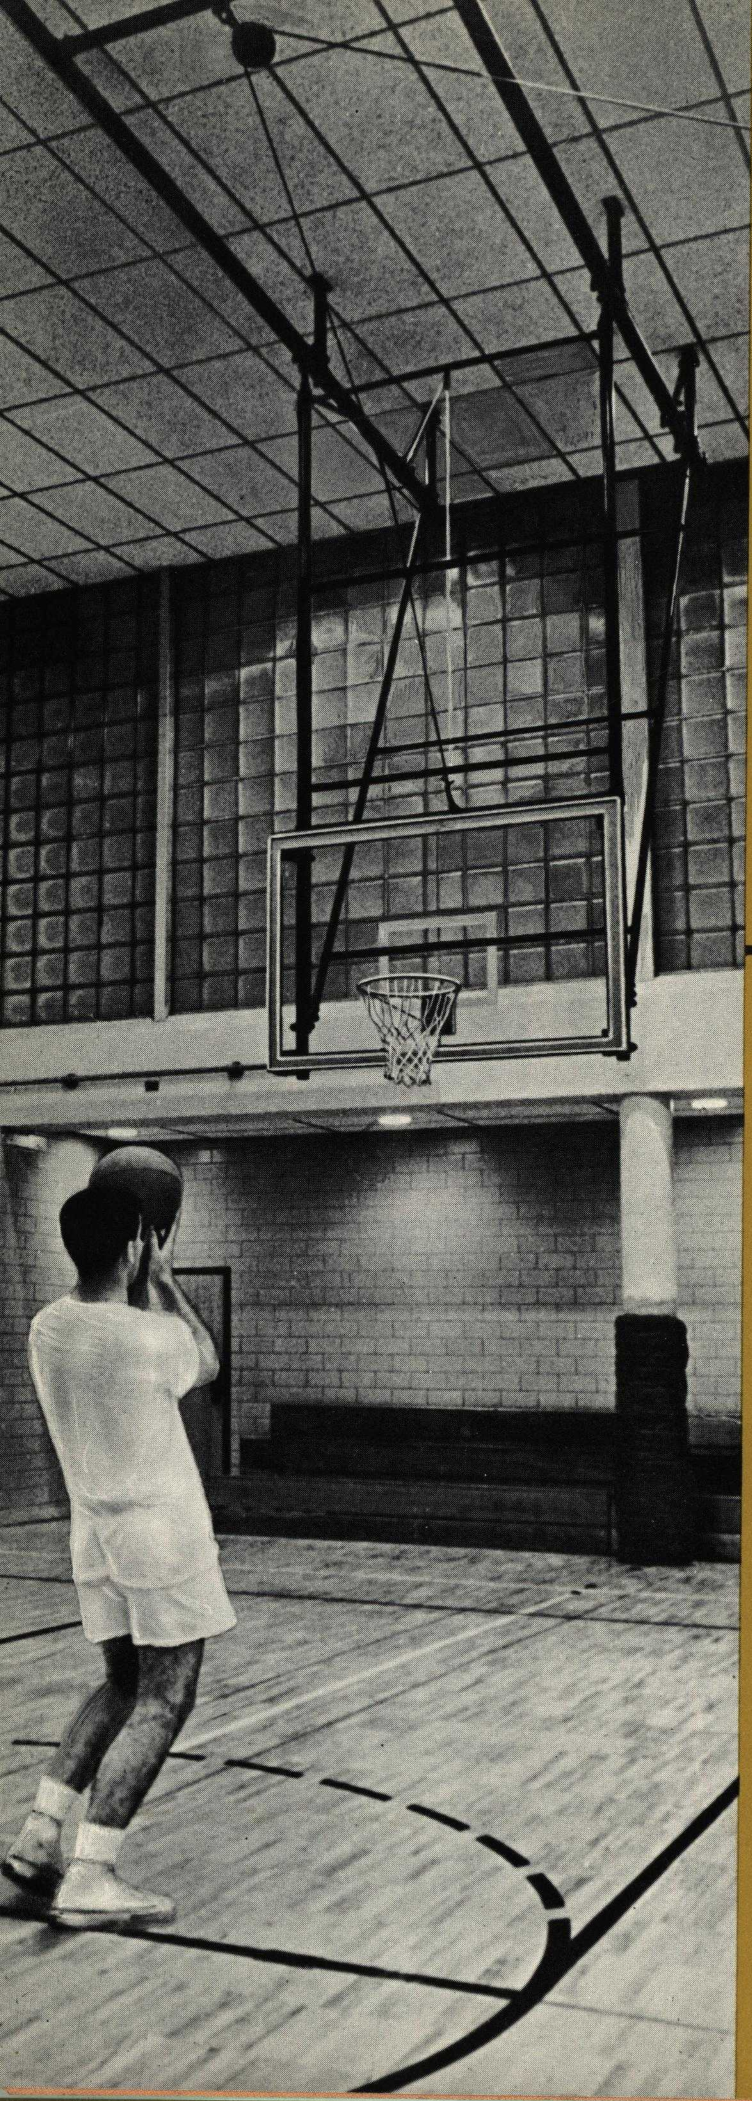
WAYNE

BASKETBALL BACKSTOPS



WAYNE BASKETBALL BACKSTOPS

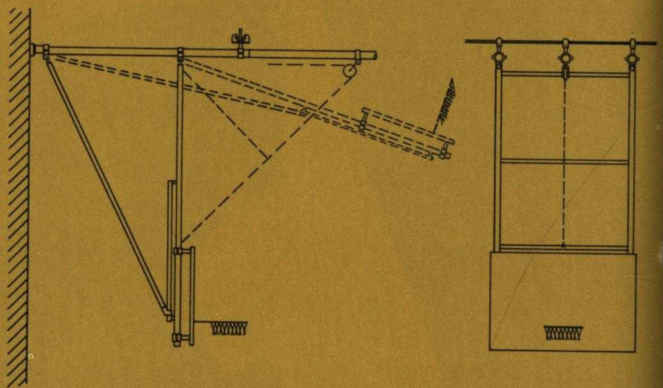
Wayne Basketball Backstops are highly efficient, strong, precision assemblies designed to conform fully to the high standards of the National Basketball Committee.

Units illustrated are representative of a broad quality line of basketball backstop types numbering in excess of 36 models adaptable to almost any structural condition likely to be encountered.

Although Wayne Basketball Backstops are essentially fabricated to basic design standards, each installation is, in effect, a custom application requiring individual engineering to meet specific structural variations.

COMPLETE ENGINEERING SERVICE

When Wayne Basketball Backstops are specified, automatically you are assured of a complete responsible service including every professional requisite—initial layout—comprehensive detailed approved drawings—precision fabrication and skilled installation coordinated with your building or remodeling schedule.



MODEL CF-40 FORWARD FOLD—CEILING MOUNTED

Recommended for conditions where the backstop must be moved out of the way to accommodate other activities. Unit includes worm-gear winch for raising the backstop to ceiling quickly with little effort.

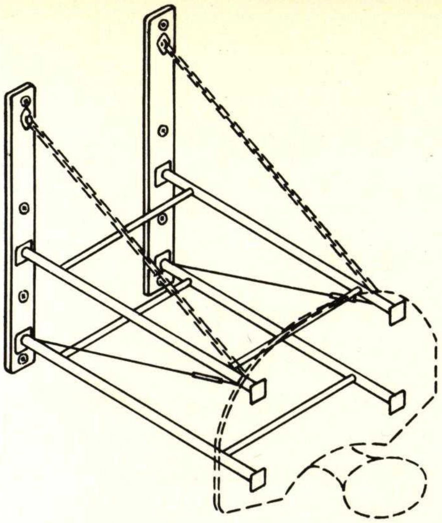
SPECIFICATIONS: Backstop shall be forward swing-up type complete with rigid superstructure and all hoisting appurtenances required for installation.

Superstructure shall be constructed with 3½″ O. D. pipe jointed with formed steel fittings securely bolted in place. Superstructure shall be further braced to provide a maximum unsupported span of 16′-0″ or less when bridging is not used.

Backstop frame shall consist of a drop frame constructed of 2⅜″ O. D. drop pipes with bracing of $1\frac{5}{16}$″ O. D. pipe spacers rigidly welded into one unit, and a brace section constructed of 1⅝″ O. D. pipe welded into one unit as above. Formed and welded fittings shall be used throughout to allow for final adjustment at installation. Bank extension fittings shall provide for 6″ extension from vertical supports as specified by "Official Basketball Rules".

Backstop shall operate with a slide rod arrangement which "weight locks" the backstop in playing position without the use of supplementary latches. The arrangement shall consist of a hinging collar operating on a $1\frac{1}{16}$″ O.D. slide rod which is further attached to the drop pipe frame.

Winch shall be worm-gear type, designed to hold unit at any position when raising or lowering backstop. Winch drum and gear shall be fully enclosed. Backstop shall be furnished complete with bank and goal specified herein.



MODEL WM-30 STATIONARY—WALL MOUNTED

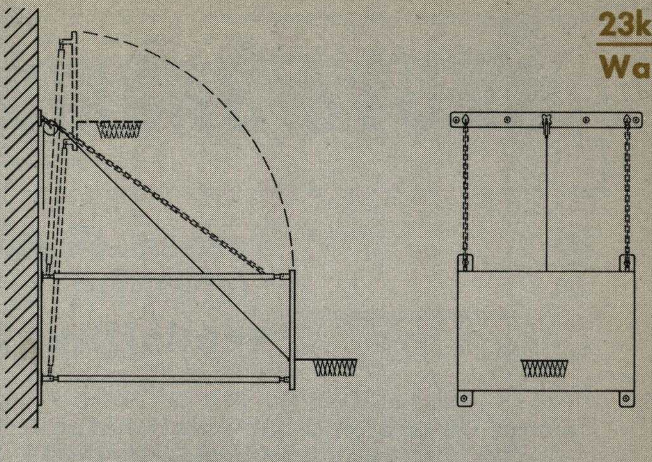
A rigid, permanent backstop simply designed for maximum performance. An ideal main-court backstop. Mounting is to an unobstructed vertical wall. May be installed flush or extended 12′ or less from the wall. Can be furnished with choice of banks.

SPECIFICATIONS: Backstop shall be wall braced type,______extended.

Frame shall be constructed of 1⅞″ O. D. extension pipes welded into rigid units with 1$\frac{5}{16}$″ O. D. spacer pipes in the horizontal sections, and with steel flanges welded on both ends. Vertical bracing shall consist of $\frac{3}{16}$″ proof coil diagonal chains to the wall and ⅜″ dia. steel tension rods internally bracing the structure.

Hardwood wall pads shall be provided to absorb shock of impact and prevent damage to walls. All edges shall be chamfered. Pads shall be finished with a sealer coat and two finish coats of natural gloss lacquer.

Backstop shall be furnished complete with bank and goal specified herein.



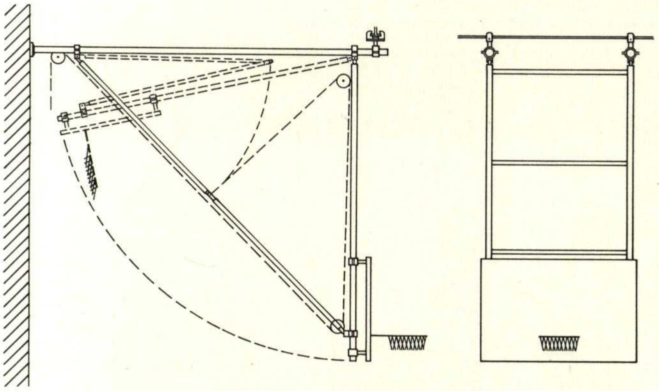
MODEL WM-33 FOLD-UP—WALL MOUNTED

Recommended for small gymnasiums where space is at a premium. Requires a high ceiling. Ceiling height must be the sum of the required extension of backstop plus 12′-10″. Can be furnished with choice of banks.

SPECIFICATIONS: Backstop shall be wall supported fold-up type with face of bank extended____________________from supporting wall. Extension frame shall be constructed of 1⅞″ O. D. extension pipes, welded into rigid units with 1$\frac{5}{16}$″ O. D. spacer pipes in the horizontal sections, and with hinge plugs welded in both ends.

Hardwood wall pads shall be provided at all wall attachment points. All edges shall be chamfered, and pads shall be finished with a sealer coat and two finish coats of natural gloss lacquer.

Winch shall be worm-gear type, designed to hold unit at any position when raising or lowering backstop. Handle shall be removable and shall provide sufficient leverage to facilitate easy raising of the backstop. Winch drum and gears shall be fully enclosed. Hoisting cable shall be ¼″ diameter plow steel improved wire rope. Backstop shall be furnished complete with bank and goal specified herein.



MODEL CF-41 BACKWARD FOLD—CEILING MOUNTED

Used when the forward fold is not practical due to positions of skylights, light fixtures or structural members. Enclosed worm-gear winch hoist lowers and locks the backstop in playing position. Can be furnished with choice of banks.

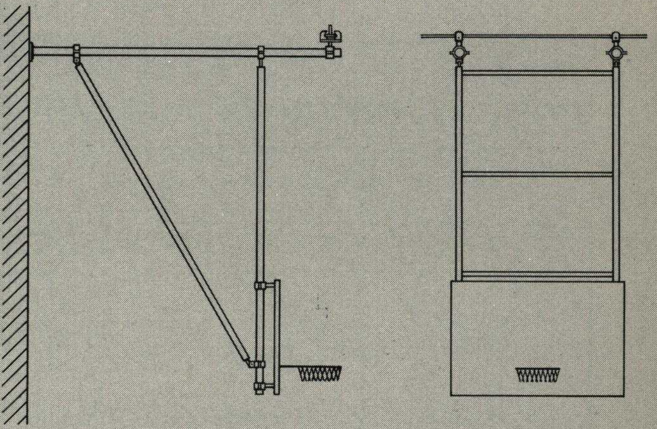
SPECIFICATIONS: Backstop shall be backward swing-up type complete with rigid superstructure and all hoisting appurtenances required for installation.

Superstructure shall be constructed with 3½″ O. D. pipe joined with formed steel fittings securely bolted in place. Superstructure shall be further braced to provide a maximum unsupported span of 16′-0″ or less when bridging is not used.

Backstop frame shall consist of a drop frame constructed of 2⅜″ O. D. drop pipes with bracing of 1⅝″ O. D. pipe spacers rigidly welded into one unit, and a brace section constructed of 1⅝″ O. D. pipe welded into one unit as above. Formed and welded fittings shall be used throughout to allow for final adjustment at installation. Bank extension fittings shall provide for 6″ extension from vertical supports as specified by "Official Basketball Rules".

Backstop shall operate by means of a knee joint in the rear frame. Knee joint shall be formed by a pair of welded hinges—factory assembled to assure ease of operation and stabilize the hinge action. Knee joint shall "weight lock" automatically when backstop is lowered, and no supplementary ropes or manual latches shall be required.

Winch shall be worm-gear type, designed to hold unit at any position when raising or lowering backstop. Backstop shall be furnished complete with bank and goal specified herein.



MODEL CS-51 STATIONARY—CEILING MOUNTED

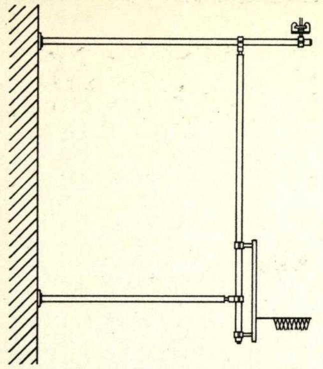
A rigid backstop installation recommended when hoisting of backstop is not necessary and where a wall is not sufficiently strong for the backstop to be wall supported. Can be furnished with rectangular or fan shaped bank.

SPECIFICATIONS: Backstop shall be ceiling suspended fixed-type complete with rigid superstructure, and all attachment hardware required for a complete installation.

Superstructure shall be constructed with 3½″ O. D. pipe joined with formed steel fittings securely bolted in place. Superstructure shall be further braced to provide a maximum unsupported span of 16′-0″ or less when bridging is not used. On spans of 3½″ O. D. pipe which exceed 16′-0″ the overhead pipe shall be bridged by a welded "truss-type" method to provide maximum rigidity.

Backstop frame shall consist of a drop frame constructed of 2⅜″ O. D. drop pipes with bracing of 1$\frac{5}{16}$″ O. D. pipe spacers rigidly welded into one unit, and a brace section constructed of 1⅝″ O. D. pipe welded into one unit as above. Formed and welded fittings shall be used throughout to allow for final adjustment at installation. Bank extension fittings shall provide for 6″ extension from vertical supports as specified by "Official Basketball Rules".

Backstop shall be furnished complete with bank and goal specified herein.



MODEL CS-50 STATIONARY—WALL BRACE—CEILING MOUNTED

A rigid backstop installation recommended when hoisting of backstop is not necessary and where a wall is not sufficiently strong for the backstop to be entirely wall supported. Can be furnished with rectangular or fan shaped bank.

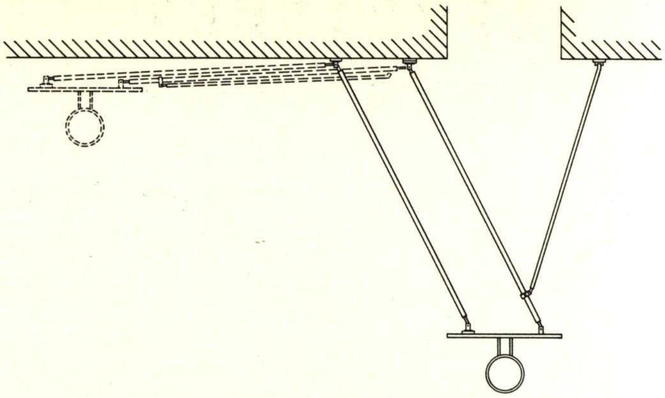
SPECIFICATIONS: Backstop shall be ceiling suspended and wall braced type complete with rigid superstructure, and all attachment hardware required for a complete installation.

Superstructure shall be constructed with 3½″ O. D. pipe joined with formed steel fittings securely bolted in place. Superstructure shall be further braced to provide a maximum unsupported span of 16′-0″ or less when bridging is not used.

Backstop frame shall consist of a drop frame constructed of 2⅜″ O. D. drop pipes with bracing of 1 5/16″ O. D. pipe spacers rigidly welded into one unit, and a brace section constructed of 1⅝″ O. D. pipe welded into one unit as above. Formed and welded fittings shall be used throughout to allow for final adjustment at installation. Bank extension fittings shall provide for 6″ extension from vertical supports as specified by "Official Basketball Rules".

Brace frame shall terminate at the wall into a hardwood wall pad, with all edges chamfered, and finished with a sealer coat and two finish coats of natural gloss lacquer.

Backstop shall be furnished complete with bank and goal specified herein.



MODEL GT-60 GATE TYPE SIDE FOLD

A wall supported backstop recommended for use where a backstop must span a wall recess without interfering with operation of a folding partition. Equipped with pivot hinge pipe extensions on either side of the partition. Operated from the gymnasium floor and easily swung into position.

SPECIFICATIONS: Backstop shall be wall-braced, gate type, designed to allow folding partition to pass through bank position.

Extension frames shall be fabricated of 1⅞″ O. D. pipes with 1⅞″ O. D. pipe spreaders welded into one unit. Frames shall terminate in hinge units securely attached to hardwood pads and to rear of bank. Diagonal brace pipes shall extend from the top extension pipes to the wall, and shall be 1⅝″ O. D. pipe.

A one piece brace frame shall be fabricated of 1⅞″ O. D. pipe welded into a rigid unit, and secured to extension frame with hinge fittings. A latch arrangement shall be provided at the wall to allow brace section to be locked when in playing position and another latch shall be provided on one extension frame when backstop is folded flat against the wall.

All latching and folding shall be accomplished from the floors without the use of ladders.

Backstop shall be furnished complete with bank and goal specified herein.

PLEASE NOTE—Wayne Iron Works pursues a continuous program of design and product improvement for better gymnasium equipment. When such improvements occur, or, when a condition exists over which we have no control, Wayne Iron Works reserves the right to supply equipment considered to be standard at the time of shipment.

ALBERENE STONE

The Standard Material for the Permanent Equipment of Laboratories in Industrial, Educational and Research Institutions

ALBERENE Stone is the standard material for laboratory table tops, shelving, sinks, splash backs, drainboards, fume hoods and related equipment. It is the only permanently satisfactory material used for these purposes.

The stone is furnished in two varieties, "Regular" and "Grade 25." Regular stone is the standard type of material known to chemists for sixty years or more.

Both are natural quarried silicate stones highly resistant to chemical attack. Both have a dense fine uniform grain structure without cleavage planes (stratification) which permits accurate machining for any desired purpose with absence of splitting, chipping or spalling.

It is thus possible to make the liquid, gas and germproof joints essential to first class construction (see details).

Regular grade has an abrasive hardness factor of 6—Grade 25 runs from 15 to 30. Regular grade has an absorbency factor of .15%—Grade 25—0.075%. These low-absorbency factors make the material essentially non-staining. Discolorations which may appear are purely surface and may be readily removed by scouring.

There is no surface glaze or coating; the surface goes right through to the back.

Regular grade is a pleasing neutral bluish-grey which is non-reflective—Grade 25 is darker and has greater decorative value.

For ordinary laboratory use we recommend Regular Grade. Where the service is unusually severe, we suggest Grade 25. Wherever stone is exposed to the action of salts which expand when drying out of solution—Grade 25 should be used.

The Bureau of Standards has shown that Grade 25 is entirely unaffected by photographic chemicals after a two-year test. Under the same test laminated stones have split or spalled away.

In the design and furnishing of a Laboratory all items must be scientifically planned and built to fit particular needs.

It is obvious that strong and rigid supports are a prime factor. We are prepared to furnish and erect all stone work as well as any type of supports.

We regularly furnish our stone to the leading equipment manufacturers. It is recommended that only those reliable manufacturers having had experience in this type of work be considered.

Through the years we have accumulated a fund of specialized knowledge of laboratory design and construction. Our engineers are regularly invited to advise with technicians, architects and engineers with respect to the planning and layout of laboratory rooms. We are always glad to furnish general layout drawings, sketches of details and to collaborate with the planner in creating a laboratory best adapted to the particular purpose intended. This service is offered freely and without obligation.

We are in a position to engineer and contract for complete installations and to dismantle, move, re-condition, and re-install existing equipment.

MATERIAL SPECIFICATION

"How to Specify"—Regular grade Alberene should be called for as follows: Wherever Laboratory Stone, Stone, Soapstone or Alberene Stone is noted on Drawings and/or schedules or mentioned in the specifications, the material used shall be a natural impure talc rock of massive formation, i.e., without lamination, stratification, or cleavage planes. In structure it shall be homogeneous, except for possible veining. The presence in the veins of scattered crystals of carbonate is to be expected and is acceptable. The stone shall be finely granular in all directions and under abrasive use it shall wear to a surface similar to a fine sandpaper and shall not scale or spall off nor show exposed elongated crystals.

The stone shall have the following physical properties: Modulus of rupture in any direction—*Min.* 2,000 lbs. per square inch.

Abrasive hardness (Ha) Nat'l Bureau of Standards—*Min.* 4.50.

Absorption of water (48 hrs.) by weight—*Max.* 0.25%.

Grade 25—For this grade the same specification may be used with the following changes: (1) Substitute the word silicate for Talc. (2) Substitute a Hardness value of 15 for 4.50. (3) Substitute an absorption factor of 0.15 for 0.25.

In addition to the above the Public Building Service, Washington, D. C. includes in its specifications certain chemical resistance tests which must be met. Both grades of Alberene Stone easily meet this test.

Details of Construction

SPECIFICATIONS

for Alberene Stone Laboratory Table Tops

Alberene Stone table tops shall be of selected stone, 1¼ in. in thickness, unless otherwise called for, and provided with a 3/16 in. deep drip groove on the under side, ¾ in. back from the front edge. All tops or working counters for fume hoods, as also for table tops on which heat work is carried on, shall be of 2 in. thickness. Joints in table tops shall be made flush and tight by means of metal slip-tongue construction in acid-proof cement. Stone shelves shall be 1 in. thick, with stone shelf supports 1¼ in. thick. All exposed faces of tops, high backs and curbs shall be honed. Edges to be carborundum finish with arris of top only to be removed by stone-setter at time of installation.* While it is possible to furnish sections of stone of greater length, individual pieces should be held to a maximum length of 54 in., if possible, for best selection of stock.

Where wall tables are installed across window openings there shall be provided a 3 in. high stone curb around openings above radiators. Provide high backs and high ends against building wall and partitions for all stone wall table tops; thickness to be 1¼ in. and a minimum height of 4 in. unless otherwise specified or shown.

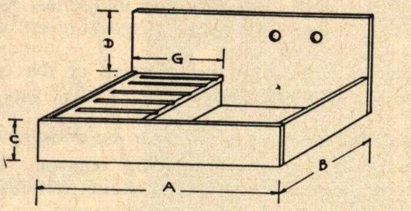
All stone subject to the action of photographic chemicals is to be of Grade 25.

*Edges of Grade 25 stone to be honed at the Mill.

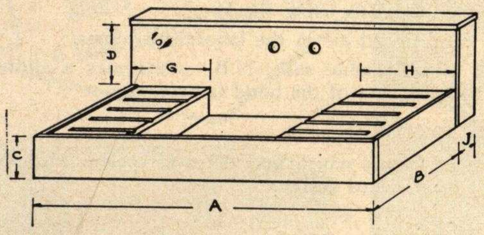
LABORATORY EQUIPMENT

ALBERENE STONE

SINKS AND DRAINBOARDS



TYPE 4.



TYPE 5.

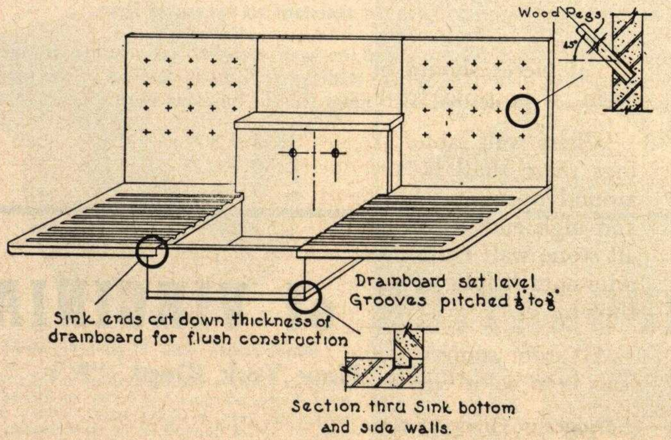
SPECIFICATIONS

for Alberene Stone Laboratory Sinks, Gutters, Drainboards and Pegboards

Alberene Stone sinks shall be constructed of selected stone. Sides to be 1¼ in. thickness with a flush bottom of 1¼ in. or 1½ in. thickness dished to drain. All slabs shall be tongued and grooved together and securely held by hidden bolts and nuts all cemented together by acid-proof cement. Sinks or tanks that are over 48 in. in length shall have 1½ in. bottoms, and if over 72 in., 2 in. bottoms. All inside surfaces and top edges of sinks shall be hone finished. The minimum outside sink depth shall be 10 in., unless otherwise shown on drawings.

Drainboards for sinks shall be 1¼ in. thick, of selected stone. Tops of drainboards shall be flush, with parallel grooving pitched within thickness of the stone.

Splash back and ends that are installed at sinks shall be not less than 8 in. in height and of same thickness of sink proper, unless otherwise shown on plans and to have exposed faces hone finished.



Wood Pegs
45°
Drainboard set level
Grooves pitched 1/8" to 3/8"
Sink ends cut down thickness of drainboard for flush construction
Section thru Sink bottom and side walls.

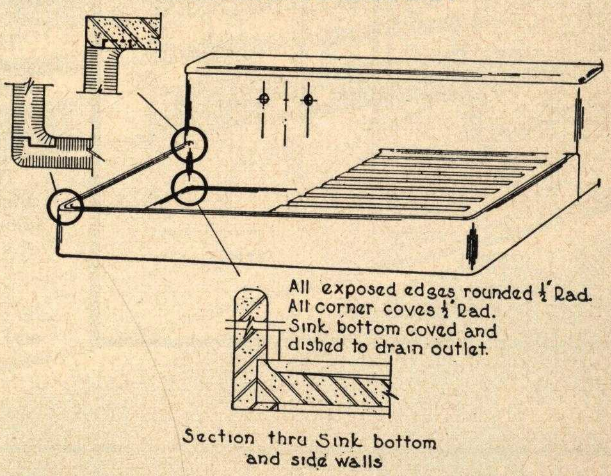
Where gutters are shown in tables they shall be constructed of 1¼ in. stone employing the rabbeted joint and bolt and nut construction used in the sinks. The dimension of a gutter shall be approximately 6 x 7 in. inside, gradually pitching from one end to a maximum depth of 6 in. at the outlet end. The amount of pitch shall be approximately 1 in. in 5 ft. The pitch in the gutters shall be accomplished by rabbeting the sides at an angle to accommodate the bottom, rather than pitching the entire gutter itself. We will not be responsible for leakage unless the gutter is adequately supported along its full length.

Where peg boards or racks are specified, these stone boards are to be used to hold peg supports on which glassware is suspended and dried. All exposed faces and edges of peg boards shall be hone finished. Unless otherwise shown on drawings, these stone peg boards shall be 36 in. in height and 1¼ in. thick, with holes bored at an angle of 45 degrees to the face of the stone for wooden pegs. Pegs can be furnished on request.

Sinks and drainboards used for photographic chemicals or for wash-up sinks shall be constructed of Grade 25 stone.

The details show only 2 type numbers. Additional types are illustrated in our complete Laboratory Bulletin, and also in a separate Sink Bulletin. Copies of both are available.

COVED CORNER CONSTRUCTION



All exposed edges rounded 1/2" Rad.
All corner coves 1/2" Rad.
Sink bottom coved and dished to drain outlet.
Section thru Sink bottom and side walls

The drawing above shows our special construction, with all inside corners of the sink coved, and with bottom coved and dished to drain. The detail drawing shows exposed edges rounded. Any of our sinks can be furnished with complete coving and complete rounding of edges, as shown.

FUME HOODS

The Alberene Stone Corporation of Virginia maintains a staff of competent engineers who have had long and specialized experience in meeting the hood problems of many differing industries. We will be happy to have you make use of their experience in working out your hood problems.

Many factors enter into the selection of the type of fume hood used. Some of these factors are—

(1) Type and character of work to be done in the hood.

(2) Nature of the gases requiring removal. In the handling of perchloric acid, for example, certain precautions must be taken and specially designed hoods are necessary.

(3) Room space available and convenience of access.

(4) Number of students or chemists using the hood.

(5) Use or non-use of conditioned air in the laboratory rooms.

(6) Use or non-use of an adjustable sash, N.B.—sometimes a sliding sash effecting complete closure of the hood is necessary.

(7) Location of vent ducts.

In view of these and other factors which may enter in specific instances there can be no such thing as standard design.

PERCHLORIC HOODS

Our engineers pioneered the design of special-type hoods for handling perchloric acid. Alberene Stone is ideally suited to this type of work because it is practically non-absorbent. The Alberene construction is such that liquid-tight joints are easily made. Proper functioning of the special type hood for perchloric acid depends on adequate flushing and means to remove wash water.

If you have a problem that requires a special-purpose hood for its solution, our engineers welcome the chance to help you select or design the type of hood best-suited for the job.

The sections and photographs shown on these pages portray successfully operating hood installations. Any type may be furnished with or without sliding sash.

The first and principal advantage of an Alberene Hood lies in the value of the stone itself as a chemically resistant material. Secondly the nature of the stone, and the thicknesses used are such that the structure of the hood may be built with no exposed bolts, screws, nuts, etc., within the hood itself.

The stone superstructure is usually constructed of 1¼ in. thickness of stone. Baffles are generally made 1 in. thick. We recommend that the hood base or counter be constructed of 2 in. thick stone specially selected of a grade of stone found to be most resistant to excessive heat.

Where metal is used for sash and/or sash weights and chains, it must be of non-corrosive material. Where additional light is desired in the hood and glass windows are desired such glass should be clear wire glass.

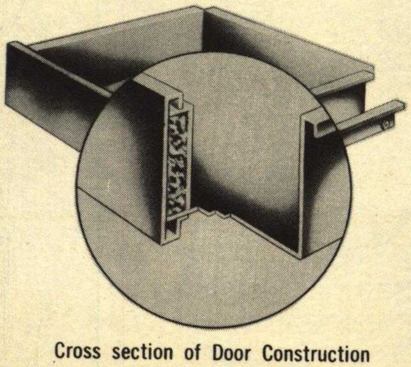
Cross section of Drawer Construction



Cross section of Door Construction

Inner pans of both doors and drawers are made removable for quick and easy decontamination. Lead coated sheet steel is used throughout the construction of all Duralab units. All inner pans are painted with the same finish as the exterior of the units, affording double protection against corrosion. A sound-deadening mineral filler is used between all inner and outer pans.

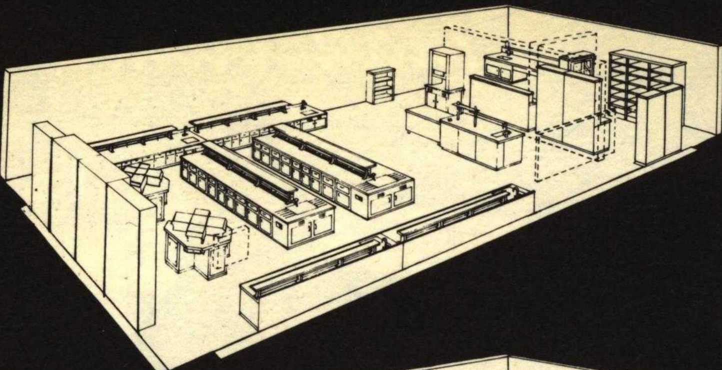
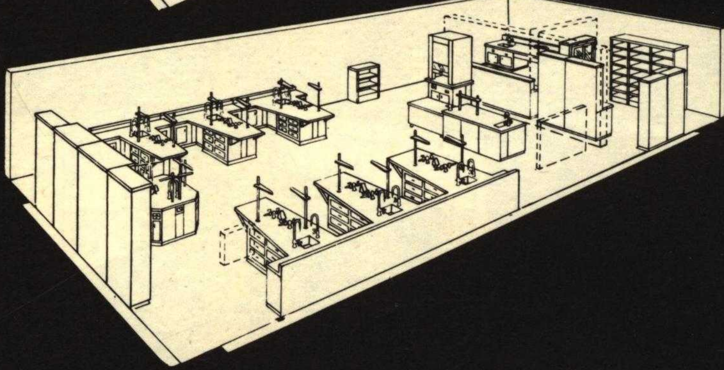
CHEMISTRY LABORATORY

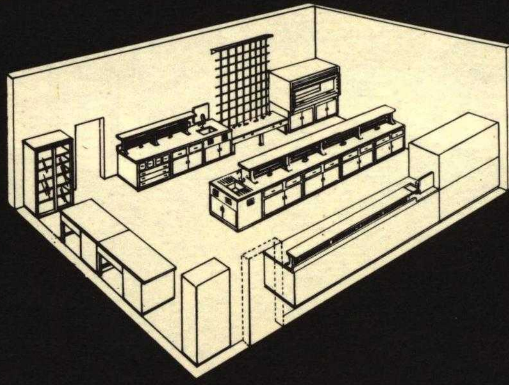
This illustration is for a 24 student Chemistry Laboratory having 3 class changes. The Center Tables are type SC-110 and the Wall Tables are type SW-110. Different arrangements for drawers, cupboards, student capacity and class changes can be selected from Catalog D5. The Group Project Tables are type GPT-105, and provides an excellent means for small groups of progressive students to work on advanced projects. The Fume Hood is located near the instructor for use during demonstration periods.



COMBINATION CHEMISTRY and PHYSICS LABORATORY

This illustration is for a 24 student Combination Chemistry and Physics Laboratory having 3 class changes. The Spacesaver type tables are type SPC-930 and the Fume Hood is type SCHC-49. The Spacesaver table utilizes the dead wall area and thus leaves the center of the room open for center tables where overcrowded conditions exist. Ample storage space is provided at the rear of the room, or additional Spacesaver tables can be provided if needed.





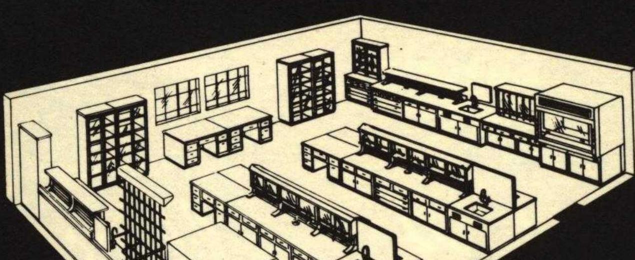
2-MAN LABORATORY

The 2-Man Laboratory illustrates a typical small laboratory planned on the modular theory. The adjacent offices are not needed in this type of layout as desk space is provided within the laboratory.

All piping, conduit and ductwork is supplied by the common service tunnels and service trenches. There are provisions for hooded areas and a rack for distillation purposes.

Full use of the natural light is taken into account by placing the desks adjacent to the windows. If a balance table is required this can also be placed near the natural light.

If other types of equipment are required consult our Engineering Department for their proper placement.



RESEARCH CHEMISTRY LABORATORY

This large Research Chemistry Laboratory is similar to the 2-Man Laboratory except it illustrates that the modular theory is applicable in large laboratories for six or more chemists.

All piping, conduit and ductwork is supplied by the common service tunnels and service trenches. There are provisions for hooded areas, distillation rack, titration table, storage areas and desk space.

Invitation

There is a Duralab Sales Engineer in your area. Allow our factory trained men in conjunction with our Design and Engineering Departments to help prepare your layouts, plans and specifications. In this manner you will be availing yourself of the latest designs and practices in the Scientific Laboratory Furniture field, at no cost or obligation to you!

FISHER UNITIZED laboratory furniture

direct from stock

AS A PART of its complete service to laboratories, Fisher Scientific Company has designed and produced a full line of laboratory furniture. These versatile, interchangeable units, of durable steel construction, are entirely prefabricated (simply bolt them together for a complete installation). Fisher Unitized Furniture, pioneered by Fisher in 1945, "revolutionized laboratory installations"—according to the journal *Industrial Laboratories*—providing custom quality with the economy of standardized design and quantity manufacturing. Most important, these units eliminate costly delays. Over 28 different units are available—and they are all available *direct from stock.*

Fisher UNITIZED Furniture

. . . custom quality, pre-engineered convenience

FISHER UNITIZED FURNITURE is made in only one grade: workmanship, material and finish are always top quality. Over two dozen different units are available —all direct from stock. The number of possible assemblies is virtually unlimited, ranging from a space-saving two-foot-wide bench to a large complex laboratory.

All units are pre-engineered; once installed, the units are easily dismantled and reassembled—together with additional units if desired—to meet changing needs. Units added at any future time will match present units precisely in all specifications, including color.

The Unitized line should not be confused with furniture made from light-gauge steel, porous (soapstone) tops, "kitchen alloy" stainless steel, and units not protected by genuine Bonderizing under the proper number of coats of highly-resistant synthetic enamel.

STEEL—All units are heavy-gauge cold-rolled prime steel (free from scale, ragged edges, scratches, internal defects) and selected with a safe margin of structural strength. Cupboard bottoms and shelves are 20 gauge; body proper and drawer suspensions, 18 gauge; front rails and case suspensions, 16 gauge; hinge reinforcements, 14 gauge.

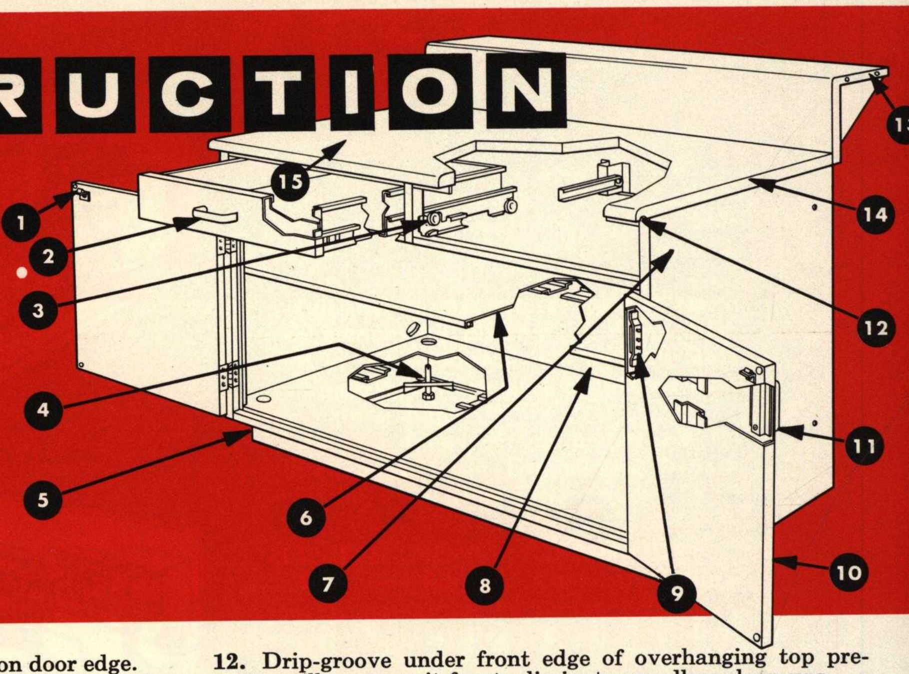
FINISH—Next to strength and quality of steel, the ability to withstand corrosive reagents is a fundamental factor in laboratory units. All Fisher units are fully immersed in a phosphate bath (i.e., Bonderized). This special chemical process greatly increases the steel's resistance to rust if the surface becomes badly scratched, and acts as a strong bond between metal and finish.

Fisher units then get a coat of high-bake enamel primer, baked out completely at 350°F; a gray finish coat (fortified enamel pigmented with inert materials plus an aluminum powder) at 350°F; and a clear unpigmented vinyl coat at 250°F. Color is an attractive medium metallic gray.

Panels finished as above withstand such tests as 15-minute exposure to glacial acetic, 50% nitric, 77% sulfuric and concentrated hydrochloric acids, and 10% sodium hydroxide.

CONSTRUCTION

features...



1. Roller catch holds door closed, avoids wear on door edge.
2. Door and drawer pulls are heavy die-castings, coated with a black plastic resin with resistance comparable to Kemrock.
3. Drawers roll on nylon ball-bearing rollers concealed in side channels; safety catches provided.
4. Leveling legs permit matching of table tops, are reached through capped holes in reinforced floor.
5. Recessed toe space for standing worker. Rubber cove molding protects unit from shoe marks, floor mopping; seals crack at floor to keep out water and dirt.
6. Full-size shelf is reinforced and can be adjusted over a 16-inch range in ½-inch steps.
7. Pre-drilled holes facilitate bolting adjacent units. Units can be bolted back-to-back to form center "island" with 14-inch reagent shelf.
8. Rear panel can readily be removed to check utilities without disturbing unit or unit assembly.
9. Hinge reinforcements are substantial 14-gauge steel.
10. Rigid doors and drawer heads are double-panel construction, ¾-inch thick, completely Bonderized and painted inside and out. Doors open full 180°. No center post to interfere with free access to cupboard.
11. Convenient pulls near cupboard top permit easy opening, without stooping or bending. Doors close by simple push.
12. Drip-groove under front edge of overhanging top prevents spillage on unit front, eliminates needless clean-ups.
13. Acid-proof reagent shelf and splashback, integral part of Stainless Steel tops, made of kiln-dried acid-proofed basswood for Kemrock and Formica tops. Shelf is 7 inches deep, can be removed to permit use of unit as base cabinet. Reagent shelf positions base 7 inches from wall for clearance of utility lines. Outlets provided for water, gas and electric connections (snap-out discs in Stainless Steel splashback; holes easily drilled in basswood splashback used with Kemrock and Formica tops). Dowel holes in rear edge and end of reagent shelf make alignment easy.
14. One-piece assembly—Kemrock and Formica top joints are sealed with cement; Stainless Steel tops bolt against neoprene strips to produce one-piece assembly. 29-sq-inch area provides good seal and continuous top across adjacent units.
15. Choice of 3 working tops—Kemrock, Formica or Stainless Steel. Tops on all but tables, desks and sitting-height (30-inch) units are 36 inches high.

All units are heavy-gauge steel with edges and corners interlocked and welded; entire unit is Bonderized before three-coat painting. Neutral gray finish resistant to moisture, chemicals, solvents, abrasion; reflects maximum light without glare; blends with modern floor and wall colors.

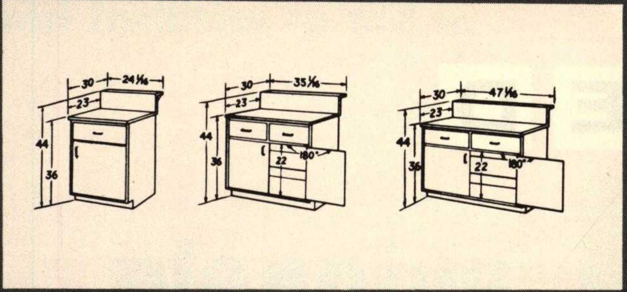
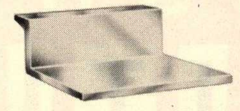
TYPICAL *dimensions...*

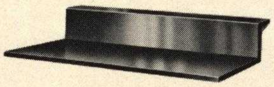


A 2-FT UNIT	A 3-FT UNIT	A 4-FT UNIT
Drawer: 4 1/16" deep, 20 5/8" wide, 18" front-to-back	Drawer: 4 1/16" deep, 14 5/8" wide, 18" front-to-back	Drawer: 4 1/16" deep, 20 5/8" wide, 18" front-to-back

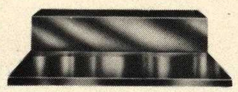
TYPICAL *working tops...*



STAINLESS STEEL for public health, food, and radioisotope labs

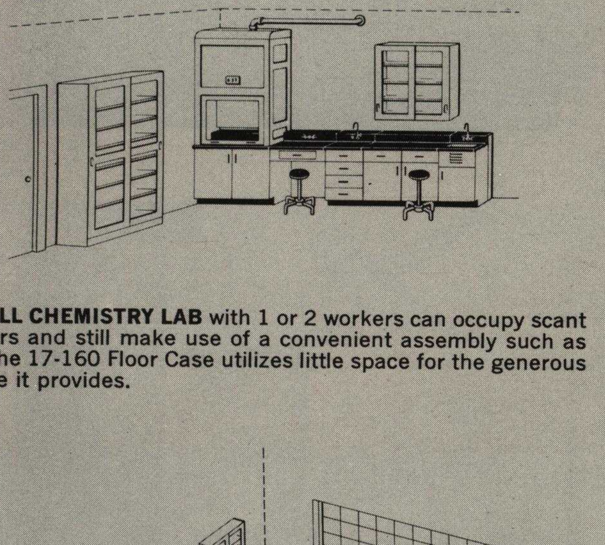


KEMROCK a general-purpose top for chemical labs

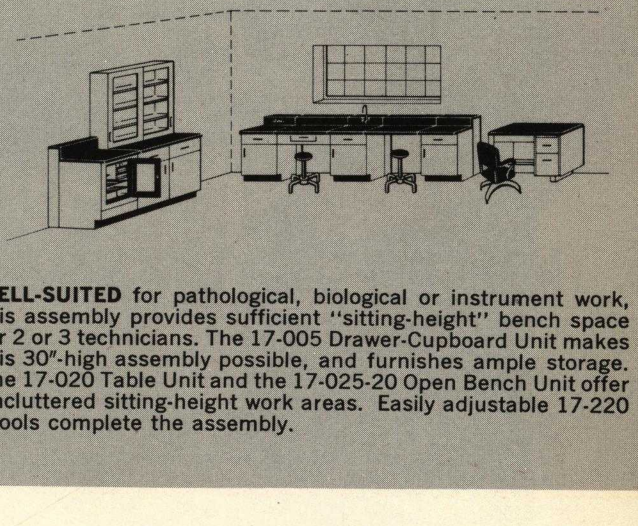


FORMICA for biological, electronic, physics and clinical labs

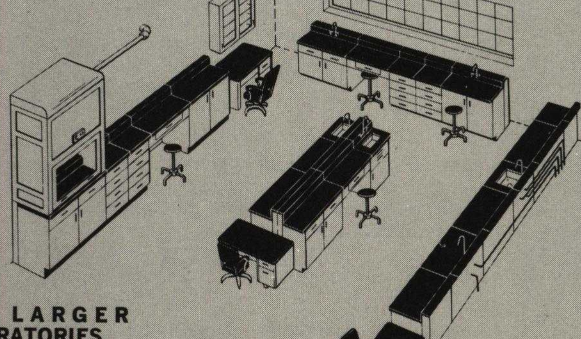
TYPICAL *assemblies...*



A SMALL CHEMISTRY LAB with 1 or 2 workers can occupy scant quarters and still make use of a convenient assembly such as this. The 17-160 Floor Case utilizes little space for the generous storage it provides.



WELL-SUITED for pathological, biological or instrument work, this assembly provides sufficient "sitting-height" bench space for 2 or 3 technicians. The 17-005 Drawer-Cupboard Unit makes this 30"-high assembly possible, and furnishes ample storage. The 17-020 Table Unit and the 17-025-20 Open Bench Unit offer uncluttered sitting-height work areas. Easily adjustable 17-220 Stools complete the assembly.



FOR LARGER LABORATORIES, here's a "back-to-back" assembly forming a center island. Three 17-200 Desks and 17-210 Chairs are included for convenience in studying references, writing reports.

SPECIAL *sewage-disposal assembly*

AMONG THE UNIQUE SERVICES of Fisher furniture experts is their complete, **ready-to-use** laboratory for sewage plants.

This assembly includes a new Fisher Furniture Unit 4 feet long, with 3 large compartmented drawers containing all the apparatus and chemicals required for the tests regularly conducted in such a laboratory. This Unit, combined with a standard Fisher Sink Unit plus one or two additional Units from the standard line (depending on size of room), adds up to a "packaged" laboratory exceptionally easy to specify and install. A newly hired technician can literally walk in and start running tests in minutes.

For details, write to FISHER SCIENTIFIC, 217 Fisher Building, Pittsburgh 19, Pennsylvania.

FISHER UNITIZED furniture

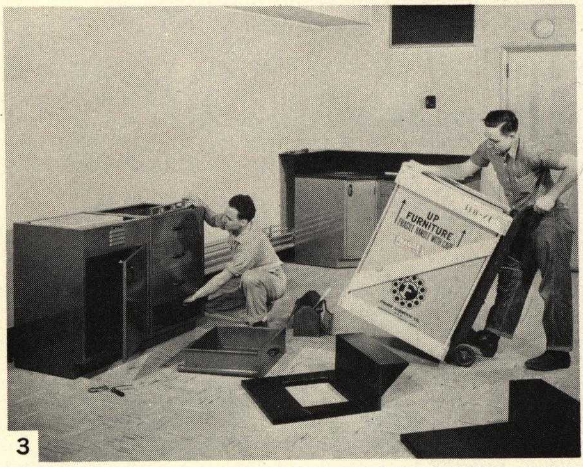
reduces planning, ordering and installing to a few simple steps

1

2

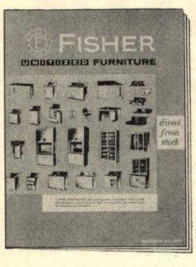
1. PLANNING is expedited by the Fisher Lab Planning Kit, free from all Fisher plants. It has scaled floor layouts, scaled punch-outs of the units, plus a 24-page furniture catalog.

2. YOUR ORDER is handled by experienced staffs, your units shipped from well-stocked Fisher furniture warehouses such as the one shown above, right. Each unit is pre-packaged for prompt shipment, has every piece of hardware, every bolt and screw needed for the installation.



3

3. TO INSTALL units merely uncrate; cement the tops; fasten the reagent shelves and utility accessories. Each unit has its own side walls and back, can be used anywhere in the assembly, added to later.



Send for 24-Page Catalog and Planning Kit—*You'll find the Fisher Unitized Furniture Catalog a gold mine of ideas for laboratory planning. Dimensions and photos of every unit. Catalog plus Planning Kit enables you to design your own installation. Write FISHER SCIENTIFIC, 217 Fisher Building, Pittsburgh 19, Pa.*

General Electric offers its vast x-ray experience and facilities to aid in

planning the hospital x-ray department

"Shirt sleeve session"...

Planning and blueprinting a modern x-ray department are certain to involve both the hospital administrator and the architect in a maze of unfamiliar complications. Logical starting point for any construction project involving x-ray facilities is your local General Electric x-ray consultant. Exploratory "shirt sleeve" sessions with all persons involved first determine specific needs. Planning can then be expertly guided by our Installation Planning Service.

With your requirements in mind, this full-time staff of specialists considers every possible operating advantage and convenience: How to arrange equipment and make space work more profitably . . . power, wiring and protective requirements . . . plumbing and other arrangements are carefully analyzed. Thus the layout offered the architect is based on the ultimate in service from the department's x-ray equipment.

Hospital architects rely on this General Electric service more and more because planning experience of more than 50 years helps G.E. provide hundreds of practical application advantages. Of course, there's no cost or obligation for this service.

Subsequent pages outline its operations step by step.

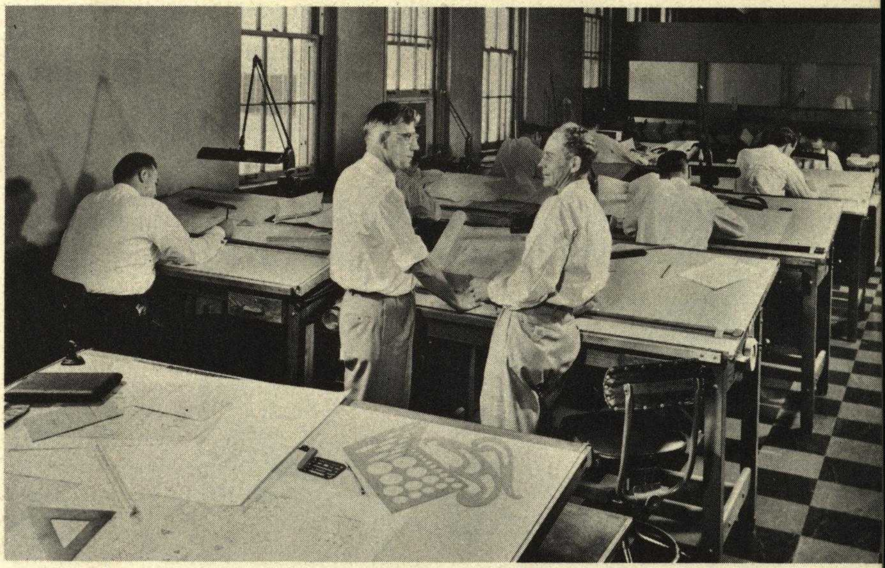
through every stage

...general layout of department...detailed plans for each section...precise installation sheets for each piece of equipment.

Size of a hospital is no indication of its x-ray needs. Requirements vary widely due to other significant factors. Thus, in lending aid for a proposed project, our representative first assembles information by careful preliminary survey and through personal discussions with the architect, radiologist, administrator and others. Data is forwarded to our headquarters *Installation Planning Service* in Milwaukee, where preliminary layouts are prepared combining to best advantage the ideas of all those working on the project. Based upon review and revision of these preliminary plans by all concerned, final detailed layouts of each section of the proposed department are prepared and supplied.



Final layouts of each area are complete and exact

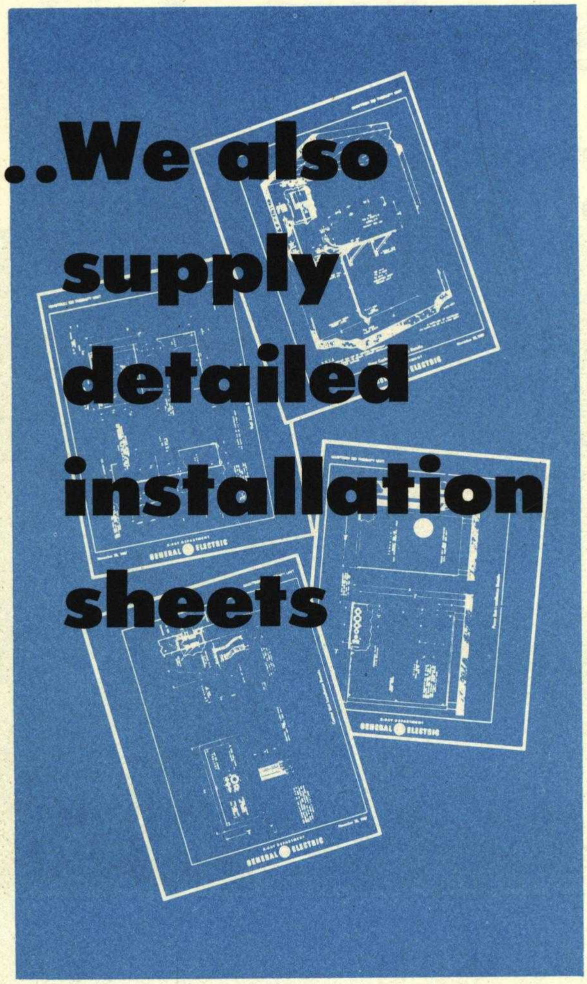
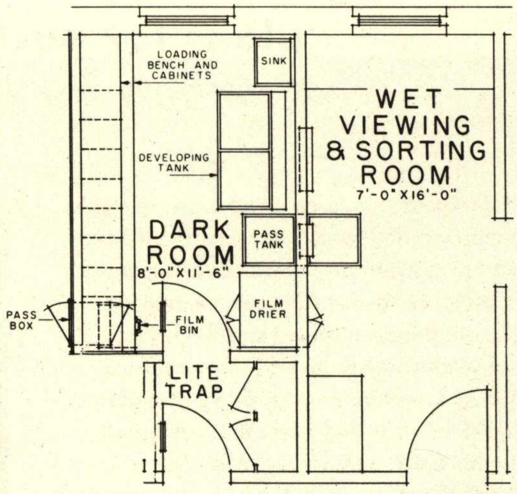
Layout service (cont.)

...We also supply detailed installation sheets



In addition to the detailed layout for each section of the x-ray department, General Electric supplies individual installation sheets for each piece of equipment and major accessory. All electrical, power and plumbing instructions are on these sheets, as well as wall openings required. Shown here are typical examples of these installation sheets, which enable you to more easily and efficiently complete your x-ray department.

Film processing



A typical darkroom plan provides ample space for complete processing of films at maximum efficiency. Providing separate wet and dry sides of the darkroom will eliminate congestion and help prevent spilling of film-processing solutions on cassettes and films at the loading bench.

In order to keep harmful light from accidentally entering the darkroom, either a maze or a door which can be interlocked should be provided. There should also be red and white lights outside the light lock to indicate which corresponding darkroom light is on.

Transfer of exposed and unexposed cassettes to and from the diagnostic area is most conveniently done through a cassette pass box. Finished films are immediately available through the pass tank which opens into the wet-viewing and sorting room, where they may be viewed on illuminators.

mazes

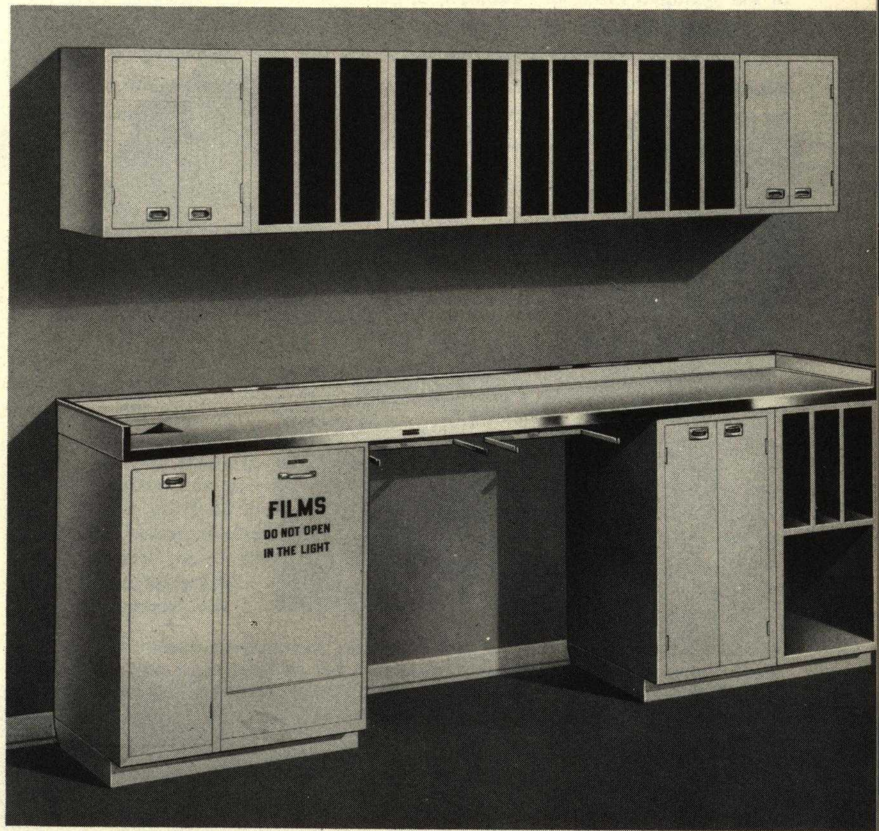
If traffic warrants the extra space required, a maze, wide enough for easy passage, is suggested instead of an interlocking door.

water supply and valving

Hot, cold and in some instances refrigerated water must be supplied to keep film processing solutions at 68°F. Use shutoff valves in darkroom plumbing system, so that individual lines or units can be cut out without affecting operations.

acid resisting pipe

Film-processing tank, sink and floor drain should be connected to a good grade of acid-resistant drainpipe with suitable traps.



FILMS
DO NOT OPEN
IN THE LIGHT

Sectional darkroom cabinets

Sectional Darkroom Cabinets offer a complete range of storage and work facilities, in whatever combination is best suited for the particular darkroom being designed. Cabinets for storage, cassettes, a waste bin and film identifier, as well as fillers, are all of gray metal. The benchtop, which is cut to specification, has a top of either gray Textolite or gray linoleum. Illustrations of each unit and exact dimensions are shown in Pub. 7E-3612, which is available upon request.

Adaptosize film-storage bin

The G-E Adaptosize Film-Storage Bin may be installed under the loading bench of the Sectional Darkroom Cabinets, or as a unit in itself. Adjustable adapters are furnished to allow boxes of film of various sizes to be stored upright with the upper edge on a level with the top of the bin. The film-storage bin has a dependable light trap construction and provision is made for the installation of an optional limit switch (E1056B) which automatically cuts off the white light in the room when the bin is opened.

Cassette pass boxes

The cassette pass box, constructed of heavy-gage steel and terne plate, and interlined with 1/16" sheet lead, permits safe, two-way transfer of cassettes between the darkroom and radiographic room. Choice includes automatic or manual door interlocks . . . 2- and 4-door models . . . and a double-capacity, 4-door, manual interlock model.

E3032A	4-Door Cassette Pass Box, manual interlock; net 200 lbs, shipping 235 lbs.

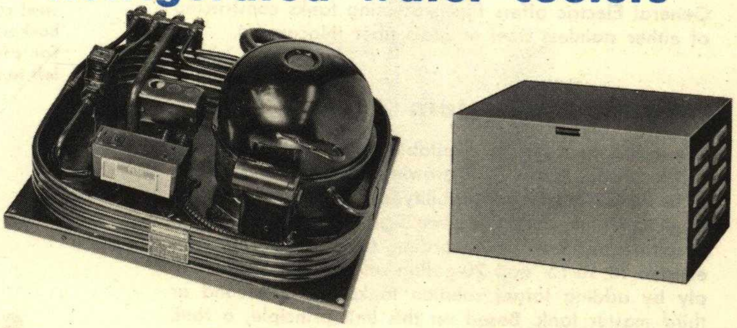
Refrigerated water coolers

G-E Refrigerated Water Cooler with three cooling elements.



The one-tier cabinet contains one cooling unit.

The General Electric Refrigerated Water Cooler is built around a basic cartridge-type refrigeration element, capable of cooling 40 gallons of water an hour from 85F to 65F. This cooling element can be obtained in a single-tier cabinet less than 12" high, or, if water cooling demands are great, in a three tier cabinet which will accept one, two or three of these elements. If desired, one element can be purchased at a time, and the others added as water cooling needs increase.

A remote cold-control, placed in the rinse compartment of the developing tank monitors the continuously flowing water delivered by the cooler so that the tank water remains within ±2° of optimum processing temperature, and the solutions remain at ±1°. All electrical components of the cooler and cold controls are Underwriter's approved.

power service

One basic G-E water cooler unit requires 15-amp-115-v outlet with provision for grounding.

Cat. No.

E1150	G-E Refrigerated Water Cooler; specify number of elements, single or three-tier cabinet, with or without plumbing manifold, type of remote cold control (state make and style of processing tank).

Film processing tanks

General Electric offers film-processing tanks constructed of either stainless steel or glass fiber (Nocorode).

master-tank system

The master-tank system, available in either stainless steel or Nocorode, is ideal for growing laboratories because of its flexibility and adaptability. Starting with one basic, or master tank, containing two 5-gallon solution tanks, a hospital can, without discarding a single master unit, expand to 10-15- and 20-gallon solution capacities simply by adding larger solution tanks and a second or third master tank. Based on this unit principle, a tank never becomes obsolete.

backgrounds

Backgrounds are available for single tanks or any combination of tanks. Each stainless-steel background contains a thermostatic mixing valve, dial thermometer, shutoff valves, vacuum breaker, mixing system, interconnecting plumbing and 8 x 10" safelight. Most sizes also include a 14 x 17" illuminator.

Nocorode tank backgrounds contain mixing valve assembly and dial thermometer.

insulation and refrigeration

All stainless-steel tanks have 1½" of spun-glass insulation built into all four sides and bottom. Refrigeration can be obtained in one of two ways: either by purchasing a "coldwall" type stainless-steel tank which has the cooling coils imbedded within the tank walls, or by having a refrigeration element (exactly as that found in the refrigerated water cooler, see page 7), installed in the base of the tank.

Nocorode tanks are available either insulated or non-insulated. The insulation is one-inch thick glass fiber between the inner and outer walls and the bottom of the tank.

pass tanks

Pass tanks make it possible to pass wet films through the wall of the darkroom to the lightroom side of the radiographic department. This can considerably lessen darkroom congestion by removing from the darkroom operations such as wet film viewing, drying of films, unloading hangers and cutting film corners.

Both water- and fixer-pass tanks are available in standard 30" and 48" sizes, or in smaller special sizes. They may be obtained with sliding or hinged covers.

In the water-pass tank films are developed and fixed on the darkroom side and then passed through the wash water to the lightroom.

With the fixer-pass tank films are developed in the darkroom and then passed through the fixer into the lightroom. In this way they are available for wet viewing at the earliest possible moment.

Special 60" stainless-steel master tank, with background, arranged for processing from left to right.

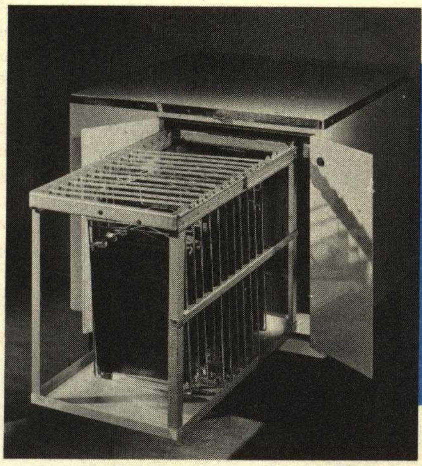
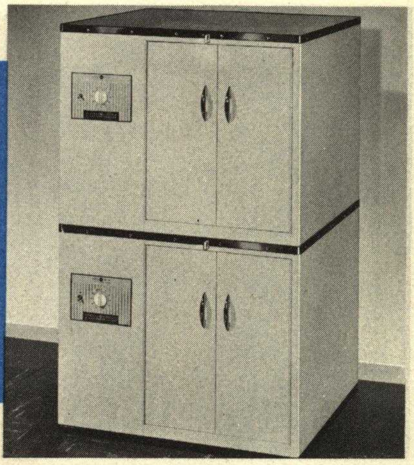
Circlair driers

The G-E Circlair Drier has an unequalled output rate for a drier of its size and price. It will hold fifteen 14" x 17" films and dry from 240 to 270 films in an 8 hour day. It can be stacked to conserve space, and can be installed through a wall, as there are doors at front and back of the drier. The timer can be preset for any period up to 55 minutes or for continuous operation. The Circlair is constructed of welded bonderized steel and finished in gray baked enamel. Various types of bases and ornamental wall flanges are also available.





power service

Supply 15-ampere 115-volt service for each drier to be installed. One or more convenience outlets will be adequate unless local codes require permanent installation with solid conduit.

venting

Film drier is equipped with an adapter to take standard 3¼" x 10" duct. Air circulation rate is 67½ cfm with an outlet velocity of 300 fpm at the vent.

Cat. No.	
E1077	Circlair Film Drier (state if high or low base is desired—low base is used when two driers are stacked; high base is used if only one drier is installed).

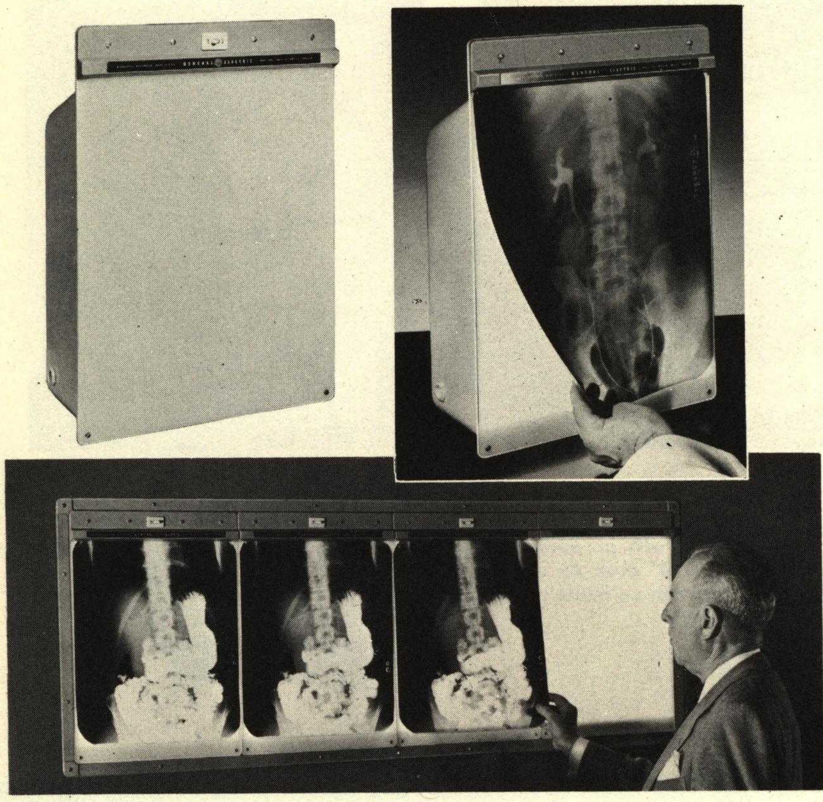
Truvision illuminator



Molded fiber glass construction makes this illuminator entirely corrosion-PROOF. In addition, the housing is much more shock-resistant than conventional metal shells. Brilliant, shadowless and evenly distributed lighting provides unparalleled radiographic illumination. Available in both single and multiple units, with toggle-switch, this illuminator can be recessed in a wall, or mounted on a desk or shelf, on a 45° angled wall bracket, or on a mobile stand. Underwriter's Laboratories approved. Ask for Pub. 7E-3803.

Cat. No.

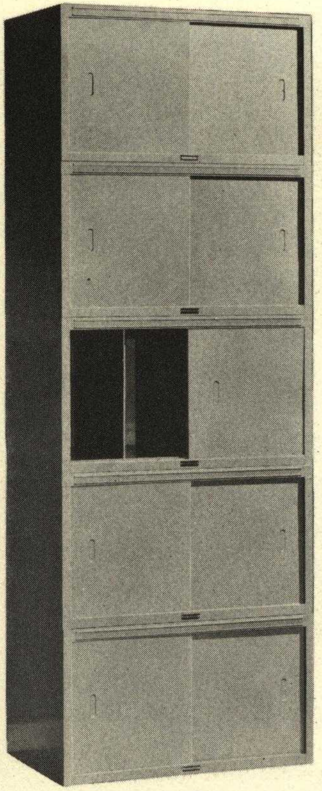
Safelights

General Electric provides a complete line of safelights for the processing room: a 5″ x 7″ adjustable safelight for wall or shelf-mounting; a 5″ x 7″, wall-mounted model, with a fixed-angle filter; an 8″ x 10″ safelight with an adjustable angle; an 8″ x 10″ combination safelight and viewer with adjustable angle. There is also a ceiling safelight which provides safe general illumination.

Cat. No.	
E1160A	5″ x 7″ Safelight, with bracket for wall or shelf mounting, 118-v., 7-watt lamp. Weights: Net—4½ lbs. Shipping—5 lbs.
E1160B	5″ x 7″ Safelight, wall-mounted, permanently angled filter, 118-v., 7-watt lamp. Weights: Net—4 lbs. Shipping—6 lbs.
E1161A	8″ x 10″ Safelight, adjustable, 118-v., two 7-watt lamps. Weights: Net—7½ lbs. Shipping—9½ lbs.
E1161B	8″ x 10″ Safelight, combination safelight and illuminator, adjustable; 118-v., three 7-watt lamps. Weights: Net—9 lbs. Shipping—11 lbs.
E1161C	8″ x 10″ Safelight, with flange for in-the-wall mounting; 118-v., two 7-watt lamps. Weights: Net—7 lbs. Shipping—9 lbs.
E1160C	Ceiling Safelight, for fluoroscopic or processing room; 118-v., 15-watt lamp. Weights: Net—½ lb. Shipping—1 lb.

Sectional space-savers



These unitized cabinets permit buying for present needs only, with the possibility of adding matching cabinets as filing needs increase. The modular construction also provides flexibility of arrangement, and shelf-type filing permits more file space in less floor space. Strong, easily inserted locking pins keep cabinets from slipping or sliding, when stacked.

Cat. No.	
E2025	Sectional Space-Saver X-Ray Film Filing Cabinet (state number desired and if gray or olive green finish is desired).
Weights:	Single unit—Net—46 lbs. Shipping—60 lbs. Single unit when filled with 800 films in negative preservers—190 lbs.

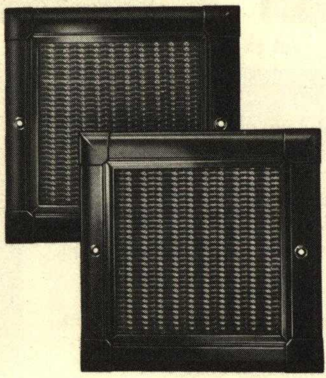
Dimensions:

17⅞″ high
31⅜″ wide
14⅜″ deep

Various arrangements made possible by locking units together.

Lightproof speaking grille

Communication between rooms is facilitated by this small, lightproof, black metal, two-piece grille. It eliminates many trips into the darkroom and thereby cuts down work interruptions. Where pass boxes, pass tanks or wet film hanger pass boxes are used it is of particular value for conveying information concerning films to be passed back and forth.



Cat. No.	
E1167A	Lightproof Speaking Grille
Weight:	Net—3 lbs. Shipping—4 lbs.

Lightproof shades

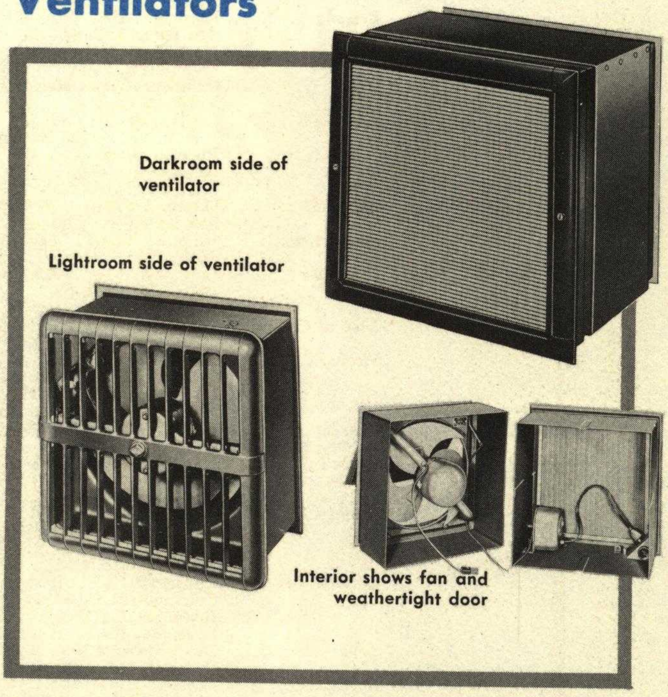
Lightproof shades are ideal for shutting out all outside light. They can be used in a fluoroscopic room, in an operating room or lecture halls to maintain controlled, identical lighting conditions at all times.

The shades are double-coated vinyl leatherette, with a flameproof coating on both sides which is permanent, water-repellent, crack-proof and pliable. The standard shades are black on both sides, but shades having one side black and the other with an aluminum-like coating are available at slightly higher cost. This coating, which would face the outside of the building, reflects light and sun and diminishes the heat build-up in the rooms being light-proofed.

The shades are mounted on an all-metal frame which fits *into* or over your present window frame. Its roller housing is steel, and there are roller bearings at each end. Music-wire coil springs control the heavy shade and retain their tension far better than other types of springs.

Available recess-mounted or face-mounted, in standard widths from 30" to 120"; lengths from 36" to 144" and in special sizes.

Ventilators



Darkroom side of ventilator

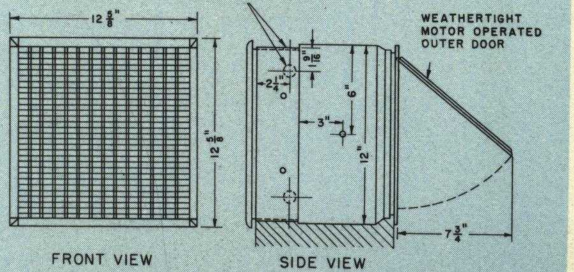
Lightroom side of ventilator

Interior shows fan and weathertight door

Capable of changing the air in a 10 x 10 x 10 foot room every four minutes, the two models of this fan both feature adjustable housings. The model for installation in an outside wall has a motor-operated, weather-tight door on the outside, operated simultaneously with the ventilator's motor. This unit can be adjusted to wall thicknesses of from 9½" to 14". The ventilator designed for installation in an inside partition or ceiling has a grille on the lightroom side, and the housing is adjustable from 6¼" to 8½". Both models have a lightproof grille on the darkroom side.

Cat. No.	
E1145A	260 CFM Electric Lightproof Ventilator, 115-v., 60 cy.; for outside wall installation. Weights: Net—57 lbs. Shipping—62 lbs.
E1145B	260 CFM Electric Lightproof Ventilator, 115-v., 60-cy.; for inside wall or partition installation, or ceiling installation. Weights: Net—50 lbs. Shipping—55 lbs.

4-$\frac{7}{8}$" DIA. K.O.'S, ONE K.O. TOP & BOTTOM, 2 K.O.'S ON LEFT SIDE. BRING A $\frac{1}{2}$" CONDUIT FROM SUITABLY LOCATED S.P.S.T. SW. TO ONE OF THESE K.O.'S.



lightproof ventilator

- General Electric services for planning the ideal x-ray department are conveniently available through all local offices throughout the United States and Canada.

GENEVA STEEL CASEWORK FOR HOSPITALS

Geneva...

outstanding for quality construction, appearance, flexibility of materials and installation.

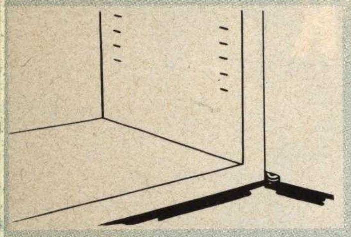
Geneva

HOSPITAL CASEWORK

Division of Acme Steel Co.
GENEVA, ILLINOIS

GENEVA BUILDS IN QUALITY

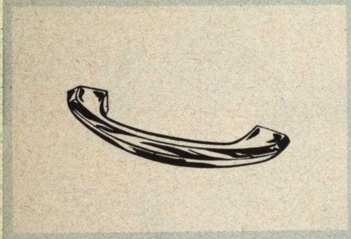
Quality is more than just a word at Geneva. Through the years, Geneva has built its reputation in the steel casework field on unexcelled quality. Only the finest materials are used in manufacture and close inspection and quality control are a fetish at Geneva. The Geneva name on institutional casework is a mark of quality that s respected by architects and administrators alike.



1—FLUSH INTERIOR

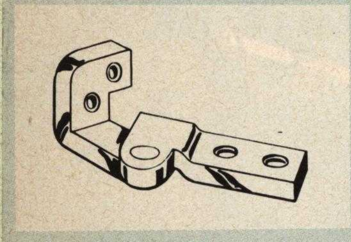
Geneva introduces a whole new concept in steel hospital casework with its new "flush interior" cabinets. Look at these advantages flush interiors have over standard hospital casework.

1. Ease of cleaning
2. Far more sanitary
3. Reduced maintenance
4. Better visibility
5. Easier accessibility
6. Facilitates sanitary inspection



2—HANDLES

Attractive pulls are made of die cast metal, have satin chrome finish. Handles have ample room for finger space and are of clean, simple design so they cannot collect dirt or grime.

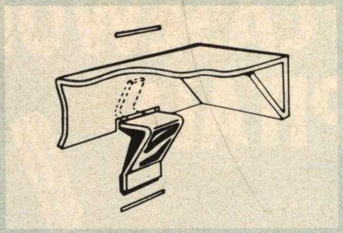


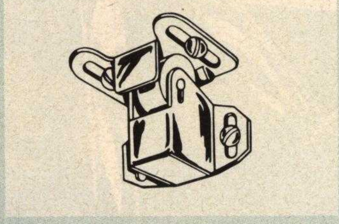
3—HINGE

Strong hinges are semi-concealed, two knuckle, heavy duty institutional type. They are made of .140 steel and have durable satin chrome finish. Hinges are located at top and bottom corners of doors for neater appearance and maximum strength. Doors over 36" high are fitted with center stiffening hinge of same type.

4—ADJUSTABLE SHELVES

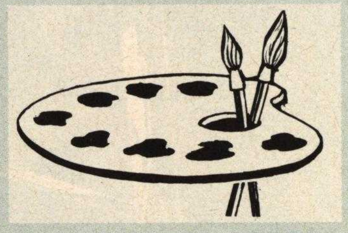
All Geneva shelves are adjustable on 1" centers. This gives flexibility where it is needed, allows storage of any size item. Shelves are formed of 18 gauge mild steel or stainless steel as specified. A 45° return flange on front and back gives extra strengh and rigidity, supports extremely heavy loads. Shelf is designed for sanitation and easy sterilization.





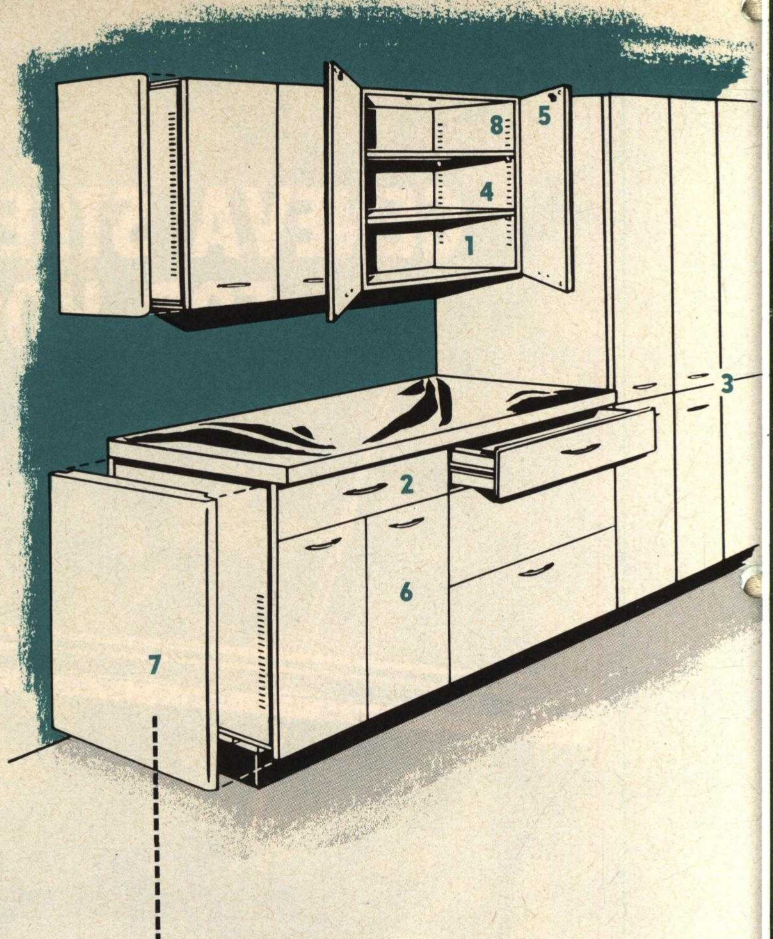
5—ROLLER CATCH

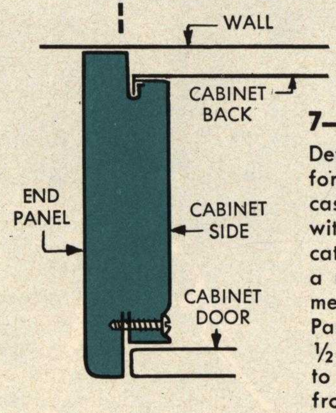
Spring loaded nylon roller type catch assures positive closure of all doors. Nylon rollers engage metal strike, operate quietly, efficiently. Tests prove they will last indefinitely, give years of trouble-free service. Catch is adjustable so that proper tension can always be maintained.



6—CHOICE OF COLOR

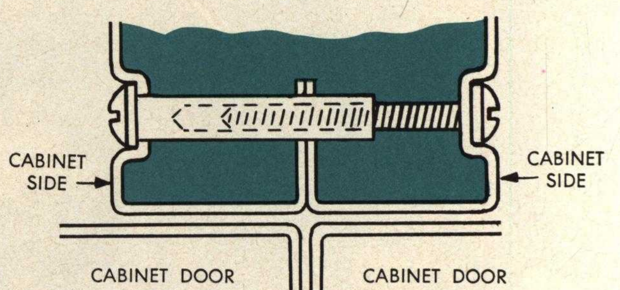
Modern hospitals no longer adhere to the old theory that all casework should be finished in sterile white. Just as in today's laboratories and schools, hospitals are using color to add comfort and eye appeal, particularly in patient rooms, nurse stations, diet kitchens, snack bars, etc. Geneva offers a wide selection of easy-to-live-with colors that will blend beautifully with most any decorating scheme. Colors are soft, muted pastel shades that can be used in combination if desired. Colors available include gray, white, green, blue, pink, yellow, turquoise, and sandalwood.





7—RADIUS END PANELS

Detachable end panels are provided for finishing off all exposed sides of casework. The panels are furnished with radius front edge and are fabricated for rigid attachment to produce a neat and attractive end to compliment the appearance of the fronts. Panels are fully sound deadened with ½" thick insulating material similar to that used on door and drawer fronts.



8—RECESSED BODY BOLTS

Sketch above shows Geneva's unique method of bolting cabinets together. Flush interior construction allows elimination of standard method of tying units together with nuts and bolts. Instead, binding screw heads are fully recessed into cabinet sides to maintain flush side free of protruding nuts and screws. This makes cleaning safe and easy.

GENEVA'S FLEXIBILITY OF MATERIALS

Geneva's advanced style of cabinet construction adds great flexibility to use of materials as well as cabinet arrangements. The recessed mullion construction makes it practical to combine stainless steel with mild painted steel in any way desired. For example, casework can have the advantage of stainless steel on all exposed parts and still use the economy of mild steel for cabinet bodies. Geneva's versatility of tooling and fabrication allows further economy in the combination of stainless steel door and drawer fronts with mild steel liners. Advanced styling permits Geneva to produce complete casework in stainless steel for those who require it. All welding is done outside of the visible cabinet areas so no pitting, discoloration or welding marks are ever seen.

Advantage of this flexibility in materials is readily apparent because of the great savings involved.

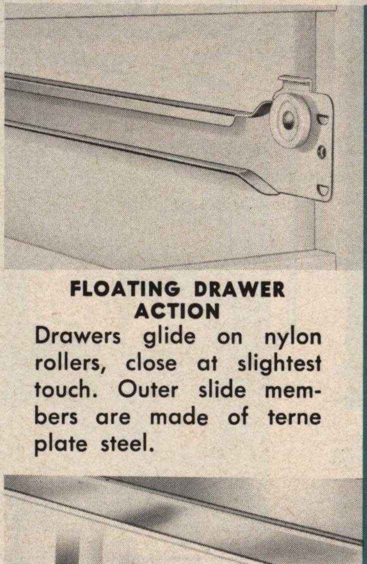
Geneva CASEWORK CONSTRUCTION FEATURES

Geneva's team of hospital casework engineers have designed the line shown in this booklet to meet the exacting needs of the modern hospital. Latest construction methods have been incorporated, many are exclusive with Geneva. Convenience, versatility, and complete sanitation have been foremost in the designer's minds.

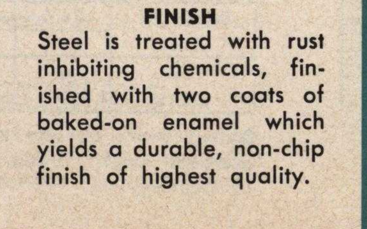
Precision engineering is the byword. Take the Geneva drawer action for example. Rust proof terne plate steel is formed into an interlocking type slide. Drawers operate on four suspended nylon rollers, close at a touch even when loaded to capacity. Drawers of same size are interchangeable.

Geneva's method of door construction is unique in the industry. Only Geneva paints doors and drawers inside and out. Full thickness sound deadener is then inserted and actually laminated to door front and liner. Result is a completely sound deadened door that is a dense integral unit that cannot be racked or bent.

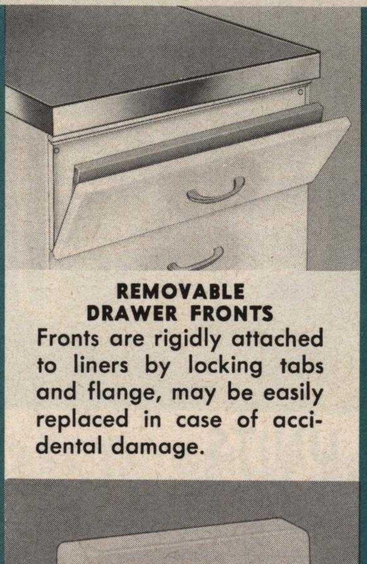
Much attention has been given the finish of these units. Steel is first cleansed and etched with chemicals to allow perfect grip for the prime coat of rust inhibiting enamel. After this is baked on, the final gloss coat of synthetic enamel is applied and baked on. This type finish withstands the most rugged tests. Stainless steel cabinets have a #4 ground finish.



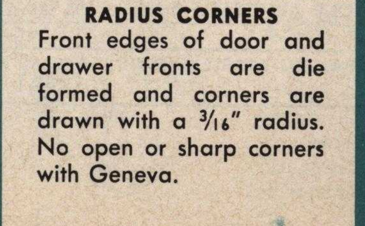
FLOATING DRAWER ACTION
Drawers glide on nylon rollers, close at slightest touch. Outer slide members are made of terne plate steel.



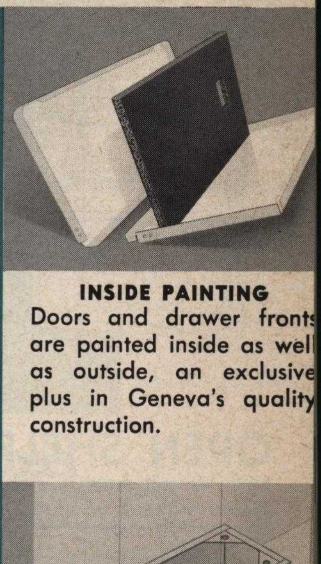
FINISH
Steel is treated with rust inhibiting chemicals, finished with two coats of baked-on enamel which yields a durable, non-chip finish of highest quality.



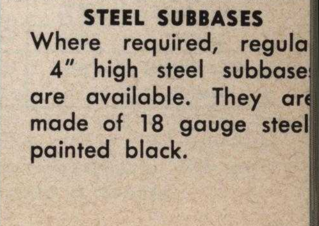
REMOVABLE DRAWER FRONTS
Fronts are rigidly attached to liners by locking tabs and flange, may be easily replaced in case of accidental damage.



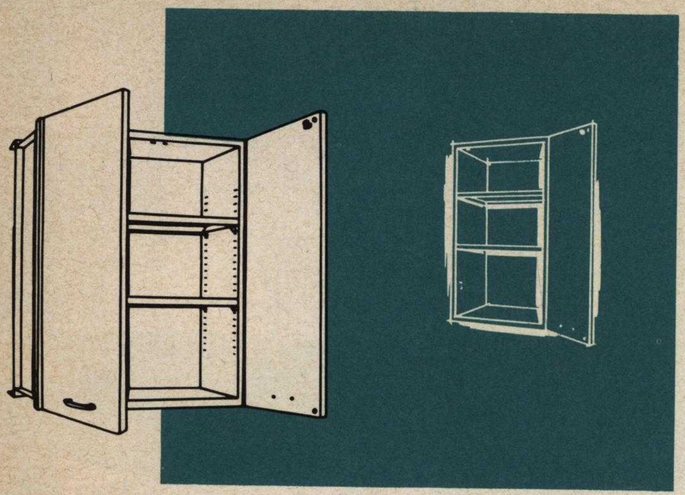
RADIUS CORNERS
Front edges of door and drawer fronts are die formed and corners are drawn with a 3/16" radius. No open or sharp corners with Geneva.



INSIDE PAINTING
Doors and drawer fronts are painted inside as wel as outside, an exclusive plus in Geneva's quality construction.



STEEL SUBBASES
Where required, regula 4" high steel subbase are available. They ar made of 18 gauge steel painted black.



WALL UNITS

—Are available in various sizes and styles as shown in chart below.

WIDTH	HEIGHT						DEPTH
	18	24	30	36	42	48	13-18
15		SINGLE DOOR UNITS					13-18
18			"	"	"		13-18

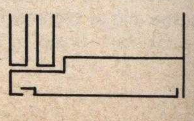
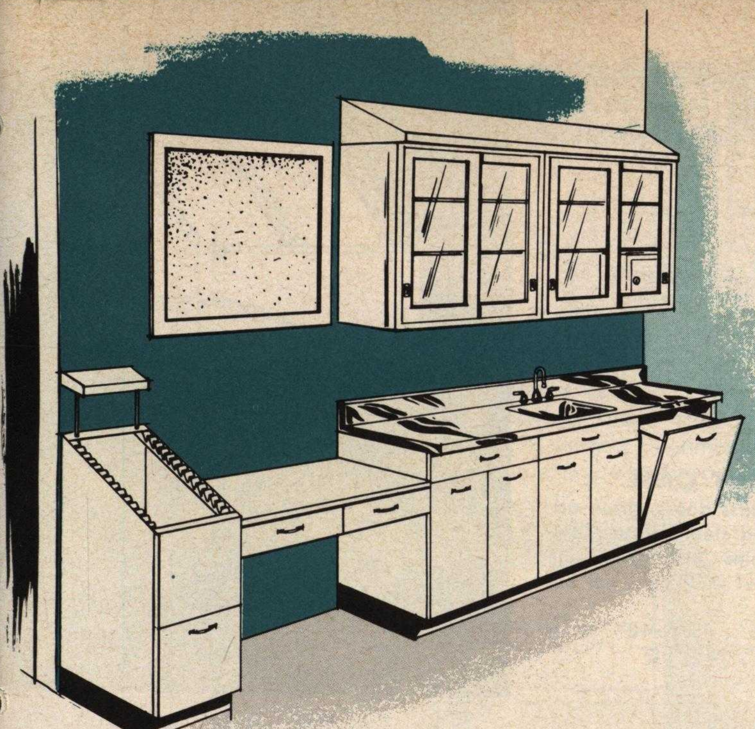
	30½	"	"		"	24½
TALL UNITS	80	FIVE ADJUSTABLE SHELVES				13-18 24½

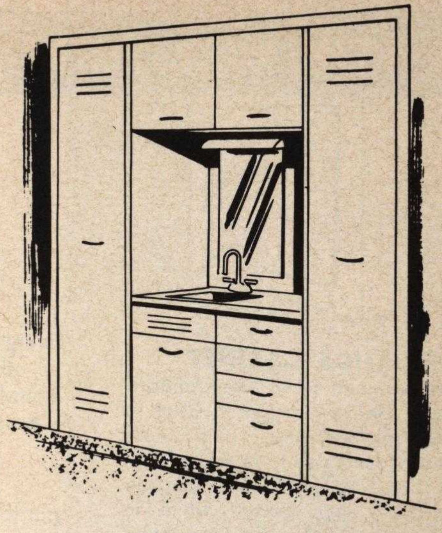
Sliding doors operate on nylon rollers from overhead track, leaving bottom clear for ease of cleaning.



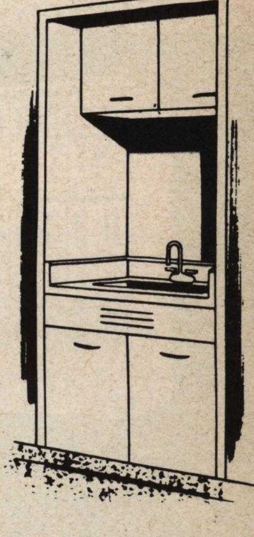


NURSES STATIONS

Great flexibility of the Geneva line allows any type of nurses station—large or small. Various types of arrangements can be planned to fit any budget. Illustration above shows a typical nurses station utilizing Geneva hospital casework to produce a compact work and nursing service area. It includes medicine sink in a stainless steel counter, gooseneck faucet, locked wall cabinet with inner locked narcotics case which is provided with door operated switch and warning light. Base section has stainless steel insulated ice bin, nurses desk with drawers, storage cabinets and chart rack. Bulletin board is handy to desk.



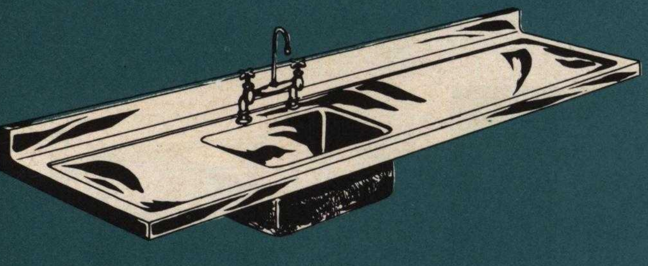
PATIENT ROOM WARDROBES



A great variety of wardrobe and dresser drawer units can be used in combination to produce any type of patient wardrobe necessary. Lavatories and mirrors are available as desired.

Units may be adapted to any room design. They may be built-in or used as free standing units. Installation is quick, easy.

SINK MATERIALS



STAINLESS STEEL

Sink tops will be furnished as specified. Entire deck surface and splashes are formed of one sheet with bowls welded in. Underside of sinks are reinforced with steel channels and are fully sound deadened.

SOAPSTONE, COLORLITH

Laboratory grades of chemically resistant soapstone or asbestos cement tops are furnished in 1 1/4" thickness. Bowls of like material to be fabricated and installed to top in acceptable manner as produced by a recognized fabricator.

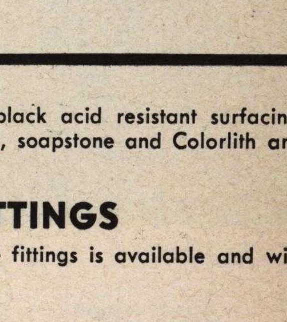
COUNTER TOP MATERIALS

Tops of high-pressure laminated plastic material on exterior grade plywood core with stainless steel edging or self edging are 1 1/2" thick. May be furnished with bowls as specified. Tempered pressed wood laminations are furnished with black acid resistant surfacing on all exposed surfaces. Stainless steel, soapstone and Colorlith are also available for counters.

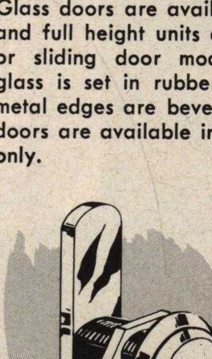
SERVICE FITTINGS

A complete line of high quality service fittings is available and will be furnished as specified.

GLASS OR GRILLE DOORS

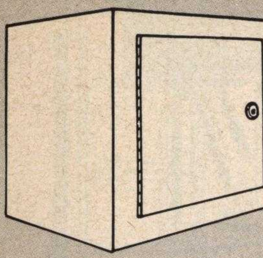


Glass doors are available on all wall and full height units either on hinged or sliding door models. 1/4" plate glass is set in rubber glazing strips, metal edges are beveled. Metal grille doors are available in enameled steel only.



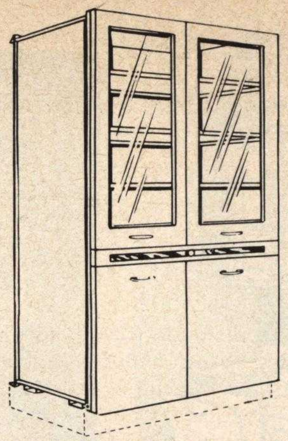
LOCKS

Lock shown is used for drawers and hinged doors. Special locks for sliding doors. Knob locks are available for two point door latching. All locks may be keyed interchangeably, differently or master keyed as directed.



NARCOTICS CABINET

This unit is designed to fit into standard wall cabinet. Heavy, laminated door is set flush into cabinet frame and is mounted with continuous hinge to minimize possibility of breaking in. Key cannot be withdrawn from lock except while in locked position. Warning light actuating switch and locking device furnished as specified.
15" W x 12" H x 11" D



INSTRUMENT CASE

Upper section has glass doors, three adjustable shelves, fixed steel bottom. Lower cupboard contains one adjustable shelf. A stainless steel shelf pulls out between sections.
18", 24", 30", 36", 42", 48" W x 80" H x 13", 18", 24½" D

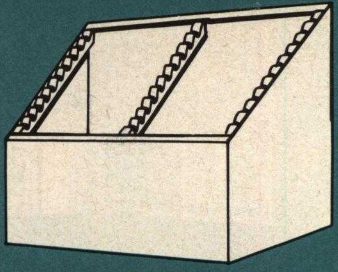


CHART RACK UNIT

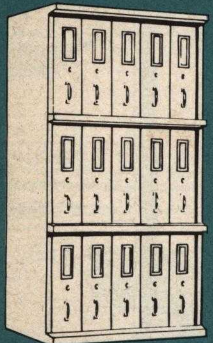
Cast aluminum chart holders are designed to fit into cutout in counter for easy accessibility. Furnished in sizes shown.

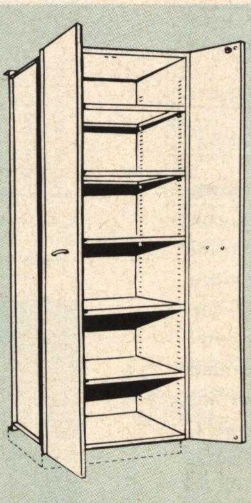
Capacity	Width	Height	Depth
10	11"	26½"	13"
20	21½"	26½"	13"
30	32"	26½"	13"



PHARMACY UNITS

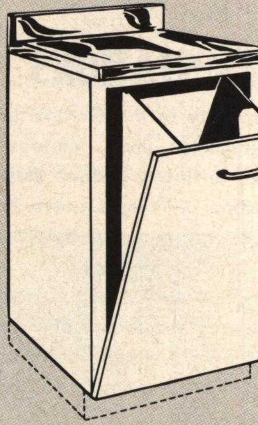
Typical Schwartz sectionalized pharmacy units are furnished in natural birch or white enamel.

No. Drawers	Width	Height	Depth
5	24"	15¾"	18"
10	24"	30½"	18"
15	24"	45¼"	18"



TALL STORAGE UNITS

Heavily sound deadened full height doors open to large cupboard which contains five adjustable solid steel shelves. Suitable for any type of general storage.
18", 24", 30", 36", 42", 48" W x 80" H x 13", 18", 24½" D



ICE BINS

Undercounter type tilting bins have stainless steel exposed parts, galvanized interiors. Center drain. Bins are fully insulated. 18" width has 100 lb. capacity, 24" width 150 lb. capacity.

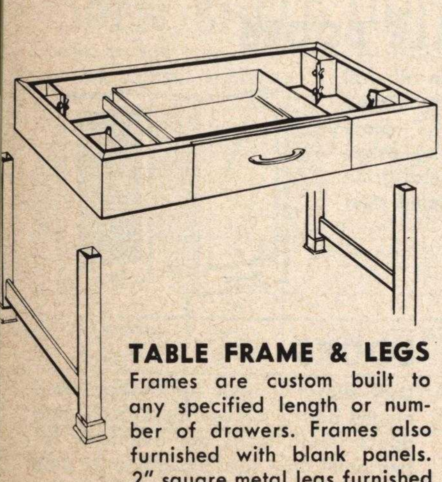


TABLE FRAME & LEGS

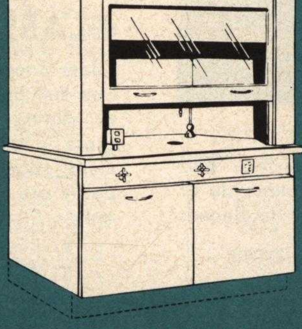
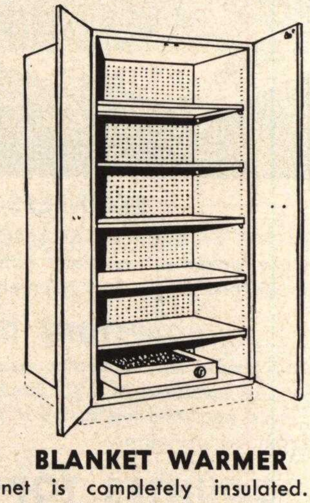
Frames are custom built to any specified length or number of drawers. Frames also furnished with blank panels. 2" square metal legs furnished where leg supports are required. Legs have adjusting screws, neoprene feet.



FUME HOODS

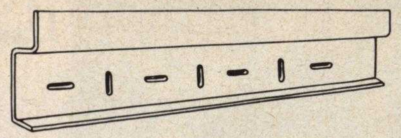
Hood is completely lined with transite, has opening for exhaust as specified. Top section has counterbalanced sash with ¼" safety plate glass, vaporproof light, services furnished as required. Two door lower section has one adjustable shelf. Entire base section is optional.
30", 36", 42", 48" W x 60" H



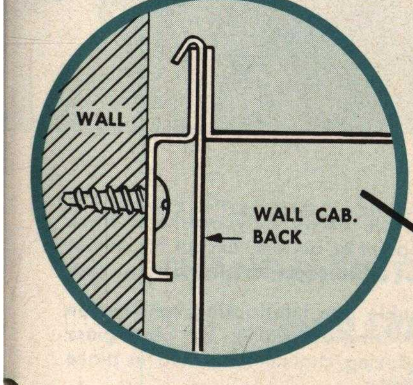
BLANKET WARMER

Cabinet is completely insulated. Perforated back panel allows free circulation of air warmed electrically or by steam heat. Five solid steel shelves are adjustable.
24", 30", 36" W x 80" H x 24½" D

SECTION DETAIL AND INSTALLATION METHODS

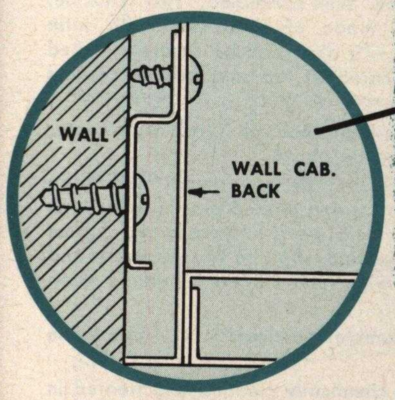


With Geneva's methods, installation is fast, accurate and neat. Continuous mounting strips of 14 gauge steel are securely fastened to wall, insure perfect alignment of casework. Installation problems are cut to a minimum with this method.



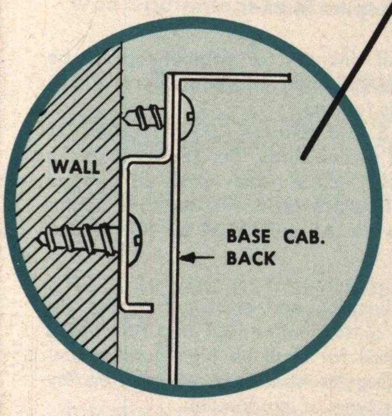
WALL
WALL CAB. BACK

Top flange of cabinet back is formed to lock over metal mounting strip as shown in sketch above. This eliminates mounting screws on cabinet interior.



WALL
WALL CAB. BACK

Mounting strip is used along bottom edge of wall cabinet back. Cabinet is securely locked to this strip with metal screws.



WALL
BASE CAB. BACK

Same type mounting strip is used for installing base casework. Cabinet fastens to strip near top as illustrated at right.

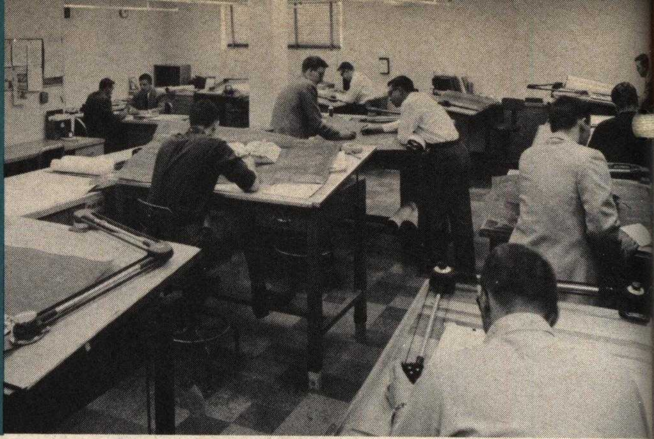
RECESSED UNITS

Units may be recessed into the wall where specified. A special 2″ wide perimeter trim of matching steel assures a flush, finished appearance.

Geneva Hospital Engineering Service

Geneva maintains a staff of engineers who are specialists in planning casework layouts for any hospital room. They detail every job for the production department, work with architects on any special cabinetry that may be required. There is no charge for the service performed by this staff of experts.



SPECIFICATIONS

1. GENERAL CONDITIONS—General conditions as called out in the specifications are hereby made part of the metal casework section and contractor shall assume all obligations therein that affect this work.

2. SCOPE OF WORK—Metal casework specifications intend to include all labor, materials, and equipment needed to deliver and install all metal casework, cabinets, shelving, sinks and counters as shown on drawings and indicated in specifications. Also where indicated as part of this contract faucets, strainers, and electrical outlets attached to casework will be furnished as part of this equipment. All materials and workmanship shall be guaranteed against defects for one year.

3. WORK NOT INCLUDED—Furnishing or installation of all plumbing and electrical service connections, supply piping, traps and stops. All heating and ventilating work in connection with any items in this section.

4. MANUFACTURER'S QUALIFICATIONS—All metal casework cabinets and shelving shall be equal to quality standards of Geneva Hospital Casework Division of Acme Steel Company. Casework of equal quality and construction shall be considered.

5. SHOP DRAWINGS—Prior to fabrication, complete shop drawings shall be submitted for approval. These drawings shall show construction detail and the size and arrangement of all equipment specified herein. Upon approval, sets of drawings shall be issued as required.

6. MATERIAL—All materials used in the fabrication of this equipment shall be of the best quality steel:

—Sheet Steel shall be cold rolled, annealed, furniture stock, stretcher levelled at the mill of #18 gauge U.S. Std. unless otherwise specified, and shall be free of rust, scratches, waves, or other serious imperfections.

Stainless Steel:

—Shall be type #302, #18 gauge, non-magnetic with a #4 finish.

7. CASEWORK CONSTRUCTION—

A. Bodies—Sides, backs, tops and bottoms of all units shall be made of #18 gauge steel cross members, rails and reinforcements shall be #16 gauge steel. Casework bodies shall be designed and fabricated to provide smooth flush interiors.

B. Doors and drawers and drawer bodies shall be of #18 gauge steel. Door and drawer front and lining shall be of double pan interlocking construction and shall be finished inside and outside before assembly. Face parts shall be 5/8" thick and shall have sound deadening material laminated to inside of front and lining under heat and pressure.

C. Doors and drawers shall close against stain proof rubber bumpers for quiet operation.

D. Drawers shall operate freely on four nylon suspension rollers and shall incorporate self closing feature for safety and ease of operation.

E. Sliding doors shall operate from heavy duty overhead track with concealed center guide point at bottom. Except for guide, bottom surface shall be free of obstruction for ease of cleaning.

F. Glazed doors shall be of double pan interlocking construction with bevel glass cutout in both front and lining. 1/4" plate glass shall be set against rubber glazing channel and held in place with retainer strip.

G. Shelves shall be #18 gauge mild steel or #18 gauge stainless steel as specified. Shelf shall be formed to provide 3/4" face at front and back edges with closed return flange to underside of shelf. End flanges shall be notched to nest over support clips. Shelves shall be adjustable on 1" centers.

H. Hardware — Hinges shall be semi-concealed, two knuckle, heavy-duty institutional type made of .140 steel with satin chrome finish. Hinge pin of .170 dia. shall be securely locked in place. Hinges shall be located at top and bottom corners of door for maximum strength.

Tall cabinet doors over 36" high shall be fitted with center stiffening hinges of same type as above.

Door and drawer pulls shall be die cast metal with satin chrome finish. Catches shall be spring loaded plastic roller type and shall engage a steel stop. Metal parts to have heavy chrome finish. Latching bars, when specified, shall be two point top and bottom type, spring loaded, with satin chrome actuating knob type handle.

Locks specified shall be pin tumbler paracentric key type to be keyed as directed.

Enameled steel units shall be chemically cleaned and treated in a six stage wash and phosphate spray coating process. After force drying a bond coat of rust inhibiting primer shall be applied to an average one mil. thickness and separately baked at proper curing temperature. This shall be followed by an average one mil. coat of acid resisting enamel with a maximum gloss (Gardiner gloss meter) rating of 90° and baked at proper curing temperature. Finish shall withstand all tests commercially prescribed for Hospital finishes.

8. STAINLESS STEEL TOPS—All sink and/or cabinet tops to be according to sizes and details as indicated on architectural drawings and shall be manufactured as follows:
Units shall be minimum #18 U.S. Std. Gauge (.050) type #302 non-magnetic stainless steel with drainboards, flanges, and splash sections of seamless construction. Deck surfaces shall be bonded to reinforcing members and shall be provided with suitable mounting strip for attachment to casework. All units shall be fully sound deadened.

9. OTHER RELATED ITEMS—Plumbing and electrical service fittings, composition tops, alberene or serpentine tops and sink bowls or treated wood tops where called for shall be high quality construction and produced according to specifications set up by recognized manufacturers of this type of equipment.

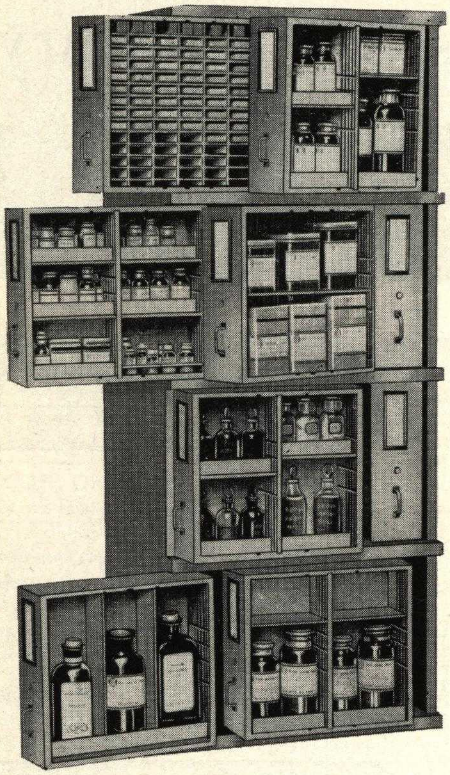
EXPERT PLANNING SERVICE

Modern, correctly engineered pharmacy layouts will be prepared promptly upon request for architects, administrators and pharmacists to fit hospital requirements. All that is needed is a correct scaled floor plan of the room.

BE SURE YOU GET GENUINE SCHWARTZ SECTIONAL SYSTEM UNITS . . . ACCEPT NO SUBSTITUTE.

Ask one of our Authorized Distributors or write us for more information regarding our Planning Service for architects and hospitals.

The pharmacy is a major element of your hospital . . . the best pharmacy equipment is the original and genuine Schwartz Sectional System.



Top Unit No. 20

Be sure you get the original and genuine SCHWARTZ UNITS
Accept no substitute

The illustration at the left shows the space saving, convenient way in which pharmaceuticals are carried in unit No. 20 of the SCHWARTZ Sectional System. The drawers swing to the left and at a 90° angle after they are pulled entirely out.

SCHWARTZ top unit No. 20 contains 20 drawers, is 24 inches wide, 60 inches high and 18 inches deep; outside measurements. Drawers are 12¾ inches high, 4 inches wide and 14⅝ inches deep; inside measurements. Movable and adjustable divisions can easily be placed where and as desired. Card holders, drawer pulls and numerals are satin chrome finish. Every item in each drawer can be alphabetically indexed by the pharmacist in loose-leaf leather binder which is furnished with all orders for two or more units.

• • •

All the containers, ranging in sizes from one dram to one quart, shown on the 16 shelves of the 8-foot long shelf unit below as well as those in front on the floor, are easily contained in the 2-foot wide No. 20 SCHWARTZ unit shown at the left, 405 containers in all. This is a typical example of the large capacity and easy accessibility of each SCHWARTZ unit.

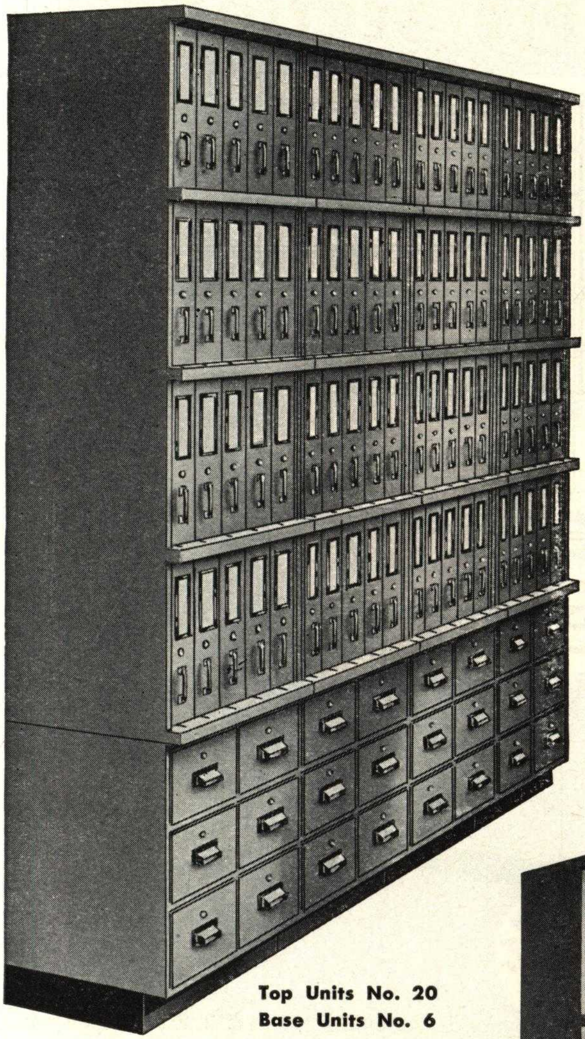
Manufactured Solely and exclusively by

GRAND RAPIDS SECTIONAL EQUIPMENT COMPANY
General Offices: 200 Fuller Bldg., 11 Fuller Ave., S.E. Grand Rapids 6, Michigan Phone GL-1-3335



Top Units No. 20
Base Units No. 6

The illustration at the left shows four standard No. 20 units of the Grand Rapids SCHWARTZ Sectional System used with four standard No. 6 drawer base units.

One No. 20 standard unit contains four rows of five pull-out and swing-around drawers, which are open on the right-hand side. Sufficient dividers, both horizontal and vertical, are provided to make the different necessary drawer arrangements.

Over-all dimensions of the No. 20 standard unit are 5′ 0″ high, 1′ 6″ deep and 2′ 0″ long. The inside drawer dimensions are 12 ¾″ high, 14 ⅝″ deep and 4″ wide.

Each No. 6 base unit contains six drawers which are fitted with one removable divider in length and one in width. This makes possible 1, 2, 3, or 4 compartments.

Over-all dimensions of the No. 6 base unit are 2′ 0″ high, 1′ 6″ deep and 2′ 0″ long. The combined height of the No. 20 unit and the No. 6 base unit is 7′ 0″.

Made in the usual Grand Rapids manner as to quality of materials and workmanship. The Grand Rapids SCHWARTZ Sectional System is superior in every way to any similar equipment offered today.

Standard finishes: Natural Maple or White Enamel.

←

Illustrated at the right are standard No. 20 units of the Grand Rapids SCHWARTZ Sectional System used with standard No. 1 cupboard bases.

These cupboard bases are for gallon bottles. Each has 3 pull-out slides, accommodating 2 one-gallon containers, and one wood shelf. The rear bottles are accessible without moving the front ones.

The No. 1 Cupboard base units are 2′ 0″ high, 1′ 6″ deep and 2′ 0″ long.

Thus, the combined height of the No. 20 standard unit and No. 1 base unit is also 7′ 0″.

No. 1 and No. 6 base units can be used together in any lineup, with either No. 16 standard units or No. 20 standard units shown here.

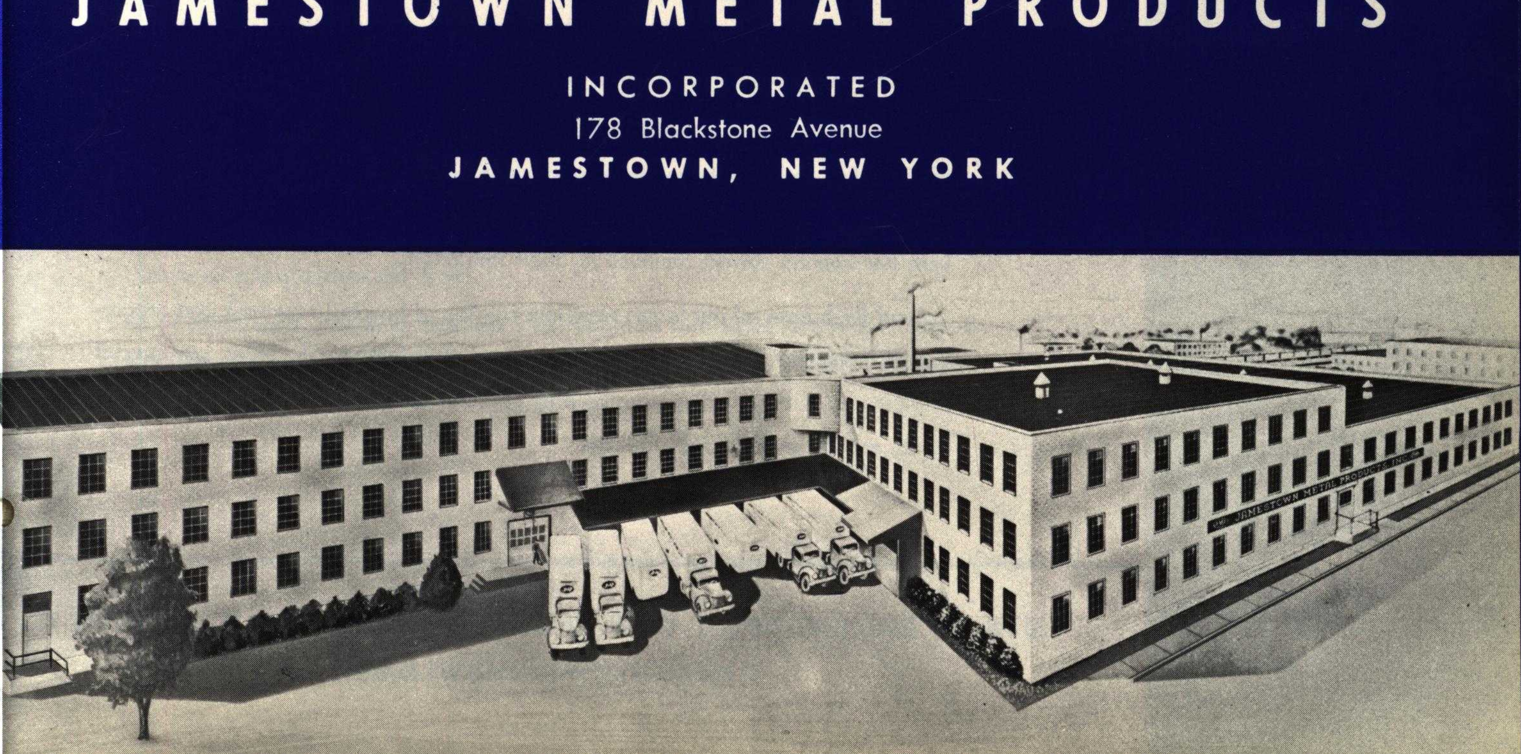
Metal CASE WORK for Hospitals

JAMESTOWN METAL PRODUCTS, INC.

JMP

JAMESTOWN METAL PRODUCTS
INCORPORATED
178 Blackstone Avenue
JAMESTOWN, NEW YORK



JAMESTOWN METAL PRODUCTS INC.

For Metal Casework It's Jamestown

WHEN fine metal casework is mentioned architects and contractors all over the U.S.A. usually think of Jamestown, New York.

Jamestown Metal Products Inc. has specialized from the start in custom-built casework for hospitals. Our plant has over 180,000 square feet of floor space devoted entirely to this type of work. Our engineering department, with its long and intensive experience in this field, can be of inestimable aid to you.

All engineering and other details and negotiations are executed at the home office in Jamestown. This practice results in prompt decisions and answers to questions, and makes for efficient controls on planning, manufacture, delivery and installations.

To facilitate delivery of our products in perfect condition and at properly scheduled times to coincide with installation plans, we ship all units from our factory to building sites in our own trailer trucks by our own responsible drivers. We have seven big transportation units for this purpose, and this service alone has been of inestimable value to many planners and contractors.

The products shown in this catalog are examples of some of the equipment built and installed by Jamestown Metal Products in hospitals and other institutions from coast to coast. They represent a few ideas that have been used by others to provide functionally correct facilities for their institutions.

Send for a copy of our large, complete catalog of hospital casework and laboratory equipment. It describes in more detail our manufacturing facilities, our special services and the products we customarily manufacture for hospitals, clinics, laboratories, schools and other institutions.

Custom-Built Casework for Hospitals

All of our cabinets are tailor-made to the architect's layout. They fit the available space **exactly**—no stock sizes to squeeze or stretch—no space-wasting fillers. Being one of the largest manufacturers of hospital casework in the country, we are equipped and staffed to handle properly the largest as well as the smallest contracts. We specialize in three types of construction, each of which has its particular advantages:

Wall and Base Cabinets

The most popular type, which can be installed anywhere along the wall, and built to any desired dimensions with no lost space.

Recessed Cabinets

Designed for recessing into the wall, or between walls, these cabinets too are built to utilize all the available space, without wastage or filler panels.

Coved Corner Cabinets

Furnished in both recessed and wall types, these are truly deluxe cases, with all interior corners coved to an ample radius for easy cleaning, and all exposed ends built with double walls. Our method of construction produces cabinets of the highest quality on the market.

High Grade Furniture Steel

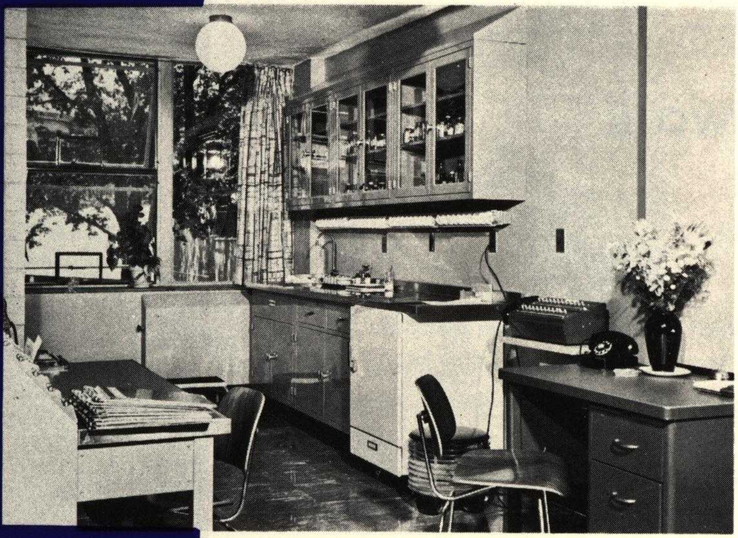
Full 18-gauge cold rolled, with baked enamel finish.

Stainless Steel

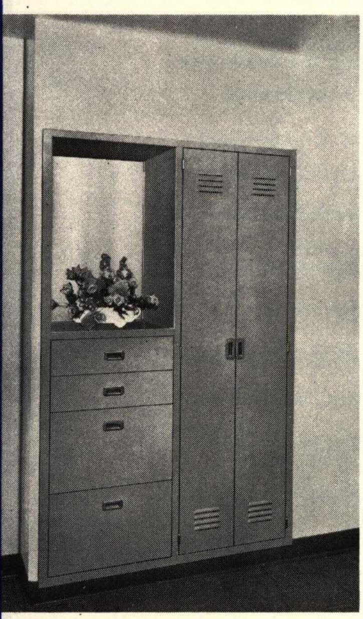
Made to our own specifications and highly polished; coved corners as smooth as a seamless drawn sink bowl.

All of these units, including stainless steel cabinets and sinks, are manufactured complete, right in our own large plant, and stored until you are ready for delivery.

METAL CASEWORK FOR HOSPITALS

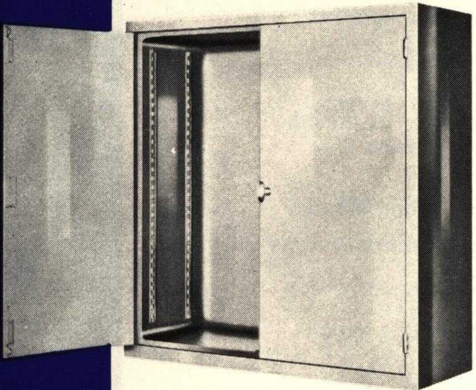


Typical JMP hospital installation, showing stainless steel sink, counter, base and wall cabinets and enameled and stainless steel chart rack and desk. The wall cabinets have sanitary slope top.



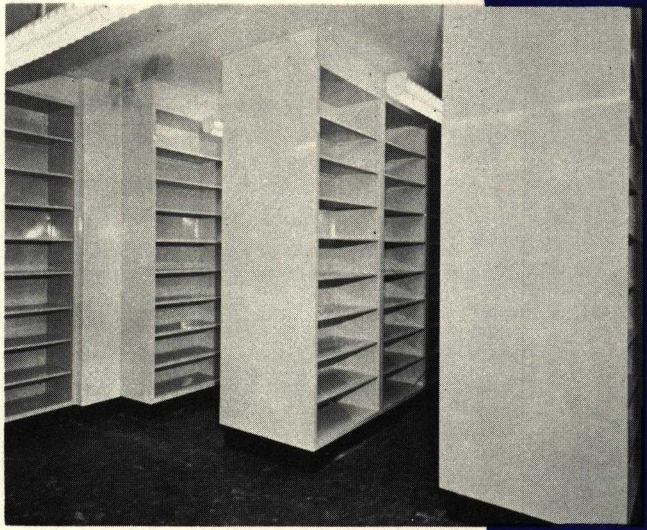
Combination Wardrobe - Dresser Unit provides hanging space for garments, and ample drawer space. Recessed sections with mirror back offers dresser feature. Furnished with or without light fixture.

These can be manufactured to your desired size and various cabinet arrangements.



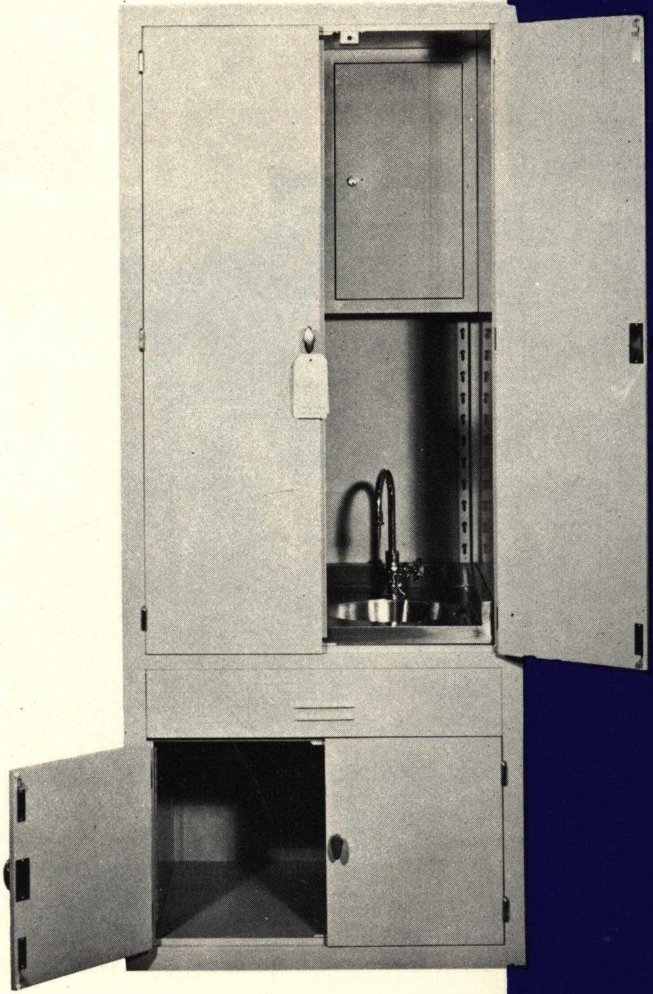
Coved Corner Cabinets of the finest construction obtainable. Interior corners are neatly coved to an ample radius for easy cleaning.

Available in stainless and enameled steel, and built only to architects' specifications.



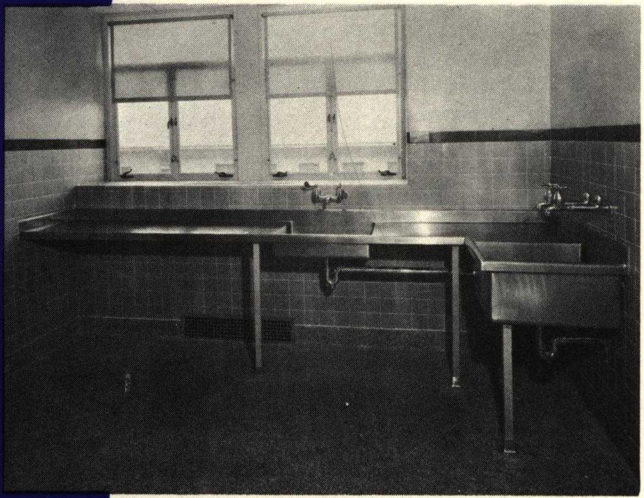
Open Storage Cabinets by JMP are unexcelled in quality. Made of 18-gauge furniture steel, with all corners gas welded and ground smooth so there are no visible joints. The cabinets arrive at the building site as complete units built to fit exactly into specified spaces without filler panels. Shelves are easily adjustable on sturdy clips—no screws or bolts.

Available in baked enamel finish to match color specifications.

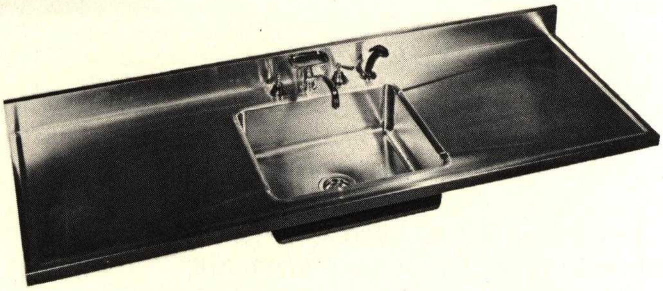


Typical Nurse's Station Unit by JMP. A popular and practical combination medicine sink and cabinet, with narcotics locker. Lock on narcotics closet operates warning signal when opened.

The cabinet can be built completely enclosed as shown, or with glass doors and exposed sink, and in enameled or stainless steel.

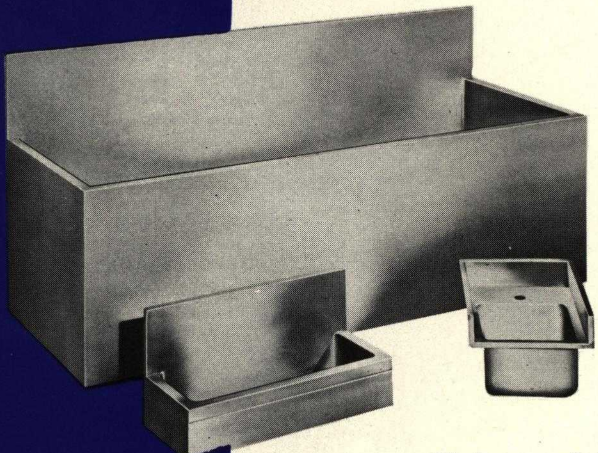


Typical JMP installation, showing welded one-piece sink and drainboard unit of stainless steel. We can fabricate such units to the most rigid specifications.



JMP offers added quality and delivery and installation control by operating its own complete manufacturing facilities for stainless steel sinks, work tops and cabinets.

Here is shown a typical unit of our own manufacture.



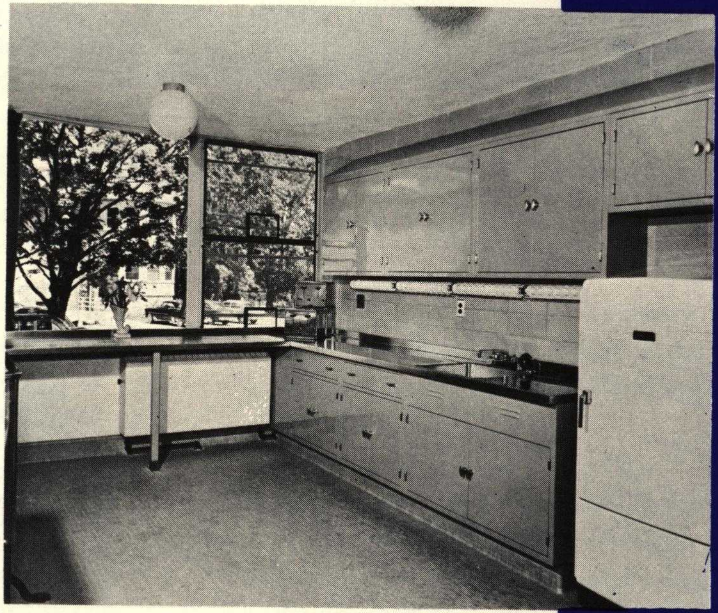
Sinks and Drainboards

Our Stainless Steel Sinks are built to your specifications in any size or proportion you desire. Made up from flat sheets with neatly rounded corners; all joints gas welded and ground to a uniform, smooth surface, leaving no visible seams or hairline cracks.

Drainboards are similarly fabricated, backed with sound-deadening insulating board. Built to your specifications, they will fit exactly into space desired, even where complicated corners are involved (as shown on opposite and preceding pages). Bowls can be located at any point desired and are welded in place with smooth rounded corners. The finished unit is all one piece, without visible seams.

This is the most sanitary and durable type of sink and drainboard available at any price.

JMP installation in a hospital food preparation center. Base and wall cabinets of enameled steel, and sink and work tops of stainless steel. Cabinet hardware is of cast bronze, precision machined, plated and polished — designed for perpetual service without necessity for replacement.



Typical JMP hospital laboratory installation. Enameled base and wall cabinets; stainless steel tops on wall tables; stone tops on center table and reagent rack.

Our cabinets and other equipment can be built to most rigid specifications for efficiency, cleanliness, heavy duty and long life.

Other JMP laboratory equipment includes sinks and fume hoods of stainless steel, Alberene stone, Chemstone and carbonized wood; also pharmacy cabinets, peg boards, etc.

Subject: Casework -
M. D. Anderson Hospital
Houston, Texas

Gentlemen:

We wish to congratulate you upon the virtual completion of your $680,000.00 hospital casework subcontract for the M. D. Anderson Hospital for Cancer Research in Houston. Your abilities have been well demonstrated and this very fine installation is a credit to your entire organization. We are proud to have been associated with you on this project.

Yours very truly,

FARNSWORTH & CHAMBERS CO., INC.

By: Alan C. Farnsworth
Alan C. Farnsworth

acf:mh

This letter, like scores of others in our files, attests to our knowledge of requirements in the field of metal casework; to our engineering skills in designing and manufacturing; to our efficient handling of contract negotiations; to our precision scheduling of manufacture, delivery and installation of equipment and to our satisfactory practice of sincere and honest service to our clients.

We are proud of our relationships with architects, contractors, hospital boards, government agencies, school boards and other institutional planners.

Following is a greatly condensed list of institutions for which we have performed important contracts. Many creditable references are omitted for lack of space, though they were equally important in building our reputation.

Because of its national significance we are particularly proud of the important part we played in the recent renovation program at the White House in Washington.

We should be happy to furnish names of architects and contractors connected with our installations in the following or other institutions:

Note: We are happy to furnish any institutional planner or contractor with our complete catalog showing manufactured products, construction details, specifications and other planning helps.

MORTUARY EQUIPMENT

REFRIGERATORS

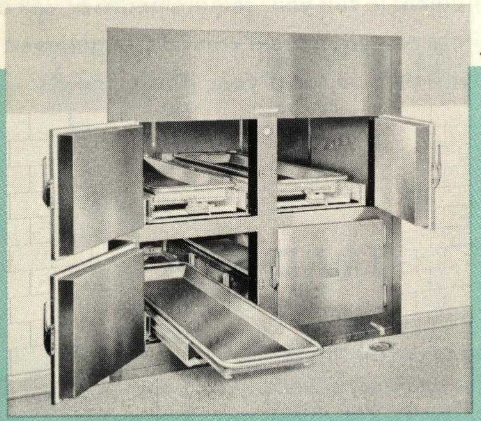
Over 40 years ago Jewett built the first mortuary refrigerator. Today Jewett, the acknowledged leader in its field, offers both standard and custom mortuaries designed to meet your specific requirements. Recessed or free-standing models are available with end opening, side opening, or pass through units.

Jewett mortuary refrigerators are likewise available in any capacity and arrangement of body space desired. Cabinets are of sectional construction, insuring facility of installation in any area. The sections are easily carried thru standard size doors.

Fronts are finished in 18/8 polished stainless steel, with interiors of white vitreous porcelain enamel. All mortuaries are insulated with 4″ Styrofoam #33. Doors are finished to match exteriors and mounted on heavy duty chrome plated hardware. All Jewett mortuary doors are equipped with device that eliminates sweating and condensation around doors. All cabinets are furnished with drains and water seal trap.

OPTIONAL FEATURES:

- **Interior vaporproof light**
- **Stainless steel interior**
- **Stainless steel floor pan, and interior door pans**



4R2W

END OPENING

End-opening mortuaries are for multiple installations or where space permits. Available in any arrangement in multiples of 1, 2 or 3 cadavers up to 126 capacity. It is desirable to have at least 15 feet of space in front of end-opening mortuaries for most satisfactory operation. Mortuaries are available with either remote or self-contained compressors. End-opening mortuaries have a four piece cadmium plated telescopic carriage operating on ball bearing rollers. The assembly comes complete with stainless steel tray.

SHOWN ARE A FEW OF THE POSSIBLE MULTIPLE INSTALLATION ARRANGEMENTS

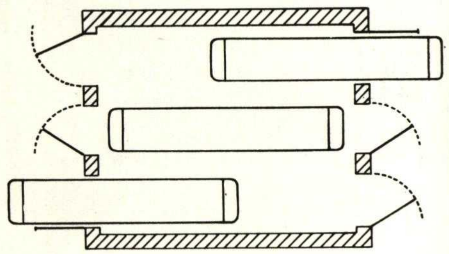
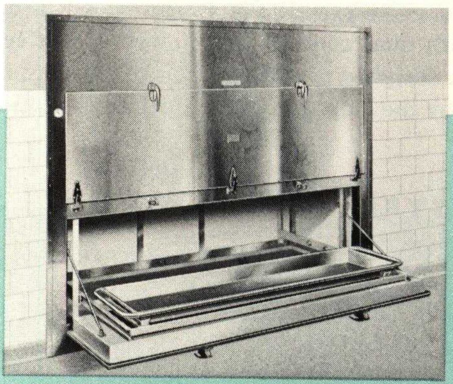
PASS-THROUGH MODELS

All end-opening mortuaries can be provided with doors at both ends for loading in one room and unloading in another as shown in this drawing.



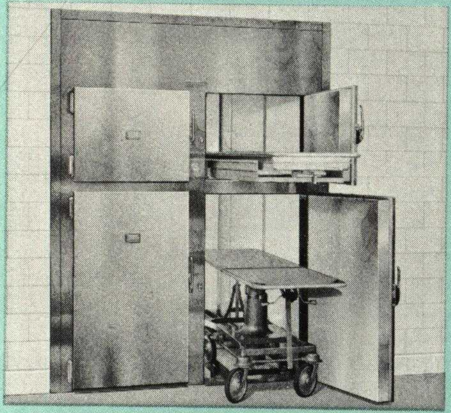
Design or specifications subject to change without notice



SIDE OPENING

2SR

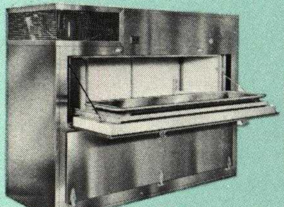
This type is useful where floor space is limited. Door projects 2'4" when opened. It is desirable to allow at least 5' of work area. Side acting mortuaries have a three piece cadmium plated telescopic carriage operating on ball bearing rollers. The assembly comes complete with stainless steel tray. Available with either remote or self-contained compressors.



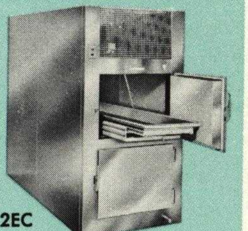
FOUR-BODY SPECIAL

4SP2W

Illustrated models show roll-in type mortuary with standard Jewett mortuary telescopic carriage assembly in the upper compartments. Bottom compartments designed to handle stretcher carts. As with all Jewett products modifications of this construction are readily available to meet your specific needs.



2SC

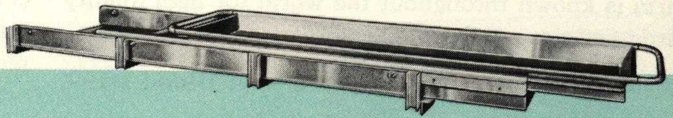


2EC

FREE-STANDING SELF-CONTAINED

These free-standing self-contained mortuaries are especially desirable for use in existing rooms where new construction is not planned. They can be shipped in one piece with all mechanical equipment ready for operation or in sections to pass through standard door openings. Available in one and two body models.

RACKS and TRAYS



All Jewett mortuary carriages and frames are constructed of heavy gauge steel, cadmium plated after fabrication. Rack assemblies are equipped with telescopic carriages which support the 20 gauge stainless steel tray for its entire extended length. Carriage frame assemblies can be furnished for special installations for use in walk-in type refrigerators complete with special supports.

Assembly complete:	Tray only:
2' 3⅝" wide	1' 10" wide
7' 3¼" deep	7' 1⅜" deep
7¾" high	3½" high

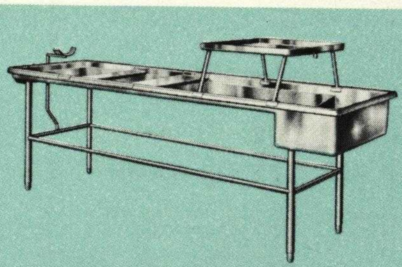
STAINLESS STEEL AUTOPSY TABLES

Both the Standard and Deluxe model Autopsy Tables are masterpieces of design . . . the result of consultations with leading pathologists throughout the country.

DISTINCTIVE FEATURES

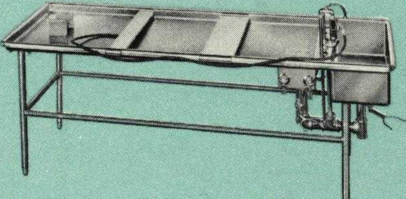
- Polished surface free from pit marks, weld seams and scale
- Seamless, smooth welded construction
- All radius corners
- No crevices for bacteria
- Adjustable removable body supports
- 1⅝" stainless steel tubular legs
- Adjustable sanitary bullet-type feet
- Length 8' 3¾"; width 30¼"; height 36"

Special models built to specification



MODEL "S"—STANDARD AUTOPSY TABLE

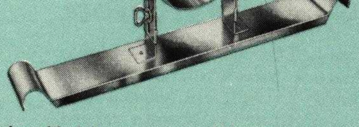
Additional features include a stainless steel adjustable head rest and stainless steel specimen and instrument tray.



MODEL "D" DE LUXE AUTOPSY TABLE

Additional features include a solid rubber head rest and Hydroaspirator with built-in automatic Vacuum Breaker and plumbing fittings illustrated.

ACCESSORIES



Available as an added feature, stainless steel adjustable head rest slides on rim of table for exact positioning.

Available as an added feature on the deluxe model, stainless steel specimen and instrument tray.

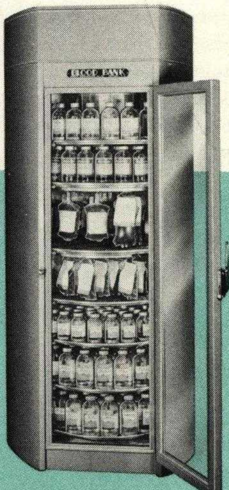
BLOOD BANK EQUIPMENT

Over a century of experience and constant research has made Jewett the leader in the field of blood refrigeration. This firm is known throughout the world for high quality standards and superior workmanship.

Jewett has developed a complete line of Blood Bank Refrigerators to fill the specific need of all blood banking institutions, both large and small. All Jewett Blood Banks come equipped with dual controls and Jewett alarm system and have been designed to meet the minimum requirements established by the Department of Health, Education and Welfare.

CYLINDRICAL

MODEL 2

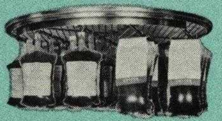


MODEL 1

The unique design of the Jewett Cylindrical Blood Bank saves floor space; and the full view, triple-pane door of cloud-proof plate glass makes blood selection easier. Additional important features include neon-illuminated interior, and revolving shelves that insure convenience of storage, selection and inventory. Each unit is provided with the Jewett alarm system as well as the automatic controls that are factory-set to produce and maintain a cabinet temperature of 39.2°F. to 42.8°F. (4°C. to 6°C.). The Jewett Cylindrical Blood Bank is precision-built to give years of trouble-free service.

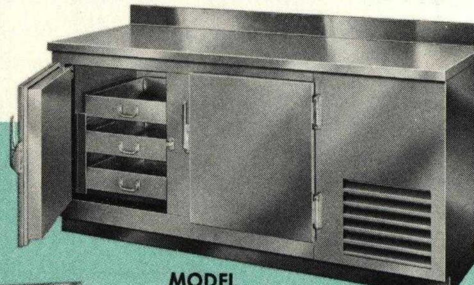
ADJUSTABLE REVOLVING SHELVES FOR BOTTLES OR BAGS

Revolving shelves put every bottle in front . . . in sight . . . in easy reach.



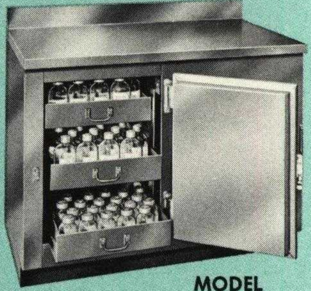
If various blood types are stored on one shelf, they can be kept separate and each bottle is readily available with a turn of the shelf. A protective ridge prevents bottles from slipping off. Now optionally available in the Jewett Blood Bank are shelves equipped to hold the new plastic blood bags. A stainless steel attachment fastened underneath the shelves holds the bags safely and securely, and still allows the shelf to revolve for ease of selection.

COUNTER TYPE



MODEL CT4

MODEL CT1



MODEL CT2

Jewett has developed these Counter Top Blood Banks to answer the need of the small hospital and clinic for ample blood storage capacity, together with a flat counter surface providing the most economical use of laboratory space. These models are also available without counter tops for undercounter application. Each unit is provided with the Jewett alarm system as well as with automatic controls that are factory-set to produce and maintain a cabinet temperature of 39.2° F. to 42.8° F. (4° C. to 6° C.)

SPECIFICATIONS	MODEL 1	MODEL 2	CT-1	CT-2	CT-4

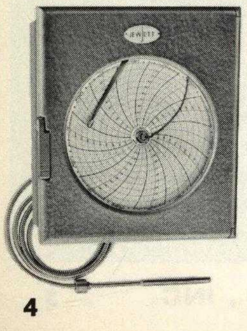
FINISHES: Models #1 and #2 Standard, grey ripple exterior, white interior. Also available in stainless steel. Models CT-1, CT-2, CT-4, stainless steel interior and exterior.



BLOOD TEMPERATURE RECORDER

Jewett's Recording Thermometer, available as an added feature on all models, is the ultimate safeguard for efficient economical blood storage. A continuous accurate record of stored blood temperature is graphed and, in the event of power failure, a complete record of the rise and fall of the temperature is recorded. A supply of 100 eight-inch easily read charts is provided for recording blood temperatures exactly in either Fahrenheit or Centigrade.

JEWETT
BLOOD BANK ALARM
TYPE:
ON
OFF

THE JEWETT ALARM SYSTEM

Standard equipment on all Jewett Blood Banks, this alarm system gives both audible and visual warning to hospital personnel should there be a dangerous fluctuation of temperature. Only the changes in temperature of the bottle's contents are signaled, while minor, temporary changes in circulating air temperatures do not actuate this unique alarm system.

Variations in size, shape and components on any Jewett Refrigerator can be arranged and designed to your specifications.

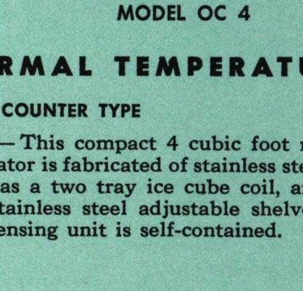
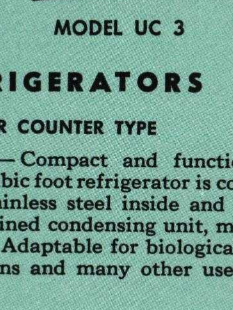
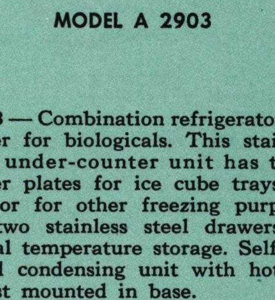
STAINLESS STEEL LAB REFRIGERATORS



MODEL OC 4



MODEL UC 3



MODEL A 2903

NORMAL TEMPERATURE REFRIGERATORS

OVER COUNTER TYPE

OC 4 — This compact 4 cubic foot refrigerator is fabricated of stainless steel and has a two tray ice cube coil, and two stainless steel adjustable shelves. Condensing unit is self-contained.

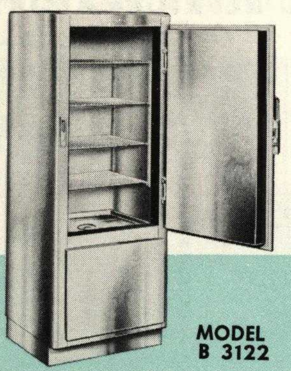
UNDER COUNTER TYPE

UC 3 — Compact and functional, this 3.8 cubic foot refrigerator is constructed of stainless steel inside and out. Self-contained condensing unit, mounted in base. Adaptable for biologicals, nurses' stations and many other uses.

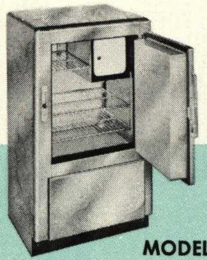
A 2903 — Combination refrigerator and freezer for biologicals. This stainless steel under-counter unit has three freezer plates for ice cube trays, ice caps or for other freezing purposes, and two stainless steel drawers for normal temperature storage. Self-contained condensing unit with hot gas defrost mounted in base.

Model	Capacity	Height	Width	Depth	Con. Unit
OC-4	4.4 Cu. Ft.	34½″	30″	24″	⅛ H.P.
UC-3	3.8 Cu. Ft.	34½″	24″	24″	⅛ H.P.
A-2903	3 Cold Plates and 2 storage drawers	34½″	30″	24″	⅛ H.P.

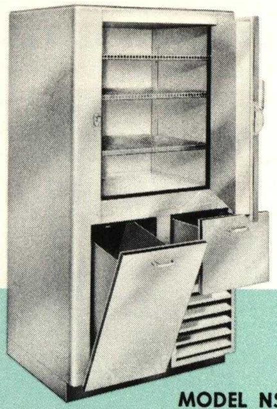
STAINLESS STEEL NURSES' STATIONS and/or UTILITY ROOM REFRIGERATORS



MODEL B 3122



MODEL NS 4



MODEL NS 13

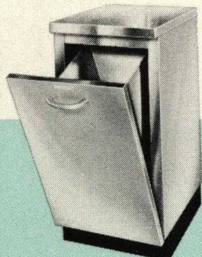
B 3122 — Available in two sizes, 8 and 10 cubic feet capacity. This self defrosting diet kitchen or utility room refrigerator has cold wall construction providing additional storage space, and four stainless steel adjustable shelves.

NS 4 — This 4 cubic foot refrigerator is designed for use in nurses stations and floor kitchens. It has 2-tray ice cube coil, and three adjustable stainless steel shelves.

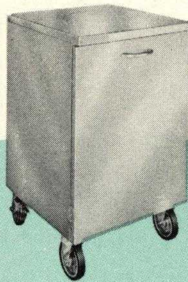
NS 13 — This 13 cubic foot cold wall refrigerator, one hundred lb. ice storage bin and large capacity utility drawer is combined in one unit to form a complete and efficient nurses' station unit.

Model	Capacity	Height	Width	Depth	Con. Unit
B-3122-8	9.6 Cu. Ft.	69"	28"	22"	⅛ H.P.
B-3122-10	11.7 Cu. Ft.	69"	30"	24"	⅛ H.P.
NS-4	4 Cu. Ft.	42"	24"	23"	⅛ H.P.
NS-13	100 lb. & 13 Cu. Ft.	72"	36"	30"	⅛ H.P.

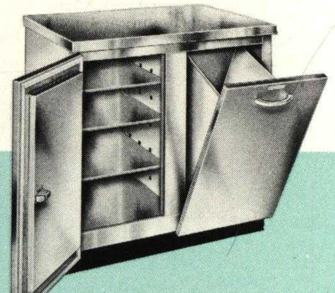
STAINLESS STEEL CRACKED ICE BINS



MODEL R 100



MODEL R 150P



MODEL R 200

R 100 and R 150 — Stainless steel top, front, ends and counterbalanced tilting ice bin. Fully insulated complete with drain. Special sizes on request. Optionally available for under counter installation.

R 100P and R 150P — the same design and construction as stationary models with 4" casters, 2 stationary and 2 swivel with brakes. Efficient, economical and functional, this model is easily portable and is available as shown with 150 lb. capacity or with 100 lb. capacity.

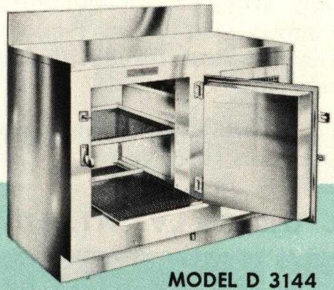
R 200 — 4.5 cu. ft. storage space combined with 100 lb. crushed ice bin. Engineered to conduct cold air from ice bin to stainless steel shelved storage compartment thus keeping stored products cool. Optionally available for under counter installation.

Model	Capacity	Height with Base	Height w/o Base	Width	Depth
R-100	100 lbs.	36"	32"	18"	25"
R-150	150 lbs.	36"	32"	24"	25"
R-200	100 lbs. & 4.5 cu. ft.	36"	32"	36"	25"

R-100P and R-150P are 37¼" high. All other specifications are the same.

STAINLESS STEEL MILK FORMULA REFRIGERATORS

MODEL MF 28



MODEL D 3144

MODEL D 3127

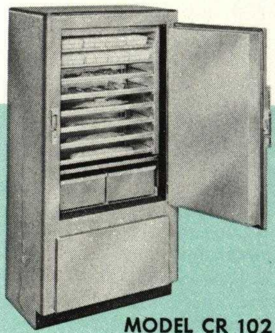
MF 28 — 8 adjustable stainless steel shelves have a capacity of 76 baskets holding 6 bottles or 456 bottles. Three inches of styrofoam insulation, automatic defrosting, wedge type blower coil and heavy-duty air cooled condensing unit create continuous temperature control.

D 3144 — This 36″ high counter top model is fitted with two stainless steel pull-out shelves which have a 72 bottle capacity. It is equipped with mullion-type self-defrosting blower coil and a heavy-duty air-cooled condensing unit.

D 3127 — Counter top model 36″ high, has a 144 bottle capacity on its four pull-out stainless steel shelves. Equipped with mullion-type self-defrosting blower coil, it has a heavy-duty air-cooled condensing unit.

Model	Bottle Cap.	Capacity	Height	Width	Depth	Con. Unit
MF-28	456	28 Cu. Ft.	72″	48″	30″	½ H.P.
D-3144	72	5.7 Cu. Ft.	36″	48″	29″	⅛ H.P.
D-3127	144	16 Cu. Ft.	36″	75″	29″	¼ H.P.

STAINLESS STEEL COLD PACK and/or ICE CUBE FREEZERS



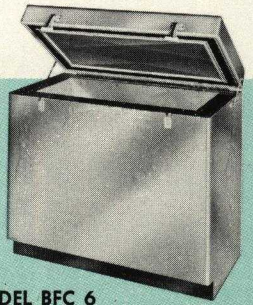
MODEL CR 102

MODEL A 2714

CR 102 (illus.) has a capacity of 64 lbs. of ice cubes, CR 103 a 96 lb. capacity. Cold-pack and/or ice-cube freezers for installation at central supply or nurses stations they are designed to store both freezer bags and ice cubes. Stainless steel fabricated inside and out, they come equipped with hot gas defrosting unit which defrosts in 5 minutes.

A 2714 — Cold-pack and/or ice cube freezer combined with 13 cubic feet of normal temperature storage, for installation at central supply or nurses stations. Stainless steel fabrication inside and out including adjustable stainless steel shelving. Freezer is equipped with hot gas defrosting unit which operates in 5 minutes.

STAINLESS STEEL BONE FREEZER



MODEL BFC 6

BFC 6 — 6 cubic foot freezer chest for use where low temperatures (−10° F.) are needed for freezing bones and specimens. Interior and exterior fabricated of stainless steel, it has a spring balanced lid, self-contained condensing unit.

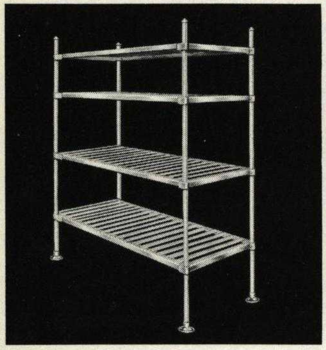
Model	Capacity	Height	Width	Depth	Con. Unit
CR-102	512 Cubes 64 lbs.	57″	28″	22″	¼ H.P.
CR-103	768 Cubes 96 lbs.	69″	28″	22″	⅓ H.P.
A-2714	384 Cubes & 13 Cu. Ft.	69″	54″	24″	⅓ H.P.
BFC-6	5.6 Cu. Ft.	36″	42″	24″	⅓ H.P.

JEWETT STATIONARY AND MOBILE SHELVING UNITS

GENERAL FEATURES:

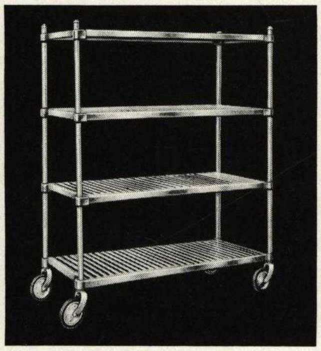
- Tubular post construction provides completely exposed, easily cleaned surface, sturdy support and allows for easy adjustment, addition or removal of shelves.
- All posts furnished with stainless steel caps.
- Multiple sections are easily formed in any arrangement or shape, by the simple addition of sections to the existing posts fitted with double brackets.
- All shelves are removable, no bolting or tools required.

DIE-FORMED STAINLESS STEEL OR GALVANIZED



MODEL R-122S — Self-supporting, die-formed stainless steel shelving. Fabricated from #16 gauge, type #302 stainless steel, these units are supported on stainless steel tubular posts equipped with wedge fit adjustable brackets and self-leveling feet.

MODEL R-122G — Self-supporting, die-formed galvanized shelving. Die-formed from #16 gauge steel sheets, supported on high carbon tubular steel posts equipped with vertically adjustable wedge fit brackets and self-leveling feet, hot dipped galvanized after fabrication.



MODEL R-115S — Stainless Steel Medium Duty Mobile Unit. Same specifications as R-122S, with posts on 4 stem-type swivel casters, two of which are equipped with brakes.

MODEL R-115G — Galvanized Medium Duty Mobile Unit. Same specifications as R-122G shelving, with posts mounted on 4 stem-type swivel casters, two of which are equipped with brakes.

MODEL R-117S — Stainless Steel Heavy Duty Mobile Unit. Same specifications as R-122S shelving, mounted on 4 stem-type swivel casters, two of which are equipped with brakes. Solid lower deck insures rigidity and provides additional shelf space.

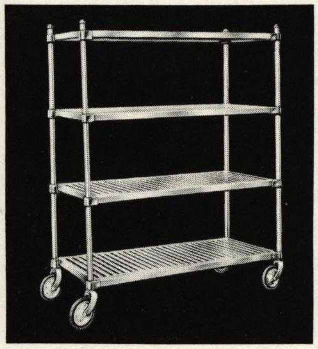
MODEL R-117G—Galvanized Heavy Duty Mobile Units. Same specifications as R-122G shelving, mounted on 4 stem-type swivel casters, two of which are equipped with brakes. Solid lower deck insures rigidity and provides additional shelf space.

Optional — back ledges for shelving.

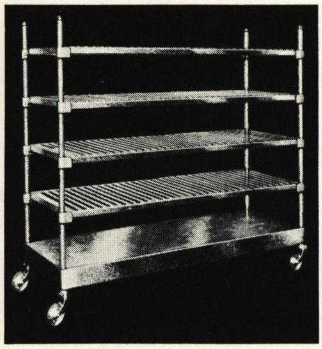
Optional — Back and/or side ledges to prevent falling. Bumper wheels to prevent marking or scuffing of walls.

SLATTED GALVANIZED

MODEL R-120 — Galvanized self-supporting unit Shelving is fabricated of #12 gauge steel with 1" wide slats flush riveted 1" apart. Posts are equipped with stainless steel adjustable, self-leveling feet.



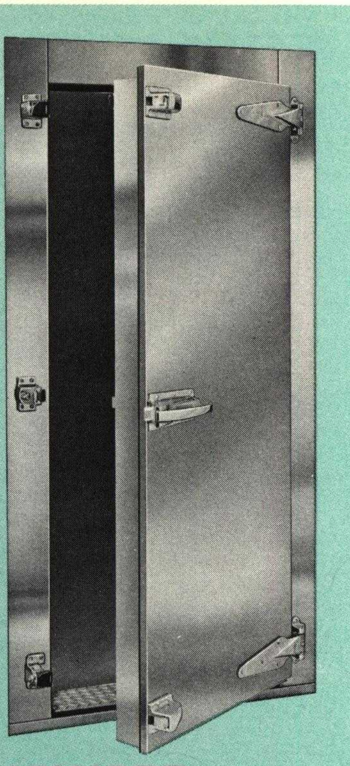
MODEL R-114 — Slatted Galvanized Medium Duty Mobile Unit. This maneuverable unit has posts mounted on 4 stem-type swivel casters, two of which are equipped with brakes and insure maximum ease of maintenance in refrigerated areas.



MODEL R-116 — Slatted Galvanized Heavy Duty Mobile Unit. The heavy duty chassis is equipped with 4 stem-type swivel casters, two of which are equipped with brakes. Solid lower deck insures rigidity and provides additional shelf space.

Optional — Back ledges for shelving.

Optional — Back and/or side ledges to prevent materials from falling; Bumper wheels to prevent marking or scuffing of walls.



JEWETT DE LUXE ALL STAINLESS STEEL WALK-IN REFRIGERATOR DOORS

The exterior of the door and door frame is covered with 18 gauge stainless steel (#4 finish) carried around the overlap of the door with all corners welded and ground smooth. The door sill is 12 gauge stainless steel. The interior frame jambs are 18 gauge stainless steel (#4 finish). The interior door pan is 20 gauge stainless steel with corners welded and ground smooth. Door pan is protected by a 14" high 14 gauge stainless steel kick plate. The breaker strip is of rigid, high gloss, heat-insulating composition approximately 1/8" thick. The insulation includes 2 or more courses of 2" thick styrofoam #33. The approved sponge-type gasket, fastened with concealed stainless steel fasteners, is impervious to grease.

Each door is fitted with heavy-duty, forged bronze, chrome plated hardware, including self-closing fastener, adjustable strike and 2-point latch. The inside door has release mechanism which operates even when exterior door is locked. The ball-bearing action door is fitted with 3 hinges, butt-strap type, 16" long. Heater cables are installed in door frames for freezer room doors for the prevention of frost build-up. We will furnish complete specifications and drawings for your requirements without obligation.

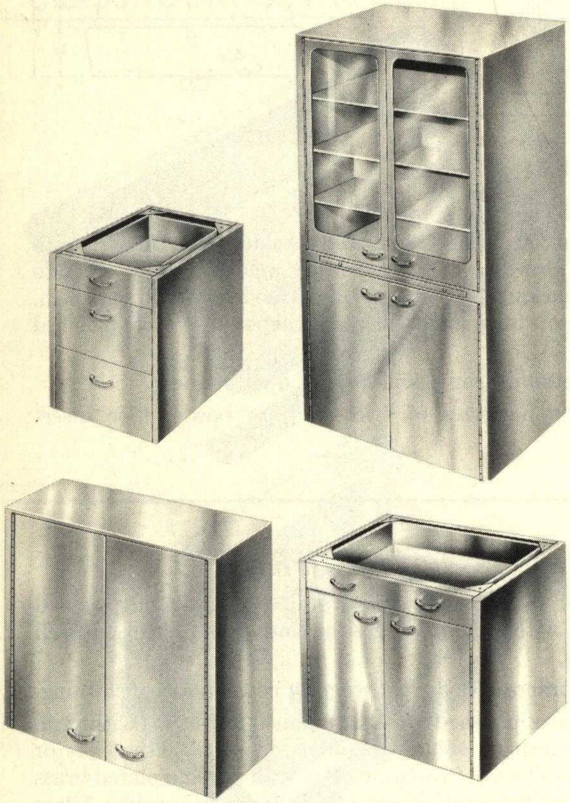
CABINETS FOR HOSPITAL AND LABORATORY INSTALLATIONS



The New Just Line stainless steel cabinets conform to the highest standards of construction and the durability of type 302 18-8 stainless steel combine to assure installations suitable for lifetime service.

SPECIFICATIONS

WALL CABINETS shall be of flush type construction. Sizes range from 15″ through 48″ in length, from 24″ through 48″ in height, and 12¾″ in depth. Material shall be not less than 18 gauge stainless steel. Front face of cabinet shall be seamless welded, polished appearance.

BASE CABINETS shall be of flush type construction. Sizes range from 15″ through 48″ in length, 30½″ standard height (36″ overall with sub base and top) and 24¾″ in depth. Material shall be not less than 18 gauge stainless steel. Front face of cabinet shall be seamless welded, polished appearance.

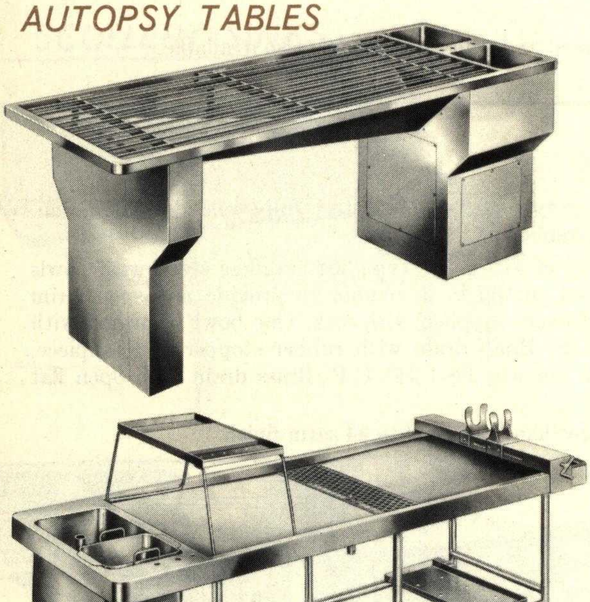
FINISH—All exposed exterior surfaces shall be polished to #4 satin finish.

All interior surfaces, including interiors of glazed door units and open shelving units shall be #2B finish, cleaned but not polished.

ACCESSORIES AND SPECIAL UNITS—The Just Line of stainless cabinets includes accessories and special features such as slope tops, sub bases, sliding shelves, special drawers, narcotic lockers, ice and plaster bins, recessed cabinets, open shelving, and many items not illustrated here.

A brochure and specifications will be mailed on request.

AUTOPSY TABLES

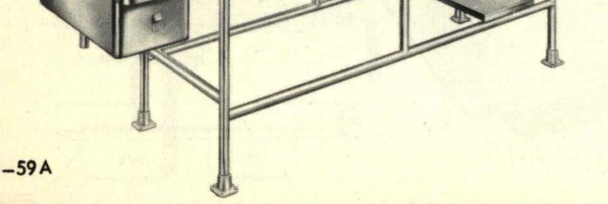


MODEL C-15178 SPECIFICATIONS

Table and basins fabricated of #16 gauge type 302 stainless steel, seamless welded construction, with interior radius corners for easy cleaning.

Rack consists of ⅝″ O.D. stainless tubular rods seated in stainless bar supports, allowing complete drainage of fluids from work level. Entire rack disassembles for complete cleansing after use.

Table supported on 1¼″ I.P.S. painted pipe legs. Legs, supply and drain connections concealed by stainless steel base enclosures fitted with access panels. Interior of base enclosures and underside of basins thoroughly sound deadened.



MODEL C-13867 SPECIFICATIONS

Table and Basins fabricated of #16 gauge type 302 stainless steel, seamless welded construction.

Table pitched to center drain with removable perforated stainless steel grating. Furnished with sliding instrument tray with cork cutting board, removable specimen basin, sliding tray for specimen bottle, adjustable head clamp (optional).

Table mounted on 1⅝″ O.D. stainless tubular leg frame.

Exposed surfaces polished to #4 finish.

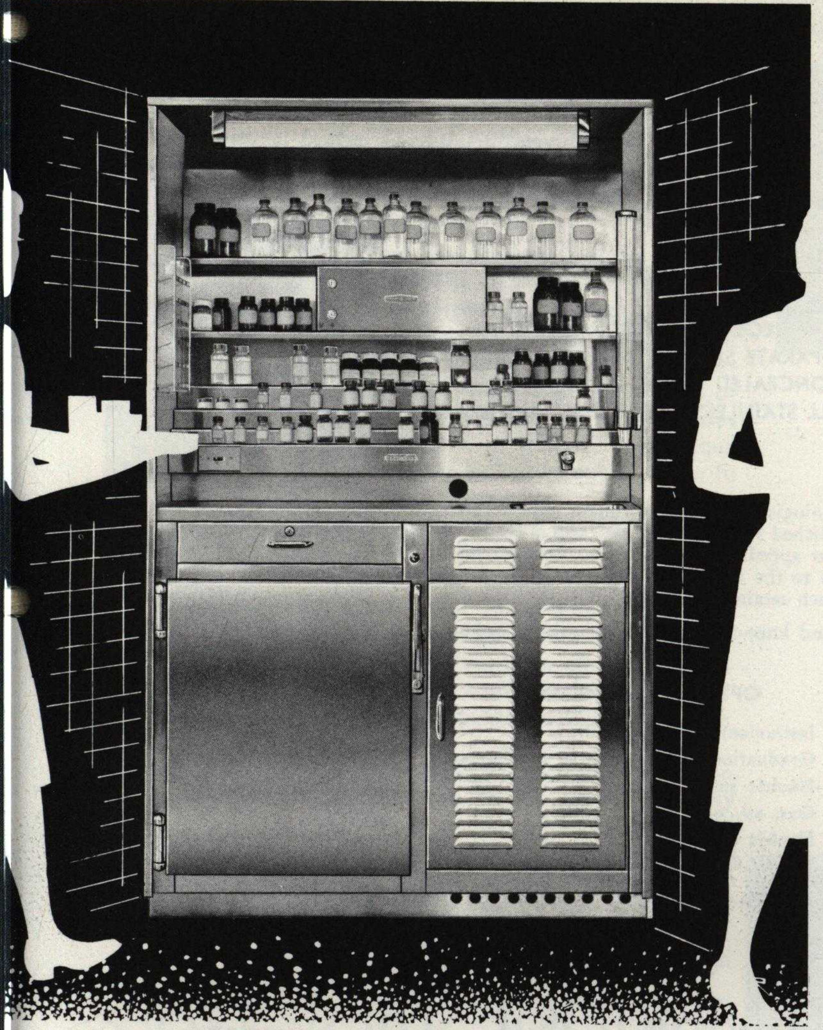
MARKET FORGE CO.

MEDI-PREP®

MEDICINE STATION



All necessary components for medicine storage, preparation and dispensing combined in **one** scientifically designed packaged unit.

SAVES NURSES' TIME —
allows more hours for **Patient Care.**

REDUCES ERROR —
all medicines easily seen and reached without distraction.

SAVES SPACE —
combines many units into one self-contained installation.

ELIMINATES DESIGN PROBLEMS —
no need to plan special units.

COSTS LESS TO INSTALL —
only one water, drain and electric connection.

CUTS CONSTRUCTION COSTS —
eliminates separate plumbing and room lighting.

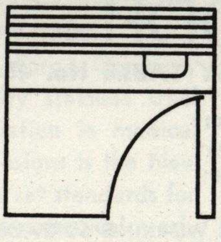
COSTS LESS THAN SEPARATE UNITS —
much less than custom units.

EASY TO CLEAN AND MAINTAIN —
all stainless steel; condensing unit guaranteed 5 years.

The MEDI-PREP MEDICINE STATION is the result of extensive time and motion studies taken in collaboration with hospital consultants and architects.

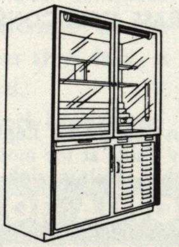
Send for illustrated folder H-129 and detailed spec. sheet H-6950 or call our nearest representative as listed on page 4.

MARKET FORGE MEDI-PREP MEDICINE STATION MAY BE INSTALLED IN *EXPOSED* LOCATION OR IN A *SEPARATE* ROOM



SEPARATE ROOM

In planning new construction, the most popular arrangement is the unit without doors, enclosed in a small room.



SECURITY DOORS

(OPTIONAL)

For existing installations where it is not practical to have a separate room, the upper portion of the Medi-Prep is available with tempered plate glass doors in a heavy duty stainless steel frame with separate lock.

ELEVEN TIME AND SPACE SAVING FEATURES . . .

- Tiered medicine shelves for convenient, efficient arrangement.
- Double locking narcotics cabinet complete with automatic warning light.
- 4 cu. ft. refrigerator with 1/8 horsepower, 115 volt compressor.
- Stainless steel rectangular sink with radius corners.
- Push button cold water faucet.
- Cup dispenser handy to faucet.
- Medicine card rack for safe, accurate time control.
- Full width, no glare fluorescent light.
- Two large shelves provide extra storage facilities.
- Waste cup disposal chute with removable container.
- Lifetime stainless steel construction.

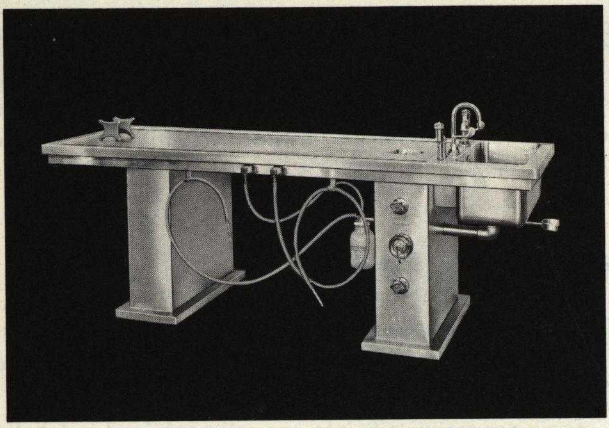
MARKET FORGE AUTOPSY TABLES



MIAMI MODEL

AUTOPSY TABLE No. 45-5200

- LENGTH 101''
- WIDTH 32½''
- HEIGHT 34''

- ONE-PIECE WORKING SURFACE.
- SEPARATE SINK.
- CONCEALED PIPING.
- ALL STAINLESS STEEL CONSTRUCTION.

MIAMI MODEL AUTOPSY TABLE NO. 45-5200

The Miami Model Autopsy Table meets the requirements of those pathologists who prefer a plain unperforated table top with a separate integral sink. The unbroken surface of the polished stainless steel table top is mounted on pedestals which conceal and enclose all piping, resulting in a neat appearing, durable, and easy to clean installation. A raised rim around the entire surface of the top pitches to the drain, assuring positive removal of all liquids to the waste line through a large removable strainer which retains small parts.

The built-in sink is provided with a wrist-controlled water supply and knee-controlled drain valve allowing convenient facilities for washing of parts or rinsing of sponges.

STANDARD EQUIPMENT

- Flexible rubber hose and nozzle for irrigation.
- Tempered water through lever controlled mixing valve.
- Water powered aspirator with hose, nozzle and graduated bottle for suction purposes.
- Removable rubber headrest.
- All stainless steel construction.

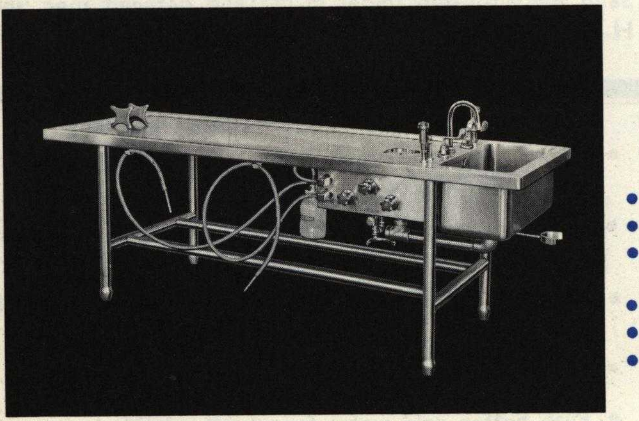
OPTIONAL EQUIPMENT

- Instrument and cutting tray.
- Graduation of top edge in centimeters.
- Electric suction pump.
- Gas, air, or electrical outlets.
- Electric disposer unit.
- Trough Flushing System.

Specification Sheet Number B-6902 providing complete detailed information on the Miami Model Autopsy Table will be sent promptly upon request.

MIAMI MODEL SUGGESTED SPECIFICATIONS

One (1) only, Miami Model No. 45-5200 Market Forge Autopsy Table. To be all stainless steel construction. Provide one (1) rubber headrest, stainless steel removable instrument tray, and graduation of top edge in centimeters. Overall dimensions shall be 101'' long, 32½'' wide, and 34'' high. To be as manufactured by Market Forge Company, Everett, Massachusetts.



CAMBRIDGE MODEL

AUTOPSY TABLE No. 45-5300

- LENGTH 101''
- WIDTH 32½''
- HEIGHT 34''

- SMOOTH WORKING SURFACE.
- BUILT-IN SINK.
- ALL STAINLESS STEEL CONSTRUCTION.

CAMBRIDGE MODEL AUTOPSY TABLE NO. 45-5300

The Cambridge Table was designed by Doctor H. E. MacMahon, Pathologist-in-Chief, New England Medical Center, Boston, Mass., and was built to provide a completely equipped Autopsy Table at the most economical price. The smooth working surface is one-piece, polished stainless steel, with a built-in sink at one end, supported by a tubular frame mounted on adjustable sanitary feet.

The top slopes to the drain at one end and the edge of the table is raised to assure positive removal of all liquids to the waste line. A perforated removable strainer is provided to prevent the loss of small parts. The sink is equipped with a wrist-controlled water supply and knee-controlled drain valve for ease of operation. The entire table is fabricated of stainless steel for durability, appearance, and ease of cleaning.

STANDARD EQUIPMENT

- Flexible rubber hose and nozzle for irrigation.
- Water powered aspirator with hose, nozzle and graduated bottle for suction purposes.
- Rubber headrest.
- All stainless steel construction.

OPTIONAL EQUIPMENT

- Instrument and cutting tray.
- Graduation of top edge in centimeters.
- Electric suction pump.
- Gas, air, or electrical outlets.
- Electric disposer unit.
- Trough Flushing System.

Specification Sheet Number H-6903 providing complete detailed information on the Cambridge Model Autopsy Table will be sent promptly upon request.

CAMBRIDGE MODEL SUGGESTED SPECIFICATIONS

One (1) only Cambridge Model No. 45-5300 Market Forge Autopsy Table. All stainless steel construction. Provide one (1) rubber headrest, stainless steel instrument tray, and graduation of top edge in centimeters. Overall dimensions shall be 101'' long, 32½'' wide, 34'' high. To be as manufactured by Market Forge Company, Everett, Massachusetts.

BOSTON MODEL

AUTOPSY TABLE No. 45-5150

with Rota-Lift adjustment

• LENGTH 84½" • WIDTH 30⅝" • HEIGHT 32½" to 37"

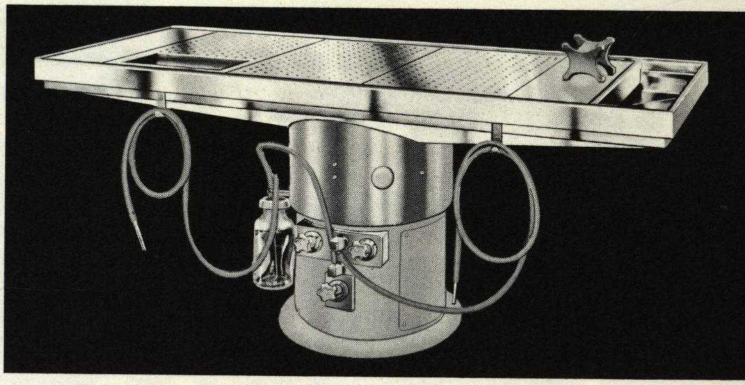
The original Boston Model Autopsy Tables were installed in the Boston City Hospital in 1931. Continued development has refined this table into the most modern piece of equipment for the pathologist.

The Rota-Lift top provides adjustment of the working height to the most comfortable operating position and may also be used during a lengthy autopsy to provide a welcome change in procedure to relieve fatigue and strain. The top is easily raised or lowered by a foot operated hydraulic pump. The top, which rotates in an arc of 90°, is especially desirable in installations where autopsies are observed or in which space is limited. The unique Rota-Lift top may be positively locked in any position to provide maximum operating convenience.

The drainage of the Boston Model provides for the complete elimination of fluids through its deep trough construction and perforated top panels while retaining small parts and instruments. The top perforated panels are removable for easy cleaning of both panels and trough.

The central pedestal which contains all piping, provides a sturdy sanitary base. The control valves, hose connection and suction bottle are mounted within easy reach on the pedestal.

The optional equipment listed at the right should also be considered for use with the Boston Model Autopsy Table to add to its utility and convenience.



STANDARD EQUIPMENT:

- Flexible rubber hose and nozzle for irrigation.
- Water-powered aspirator with hose, nozzle and graduated bottle for suction purposes.
- Removable rubber headrest.
- Vertical adjustment mechanism.
- All stainless steel construction.

SPECIFY OPTIONAL EQUIPMENT (for detailed information on the following refer to bulletin No. H-6904)

- Instrument and cutting tray.
- Stainless steel sponge bowl.
- Graduation of top edge in centimeters.
- Electric suction pump.
- Stainless steel base.
- Trough flushing system.
- Gas, air, or electrical outlets.
- Electric disposer unit.
- Ventilation system to exhaust room air through table.

BOSTON MODEL AUTOPSY TABLE No. 45-5100

Same as above except without hydraulic vertical adjustment mechanism.

Write for specification sheet No. H-6900 or General Autopsy Table Bulletin No. H-665.

BOSTON MODEL SUGGESTED SPECIFICATION

One (1) only Boston Model No. 45-5150 Market Forge Autopsy Table. All parts including pedestal shall be stainless steel with chrome plated base ring. Top shall rotate in an arc of 90° and be vertically adjustable. One top panel shall be provided with stainless steel sponge bowl. Also provide one (1) rubber headrest, stainless steel removable instrument tray, and graduation of top edge in centimeters. Overall dimensions shall be 84½" long, 30⅝" wide, 32½" lowered height and 37" raised height. To be as manufactured by Market Forge Company, Everett, Massachusetts.

NEW YORK MODEL

DISSECTING TABLE No. 45-5500

For more than 30 years, Market Forge Company has designed and manufactured quality stainless steel Dissecting Tables, primarily for installation in medical schools. One of the widely accepted designs is the New York Model Table (illustrated), which has set standards for maximum efficiency and exactness in anatomical work, instruction and study. This Model provides complete facilities for dissection as well as for storage of the cadaver. Subject, which rests on a stainless steel tray, is easily lowered into the table and covered.

Additional information on the New York Model and other designs is available on request.

MARKET FORGE COMPANY EVERETT 49, MASS

MARKET FORGE MORTUARY EQUIPMENT

MORGUE PLANNING SERVICE

Market Forge Company now has available a complete MORGUE PLANNING SERVICE to aid architects and hospital personnel in laying out new or renovated morgue areas.

Simply send us a sketch of the area available, with room dimensions and location of doors and windows. At no obligation, we will prepare a scale layout of the morgue and include recommendations for required equipment.

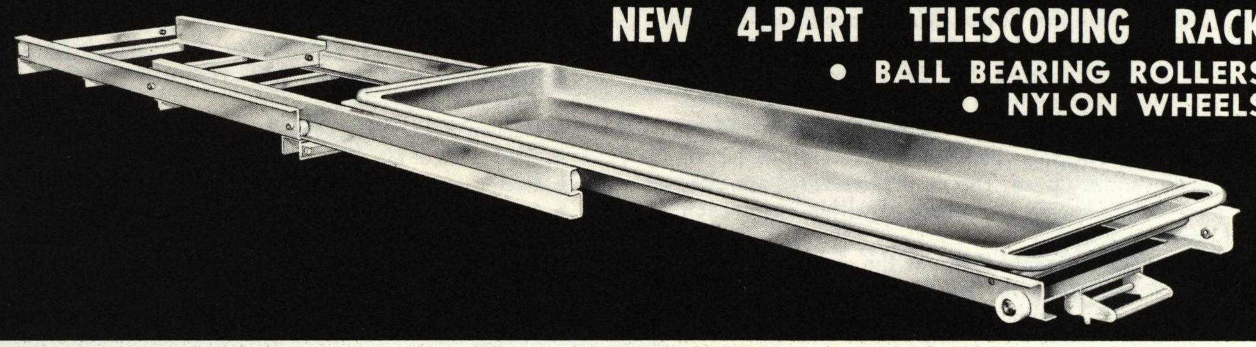
Market Forge manufactures a complete line of morgue equipment, designed in cooperation with pathologists to meet specific autopsy room requirements.

Write for new brochure describing our Morgue Planning Service. Form No. H-550.

Your inquiry is invited on the following:

Mortuary Refrigerators
Mortuary Sinks
Work Counters and Tables
Instrument Cabinets
Specimen Cabinets
Portable Observation Stands
Autopsy Tables
Dissecting Tables
Instrument Tables
Cadaver Handling Equipment

MORTUARY RACKS



NEW 4-PART TELESCOPING RACK

- BALL BEARING ROLLERS
- NYLON WHEELS

Market Forge four part mortuary racks incorporate a construction and design planned to provide for the most efficient storage and handling of cadavers.

Available in end opening, side operated and double end pass-through models in sizes to meet all requirements, these racks feature the automatic trip handle for locking carriage and tray in place . . . flared trays for ease of cleaning . . . sealed-in ball bearing rollers, nylon wheels, and rugged construction for maintenance-free performance. Write for descriptive folder No. R-343.

COMPLETE MORTUARY REFRIGERATORS

Market Forge mortuary refrigerators provide efficient facilities for the storage of cadavers. Available up to nine body capacity as standard and in larger sizes on request, the Market Forge mortuary refrigerator features all metal construction with heavy gauge polished stainless steel front.

Complete with easy-to-operate, ball-bearing telescoping racks, the refrigerator is completely insulated with odorless, vermin-proof and fireproof insulation. All metal construction provides an extremely attractive and easy-to-clean installation. All refrigerators are equipped with dial thermometer, inside light and switch, floor drains, heavy duty blower coils and air cooled condensing unit. Write for specification sheet No. H-669.

"Hospital Designed"

CASEWORK and PATIENT ROOM WARDROBES

by Maysteel

Today's Most Complete Line — Offering Truly Functional Advantages Demanded for Modern Hospital Work and Storage Areas.

Only Maysteel "Hospital Designed" Casework can provide benefits like these:

- * Ease work load of nurses, orderlies —
- * Speed work flow for increased employee efficiency —
- * Simplify inventory with improved storage facilities —
- * Provide maintenance free operation —
- * Minimize noise, clatter, banging — through "Hospital Hush" construction —
- * Facilitate Asepsis through hard, non-porous porcelain like surfaces —
- * Reduce building and remodeling costs—
- * Provide truly modern facilities —

— AS NEW TOMORROW AS THEY ARE TODAY!

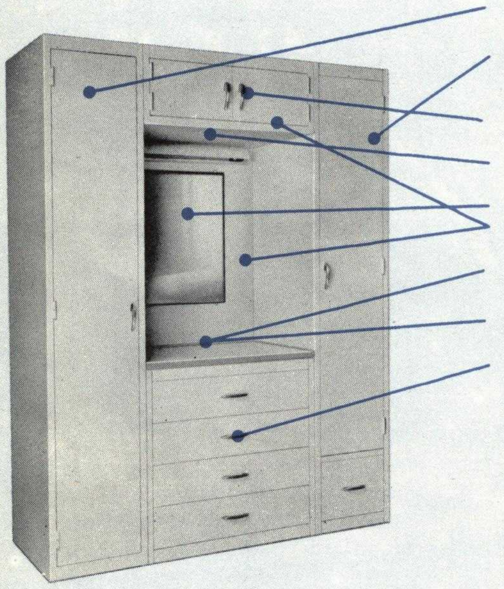
"Hospital Designed"

Maysteel

PATIENT ROOM WARDROBES

YOU BUILD YOUR OWN DESIGN ASSEMBLY FROM UNITS OF YOUR CHOICE

This Maysteel Patient Room Wardrobe Assembly is typical for a Semi-private Patient Room. Available as a Built-in or Free-standing Assembly, Provides Maximum Space Storage on Minimum Floor Area.



Consists of:
WR—101 Left Hand Wardrobe—
WR—110 Right Hand Wardrobe with Shoe Drawer—
WR—500 Upper Storage Cabinet—
WR—Fluorescent Light Fixture—
WR—700 Mirror-
WR—300 Back and Ceiling Liner—
WR—400 Enamel Steel Top—
WR—710 Plate Glass Top—
WR—210 Vanity With 4 Drawers—

Maysteel Wardrobes provides greater "Flexible Storage" Capacity for Patients' Belongings: Full 22" Depth Free-Hanging Area — with Hat Shelf, Clothes Rod 54" Above Floor for Dresses, Suits, Overcoats, Skirts, Coats. Clothes hang straight, not askew. Provisions for Overnight Bag, Shoes, Rubbers, Boots.

Colorful, homelike, thoughtfully styled for patient cheer and comfort, Maysteel Patient Room Wardrobes permit endless variety in attractive storage arrangements that lend individuality to every room, make easier the care of the patient. No furniture to move or disturb when bringing patients into or out of the room. Artistically finished in your choice of rugged "Hospital Designed" baked-on colors. Maysteel Wardrobes feature reinforced, insulated, rubber cushioned flush doors and drawers for quiet operation — and all the storage areas in Maysteel Wardrobes are within easy reach from the floor. These are some of the "Hospital Designed" features that reflect the quality you will be proud to own through the years.

ASSEMBLE LIKE BUILDING BLOCKS . . . MOVE IN LIKE FURNITURE

Because Maysteel Patient Room Wardrobes require no floor, wall or ceiling preparation, the units are completely assembled on the site in their planned combinations. Each unit or section is moved into place like a piece of furniture. The complete Wardrobe is assembled in minutes with no additional framing or finishing details needed.

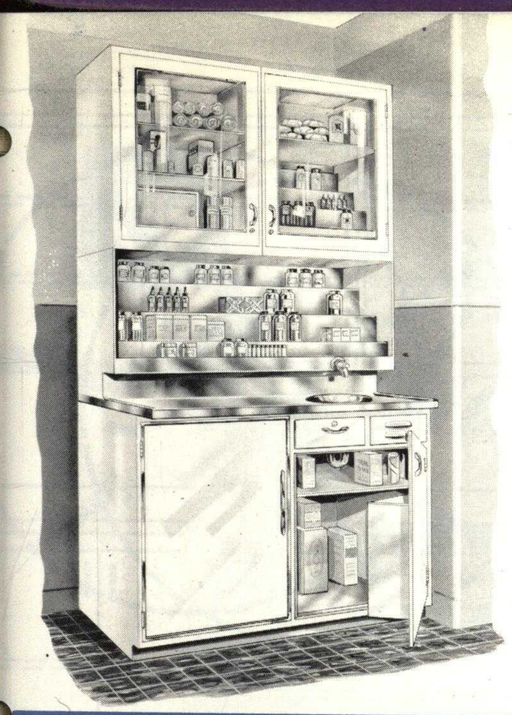
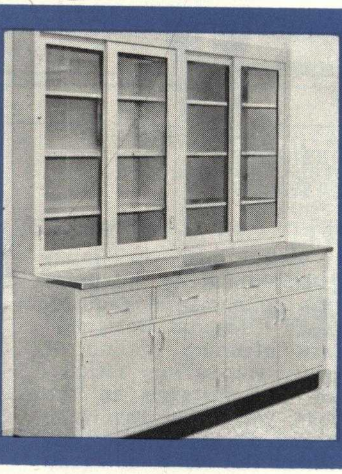
CASEWORK



MEDICATION PREPARATION CENTER—The ultimate in studied storage for nursing areas and utility rooms — expansible and flexible. Provides Visible Tiered Medication Storage, Double-locked Narcotic Locker, Locked Medication Area, Refrigerated Storage, Sink with Full Depth Working Surface. Needle Storage, Spacious Under Counter Bulk Storage.

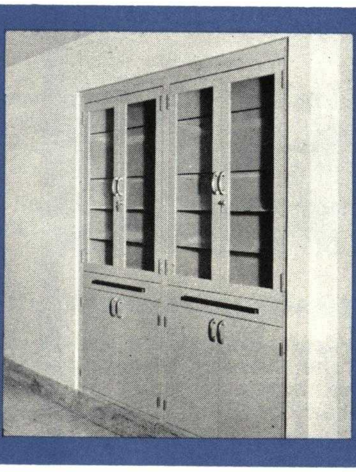
Every detail is planned for improved work-flow efficiency, time-saving, step-saving convenience that assists your hardworking nursing staff — helps make patient care easier, and working conditions a source of continuing satisfaction.

Casework that reflects careful planning for today's needs and tomorrow's expansion — confirming, years from now, the worth of Maysteel's "Hospital-Designed" advantages.

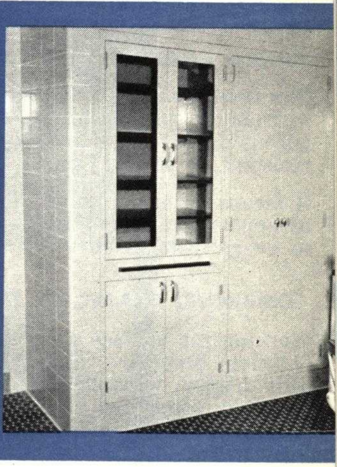


Wall Storage—Sliding doors, counter cabinet, with stainless steel or formica ledge, undercounter base cabinet.

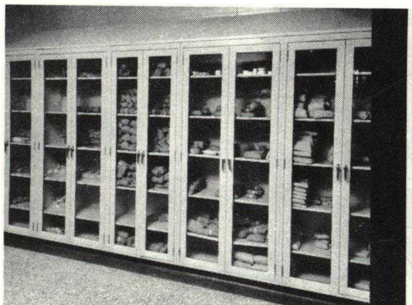
Wall and Base Cabinet — With double locked Narcotic Locker, base cabinets with drawers and or adjustable shelves.



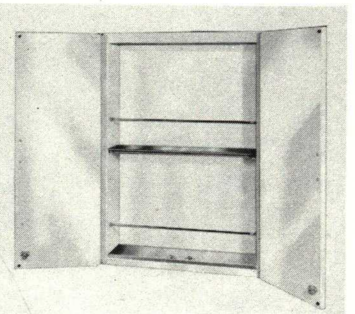
Instrument Storage Cabinets — Visible storage with pull-out shelves and adjustable stainless steel, glass, or baked enamel storage shelves.



All Purpose Storage Cabinets — Combining visual and concealed storage with glass, stainless steel, or baked enamel shelves.



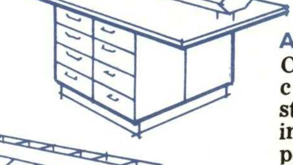
Full Height Storage Cabinets — Provide visual inventory, have silent-action glass doors, five adjustable shelves of stainless steel or baked enamel. Duplicate with solid steel doors for non-visual storage. Sloping top eases cleaning and sanitation.



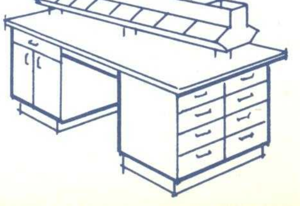
Bed Pan Storage Cabinet — Unit holds bed pans and urinals. Available in several designs, to accommodate the practices followed in your hospital.

SORTING WORK COUNTER
Versatile island type unit stainless steel sorting bins and working surface, adaptable to many areas. Choice of base units with drawers, open or closed shelves — 48" wide, in varying lengths.

ILLUSTRATING 3 OF THE VERSATILE ARRANGEMENTS OF THE SORTING WORK COUNTER.



Above — Sorting Counter with center drawer storage and working space for four people.



Left — Sorting counter with 2 4-drawer cabinets at one end and 2 double door cabinets at other end.

WHY Maysteel "Hospital Designed" CASEWORK ?

Casework, a major equipment investment, falls into the category of "the best is none too good." Used 24 hours a day, every day, good casework must be engineered with an understanding of specialized hospital requirements.

For example — superior strength — cabinets designed for loads up to 250 lbs. per square foot, without rack or twist — smooth, quiet-operating drawers and doors, handles and pulls prelocated for easy reach — hollow back provides ventilation around cabinet at wallside, as well as tight bearing to wall — drawers full size for maximum storage — these and many others are basic reasons why Maysteel Casework, "Hospital Designed," provides your best investment for years and years of trouble-free use.

STAINLESS STEEL CASEWORK

Stainless steel casework by Maysteel, interchangeable with similar unit in baked enamel, offers a lifetime installation with gleaming satin finish, ideal for economical, long-range hospital operation. Maintenance requirements are at the absolute minimum.

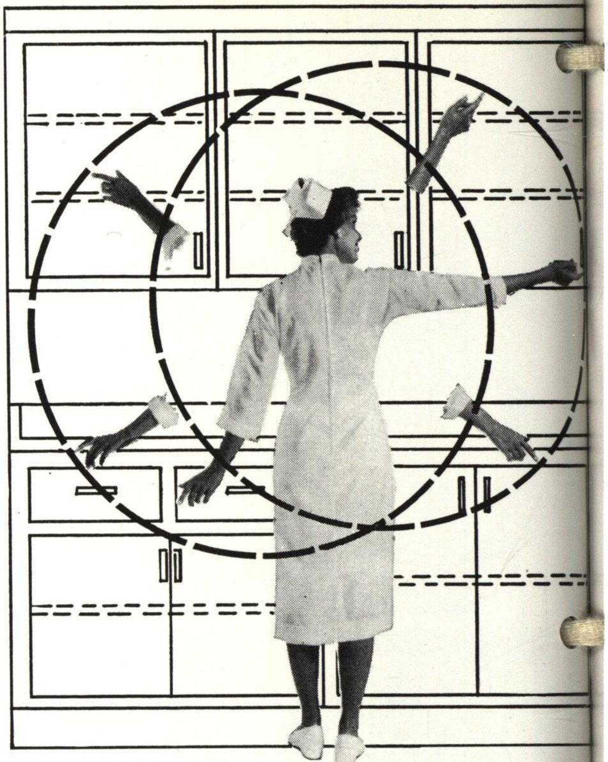
BAKED ENAMEL CASEWORK

The final protection of "Hospital Designed" Casework involves the all important wearability, plus color — Maysteel 6H finish, "Hospital Designed" and tested, porous free "porcelain like" appearance — extreme surface hardness, highly resistant to impact, high humidity, detergents, and chemical solutions.

It means an easier surface to maintain for todays asepsis and lifelong freshness of appearance. Actually Maysteel 6H Finish, is added insurance for longer life to every installation.

COMBINING STAINLESS STEEL AND BAKED ENAMEL CASEWORK

Working top surface as well as doors, drawers and shelves can be furnished in Stainless Steel, — the rest of the Casework in gay, Baked-on Enamel colors. This highly versatile, attractive and worthwhile combination, pioneered by Maysteel, offers the extra durability of Stainless Steel and the functional color harmonies of Baked-On Enamel.



"HOSPITAL DESIGNED" MAYSTEEL CASEWORK

'REACH-PLANNED' FOR CONVENIENCE

Keeping the work load in mind and designing equipment to minimize it is one of the fundamental requirements of Maysteel "Hospital Designed" Casework. **Reach planning** is one of these work-saving, step-saving, fatigue-saving features. For instance, in the illustration above, you notice that cabinet door pulls and drawer handles can be reached without the effort of squatting, bending, stretching or turning. Counter and working surfaces are built to average-height, minimum fatigue convenience. The highest shelves are brought down to easy reach from floor level with no loss of storage area.

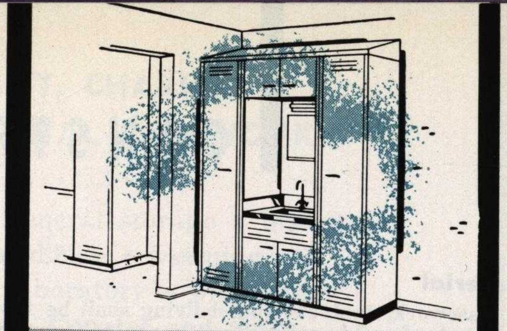
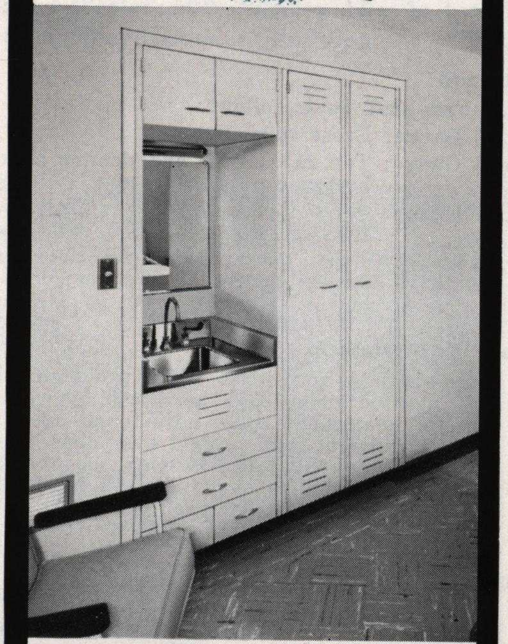
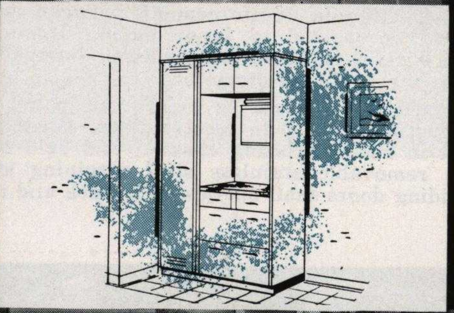
St. Charles

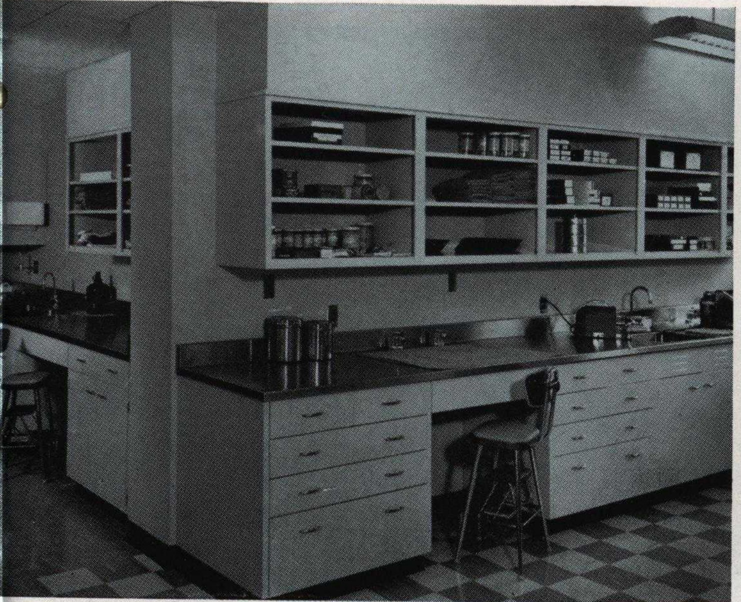
hospital casework

In its approach to the hospital field St. Charles has not been limited by tradition but has applied its technical and productive resources in developing casework capable of meeting today's requirements. These include **(1) maximum use of space; (2) complete flexibility; (3) extra strength to meet hospital usage; and (4) economy.**









CONSTRUCTION FEATURES

Material

Casework, cabinets and shelving shall be fabricated of mild, cold-rolled, annealed furniture steel.

Gauges

Gauges shall be as follows:

14 Gauge: Cross rails.
16 Gauge: Top rails; case and drawer slides; bottom reinforcements.
18 Gauge: Sides; bottoms; door and drawer fronts; shelves; gussets; sub bases.
20 Gauge: Tops; backs; liners for door and drawer fronts; shelf strips; drawer bodies.

Case Construction

Sides shall be formed to make rabbeted stile 1⅛ in. wide which shall be closed by welded channel containing shelf adjustment louvers. Top of wall unit shall project over door, when closed, forming cap to resist entrance of dust. Bottom of wall unit shall be flush of double panel construction. Top rails and cross rails of base units shall be U-shaped channels.

Doors and Drawers

Doors and drawer fronts shall be of double panel construction, ⅝ in. thick, sound-deadened. Handle reinforcement between panels shall be welded to inner panel. Doors and drawers shall have soft rubber bumpers no less than 1 in. in diameter.

Glazed doors shall be reinforced panel construction cut out to receive glass. Glass to be set in rubber glazing channel and held firmly by removable stainless steel retaining strips. Sliding doors shall operate in a track and roller assembly at top of unit and with a guide at bottom. Shall have recessed door pull. Drawer bodies shall be formed of one sheet and welded to front and back through flanges. Tops of side shall be rolled to eliminate sharp edges.

Drawer slide shall be a formed channel with roller at rear; case slide shall be a formed channel with roller at front. Shall have positive stop to prevent accidental removal.

Shelves

Front and rear shelf edges are formed into a 30° triangular truss with extended lip. This truss edge rests in cadmium plated shelf clips. Adjustable on 1½″ centers. Glass shelf clips have rubber bumpers.

Hardware

Catch housing in door shall have two vertically-mounted, full-floating springs. Strike of hardened steel shall be attached to unit. Where called for, up and down spring actuated bolts shall have knobs finished to match other hardware.

Hinges shall be brass, five-jointed institutional type, 2 in. long. Doors over 36″ high shall have an additional hinge in center. Hinge pin shall be locked in place.

Handle shall be cast zinc finished in brushed chrome.

Finish

Following a five-stage wash and phosphate coating spray process, prime coat of film thickness of 1 mil plus or minus 10 per cent shall be sprayed on and baked. Finish coat of equal film thickness shall be sprayed on and baked, resulting in a finish having a film thickness of 2 mils plus or minus 10 per cent. Colors as selected.

Shampaine
COMPANY

HOSPITAL AND LABORATORY CASEWORK

Knowledge gained over more than 25 years of exclusive manufacture of surgical equipment for hospitals and physicians is utilized to lead the way in the designing and producing of quality casework, basic to any modern, scientific hospital or laboratory.

There's a special Shampaine casework unit or combination of units for every hospital or laboratory construction or remodeling project. Roomy and sturdy, attractive Shampaine metal casework keeps its like-new appearance with a minimum of maintenance.

Shampaine representatives, conveniently located throughout the country, or the Shampaine Casework Planning Department, will be glad to discuss your planning needs and give you the benefit of the many economies that can be effected with proper planning. A phone call or letter will bring the Shampaine man into action.

MATERIALS AND FINISHES

All steel is of prime grade, all gauges U.S. Standard. Stainless steel is AISI type free of buckles or imperfections with No. 4 satin finish on surfaces. Carbon steel is finished in baked enamel with high lustre and the depth and appearance of accepted appliance standards. Special acid resistant finish is available where required.

WARDROBE UNITS

Sectional Wardrobe Units follow the decorating trend for built-in cabinets. They are the ideal installation for dormitory, patient, locker, supply, and utility rooms. Concealed bolts lock sections securely in any combination of sections desired.

In addition to single units illustrated, the Shampaine designing department has developed the most popular combinations into a special series. See chart to right and illustration on introductory page of this Shampaine section.

Sub-bases not included.

Models shown suitable for exposed or recessed mounting. When recessed mounting is ordered, a one-inch flange for sides and top will be furnished.

HOW TO SPECIFY

Order Shampaine casework by item number. Be sure to specify *carbon* or *stainless* steel. List appropriate suffix for Hospital or Laboratory unit. Wherever models are available with exposed or recessed mounting, be sure to specify mounting required.

The casework shown on these four pages is but a small section of the complete line shown in the big Shampaine Casework Catalog. Write for your free copy today.

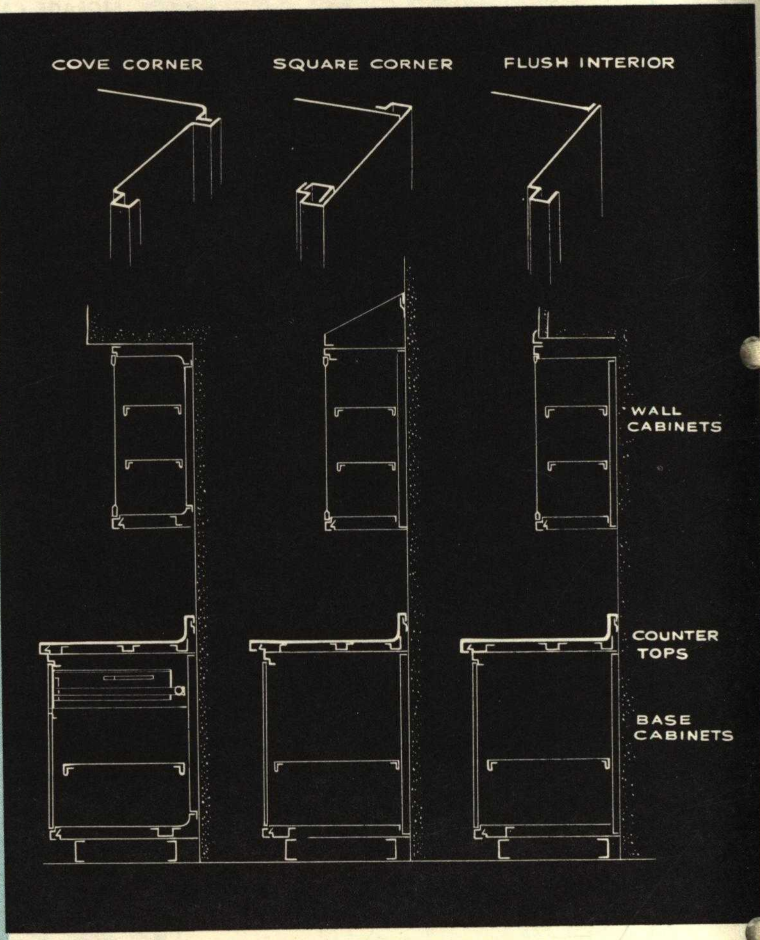
AVAILABLE IN BAKED ENAMEL COLORS OR STAINLESS STEEL AS DESIRED

CONSTRUCTION FEATURES

All special casework can be made in either square corner, flush interior or cove corner construction as shown in detail below.



COVE CORNER
SQUARE CORNER
FLUSH INTERIOR
WALL CABINETS
COUNTER TOPS
BASE CABINETS

All units are fabricated as individual parts and bolted into a complete assembly on the job. This enables a run of cabinets to be added to as your requirements increase.

Stainless steel sink tops, counter tops and sink bowls to be 16 gauge with #4 satin finish. All internal corners in sink bowl and where back and end splash meets counter there is to be a ¾″ cove. Each side of bowl, top is to be recessed forming a drain board pitched to sink. Underside of top to be reinforced with box channel stiffeners full length of top and entire underside to be sprayed with a cork sound deadener.

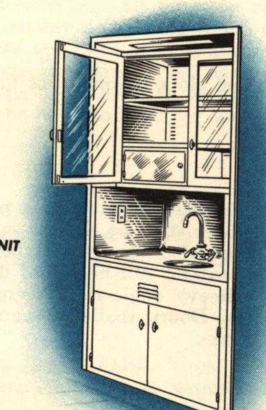
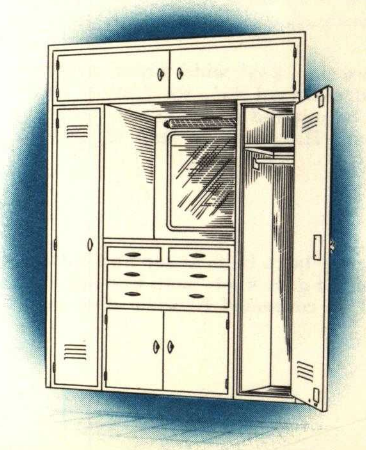
SPECIAL EQUIPMENT

Designed and built to take care of all modern hospital requirements and conform to building conditions.



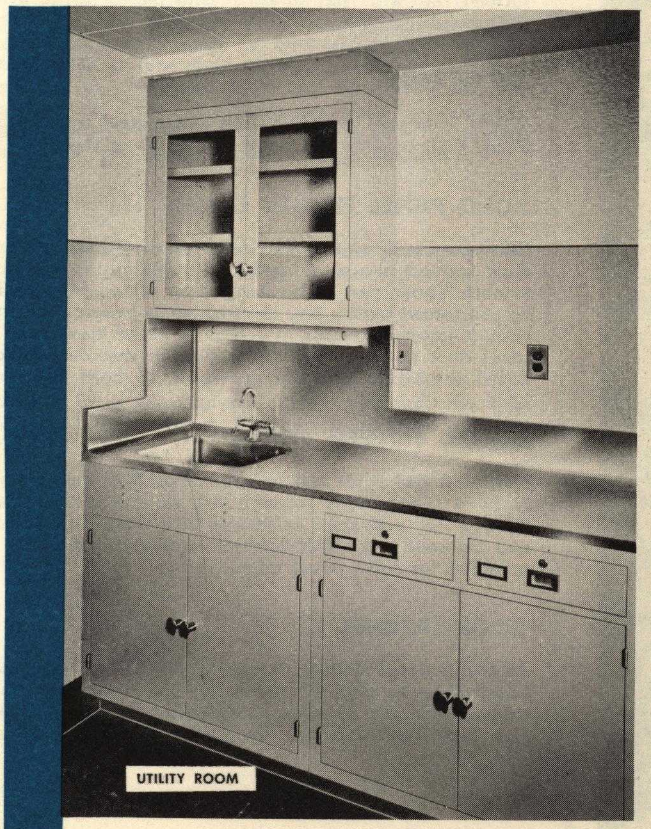
NURSE'S STATION MEDICINE UNIT

With medicine cabinet, built-in narcotic chest, stainless steel medicine sink and recessed light.



WARDROBE AND DRESSER UNIT

With blanket storage cabinet, complete with formica dresser top, mirror and built-in light for two patient bedroom.



UTILITY ROOM

GENERAL

This contractor shall provide all materials, labor and equipment required to furnish and install, complete and ready for use, the metal casework equipment required under this section, in strict accordance with drawings and this specification.

QUALIFICATIONS OF CONTRACTOR

All equipment covered by this section shall be made by one contractor who specializes in designing, engineering and manufacturing such products and maintains an experienced force and a properly equipped factory, operated by experienced shop personnel.

SAMPLES

Before the order is placed for this equipment, any bidder, when so requested by the Architect, shall submit to him such samples and at such time as he may stipulate. If the samples submitted are disapproved, the bid of the maker will be rejected. The samples of the successful bidder will be retained (for comparison) until completion of the installation and may, at the contractor's option, be used as part of the installation.

METAL CASEWORK CONSTRUCTION

Where required for proper handling of any item, it may be made in sections or units. Each unit to be of type and size required to assemble item complete and to dimensions indicated without the use of fillers at either end or between units. Sides, top, bottom and back of each unit to be of #18 gauge steel, reinforced where required with #16 gauge steel channels, welded to the outer side thereof. Front edges of unit shall be formed into a channel shape with 1" flat face and shall be rabbeted all around to form door and drawer strikes. Cross rails and intermediate uprights shall have 1" flat fronts and rabbeted same as outer edges of unit. All parts of unit to be securely welded together and front joints shall be ground smooth, making joints invisible. Sides of unit with adjustable shelves shall have slots perforated therein on ½" centers and extending from 6" below the top to 6" above the bottom. Slots to be covered on outer side of unit by channels, tightly welded thereto. (Internally mounted adjustment strips are permitted in insulated units only.) All exposed bottom surfaces such as under side of wall cases and toe spaces under base units shall have soffits. Front edges of soffits to be slightly rounded. Interior surfaces of units must be flush and smooth. Projecting door and drawer rabbets, lock catches and strikes or any other formations or projections that prevent or hinder cleaning are not acceptable. All units shall be so constructed that no vermin, dust, dirt or water can enter except from the front.

COVER MOULDS

Recessed items shall have a mould to cover the space between the case and wall. Cover mould to be of #16 gauge, 1½" wide, with outer edge rounded and projecting ¼" over face of wall.

END PANELS

Exposed ends and both sides of knee spaces on all items shall be finished end panels of #18 gauge steel with front edges formed into a 1" flat pilaster. End panels to be attached to units from the inside so no screw heads are visible from the outside.

SLOPE TOPS

Where indicated, to be of #18 gauge steel with 1" flat fronts and sloped from front to back to an angle of 30 degrees. They shall be attached from the inside of item.

SOLID PANEL HINGED DOORS

Shall be made of two ¾" deep pans with the inner panel telescoping into the outer pan. Front pan shall have its outer edge formed into a channel to eliminate the raw edge. Other edges shall be flanged and all corners welded and ground smooth. Inner pan to be flanged on all edges with its outer edge offset to fit the channel in front pan. Each door to be reinforced with a box channel set between the pans and shall extend full height of door. Both door and case to have slots of proper size for insertion of hinge leaves and shall have heavy angle reinforcements welded to edge and side of inner door panel and behind rabbet of case for support of hinges. Doors shall be sound deadened with Celotex rigid-board insulation securely cemented to both front and rear pans.

GLAZED HINGED DOORS

Hollow metal stiles and rails to be of #18 gauge steel not less than ¾" thick nor more than 2½" wide. Front members to have inner edges formed into quarter round glass stops and outer edges flanged rearward ¾". Rear stiles to be flanged ¾" and shall telescope into front stiles and welded thereto. Glass stops to be mitered at corners to snug fits and fastened with #4 machine screws. Glass to be set into approved rubber channels. Hinges to be applied same as specified for solid panel doors.

DOOR LATCHES

All swing doors shall have up and down bolts equipped with spring actuated stainless steel latch bolts at top and bottom. Latch bolts to protrude from top and bottom edges of door and shall, independent of the door knob, snap into stainless steel strikes and keepers, recessed into rabbets of case. Entire latch mechanism shall be concealed between door pans. Left hand leaf of double doors with lock shall be equipped with an astragal.

METAL CASEWORK

LOCKS

Shall be four tumbler grooved key type, keyed and master keyed as directed. Locks on hinged doors shall set into door knob. Locks on sliding doors to be of the plunger type. Locks on drawers shall be mortised into drawer head.

SLIDING DOORS

Both solid panel and glazed type shall be constructed as specified for hinged doors except that hinges shall be omitted and each door shall operate on two ball-bearing sheaves on stainless steel tracks at bottom and in guides at top of case. Top of track at bottom must be set below the top surface of the bottom of the case. Doors shall be removable but only when partly open. Each door to have a flush pull.

DRAWERS

Outer pan of head to be of #18 gauge steel with all edges formed into ¾″ channels, beveled ¹⁄₁₆″ toward the rear, and all corners welded and ground to a slight radius. Open seams at corners are not acceptable. Inner pan of head to be of #20 gauge steel flanged on all edges and telescoped into the outer pan. Inside of both pans shall be enameled before assembly. Head shall be sound deadened and inner pan removable. Body of drawer to be of one piece of #20 gauge steel with top edges formed into box channels. Back to be of #18 gauge and welded to body. Interior of drawer must be smooth and free from laps and raw edges.

DRAWER SUSPENSIONS

File or letter, cash and card index drawers shall operate on ball-bearing progressive extension slides, allowing full length withdrawal without sag. Other drawers with head surface of 36 square inches or more shall operate on ball-bearing rollers in heavy channels; two rollers set in front of the case channels and two in back of the drawer channels and so spaced that drawer is at all times carried on the rollers.

SHELVES

Interior adjustable shelves to be of #20 gauge steel, flanged downward ¾″ at sides. Flanges to have ⅛″ notches at proper locations to fit into supporting brackets. Front and rear edges of shelves to be double folded and flanged downward ¾″. All shelves over 36″ wide and 18″ deep shall have angle reinforcements welded to the underside. Open channel formations at any edge of shelves is not acceptable. Glass shelves 36″ or less wide shall be plate ¼″ thick and over 36″ wide, ⅜″ thick. Shelves over 48″ wide shall have a chrome plated center support.

FRAMES & APRONS

For counters, knee spaces, etc. to be of #16 gauge steel formed into channel shapes at front bottom edge. Where drawers occur, apron shall be pierced and top edge of opening flanged and rabbeted to receive drawer head. Frame shall have dividers at intervals of 30″ or less flanged on all sides and welded to frame at front and rear.

STAINLESS STEEL TOPS, SINKS and CURBS

To be of #16 gauge with exposed edges formed into channel shapes 1¼″ high. Tops to have curbs where and of heights indicated. Tops of curbs to be formed into channels ¾″ wide. Exposed backs of curbs to be closed and finished same as fronts. Junctions of tops and curbs shall be coved to a radius of 1″. Wall clips for the proper fastening of tops to walls shall be furnished and installed as required. Tops to be reinforced on the underside with box channels spaced to prevent warpage, oil canning and buckling. All joints in tops (except field joints) shall be butt-welded, ground and polished. No solder is permitted on any exposed stainless surface. Underside of tops shall be coated with an approved sound deadener. Where field joints are necessary, sections shall be fitted to a hairline joint and securely connected mechanically on the underside. Tops with sinks shall have raised drain rim 1″ wide x ¼″ high and shall be depressed on either side of bowls for drainage. Sink bowls to be of sizes indicated and so welded to top as to form an integral part thereof. Inside radius of bowls to be not less than ¾″ and bottoms shall be uniformly pitched to the drain indent.

FINISH

All carbon steel parts are finished to a smooth eggshell gloss of the color selected. Surfaces are properly prepared by sanding and degreasing. Each part is given a baked coat of acid, alkaline and solvent resisting primer. Finishing is performed in a modern conveyorized clean paint department.

STAINLESS STEEL FINISH

All exposed surfaces shall have #4 satin finish. Tops, sinks and curbs to be of even color. Solder, welding marks, pits or other imperfections or discolorations on any exposed surface will not be accepted. Unexposed surfaces to have #2 finish.

HARDWARE

All hardware, including hinges, shall have satin chrome finish.

PLANNING ASSISTANCE

The benefit of our many years of experience as well as engineering service is available at all times to architects, steel fabricators and prison officials as to details of cell arrangement and design.

**LOCKS,
LOCKING DEVICES and
SECURITY EQUIPMENT**

We manufacture locking devices, electric locks and hardware for prisons, reformatories, asylums, jails, juvenile and other types of public institutions.

We have equipped more than 50,000 cells located in prominent penal institutions in the United States and Canada with our locks and devices. That such equipment has given satisfactory service is indicated by the many repeat instalations we have had at the same institutions. More detailed information is available in our complete catalog.

"ADAMATIC" ELECTRO-MECHANICAL LOCKS

for remotely controlled locking of swinging and sliding doors

Recommended Use	Lock No. Series	Type Door	Dimensions in Inches
Entrance doors, safety vestibules. Heavy duty service.	51-E	Swinging	13½x9x3⅛
Corridor door, wagon and truck gates. Heavy duty service.	55-E	Sliding	15½x6x2⅞
Entrance and corridor doors. Intermittent service.	120-A	Swinging	9¼x4 3/16x3

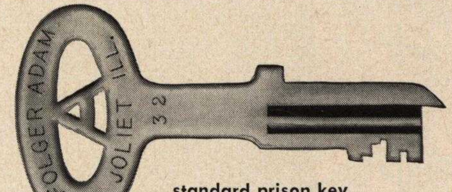
51-E electric lock for swinging doors

INDUSTRIAL LOCKS

Our electric locks and controls are adaptable to industrial use because of their wear resistance and extra security. In addition to standard locks listed, we design special modifications, interlocks, electric bolts and related equipment to meet individual requirements.

KEYS

All locks, except Series 110, 115, 117 and 120-A, are operated by alloy bronze keys 4½ in. long, blades ⅞x5/32 in. These keys are of paracentric type. Special design of key and lock cylinder permits easy and quick insertion. Locks of any series, except as noted above, may be arranged to operate with one common key; viz., in a door with wicket opening, both door and wicket locks may be served by the same key; or a sliding elevator door lock may be served by the same key as an adjoining swinging corridor door.



standard prison key (illustration about ½ size)

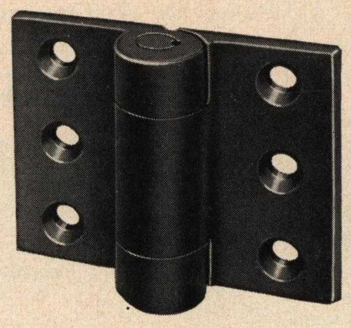
CREMONE BOLT SETS • prison type

Pairs of doors are inherently weak against mass attack. They should be equipped with Cremone Bolt Mechanism comprising head and foot bolt for each door, dead lock control for inactive door and combination snap and dead lock for active door. Foot bolt recesses in floor should be as nearly dust-proof as possible, of non-corrosive material and made for easy removal and cleaning. Specify CR-3D for pairs of doors and CR-3S for single doors. These cremones may be keyed from one or both sides. Case dimensions 8 1/16"x17 5/16"x1⅞" head and foot bolts ⅞" diameter.

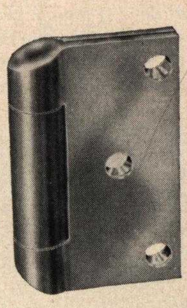
PRISON AND JAIL HINGES • INSTITUTIONAL BUTTS

prison and jail hinges—We manufacture hinges in full surface, half surface and gap types, made of drop forged steel. Leaf widths shown are maximum. Narrower widths are available for various widths of buck flanges. Attachment holes are jig-drilled before assembly to assure accuracy. Standard prison hinges (ADAM #5) are 5" in height x 6½" in width, leaf thickness ½", diameter of hinge pins ¾" with two large totally concealed ball bearings. Provision for lubrication is made on top surface of hinge.

institutional butts—Designed to provide great strength and long life combined with graceful streamlined design. Each leaf is a rugged solid alloy bronze casting. No bent sheet construction or bushings. Two sets of hardened and ground tool steel ball races in each butt. Large and accurately ground ball bearings. Size of butts (ADAM #4½) 4½" x 4½" made of alloy bronze, leaf thickness 3/16".



prison hinge



institutional butt

LOCK MOUNTING

Complete units for safely and conveniently mounting prison locks on grille plate and hollow metal doors. Steel welded construction. Prison security screws permit the removal of cover plate for lock cleaning or repairs.

No device can meet all institutional requirements, but some one of those listed above will answer any problem. The type of institution is shown in first column, our catalog designation follows in column two. What the device accomplishes and how it is accomplished are shown by following across page in same horizontal column.

See Front Cover . . . . for **PLANNING ASSISTANCE**

We manufacture a complete line of equipment for institutions of detention, with the quality and workmanship expected of one of America's largest manufacturers of Steel Jail and Prison Equipment.

Construction, design and fabrication are engineered to provide security for the inmates and safety for attendant personnel.

Equipment such as steel tables and seats, protected light fixtures, safety observation and speaking panels, concealed security doors, aluminum detention windows, plate and grating construction, incorporating *tool resisting* steel and remote control *mechanical* locking and operating devices are fabricated by skilled shop mechanics.

Our engineering staff is composed of *registered* engineers and men of broad experience, who can interpret your plans and intelligently convert them into modern and economical working designs for Jail and Prison Equipment.

You are invited to submit your problems to our Engineering Staff, who will gladly give you the benefit of their years of experience—*without obligation.*

Pauly JAIL BUILDING COMPANY

1856–1960

OVER 100 YEARS OF CONTINUOUS SERVICE

Modern Equipment-

FOR PRISONS, REFORMATORIES, JAILS AND MENTAL HOSPITALS

Pauly JAIL BUILDING COMPANY

Experience Practical knowledge covering design and fabrication of jail equipment now in the files of the Company was accumulated during a period of 100 years by men rich in experience who have been and are, associated with the Pauly Company for many years. Major improvements in detention equipment were originated and developed through their efforts and have been incorporated in cells and jail furnishings purchased by various Municipal, State and Federal Agencies.

Consultation Service Sketches, Details and Specifications for modern arrangements of cell equipment based on Security, Safety and Sanitation will be prepared by our Engineering Department upon receipt of preliminary information from the Architect or Engineer. This service involves neither charge nor obligation.

Special Materials and Furnishings Tool resisting steel bars and plates are recommended for all exterior sides forming felon cells, window grilles and exterior doors.

Consultation and observation panels or wickets, seats, tables, benches, bunks, vents, shelves, clothes hooks and electric light boxes are the usual accessories furnished with cell equipment.

Locking Equipment Pauly semi or fully selective device for sliding or hinged cell doors. Automatic corridor locking mechanism with special safety deadlock. Automatic handpull sliding door locks for police station cells. Manual or mechanical individually or gang operated devices with special locking features for controlling one, any group, or all doors from control station.

Sanitation Proper arrangement of plumbing fixtures including specially designed and constructed shower enclosures.

Stainless steel tables and seats for penitentiary and reformatory cafeterias.

modern jails and prison equipment by *Roanoke*

ROANOKE IRON & BRIDGE WORKS, INC.
P.O. Box 1711, Roanoke, Virginia

modern jails by *Roanoke*...

... a leading jail and prison equipment manufacturer since 1900 in

ROANOKE IRON & BRIDGE WORKS, INC. combines **security • safety • segregation • sanitation** with low operating and maintenance costs in jail construction.

Our engineering and consultative services are available to architects and municipal, county and state officials, without cost or obligation, to assist in planning jail construction to meet current and future requirements with • **cost estimates • layouts • design • models and samples • specifications.**

The experience and "know-how" of the technical, engineering, fabrication and erection personnel of ROANOKE IRON & BRIDGE WORKS, INC., have made our services invaluable to jail planners for over 58 years. These services continue to enjoy a reputation of quality, dignity and friendliness.

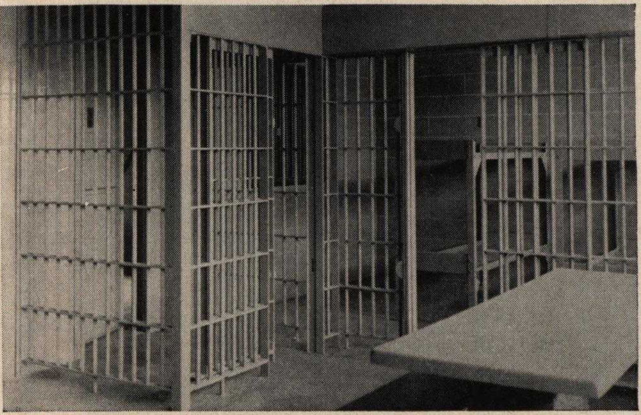
the four vital essentials of modern jail construction

The four vital essentials of modern jail construction—**security, safety, segregation, and sanitation**—are prime factors which govern the design and construction of ROANOKE IRON & BRIDGE WORKS' jails. Our experience in fabrication and erection workmanship also insures attractive appearance and low maintenance and operating costs.

Steel grating used for cell fronts, day rooms, corridors, and other inmates' quarters is made of double-ribbed round steel bars and interlocking flat bars.

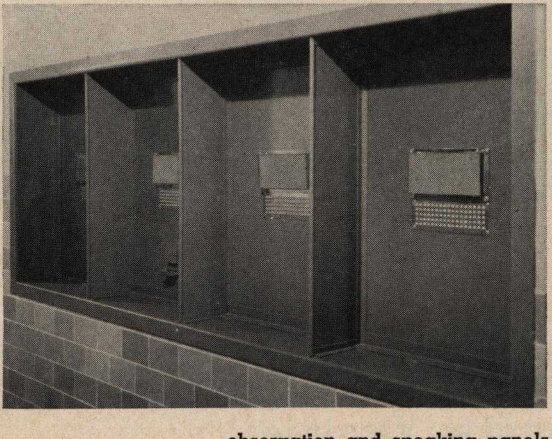
Tool-resisting grating is normally recommended for outside perimeter of inmates' quarters. This type grating is made especially for prison use; it has sufficient tool-resisting qualities to successfully resist cutting tools and sufficient low carbon steel to prevent breakage by striking or prying.

ROANOKE IRON & BRIDGE WORKS' engineers continually recommend specific layouts and arrangements of inmates' quarters, guards' corridors and other spaces to make best use of available space and to permit efficient and convenient jail supervision while improving the security and segregation features of the jail installation.



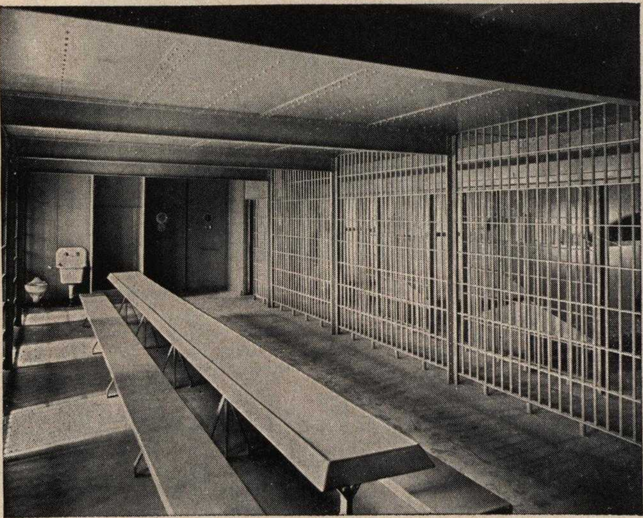
cell block entrance — safety vestibule

An important consideration in the arrangement of a jail is the safety of the guard force. Well-planned corridors and safety vestibules add greatly to the safety feature as well as assuring greater security of inmates. Proper layout and proper prison equipment can ofttimes mean additional safety and a reduction in guard force.



observation and speaking panels

Facilities are often provided for persons to visit with inmates. The emotional stress and tension of inmates and visitors during visits are partially dependent upon design of the speaking and observation panels in the visiting area. ROANOKE IRON & BRIDGE WORKS' recommended design tends to minimize the stress and tension by the elimination of unnecessary prison atmosphere without affecting security.



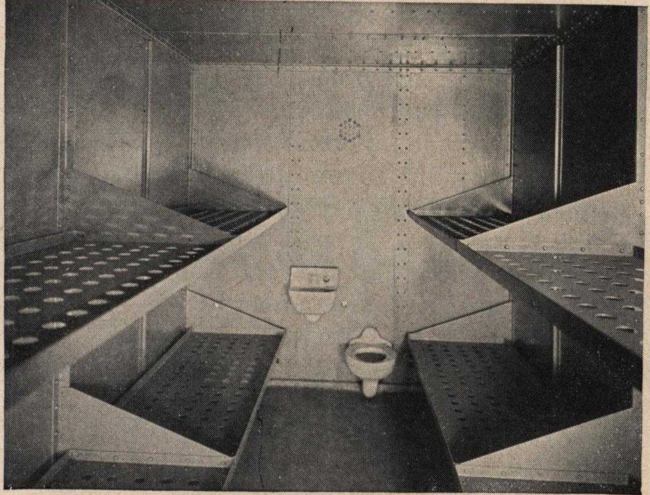
day room — all steel construction

With thorough planning, natural daylight can be used advantageously to improve the lighting, appearance and health features of prisoners' day rooms and cells.

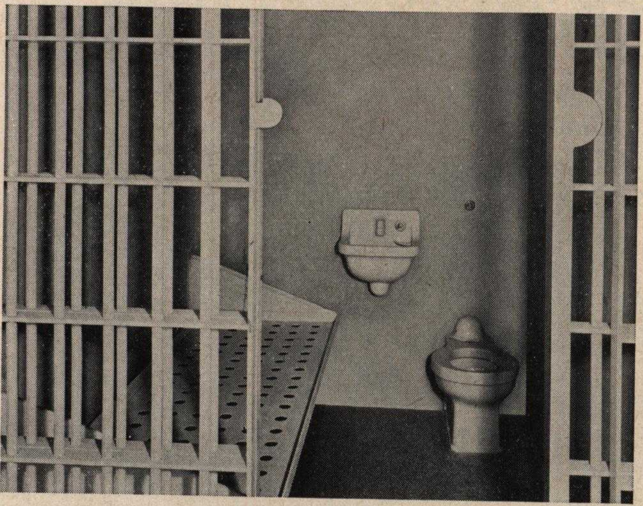
design • development • fabrication • installation

ROANOKE IRON & BRIDGE WORKS, INC., is prepared to analyze your jail needs and recommend the proper jail design and construction to meet local conditions and enable you to invite competitive bidding. Contact us for prompt, accurate and dependable service.

Proper jail planning is necessary for proper jail administration.



cell interior — multiple occupancy, all steel construction



steel cell front — single occupancy, masonry construction

Sanitation of prisoners' quarters is vital to prevent disease and to minimize the otherwise demoralizing effect of detention. ROANOKE IRON & BRIDGE WORKS' prison equipment is fabricated and installed with neat craftsmanlike appearance to encourage prisoner sanitation. This equipment is also substantially constructed to discourage attempts of malicious damaging by inmates.

fully selective operating and locking device designed and developed by ROANOKE IRON & BRIDGE WORKS, INC.

- Increases security of entire cell block
- Locks each cell door at three points on door in both opened and closed positions
- Provides safety for guards
- Provides assurance of accurate and proper operation
- Is entirely mechanical and positive and sure in action
- Is easy to operate with gear-powered wheel drive
- Removes guesswork from cell door operation
- Provides protection against fouling or damaging by inmates
- Is simple in construction
- Minimizes maintenance and replacement problems
- Operates free of springs
- Travels on bearings — a minimum of friction
- **Complete selectivity of door operation is maintained**
- **Controls offer positive indication of locked or unlocked condition of each door**
- **With only one continuous movement of the operating wheel any one or any combination of doors can be closed or opened and automatically locked**

Proficiency of jail administration is increased by a combination of accuracy, simplicity and security, all of which are built into ROANOKE IRON & BRIDGE WORKS' keyless and fully selective operating and locking device. A central control system outside the cell block allows the guard to maintain complete control over the operation of every cell door in the block while enjoying complete safety. Every door in the cell block can be controlled and operated independently or in combination with any number of other doors, thus permitting the guard to direct the activities of the inmates individually or in a group.

COMMENTS FROM SOME OF OUR CLIENTS

I wish to compliment your company on the prompt installation of your equipment, and hope to work with you again in the near future.

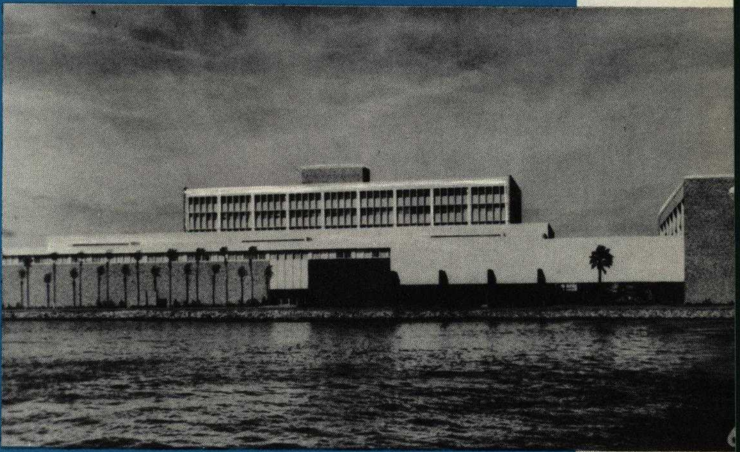
JA (Contractor)

If we can ever be of service to you in any way here on the High Plains, we would appreciate the opportunity of returning these favors to you.

Sincerely,
JE (Architects-Engineers)

Thank you again for the interest and spirit of cooperation you have displayed, enabling us to turn over to the Owner a completely satisfying job, and one in which we can all take pride.

JW (Architect)



The Board of County Commissioners of XXXXXXXX XXXXXXXXXXXX XXXXXXXX wish to express their appreciation for your fine work and cooperation in the completion of our County Jail.

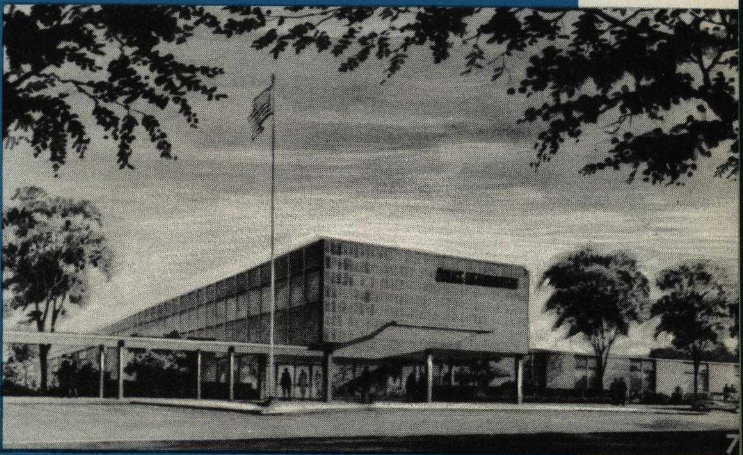
RS (County Commissioner)

Your advice and helpful criticism during preliminary planning, your drawings and specifications, during the final planning, and your constant interest in accuracy and quality throughout the project, were all of invaluable assistance to us.

FC (Architect)

Southern Steel System has placed a model of their cell locking system at our disposal and it definitely meets all of our requirements. The security in their system, plus its simplicity of operation is, without a doubt, the best offered in this field. This statement is substantiated by the engineer in charge of maintenance of the City Prison System, Department of Correction, XXXXXXXXXXXXXXXXXXXXXXXX.

CD (Engineer)



7

We have your check for the difference in poundage of steel furnished and that estimated. This is an item which I had forgotten about completely. I am certain the Board members will be most appreciative of the integrity and honesty of your firm.

It has certainly been a pleasure to work with you and your firm, and I would be very happy to recommend your Company to anyone in the market for jail equipment.

HJ (Architect)

I inspected, approved, and accepted the jail equipment furnished by your company for the XXXXXX XXX XXXXXX XXXX XX XXXXXXXXX XXXXX yesterday. The job was completed and was done in a very excellent manner. We would like to commend your superintendent for his fine work directing this job. He has cooperated with our office and the County and produced an excellent job for all of us for which we are indeed grateful.

I would like to sincerely thank you for your cooperation in helping us plan this jail, prepare the working drawings and specifications, obtaining bids, and in the actual contraction of this job.

OCJ (Architect)

Southern Steel Company's
DUAL
ELECTRO MECHANICAL
LOCKING and OPERATING SYSTEM

A proven automatic elect combination system . . . c fully selective electric to mechanical operation i

1. FULLY SELECTIVE
Operates any one, any combination or all sliding cell doors either electrically or mechanically.

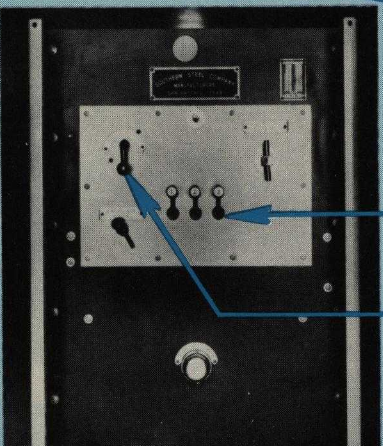
2. SIMPLE OPERATION
Just turn the switch to unlock, open, close and lock doors in any pre-selected combination.

3. INTERLOCKED
Simple mechanical and electrical interlock in control cabinet positively prevents simultaneous mechanical and electrical operation. The system operates either totally electrically or totally mechanically.

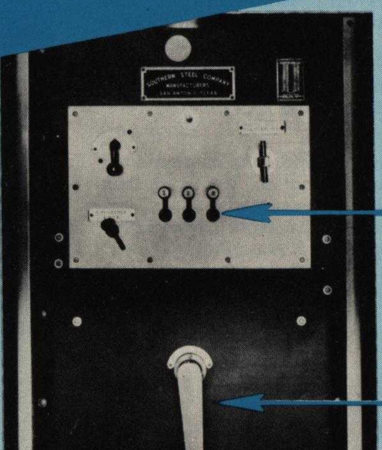
4. SINGLE DIRECTION SAFETY
Designed to prevent opening one or more doors while other doors are closing. This is highly important in any electrical operating and locking system.

5. EMERGENCY LOCK
In case of emergency in opening or closing doors, pull emergency lock, thus holding doors in any position, whether being operated electrically or mechanically, until further operation is resumed.

6. VARIABLE CLOSING PRESSURE
Electrical system can be adjusted so that a nominal pressure will hold the door, or so that considerably more pressure would be required to hold door.



SOUTHERN STEEL COMPANY
Set selectors for desired operation of each door.
Turn switch to open or close.
Unlocking and locking occurs automatically.



SOUTHERN STEEL COMPANY
Set selectors for desired operation of each door.
Turn handle to open or close.
Unlocking and locking occurs automatically.

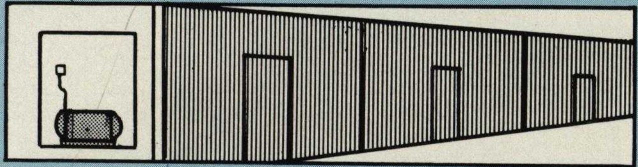
ELECTRIC OPERATION To operate doors and locks electrically, select doors to be operated and turn the switch.

REMOTE CONTROL This simple Remote Control Panel may be installed anywhere desired and still maintain full selectivity and instant changeover to mechanical operation.

MECHANICAL OPERATION In case of power failure, remove handle at base of cabinet and place in manual operating position on operating shaft. (When handle is in this position, all electrical components are disengaged.) Return handle to its original position, and the system will operate electrically. Our "Dual" system is the only electric system that gives full selectivity from the control cabinet in the event of power failure.

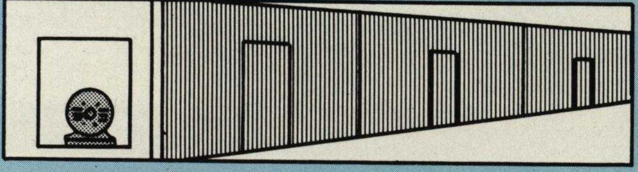
& mechanical
nverts from
lly selective
seconds

This



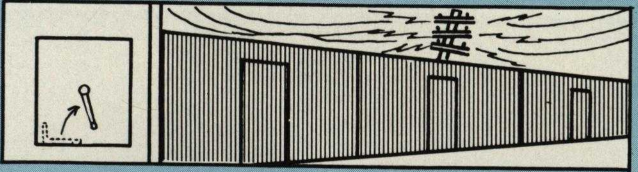
This . . . compact wiring installed at factory . . . completely self-contained electrical unit.

This



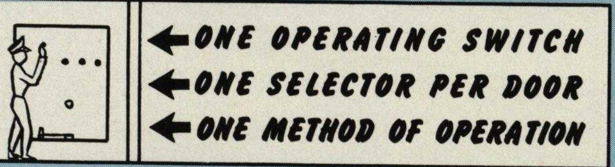
This . . . only one motor operates the entire line of cell doors. Motor can be changed or serviced quickly by any competent electrician without entering cell block.

This



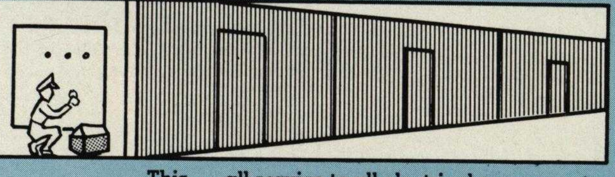
This . . . in event of power failure, move the handle to operating position and operate the system in the same fully-selective manner without leaving the control cabinet.

This



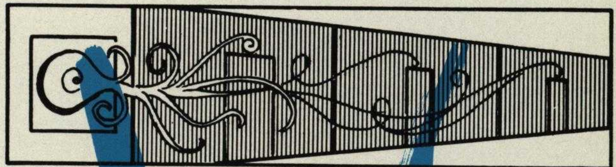
This . . . the simplicity of this system makes it possible for anyone to learn its operation in a matter of minutes.

This

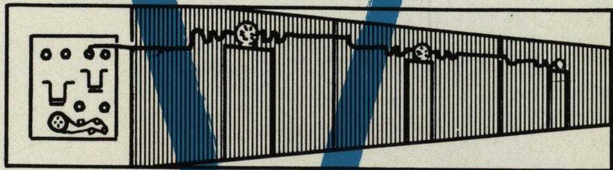


This . . . all service to all electrical components is out of sight and reach of inmates. The entire electrical system can be serviced without inmates' knowledge or change in prison routine.

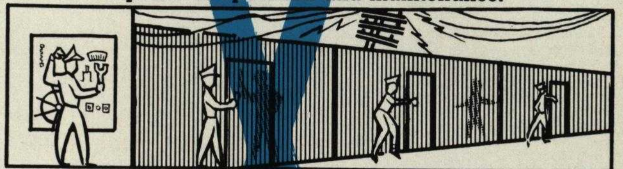
These "Old Fashioned" Electrical Nightmares have been eliminated



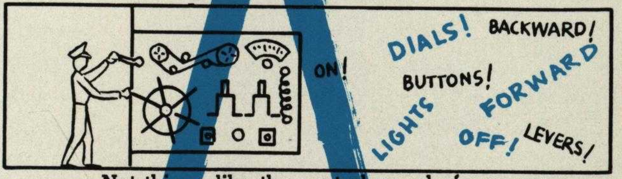
Not this . . . electrical octopus involving multiple motors, lights, switches running throughout the cell line to each individual cell.



Not this . . . long strings of fractional horsepower motors over cell doors. This means more electrical equipment, more maintenance, more hazard from inmates, more expense in operation and maintenance.

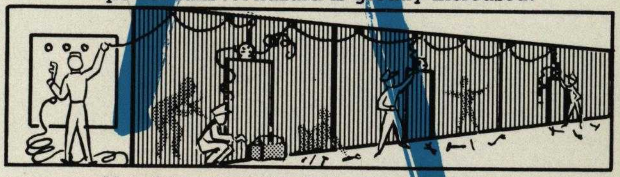


Not this . . . An electrical system requiring extensive change in procedure when power fails. Most combination electrical-mechanical systems do not provide full selectivity of cell doors in event of power failure.



ON!
DIALS!
BACKWARD!
BUTTONS!
FORWARD
LIGHTS
OFF!
LEVERS!

Not this . . . like the control panel of a supersonic bomber, many systems require highly trained personnel to operate. An entirely different procedure of operation is required if power fails . . . hazard is greatly increased.

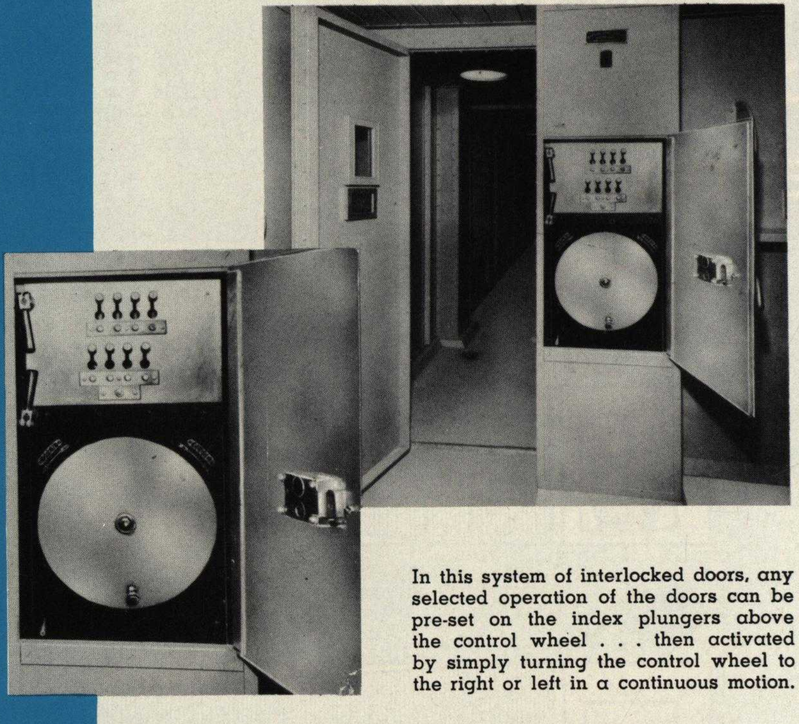


Not this . . . trouble in any motor along the cell line of some systems creates a serious security hazard requiring servicemen to bring tools and to work within the inmate cell area.

Intermittent Gear Locking and Operating System . . . . . .

This system originated and pioneered by the Southern Steel Company enables the operator to (1) unlock, (2) open, and (3) lock open any cell door or any number of doors by one continuous movement of the operating wheel. By turning in the other direction the operator can (4) unlock, (5) close, and (6) lock closed any cell door or any number of doors designed to be operated from the same control cabinet. Any door may be stopped and held at any point in movement at half-inch intervals. Correct operation can be taught in a manner of minutes.

Dependable wheel drive provides an abundance of power for quiet and efficient operation and has made this system the acknowledged standard of excellence throughout the United States.



In this system of interlocked doors, any selected operation of the doors can be pre-set on the index plungers above the control wheel . . . then activated by simply turning the control wheel to the right or left in a continuous motion.

Homogeneous Tool Resisting Steel

Where the cost of the large number of extra guards, 24 hours a day, is not practical, continuous analysis tool resisting steel performs a vital economy function. This special steel is thousands of times more resistant to cutting than mild steel; however, it is malleable to the point of fulfilling all requirements as to hardness and flexibility. In institutions such as county jails where an excessive number of guards is an impossible expense, tool resisting steel is the heart of such county jail security.

Independent tests prove the statement that reducing the tool resisting quality of steel and saving only 2 or 3% on the cost of the installed equipment is never a real economy.

ESTABLISHED 1897
SOUTHERN STEEL CO.
SAN ANTONIO, TEXAS

History of the SOUTHERN STEEL COMPANY

For more than 63 years, we have accumulated valuable experience meeting many unique problems in the highly specialized field of designing, fabricating and installing jail and prison equipment.

From its beginning, the Southern Steel Company has enjoyed a steady and consistent growth in facilities and in specially trained personnel in the field of penal engineering. With more than 4,000 installations in 41 states, Southern Steel's organization is one of the most experienced in the field. While research and improvement has been a major factor in the growth and leadership of Southern Steel through more than 60 years, innovations are given long and exhaustive testing before they are offered for the protection of the public.

Southern Steel's daily contact with many problems peculiar to this highly specialized work, together with its privilege of collaborating with hundreds of architects, designers and engineers who are concerned with like problems, presents a challenge and an obligation to render even greater service in this field where much remains to be done in the interest of humanity and society.

The Southern Steel Company is in daily contact with architects and designers throughout the country, and we have a vast accumulation of knowledge about many types and sizes of penal institutions.

One of our equipment specialists will be glad to confer with interested architects or engineers and submit suggestions for layouts along with price estimates.

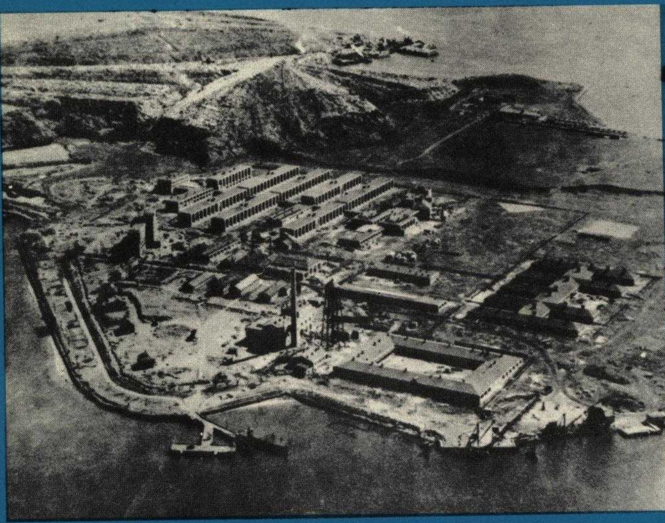
There is, of course, no obligation for this service which you may use with full assurance that any suggestions we make will not preclude any reputable manufacturer of jail equipment from bidding upon, or furnishing equipment, recommended by our consultants.

Having become the Nation's largest firm specializing in the manufacture of jail and prison equipment, we are in the enviable position of being able to point the way to the newest and best approaches to the modern science of detention.

**JAIL & PRISON EQUIPMENT
IS OUR MAIN BUSINESS**

COMPLETE CONSULTING SERVICE INCLUDING COST ESTIMATES AND PRELIMINARY LAYOUTS

Our complete consulting service, including completed plans and specifications, is available without obligation to architects, engineers, and contractors. You can write or telephone your requirements to us, and we will see that you receive promptly the kind of data you need for making a preliminary study, sketches, and rough cost estimates. Preliminaries can be quickly prepared in this way for discussion with clients and interested law enforcement officials. Call us early before your plans are formulated, and we will be glad to send a sales engineer to confer with you at your convenience.



THE LARGEST "CITY JAIL" IN THE UNITED STATES

Riker's Island Penitentiary
New York City

The Riker's Island Penitentiary in New York City, Sloan and Robertson, Architects, is a Southern Steel Company installation. It is the largest City Jail Institution in the United States and reported to be the largest penal institution ever built at one time.

The cell work, locking devices, and other prison equipment in this institution were furnished and installed by Southern Steel Company. There have been no service calls or replacement of parts on any Southern Steel Company equipment since this prison was occupied more than 30 years ago . . . an indication of the quality and dependability engineered into Southern Steel Company's products.

★

All Jail Equipment
Manufactured & Installed by
Southern Steel Co.

THE LARGEST "COUNTY JAIL" IN THE SOUTH

Dade County Jail and
Public Safety Department
Miami, Florida

★

Because the Southern Steel Company *specializes* in jail and prison equipment, no jail job is too large or too small to merit our complete service . . . from initial layout suggestions through complete planning . . . to manufacture, installation, and guarantee of all equipment. In the Dade County Jail in Miami, the Southern Steel Company was selected to supply:

- **45 Fully Selective Lines of Cell Work**
- **628 Bunks**
- **325 Jail Doors**
- **107 Tons of Vertical Bars**
- **85 Tons Steel Plate Walls**
- **20,000 Square Feet Grill or Grating Work**
- **All Other Jail Equipment for the South's Largest County Jail**

The Dade County Jail is just one more reason why the Southern Steel Company remains the nation's largest firm SPECIALIZING in the manufacture and installation of Jail and Prison Equipment.

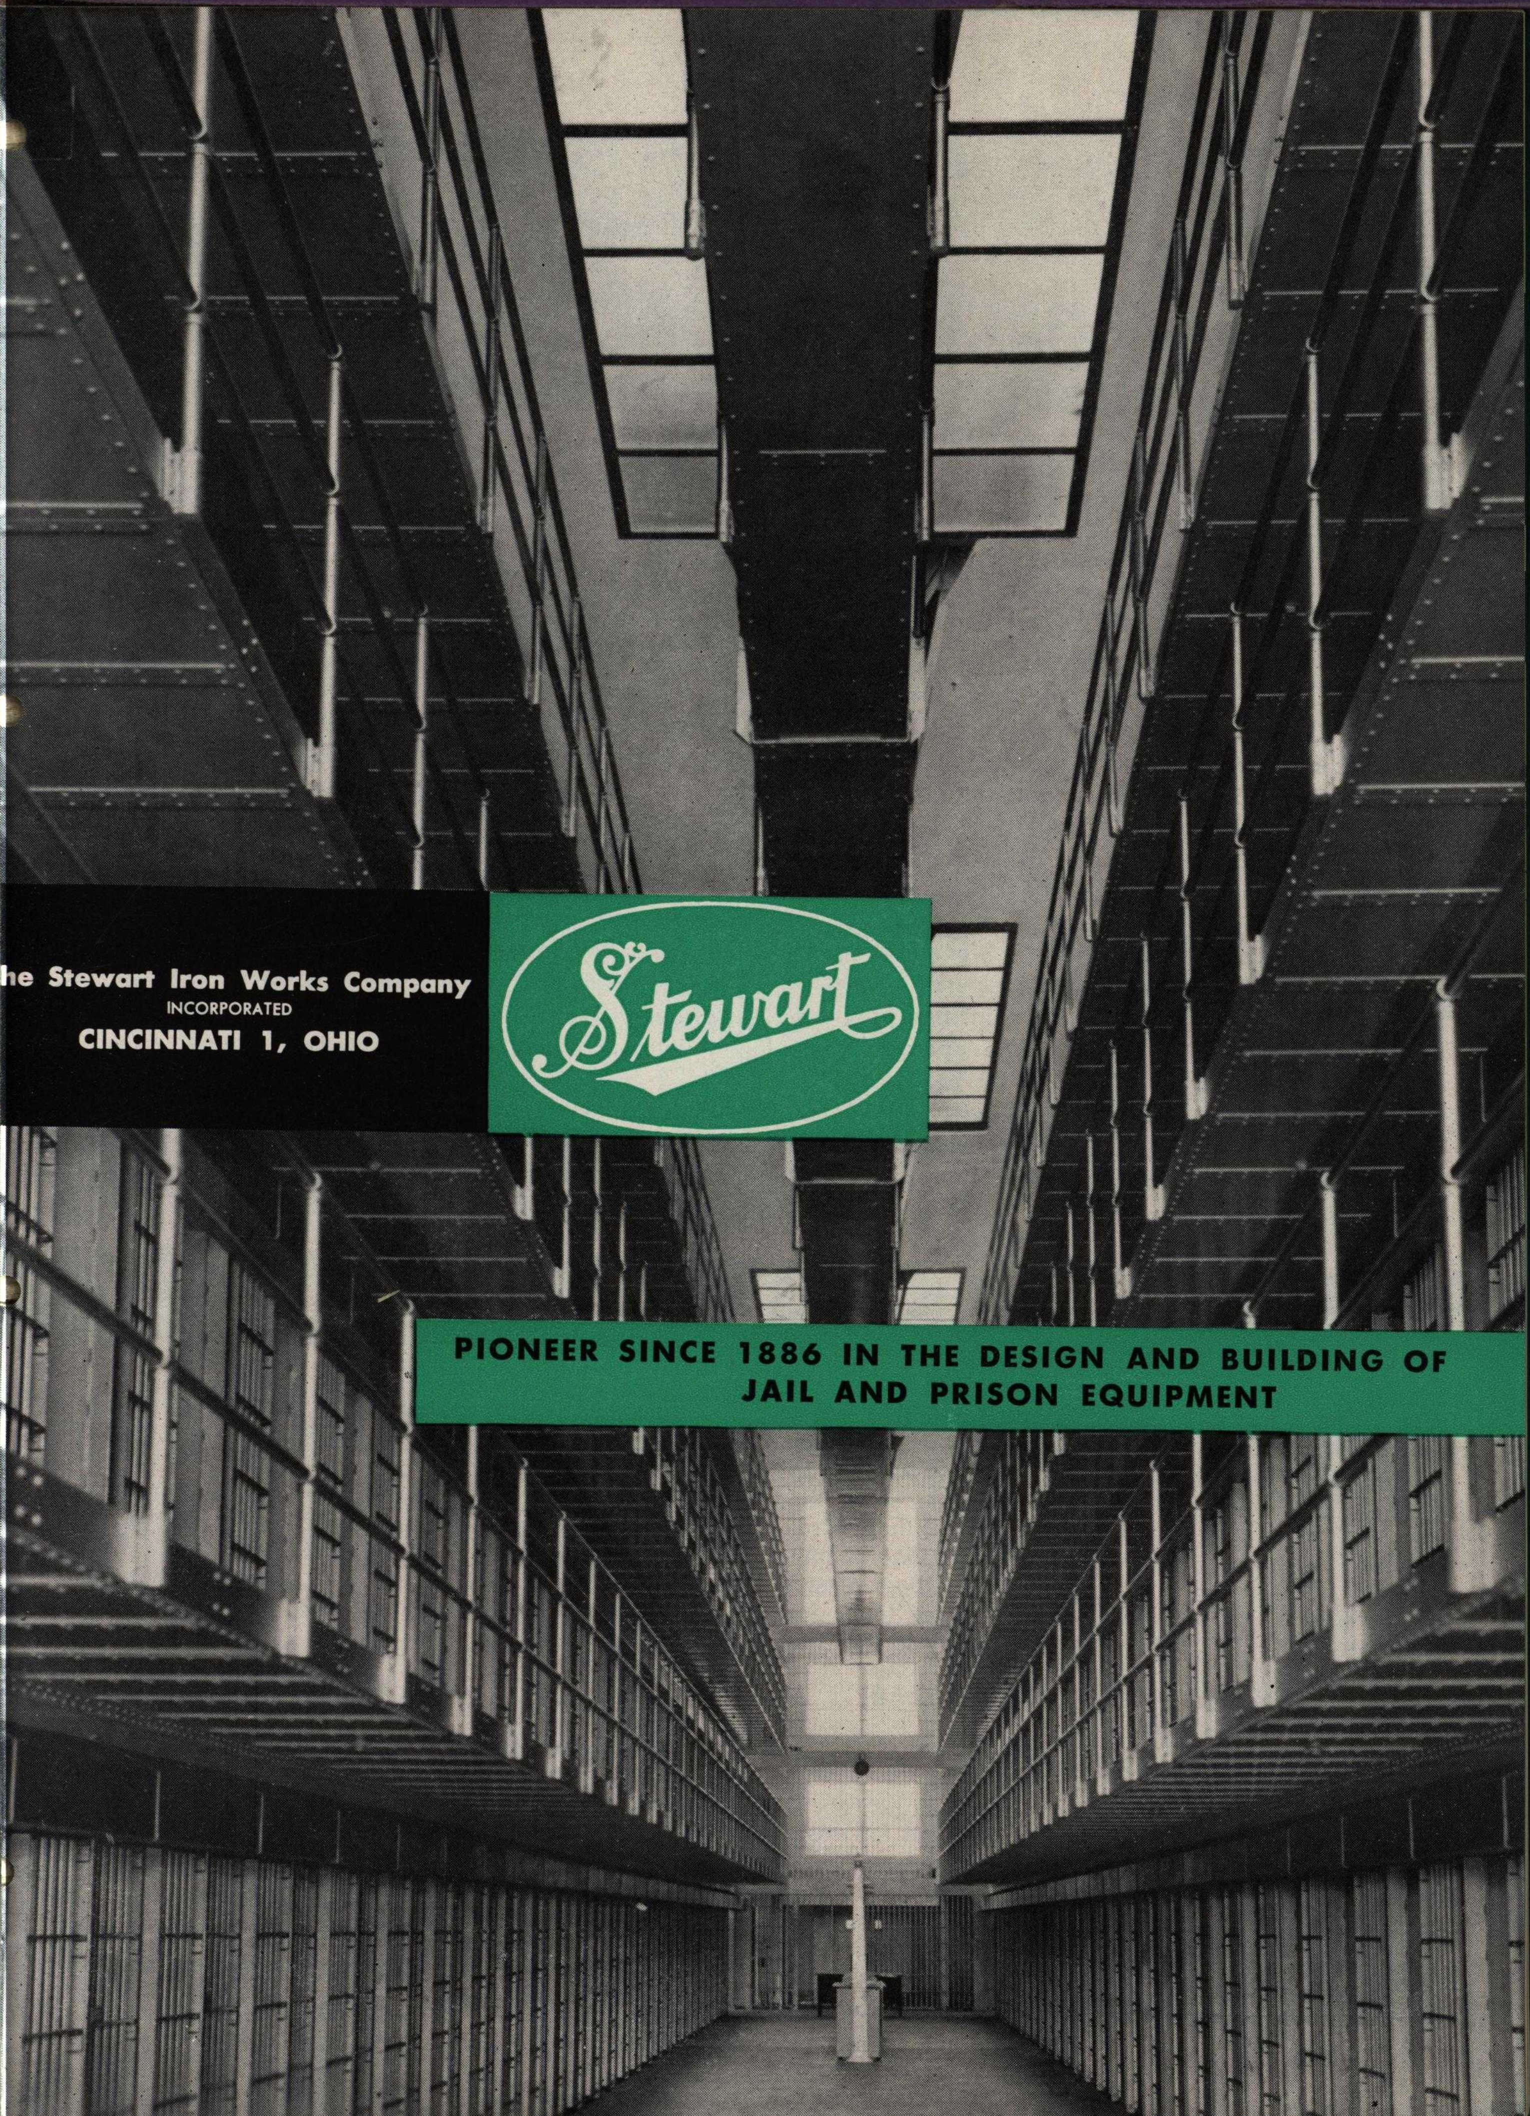
SAN ANTONIO, TEXAS



he Stewart Iron Works Company
INCORPORATED
CINCINNATI 1, OHIO

Stewart

PIONEER SINCE 1886 IN THE DESIGN AND BUILDING OF JAIL AND PRISON EQUIPMENT

STEWART PUSH-BUTTON REMOTE CELL DOOR CONTROL PROVIDES NEW SECURITY, NEW SAFETY

- ***Locks or unlocks one or any number of cell doors in any position***
- ***Signals every door position on control panel***
- ***Entire system actuated by a single motor at control panel***
- ***Switches to standby mechanical operation with single lever***

For 73 years Stewart has pioneered the development of jail and prison equipment in building many of America's most critical security installations, including Alcatraz. One of Stewart's important features has been its exclusive mechanical locking system, providing single lever control of an entire row of cells or a cell block from the end of the row.

Now, a new wonder from Stewart, electrification of this thoroughly proved locking system permits location of the control center at any remote point that provides best control and most safety for the operator. The electro-mechanical control center may be located at the end of the cell block, in the warden's office, or across the street, actually with no limitation as to distance. Remote location provides maximum safety not only for the operator but also for the control equipment. The entire system is actuated by *only a single motor* located at the end of cell row, secure against tampering, easy and economical to service and inspect.

From the central control location a single operator has electrical push-button control of every door in the prison individually or in any desired groups. He may open one door or any number, close one or any number, lock any number in open or closed position, even lock them if jammed partially open. The position of every door — open or closed — is recorded by an individual signal light at the control location.

Another Stewart exclusive and just as revolutionary, in case of power failure a single lever switches the entire system to mechanical operation, still providing all the selectivity of the electric control system.

MECHANICAL LOCKING DEVICE ALSO AVAILABLE

Proved over many years in installations from coast to coast, the Stewart centralized mechanical control for cell doors is simple in construction, positive in operation. With the movement of a single lever, the operator has the same selectivity described for the electro-mechanical system. He may open or close one or any number of doors, or in any combination, without regard to the position of other doors in the same line. An auxiliary locking device enables the operator to lock the sliding doors about every inch of travel between open and closed position, preventing door movement in either direction.

An auxiliary safety device in the control cabinet prevents the operator from closing the control cabinet doors until all cell doors are locked in either the open or closed position. The control cabinet door is securely hung and locked with a prison type dead lock for the safety of the operator.

JAIL AND PRISON EQUIPMENT *from a village lock-up to a federal penitentiary*

Stewart manufactures the sturdiest equipment for every requirement: grating and plate cells in open-hearth and tool-resisting steel; hinged and sliding doors (key operated or remote controlled); locks and locking devices; window guards; steel stairs and railing; bunks; light boxes; vents; tables; seats; non-climable chain link wire fence, and other accessories for modern penal institutions.

ENGINEERING CONSULTATION AT NO OBLIGATION

Stewart engineering, designing and drafting facilities are available to architects and penal authorities without cost or obligation. Designs, estimates, specifications and layouts for jail equipment for new construction or modernization will be furnished on request. Architects, prison officials and engineers are cordially invited to consult Stewart engineers.

STEWART HEAVYWEIGHT CHAIN LINK WIRE FENCE FEATURES ALL-BEAM FRAMEWORK

Heaviest and strongest fence available. Photo illustrates style 5TH with extension arm to accommodate five strands of barbed wire. This style assures the utmost in security because it prevents unauthorized entry from without, or escape from within. Notice that line post and extension arm is an integral unit. Arm cannot be broken or lifted off. Style 5TH is available in heights up to 13 feet. Stewart open section framework with solid I-Beam top rails, line and corner posts, is stronger, heavier and more corrosion-resistant. It will last longer and cost less to maintain. Write for specification manual.

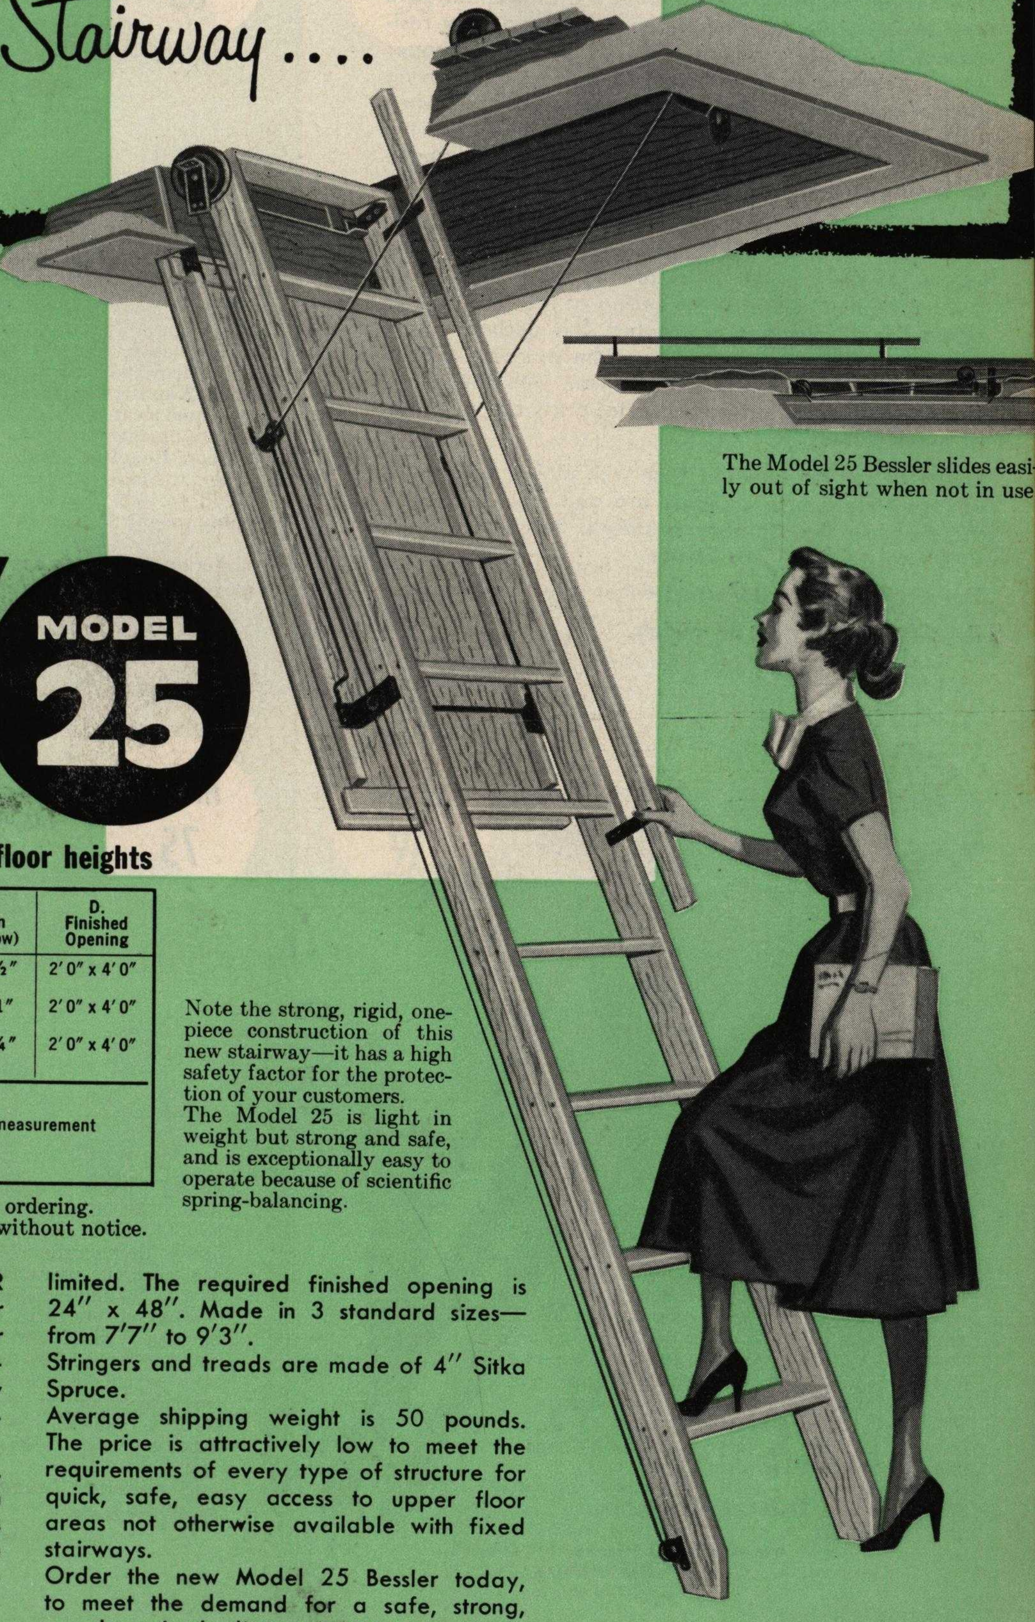
An Economical **NEW** *Bessler Disappearing Stairway....*

QUALITY AT A NEW LOW PRICE!

MODEL 25



The Model 25 Bessler slides easily out of sight when not in use

DIMENSIONS for various floor to floor heights

Floor to Floor	A. Radius (Above)	B. Plumb Height (Above)	C. Run (Below)	D. Finished Opening
7′ 7″ to 8′ 3″ (Order Model 25-S)	5′ 0″	3′ 0″	3′ 8½″	2′ 0″ x 4′ 0″
8′ 4″ to 8′ 9″ (Order Model 25-M)	5′ 6″	3′ 8″	3′ 11″	2′ 0″ x 4′ 0″
8′ 10″ to 9′ 3″ (Order Model 25-L)	6′ 0″	4′ 4″	4′ 1¼″	2′ 0″ x 4′ 0″

Actual width of stairway 17³⁄₁₆″ overall, including stringers.

Rough opening should be made two inches larger than the measurement shown for finished opening.

Average shipping weight approximately 50 pounds.

Be sure to give floor to floor height when ordering. Specifications and material subject to change without notice.

Note the strong, rigid, one-piece construction of this new stairway—it has a high safety factor for the protection of your customers. The Model 25 is light in weight but strong and safe, and is exceptionally easy to operate because of scientific spring-balancing.

This is the new Model 25 in the BESSLER Disappearing Stairway line . . . famous for 45 years as the inventor and quality leader in the disappearing stairway field. Typically Bessler in scientific design . . . safety engineering . . . and strong, quality construction.

The Model 25 Bessler has three spring drums, two of which close the door; the other drum is to assist the operator in sliding stringers over door. This drum is at the head of the opening on the left side and easily accessible for adjusting and tension.

The slightly steeper run and shorter door are most suitable for use where space is limited. The required finished opening is 24″ x 48″. Made in 3 standard sizes—from 7′7″ to 9′3″.

Stringers and treads are made of 4″ Sitka Spruce.

Average shipping weight is 50 pounds. The price is attractively low to meet the requirements of every type of structure for quick, safe, easy access to upper floor areas not otherwise available with fixed stairways.

Order the new Model 25 Bessler today, to meet the demand for a safe, strong, popular-priced disappearing stairway in the high-quality field!

BESSLER DISAPPEARING STAIRW

SUBSTANTIAL · SIGHTLY · PRACTICAL · FOR ONE AND TWO-STORY RESIDENCES AND

The Original Disappearing Stairway . . . in Use Over 45 Years

The Bessler Disappearing Stairway is a substantial, safe and practical flight of stairs for one or two-story residences and other types of buildings, providing proper stair access to an upper floor when desired, and leaving clear the floor space ordinarily occupied by stairs when that is wanted. While not in use, the stair slides into the ceiling out of the way. It can be operated from above as well as from below.

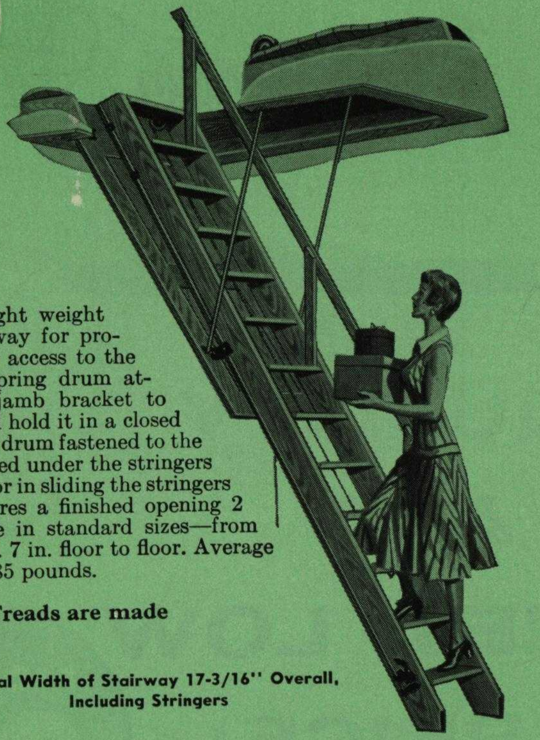
The treads are properly secured to heavy string pieces with open risers. The full-length hand rail is strong and secure. At the top the stairs are attached to the end trimmer of an opening in the ceiling of the room or hall where the stairs are to be located. The mechanism and operation are very simple. To use the stairway a slight pull on a chain brings it into position, with very slight assistance from the operator. Metal parts are all made of pressed steel.

The door can be installed flush with plaster regardless of how wide the ceiling joists are and is the only part visible when the stairway is closed. Stringers, treads, and hand rail are Sitka Spruce.

Hand rail can be installed on either side of stairway.

Repairs available for all models.

Model 35

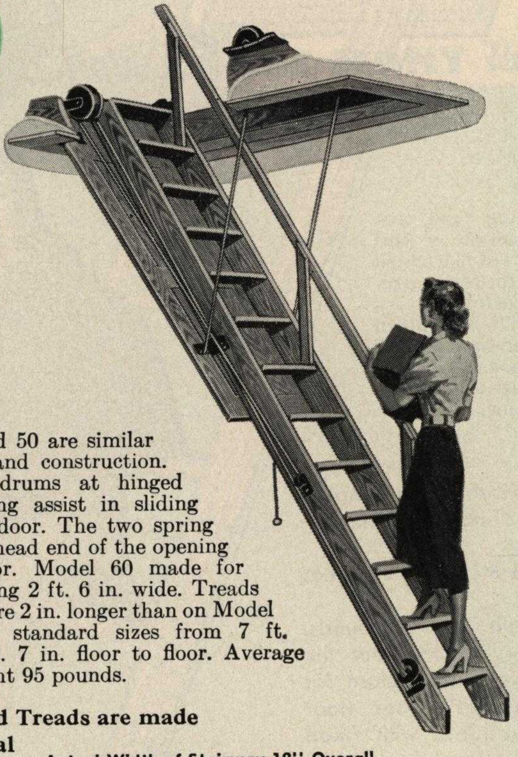


Model 35 is a light weight inexpensive stairway for providing safe, ready access to the attic. It has a spring drum attached to each jamb bracket to raise the door and hold it in a closed position. A spring drum fastened to the metal frame located under the stringers assists the operator in sliding the stringers over door. Requires a finished opening 2 ft. wide. . . Made in standard sizes—from 7 ft. 7 in. to 10 ft. 7 in. floor to floor. Average shipping weight 85 pounds.

Stringers and Treads are made of 6″ material

Actual Width of Stairway 17-3/16″ Overall, Including Stringers

Model 60

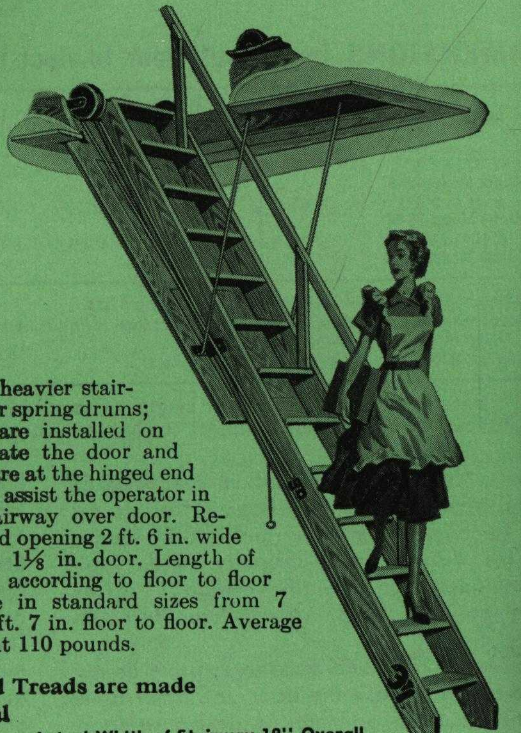


Models 60 and 50 are similar in operation and construction. Two spring drums at hinged end of opening assist in sliding stringer over door. The two spring drums at the head end of the opening close the door. Model 60 made for finished opening 2 ft. 6 in. wide. Treads on Model 60 are 2 in. longer than on Model 50. Made in standard sizes from 7 ft. 7 in. to 10 ft. 7 in. floor to floor. Average shipping weight 95 pounds.

Stringers and Treads are made of 6″ material

Actual Width of Stairway 19″ Overall, Including Stringers

Model 75



Model 75 is a heavier stairway. It has four spring drums; two of these are installed on jambs to operate the door and the other two are at the hinged end of opening and assist the operator in sliding the stairway over door. Requires a finished opening 2 ft. 6 in. wide equipped with 1⅛ in. door. Length of opening varies according to floor to floor heights. Made in standard sizes from 7 ft. 7 in. to 10 ft. 7 in. floor to floor. Average shipping weight 110 pounds.

Stringers and Treads are made of 6″ material

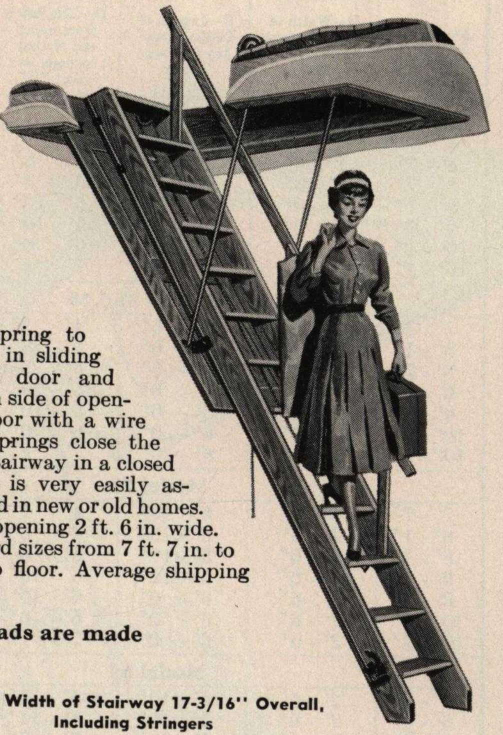
Actual Width of Stairway 19″ Overall, Including Stringers

WHEN ORDERING PLEASE GIVE EXACT HEIGHT FROM FLOOR TO TOP OF UPPER FLOOR

YS IN EIGHT SAFE WOOD MODELS

HER TYPES OF BUILDINGS • PROVIDE ACCESS TO UPPER STORIES AND FLOOR AREAS

Model 45

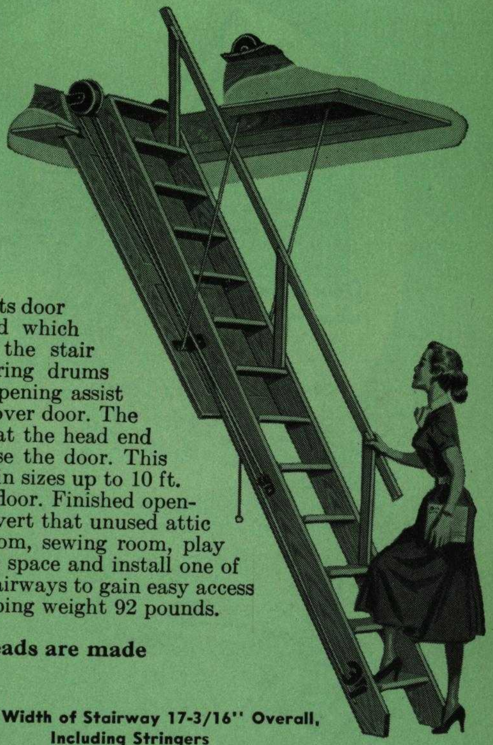


Model 45 has a spring to assist the operator in sliding the stringers over door and spring drum on each side of opening connected to door with a wire cable. These two springs close the door and hold the stairway in a closed position. Model 45 is very easily assembled and installed in new or old homes. Requires a finished opening 2 ft. 6 in. wide. . . . Made in standard sizes from 7 ft. 7 in. to 10 ft. 7 in. floor to floor. Average shipping weight 90 pounds.

Stringers and Treads are made of 6″ material.

Actual Width of Stairway 17-3/16″ Overall, Including Stringers

Model 50

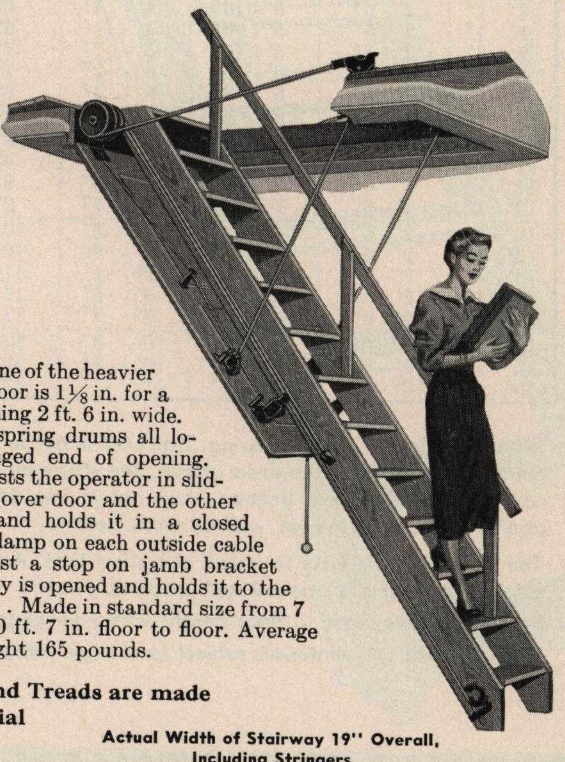


This stairway has its door hinged on the end which helps to support the stair stringers. Two spring drums at hinged end of opening assist in sliding stringer over door. The two spring drums at the head end of the opening close the door. This model is furnished in sizes up to 10 ft. 7 in. from floor to floor. Finished opening 2 ft. wide. Convert that unused attic space into a bedroom, sewing room, play room or for storage space and install one of our space saving stairways to gain easy access to it. Average shipping weight 92 pounds.

Stringers and Treads are made of 6″ material.

Actual Width of Stairway 17-3/16″ Overall, Including Stringers

Model 89

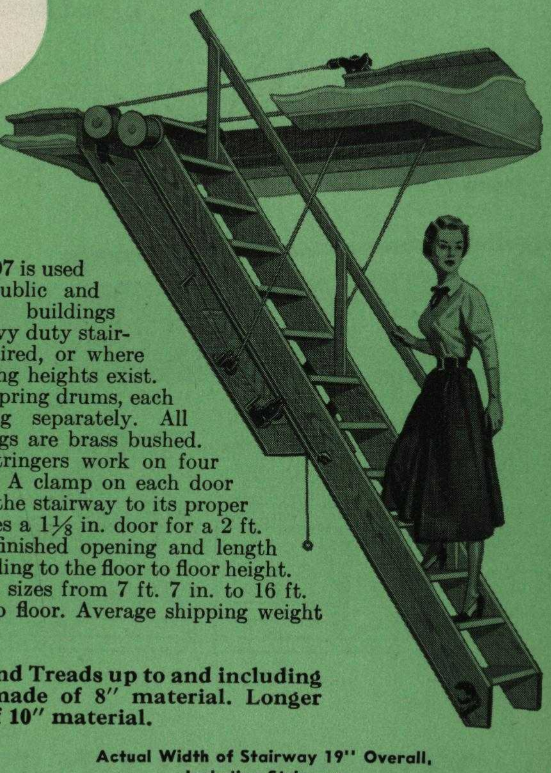


Model 89 is one of the heavier stairways. Door is 1⅛ in. for a finished opening 2 ft. 6 in. wide. It has four spring drums all located at hinged end of opening. One pair assists the operator in sliding stringers over door and the other raises door and holds it in a closed position. A clamp on each outside cable strikes against a stop on jamb bracket when stairway is opened and holds it to the correct run. . . Made in standard size from 7 ft. 7 in. to 10 ft. 7 in. floor to floor. Average shipping weight 165 pounds.

Stringers and Treads are made of 8″ material

Actual Width of Stairway 19″ Overall, Including Stringers

Model 97



Model No. 97 is used in many public and commercial buildings where a heavy duty stairway is required, or where greater ceiling heights exist. It has four spring drums, each one working separately. All main bearings are brass bushed. The stair stringers work on four steel rollers. A clamp on each door cable holds the stairway to its proper run. Requires a 1⅛ in. door for a 2 ft. 6 in. wide finished opening and length varies according to the floor to floor height. . . . Made in sizes from 7 ft. 7 in. to 16 ft. 1 in. floor to floor. Average shipping weight 190 pounds.

Stringers and Treads up to and including 12′7″ are made of 8″ material. Longer stringers of 10″ material.

Actual Width of Stairway 19″ Overall, Including Stringers

When the Bessler Disappearing Stairway is not in use, it is entirely concealed in the area above. The stairway takes up no space in the room below, when not in use. It can be operated from above as well as from below.

The Bessler unit is easy to install in a short time. A complete set of instructions is packed with each stairway.

Be sure to give floor to floor height with your order.

Specifications and materials subject to change without notice.

THE BESSLER DISAPPEARING STAIRWAY CO.

1900 East Market St., Akron 5, Ohio

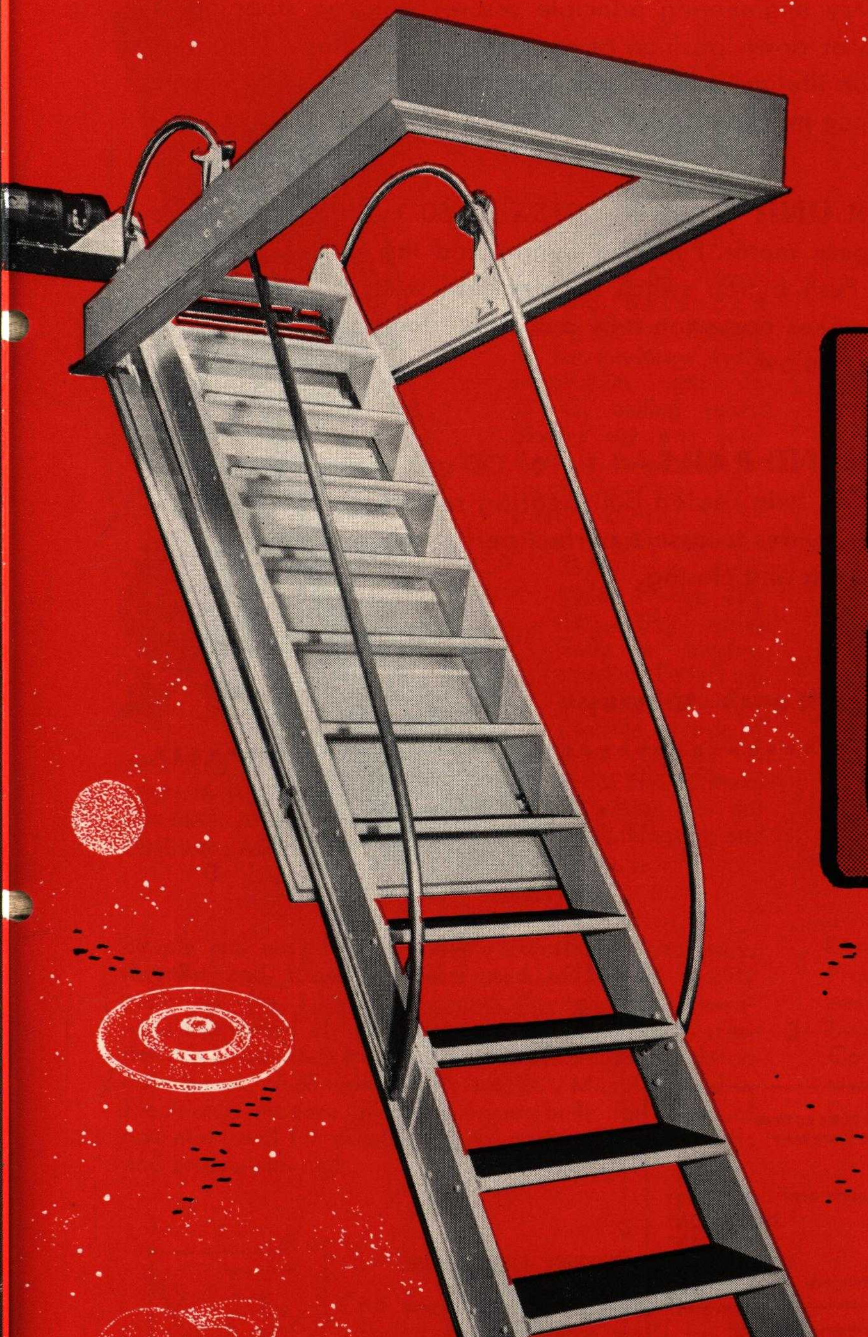
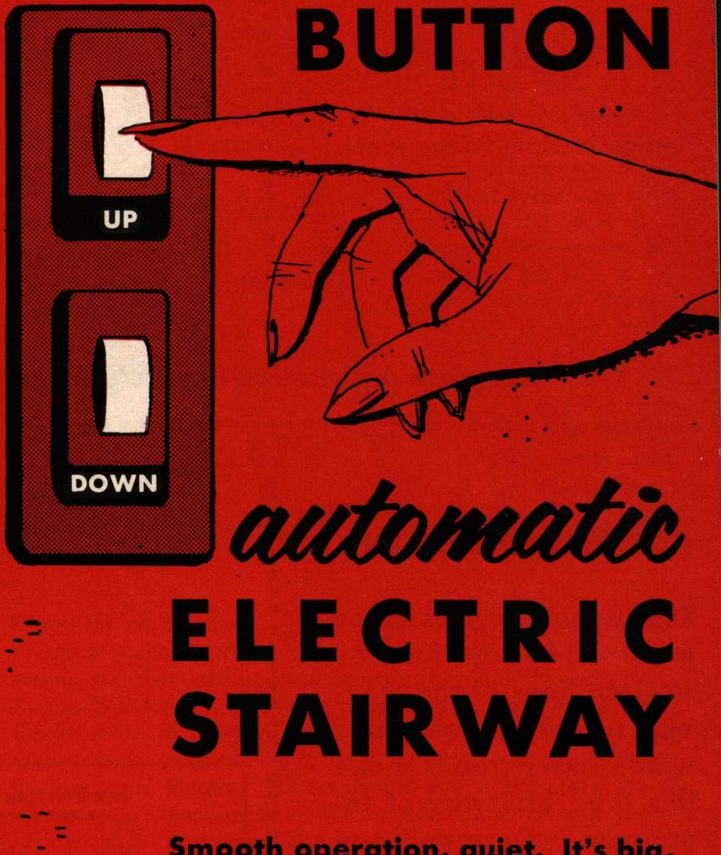
NEW as tomorrow



BIG

PUSH BUTTON



automatic ELECTRIC STAIRWAY

Smooth operation, quiet. It's big, bold and beautiful. Eight inch treads. Like all PRECISION products it's built to give trouble-free service and to last a lifetime. Simple engineering principle assures perfect opening and closing!

Manufactured by

PRECISION PARTS CORPORATION

400 North First Street
Nashville 7, Tennessee

Manufacturers of America's Most Complete Line of Disappearing Stairways

PRECISION AUTOMATIC ELECTRIC STAIRWAY

BIG BOLD and BEAUTIFUL

BIG TREADS—

1″ x 8″ x 19⅜″. Covered, as a safety feature, with ribbed rubber tread over the full 8 x 19⅜ inch area.

BIG STRINGERS—

1⅛″ x 6½″ kiln dried, "stress-tested" lumber. Heavily insulated door panel.

BOLD OPERATION— Simple AIRCRAFT steel cables and dual pulley engineering principle assures stairway stopping in either up or down position at exactly the right place. Operates entirely on lifetime sealed ball bearings. Safe and sure. Truly a masterpiece in "push-button living".

POWER UNIT— 1/3 hp; 115-volt, 60 cycle, single phase electric gear motor. Push the button and this power unit does the rest. Push button switch fits standard wall receptacle. Dual controls makes operation fully automatic from the station above as well as below.

BOLD HAND RAILS—1-1/16″ OD galvanized steel tubing. Operate on twin sealed ball bearing rollers, (both sides), as stationary guides to assure perfect performance of stairway on both opening and closing.

Complete installation instructions with each stairway

ADVANCED DESIGN

The sweeping curves of the hand rails against the straight lines of the stairway's heavy stringers and wide, heavy treads make this the "Stairway of tomorrow." Designed and built for use in the finest homes, banks and other commercial buildings where storage space is at a premium.

Art Metal

41 E. 42nd STREET NEW YORK 17, N. Y.

OFFICE FURNITURE AND MODULAR EQUIPMENT

Director Line

The newest concept in office desk design makes it possible to create the appearance most suited to your taste.

From company-wide needs of the nation's largest businesses, to the requirements of the smallest office, Art Metal can supply office furniture, modular equipment, and business systems to meet every problem, every need.

For more than 70 years, Art Metal engineers and planners have carefully studied and met the requirements of business. As a result, through one source — Art Metal — the most complete line of office equipment is available.

Today, Art Metal manufactures over 200 types of office furniture . . . visible systems and equipment for record keeping and administrative control . . . vertical filing and indexing systems.

A complete Office Planning Service which provides scientifically planned office layouts and equipment recommendations is at your disposal. These facilities are available through all branch offices or dealers in the nation-wide Art Metal organization.

ART METAL CONSTRUCTION COMPANY
41 EAST 42nd STREET
NEW YORK 17, N. Y.

Art Metal *The nation's leading designer and manufacturer of metal office equipment*

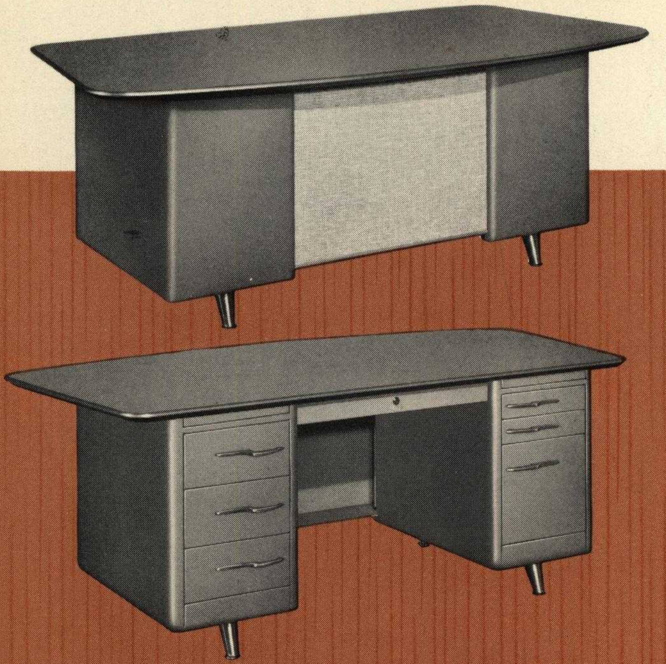
ART METAL DESKS . . . DRAWER ACCESSORIES

Desks are job-fitted to every work station.

Art Metal desks are built for efficiency, styled for leadership. Their functional design and organization for individual job requirements step up office work output and reduce costs wherever they are installed.

Within the three distinct desk series — Director Line, Pace-Setter, and Mainliner — there are styles for every office requirement and location. All desks have drawer equipment which serves most general purposes. For more refined and specialized use, Art Metal offers a complete line of drawer accessories, making it possible to design each desk to individual job requirements.

Desk versatility is increased through the use of functional Credenza units. This completely flexible, smartly styled line permits use as individual bases or group combinations to provide additional filing storage space adjacent to the desk .

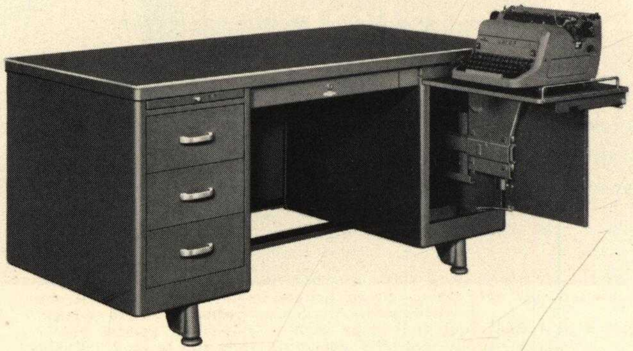


DIRECTOR LINE DESKS

Front and rear views of executive style with large fan top, overhang at back and both ends. Special Panlam "character" plastic applied to desk back.

PACE-SETTER DESKS . . . EXECUTIVE, GENERAL OFFICE, AND SECRETARIAL STYLES

The Pace-Setter series is a complete line of Executive and General Office Desks and Tables. The 78" executive style is shown. Other flat top sizes range from 40" to 72" wide — tables from 36" to 120" wide.

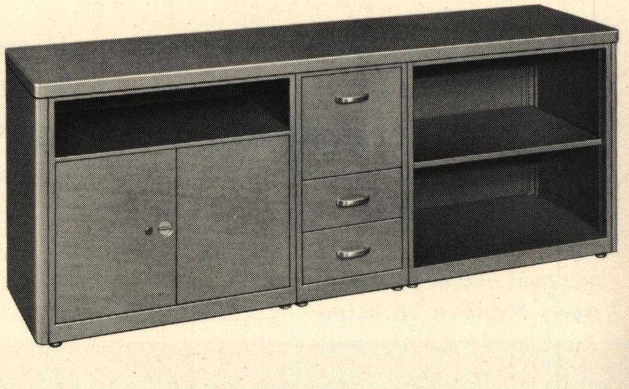


Pace-Setter Desks include 50", 55" and 60" secretarial styles with Fold-O-Way and elevator-type platforms for typewriters. Also available are clerical-type desks with fixed machine platforms in 45", 55" and 60" widths.

MAINLINER DESKS

Art Metal Mainliner Desks include flat top and secretarial styles as well as fixed platform types. Optional drawer accessories permit planned desks to fit specialized requirements.

CREDENZA UNITS

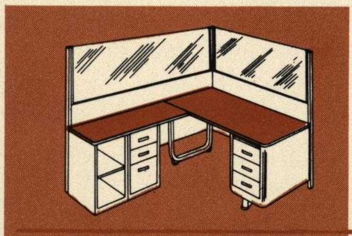


Credenza Units may be assembled in lengths up to 91½" or used individually. Basic units consist of two-drawer files, open and closed storage units and cupboards.

ART METAL MODULARS . . . the permanent answer to changing office requirements

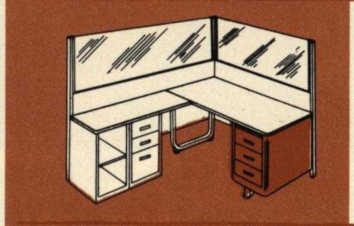
Modulars, by providing a wide range of prefabricated elements, give complete freedom for designing offices that fit today's requirements perfectly. They fit together in compact combinations that permit 30% or more in floor space savings. In areas where job functions require extreme concentration, Modulars help reduce distractions. Modulars are easily arranged to smooth traffic and work flow, and make productive, attractive places to work.

BASIC MODULAR ELEMENTS



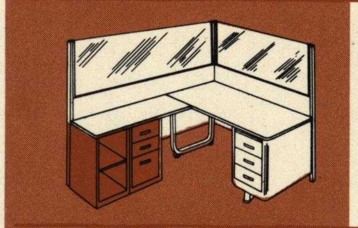
MODULAR TOPS

Provide the easily reachable work top area that ends cluttered desks and increases office production.



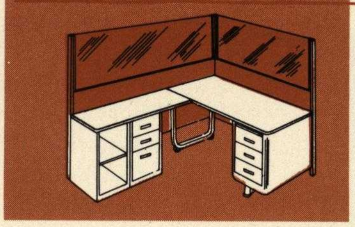
DESK PEDESTALS

In two depths, 18" and 30", and in letter, cap, or typewriter pedestal widths. Complete range of drawer accessories.



FILE PEDESTALS

Select from over 25 styles in three depths to get that extra file or storage space that makes a work station complete.



MODULAR PARTITIONS

Free-standing partitions in 44 sizes and a variety of panel inserts designed to fit within 1½" or less virtually any dimension over 13½".

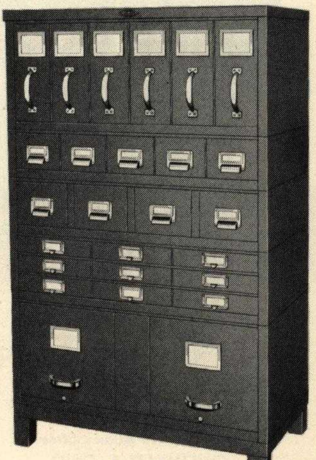
ALUMINUM OFFICE CHAIRS

These smart looking, quality-built chairs mark a new high in office chair design and construction. They have greater strength and durability to take the punishing wear of a busy office. Chair styles include executive type, both swivel and arm, clerical and secretarial posture styles, and general office chairs.

EXECUTIVE POSTURE CHAIR

ARM CHAIR

SECRETARIAL POSTURE CHAIR



WIDESECTIONS

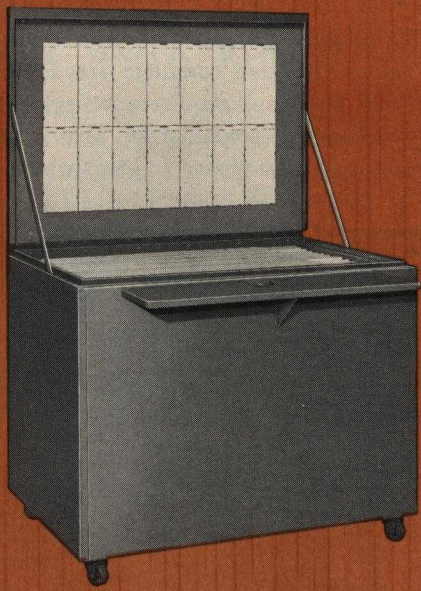
The great adaptability and flexibility of these horizontal sections permit almost limitless combinations to meet any filing requirement. The illustration shows how units of varying sizes and purposes can be combined into one compact unit.

ART METAL FILES FOR EVERY OFFICE NEED . . . EVERY OFFICE RECORD

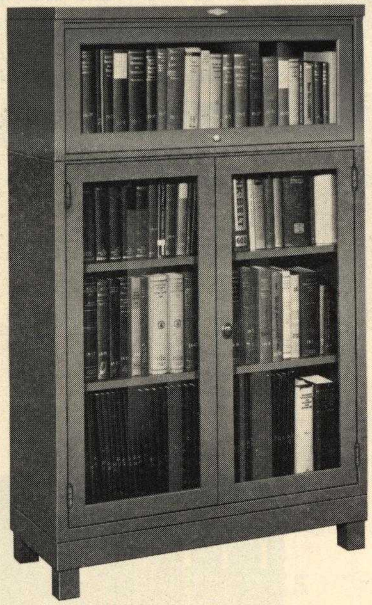
File models range from Director Files (at left) through Insulated Files, Speed-Files, space-saving Multi-Files and Open File Shelving. Outstanding engineering and construction features provide the strength and durability, plus the ease and economy of operation responsible for Art Metal's leadership in office equipment manufacture. Unique suspensions permit drawer extension BEYOND cabinet front making drawer space 100% usable.

ART METAL PLANFILES

Ideal for preserving valuable plans and drawings. They provide a fast, simple means of filing and locating drawings while protecting against fire, water, and dust damage. Available in four sizes for drawings up to 56" wide.

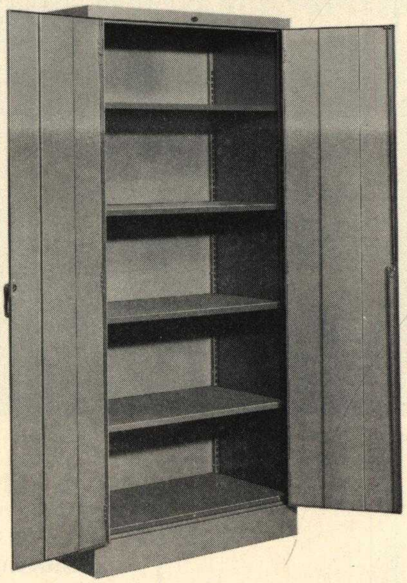


EXECUTIVE BOOKCASES . . . STORAGE AND WARDROBE CABINETS



Art Metal Executive Bookcases provide ample room for books, binders, notebooks, and other records which do not fit into ordinary 10" depth units. Sectional feature permits you to start with one section plus a top and base . . . add extra sections as needed.

For storing and protecting office supplies, Art Metal Storage Cabinets are equipped with four adjustable shelves. If desired, unit can be converted to a Wardrobe Cabinet by substituting a hat shelf and coat hanger rod.



For complete details about Art Metal office equipment, ask for

the complete Art Metal Stock Catalog or an individual catalog for any of the products shown.

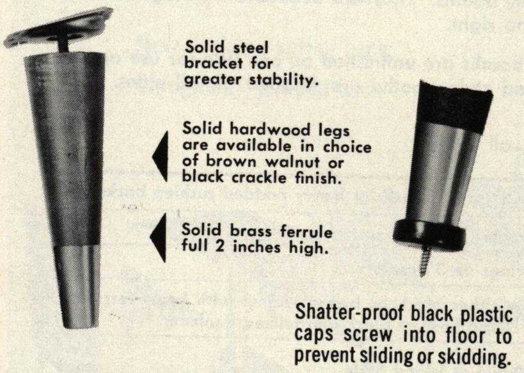
LEG CONSTRUCTION



Solid steel bracket for greater stability.
Solid hardwood legs are available in choice of brown walnut or black crackle finish.
Solid brass ferrule full 2 inches high.
Shatter-proof black plastic caps screw into floor to prevent sliding or skidding.

Brody has a wide selection of rugged fabrics that are all made to take abuse. Other upholstery fabrics can be ordered for Brody booths in solid colors or combination of colors, color-coordinated according to your needs. They are washable for easy maintenance.

The above sketch shows the exact production terms used in our factory. On special color combinations indicate these terms in your specifications. Our design department is always at your service with suggestions or assistance.

The modern look in public seating is leg booths. Brody leg booths are engineered to assure level seating, longer life, and easy economical floor maintenance. Legs are available in a choice of solid hardwoods and brown walnut or black crackle finish—with a 2″ solid brass ferrule.

Shatter-proof black plastic caps screw into floor to prevent sliding or skidding.

THE CHICAGO HARDWARE FOUNDRY CO.
NORTH CHICAGO, ILLINOIS

"dependable since 1897"

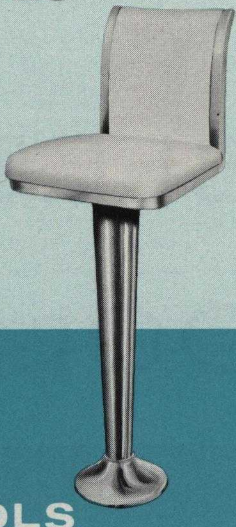
NEW COLORS AND FINISHES

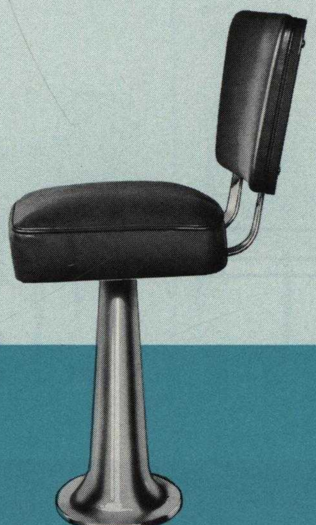
"CHF" Color-Choice gives the widest selection of colors and finishes ever offered . . . gives designers the greatest latitude in color styling. Nowhere else can you find such a spectacular array to choose from: lifetime porcelain enamel in 20 lustrous colors . . . metal finishes in Amber Forever Solid Bronze, Anodized Aluminum, Chrome Plate . . . Natural Woods . . . plus all of today's modern fabrics and decorator colors.

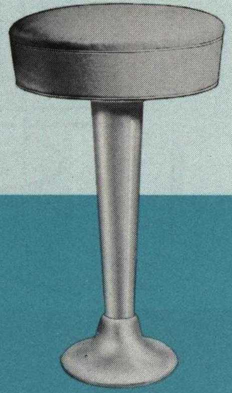
"CHF" WINNERS IN INSTITUTIONS National Food Service CONTEST

You can depend on top styling and sound design with "CHF" Stools and Tables. Every year, many of the top award winners in the INSTITUTIONS Annual Food Service Contest are equipped with "CHF" Stools and Tables. Such consistent superiority leads more and more designers to choose "CHF" Stools and Tables to represent and personalize their finest ideas.

STOOLS







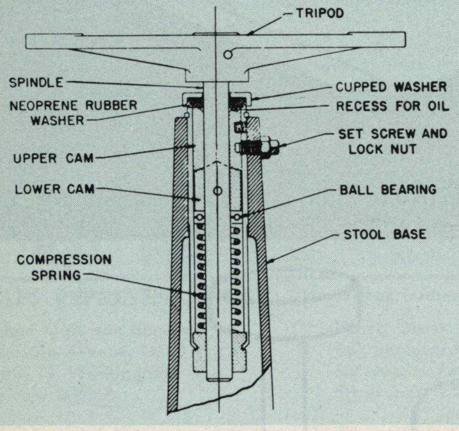
STOOLS

NO. 414-848-875-W: The striking beauty of new "Flare" design now in a handsome stool with classic simplicity of line. Cast in the warm beauty of solid bronze for the utmost in taste and refinement. Back rest and seat frame also in solid bronze. Seat and back upholstered in choice of fabric and color. Seat size 16" x 14" x 3" thick. Back is 15" high. Available in cast iron, choice of lifetime porcelain colors; solid bronze; chrome or anodized aluminum.

NO. 876-848-874: Designed for luxurious comfort with deeply padded back and seat. Back supports are concealed and are available in chrome or bronze to match base. For extra refinement this seat can be upholstered in genuine leather, or it may be had in a wide choice of fabrics and colors. Size of seat: 14"x14"x3½" thick. Back is 14" high.

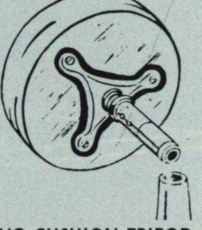
NO. 414-849-870: New "Flare" column stool in the modern beauty and utility of cast anodized aluminum. This tastefully designed stool will fit perfectly into any interior styling, modern or traditional. Spacious round seat is deeply upholstered in a large selection of modern fabrics and colors. Seat is 15" in diameter x 3" thick.

"CHF" STOOLS AND TABLES ARE AVAILABLE IN SOLID BRONZE, ANODIZED



NO. 848
SPRING CUSHION, BALL BEARING SEAT RETURN TRIPOD

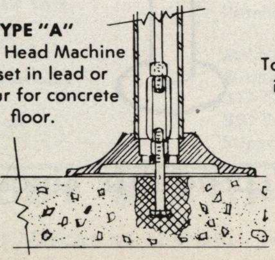
A patented construction with automatic stop for counter stools with backs. This sturdy, extra-durable attachment provides both spring cushion comfort and work-saving automatic seat return. Concealed spring in stool neck gives customors the cushioning of an innerspring unit — eliminates need for springs in seat itself. When person leaves seat, it returns to position with back parallel to counter . . . keeps counters looking neat and uniform at all times.



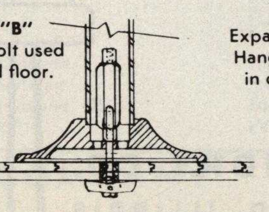
NO. 849 SPRING CUSHION TRIPOD for Seats without Backs. Same durable construction as the seat return tripod, except no neoprene washer is needed, thereby allowing even greater spring action. When a person sits down, weight is cushioned by a strong spring inside neck of tripod . . . an added comfort feature customers appreciate.

FLOOR ATTACHMENTS

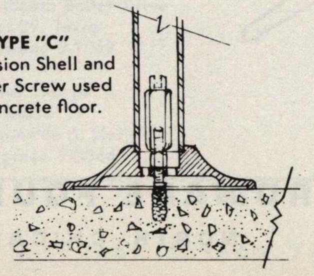
TYPE "A"
Square Head Machine Bolt set in lead or sulphur for concrete floor.



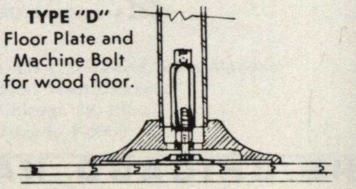
TYPE "B"
Toggle Bolt used in wood floor.



TYPE "C"
Expansion Shell and Hanger Screw used in concrete floor.

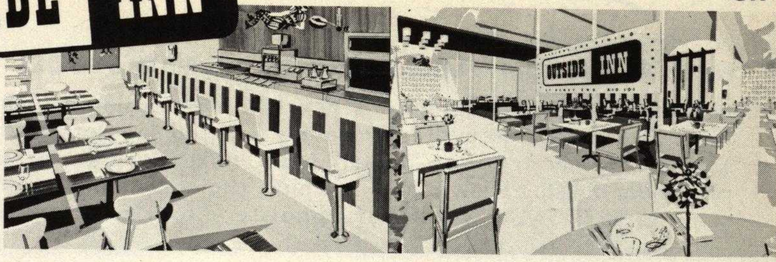


TYPE "D"
Floor Plate and Machine Bolt for wood floor.



OUTSIDE INN

New "CHF" Tables and Stools Selected by Henry End for the OUTSIDE INN "Designed for Dining" Display, National Hotel Exposition at New York City.



TABLES

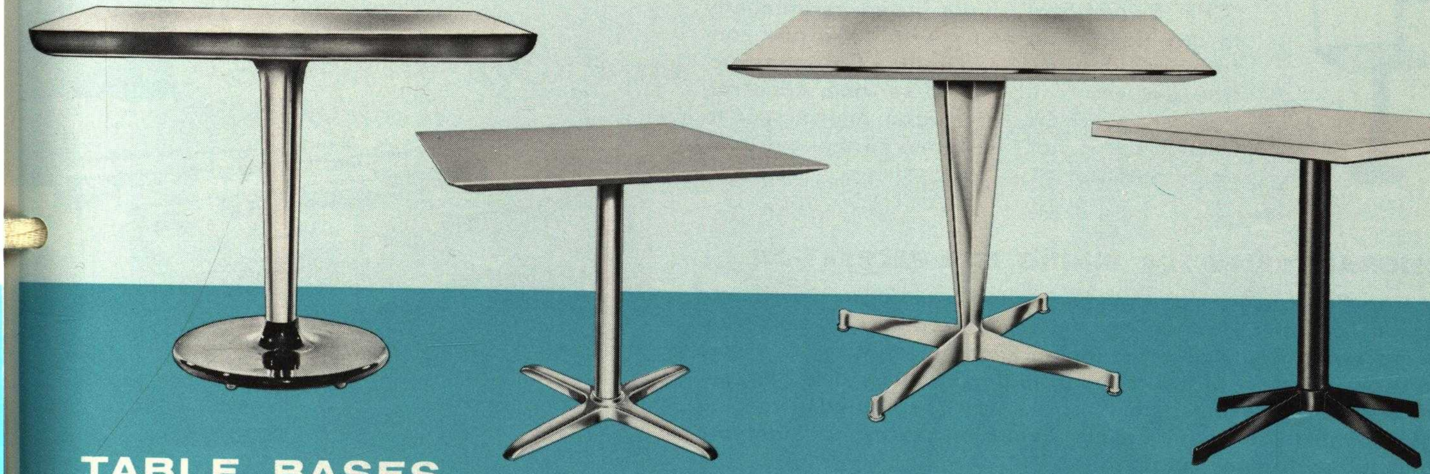


TABLE BASES

NO. 909-254A FLARE TABLE: Beautiful new table base reflecting latest in design trends — the flare column. Column shown combines beauty of cast Amber Forever Solid Bronze with cast iron base finished in a choice of lustrous porcelain enamel colors or base may be had in cast solid bronze, like column. Base is 19½" in diameter for tops up to 36" round or square. Other sizes also available for tops up to 96".

NO. 912A-254A TABLE: Four-prong style base is available in the 20 attractive colorful porcelain enamel finishes. Prongs are tapered 2¾" to 1¾" with a spread of 31". Column is 3" tubular steel in chrome or bronze plate. May also be adapted to take the No. 909 Flare column. For tops up to 36".

NEW "CHF" ASTERISK TABLE NO. 946-A (30" Base Spread) Gracefully styled, original thin-line 4-fin cast bronze and popular 4-prong base. Vertical edges of column are flared and polished to highlight design. Levelizer glides on base feet. 30" base spread for 36" x 36" tops. Available in full choice of "CHF" cast bronze, anodized aluminum, cast iron, black paint finish.

NEW THIN-LINE TABLE BASE NO. 945-A-254A (30" spread) Subtle, modern thin-line styling solid cast iron base with 3" tubular steel column, both available in 20 decorator lifetime porcelain enamel finishes . . . column in bronze plate or chrome. Raised 4-prong base, easy to clean under, provides ample foot room. Base has 30" spread for tops up to 36".

ALUMINUM. CAST IRON, PORCELAIN ENAMEL COLORS, CHROME AND NATURAL WOOD

"CHF" QUALITY TABLE TOPS

Nationally famous 9-ply super-bonded tops featuring genuine Formica. The exclusive new designs and new colors offer unlimited possibilities . . . the perfect finishing touch for "CHF" tables.

The nine layers of equal thickness hardwood are topped and super-bonded with high-pressure laminates to offer a tough, impervious table top.

Tops are available with metal edges in stainless steel, bronze, or aluminum. They are also available with super-bonded edges in plastic self-edge as shown.

NEW BUDGET TABLE TOPS

Feature Formica tops and backing sheets with screw holding power equal to, or better than best laminated plywood grades.

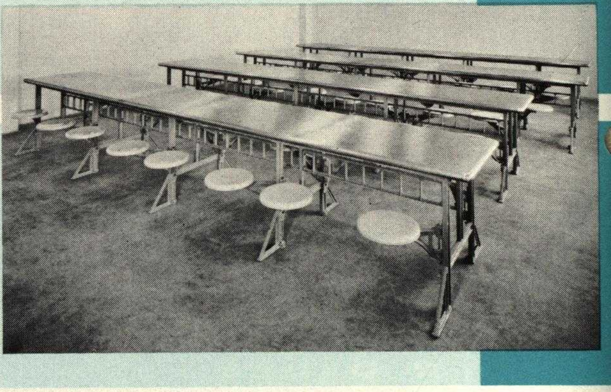
NEW ALUMINUM TABLES, CHAIRS . . . BAR STOOLS

Simplicity of design marks this new "CHF" matching aluminum table and chair ensemble. Gracefully tapered legs are durable cast aluminum in choice of soft black baked enamel or satin aluminum finish. Shown are matching chairs available with or without arms, your choice of upholstery fabrics and colors.

NEW SWIVEL SEAT CHAIRS FOR SCHOOLS AND INSTITUTIONS

"CHF" Swivel Seat Chairs fasten permanently to any floor — do away with noise and confusion of loose chairs. Lifetime Cast construction assures trouble-free service, carefree maintenance. Grooved tripod allows seat to revolve but it can't be removed without loosening setscrew.

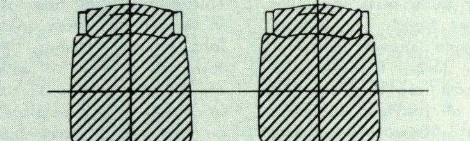


SECTIONAL TABLES FOR DINING AND RECREATION

Cast Iron Construction for lifetime service with channel legs and bridge truss center stringers for top strength, minimum bulk. Reinforced swing seats give maximum seating capacity . . . save aisle space. Variety of top colors including stainless steel. Framework in wide choice of enamel finishes. May be specified in varying lengths to meet your requirements. Extension braces that eliminate bolting tables to floor also available.

PROPER SPACING and INSTALLATION of COUNTER STOOLS

Whenever possible state the height of the counter and we will furnish the proper height of stool.



When #848 Seat Return is used, stools must be installed with a set screw away from counter.

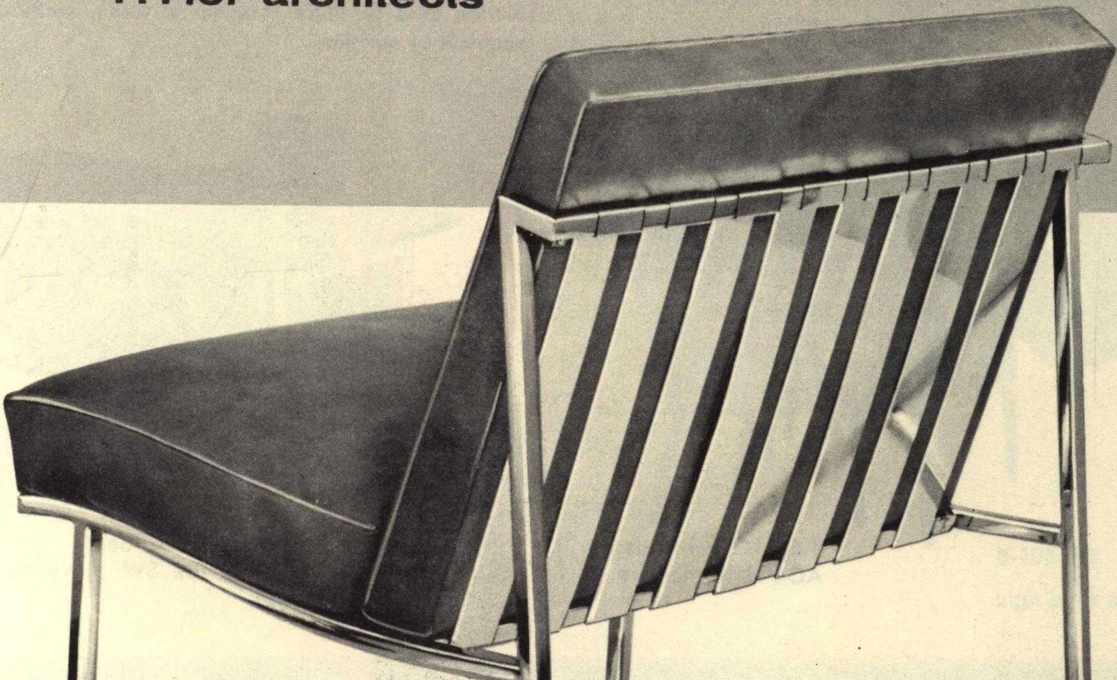
Edgewood

furniture designed by an architect

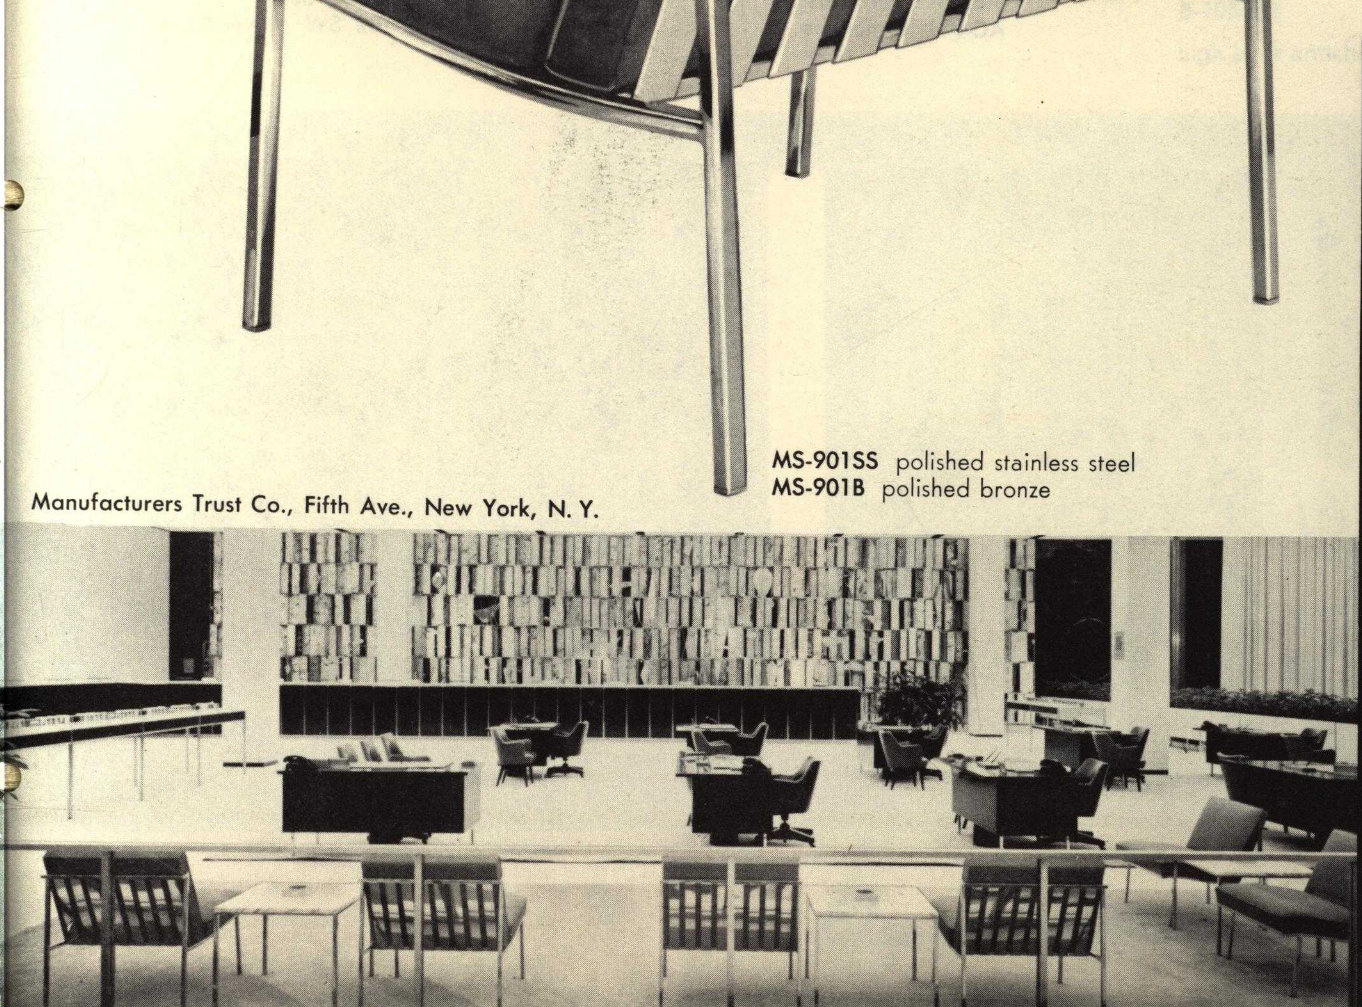
. . . for architects

designed by William Armbruster



MS-901SS polished stainless steel
MS-901B polished bronze

Manufacturers Trust Co., Fifth Ave., New York, N. Y.



Edgewood Furniture Company, Inc.

→ • designs by William Armbruster architect

executive furniture

The Edgewood collection of executive furniture offers a broad, comprehensive selection to the architectural and design professions. Edgewood designs are conceived in architectural terms — rather than in fashion trends. In fact, Edgewood believes that furniture is a basic element in interior design — and that interior design is often a potent factor in governing the design of the structure itself. Therefore, Edgewood carefully studies every selection of shape, structure and material from an architectural viewpoint.

Illustrated here are a few representative pieces of the Edgewood executive furniture group. This group consists of a full line of tables, desks, conference room and desk (swivel) chairs.

In designing its' executive furniture, Edgewood does follow the Great Tradition of simplicity, suitability, and integration of all elements. It keeps in mind two important prerequisites: service measured in decades; the solution of a furniture problem in terms, methods and materials of our time.

BARREL CHAIRS

Edgewood barrel chairs, unlike any others, employ a single molded plywood core out of which the sides and back are cut. This assures a seating piece of unfailing structural rigidity. Metal bases are available in steel (five colors), stainless steel, satin-finish chrome, or satin-finish bronze. Swivel bases are of walnut, finished to match finishes for tables and desks. Two tone upholstery optional. When ordering swivel chairs, please advise whether floor is hard surface or carpet.

public seating

Edgewood, for many years, has been a pioneer and leader in the designing of all types of flexible, functional public seating. Its' group of benches, due to the materials selected and the controlled construction, are built to assure life-time service even under the most severe use.

The types shown are William Armbruster originals, developed by Edgewood. Their design permits great flexibility of use and grouping into many arrangements. Any bench may be modified to meet unusual conditions.

Back to back and end to end spacers, and kneeling pads with supports are available for church pew use.

CHURCH PEWS

recommended for: churches, chapels, court room seating, waiting areas and terminals.

disposal of the profession. The services of the Edgewood special design team encompasse assistance in planning, color consultation and development of new furniture types. Many organizations have availed themselves of this offer. In each instance, they have received these four attributes of Edgewood custom design service.

- full co-operation with their aims
- superlative design
- finest materials and workmanship
- strict adherence to delivery schedules

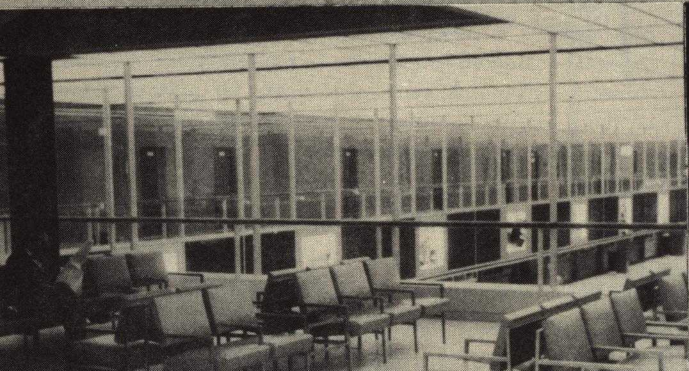
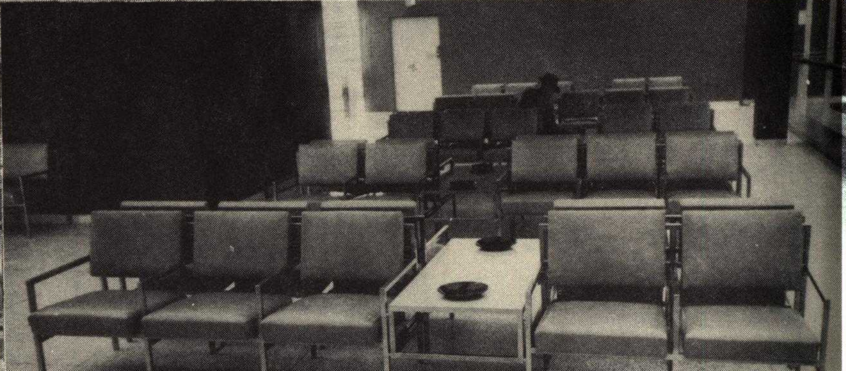
New York International Airport (Idlewild)
public seating — satin finished stainless steel Naugahyde upholstery, plastic laminate table tops





FLEXIBLE MODULAR SEATING

This system of seating—designed by William Armbruster and developed by Edgewood—permits unlimited flexibility. This system is of knockdown construction on a 48" module. It consists essentially of a leg and arm unit to which two tubular seat longerons and two back longerons are connected. Molded plywood seats and backs covered in plastic material are fastened to the respective longerons. Disassembly and re-erection in other locations can be handled by maintenance men.

All metal components are available in steel, bronze, and stainless steel. Plastic material covering seat and back panels to be specified by architect.

Diagrams below suggest possible seating arrangements in either 45 or 90 degree angles.

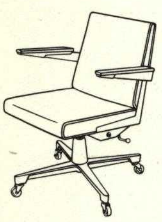
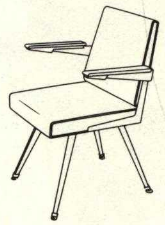
CONDENSED CATALOG FOR ARCHITECTS

AVAILABLE MODELS OF HARTER



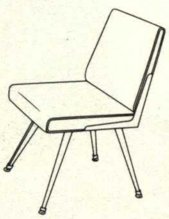
Criterion
Model 41400

Pleasing unitized structure: oneness of form and function.
Seat: 19″ wide; 18½″ deep
Back: 17¾″ wide; 16¼″ high



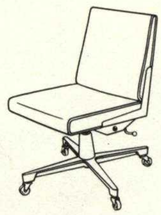
Criterion
Model 51410

Cantilever arms: styling in tune with harmonious building design.
Seat: 19″ wide, 18½″ deep
Back: 17¾″ wide; 16¼″ high



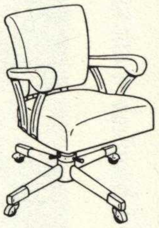
Criterion
Model 61420

Tri-tapered legs and full swivel glides keep chair firmly level.
Seat: 19″ wide; 18½″ deep
Back: 17¾″ wide; 16¼″ high



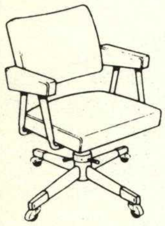
Criterion
Model 41430

Quality of "41400" for those who like a no-arm swivel chair.
Seat: 19″ wide; 18½″ deep
Back: 17¾″ wide; 16¼″ high



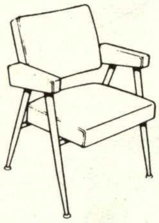
Model 65

Classic big chair beauty — yet retains trim clean lines.
Seat: 22″ wide; 20″ deep
Back: 18½″ wide; 18″ high



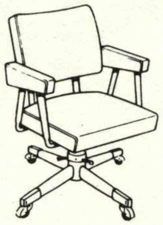
Tempo Model 300

THE Executive chair — with a look that implies success.
Seat: 19¼″ wide; 21¼″ deep
Back: 19″ wide; 14″ high



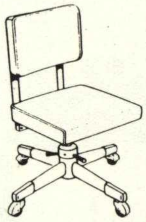
Tempo Model 310

Swept-back legs — deep cushioned foam comfort.
Seat: 19¼″ wide; 21¼″ deep
Back: 19″ wide; 14″ high



Tempo Model 350

Lithe lines — synchronized seat and back tilt. Easily adjusted.
Seat: 19¼″ wide; 21¼″ deep
Back: 18″ wide; 14″ high

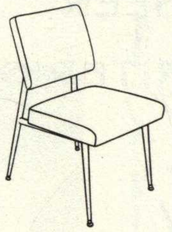


Tempo Model 360

Fully adjustable—resilient back.

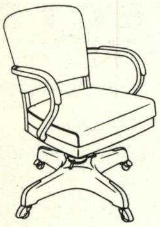
Seat: 16¼″ wide; 15¼″ deep

Back: 14¼″ wide; 9¾″ deep



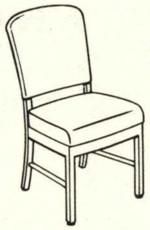
Tempo Model 320

Legs are swept back so chair back won't scuff walls.
Seat: 17½″ wide; 18½″ deep
Back: 16″ wide; 13½″ high



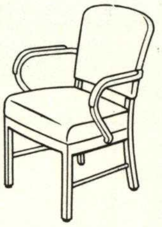
Model C-1500

Leader in Harter's most popular line. Thousands in use.
Seat: 19¼″ wide; 17½″ deep
Back: 18″ wide; 16″ high



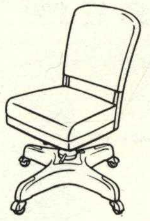
Model C-1520

Neatly tailored side chair — spring fit glides.
Seat: 19¼″ wide; 17½″ deep
Back: 18″ wide; 16″ high



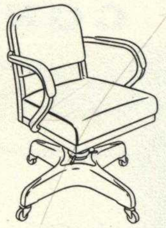
Model C-1510

Cool, clean, buoyant seating comfort assured.
Seat: 19¼″ wide; 17½″ deep
Back: 18″ wide; 16″ high



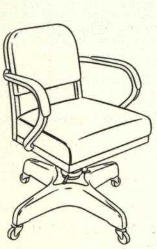
Model C-1530

Self-lubricating chair that stays quiet — always comfortable.
Seat: 17½″ wide; 15½″ deep
Back: 17″ wide; 16″ high



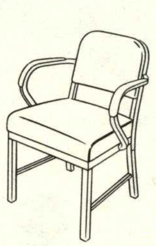
Model 1800 B

Spring seat cushion, twenty-four coils strong.
Seat: 19¼″ wide; 17½″ deep
Back: 15¾″ wide; 12″ high



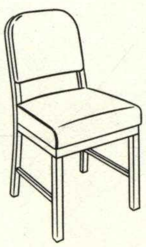
Model C-100

Three inch seat cushion! Foam rubber bonded with pure latex.
Seat: 19¼″ wide; 17½″ deep
Back: 15¾″ wide; 12″ high



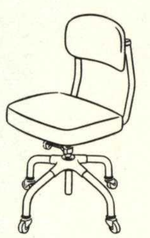
Model C-110

Wears well in factory offices — good utility service.
Seat: 19¼″ wide; 17½″ deep
Back: 15¾″ wide; 12″ high



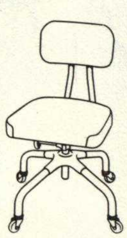
Model C-120

Matches the rugged durability of Models C-110 and 100.
Seat: 17¼″ wide; 16″ deep
Back: 14¾″ wide; 12″ high



Model E-15R

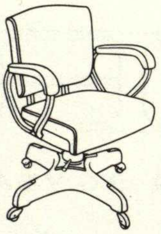
The secretarial chair you'll find in more general offices.
Seat: 16″ wide; 12½″ deep
Back: 13¼″ wide; 6¼″ high



Model 26

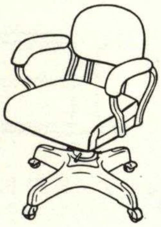
Two-inch thick cushion: comfortable density, low price.
Seat: 15¾″ wide; 14″ deep
Back: 11½″ wide; 7¼″ high

STEEL CHAIRS



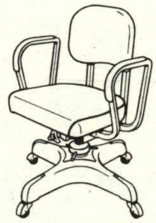
Model 70

Roomy, not cumbersome—business style with home comfort.
Seat: 20″ wide; 17½″ deep
Back: 17¾″ wide; 16″ high



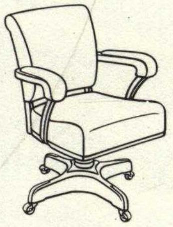
Model 66

Open design for airy coolness.
Seat: 20″ wide; 17½″ deep
Back: 15½″ wide; 11″ high



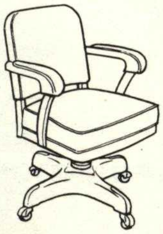
Model 67-T

Hugs desk with short arm rests. Puts you right over your work.
Seat: 17½″ wide; 15¾″ deep
Back: 15½″ wide; 11″ high



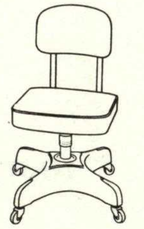
Model 700

A favorite that is always accepted as good taste in decor.
Seat: 21¾″ wide; 20″ deep
Back: 19″ wide; 17″ high



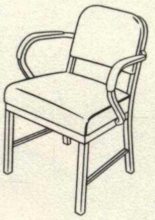
Model C-1900

A big man's chair with big foam rubber comfort over springs.
Seat: 22¾″ wide; 18½″ deep
Back: 18½″ wide; 16½″ high



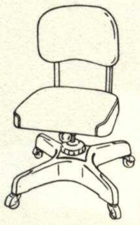
Model 57-S

Fits a girl like her gloves — helps make secretaries efficient.
Seat: 16¼″ wide; 14″ deep
Back: 13½″ wide; 8¾″ high



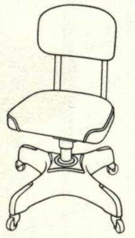
Model 1810 B

Big value in the lower price range. Every inch a true Harter.
Seat: 19¼″ wide; 17½″ deep
Back: 15¾″ wide; 12″ high



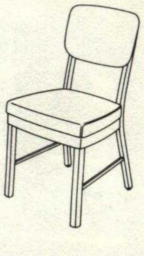
Model 62

Synchro-tilt back and seat move together for full comfort.
Seat: 17½″ wide; 15½″ deep
Back: 15½″ wide; 11″ high



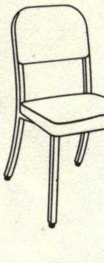
Model 54-S

Priced for tight budgets with no skimp of Harter comfort.
Seat: 17½″ wide; 15½″ deep
Back: 15½″ wide; 11″ high



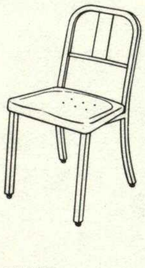
Model 420

A space-saver — that "extra" chair you so often need.
Seat: 17″ wide; 15½″ deep
Back: 16¼″ wide; 11½″ high



Model 20

Larger seat, heavier steel, more style than most side chairs.
Seat: 17″ wide; 15″ deep
Back: 14¾″ wide; 10½″ high



Model 18

All metal perforated for coolness. Heavy steel for durability.
Seat: 16½″ wide; 15″ deep

SPECIALISTS IN SEATING AND SEATING ONLY FOR OVER 30 YEARS

Harter specialists have been designing, building and fitting fine seating since 1927. This experience, combined with only the finest materials — and more of them — assure you and your clients of the most desirable seating made today. But "specialists" and "experience" are only words. Let's see what they mean to you.

in styling

Harter seating, led by the new Criterion, and recently introduced Tempo gives you the contemporary styling your clients prefer. The cantilever arm is unique in the Criterion line but typical of the advanced features that you'll find in the entire Harter line.

in quality

Harter seating has always had a "quality" reputation. The reason is simple. More thought is given to what goes into Harter seating and how it is crafted. Take the use of foam rubber. Harter uses all foam rubber where others use a thin piece of foam rubber over a flat spring. Another example: Harter upholstery. The Tempo series has hardwood arms. Harter craftsmen cover them with generous molded sections of foam rubber. Then they affix heavy pieces of felt to the sides. The result — a superb example of fine furniture with the feel of luxury — Harter luxury.

Harter quality isn't always tangible. Sturdy quietness is a composite of many features. One is Harter's original one-piece base: strongest made. Quiet working steel parts have no peer.

in comfort

When you have Harter seating you have the one brand that does not confuse comfort with "softness". Each part of the chair's anatomy truly relates to human anatomy for all-day freshness.

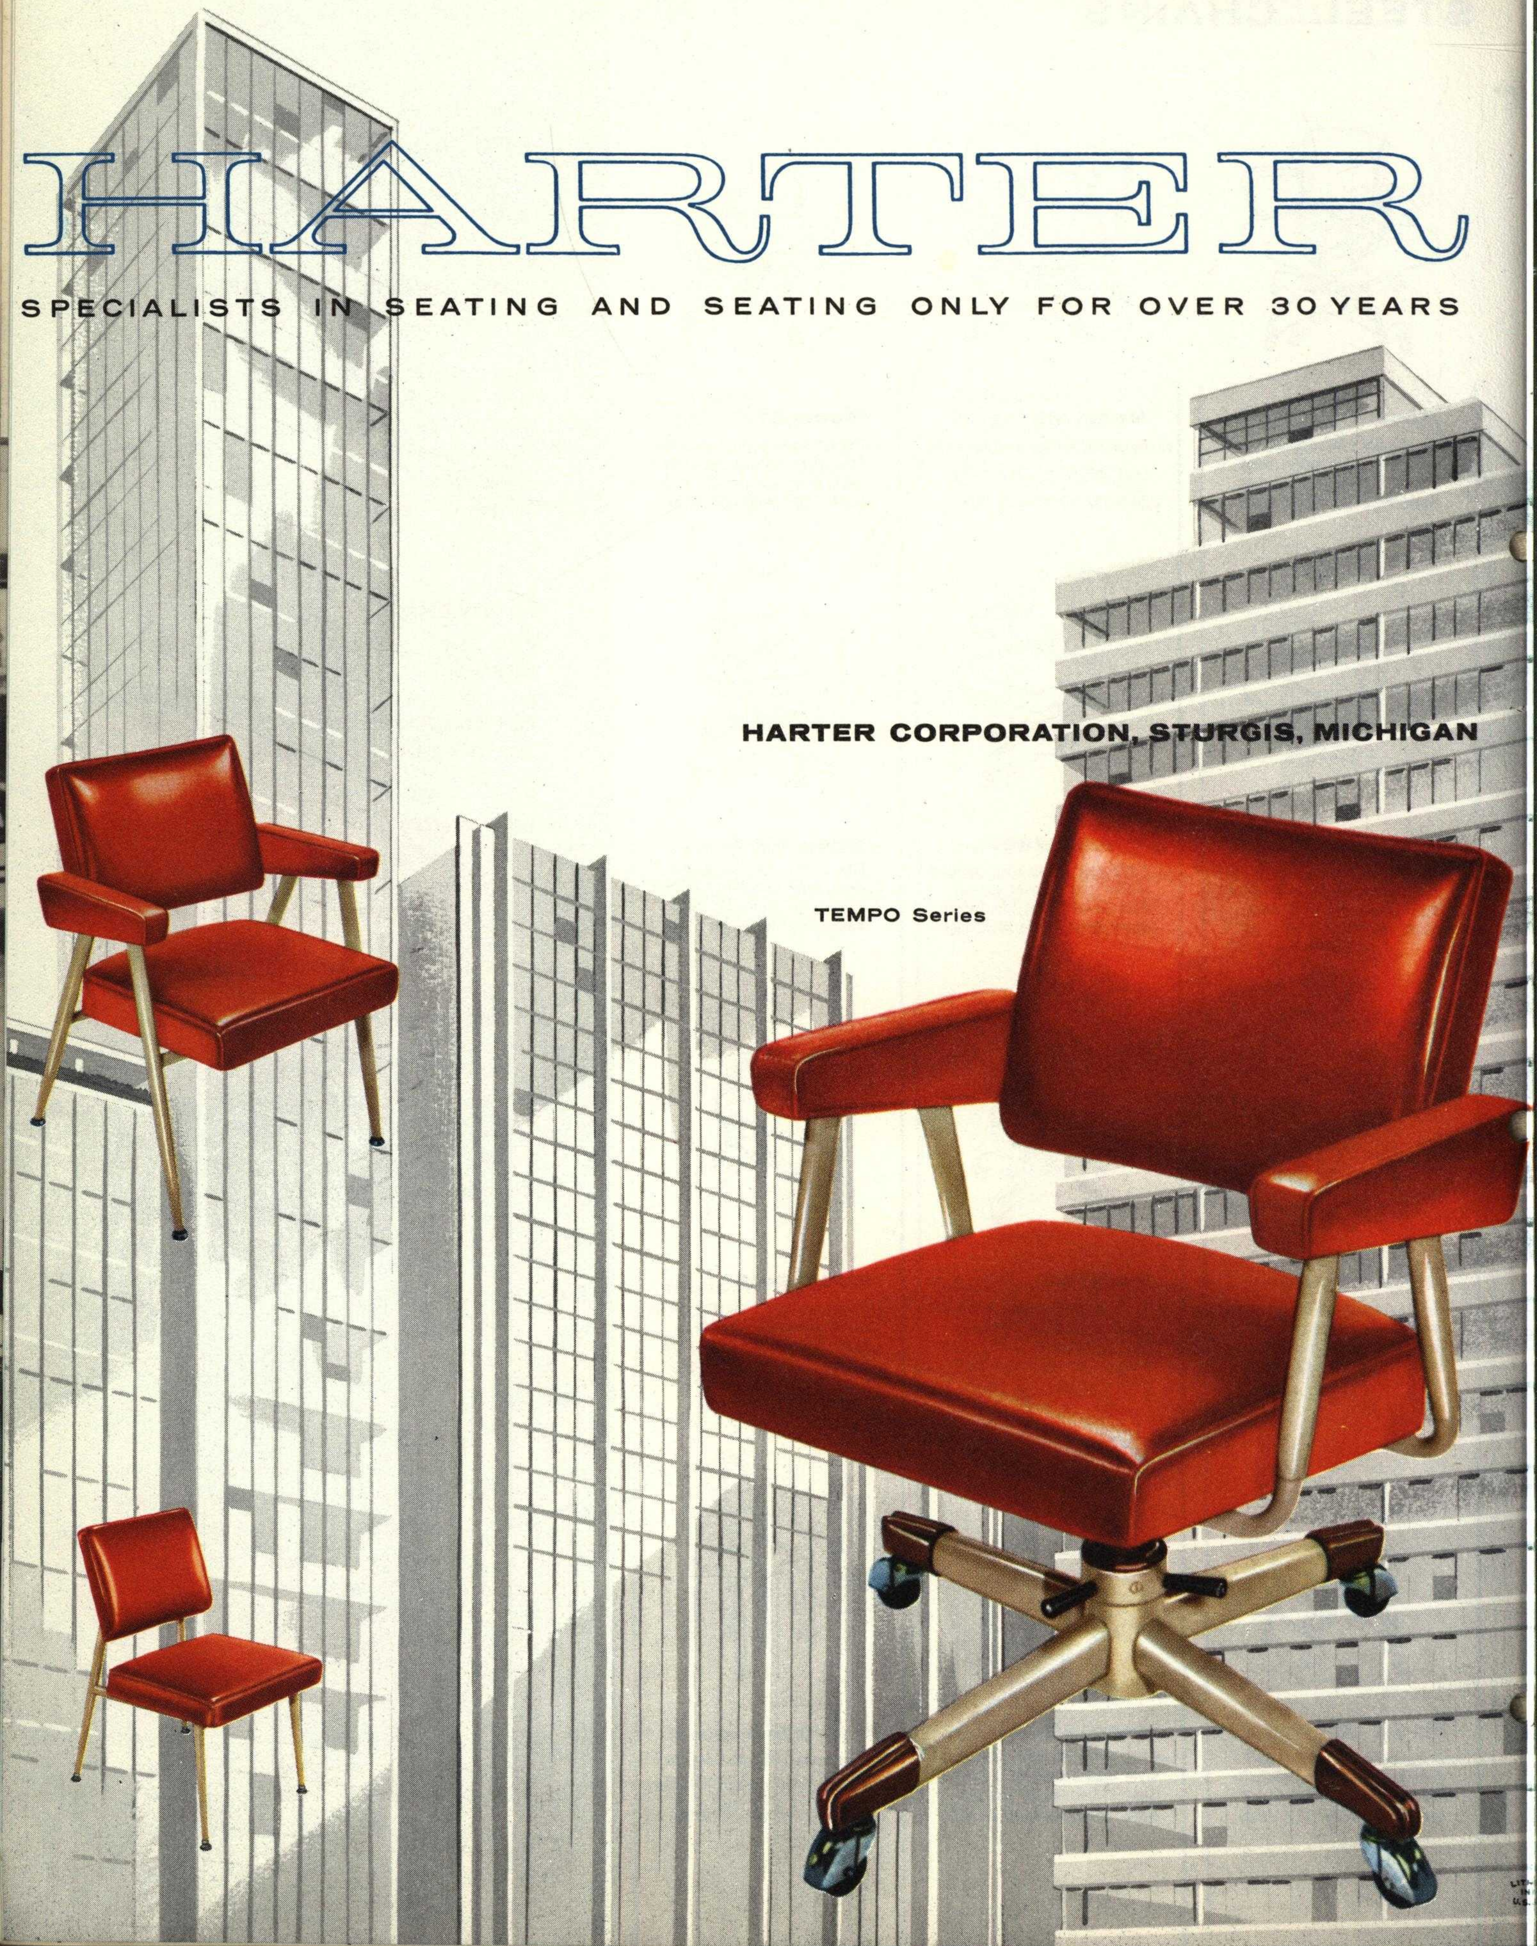
Harter controls bring you closer to perfect comfort, too. The seating adjusts to you — you don't have to adjust to the seating.

When you're concerned with furniture from the budget-class to the finest — and seating in particular — speak to a Harter "seating specialist". He will be glad to acquaint you with all the details. Just a wire — or a 'phone call — and a Harter "specialist" will be at your service. He'll consider the visit a privilege.

NOTE: Harter seating is available in a vast variety of colors and upholsteries. Naugahyde and Nygen Tolex in plastics; Gros Point, Striata and Mansfield in fabrics; and luxurious leathers. All can be used in almost unlimited color combinations. Durable baked-on enamels in matching colors will also meet the varied preferences of your clients.

HARTER

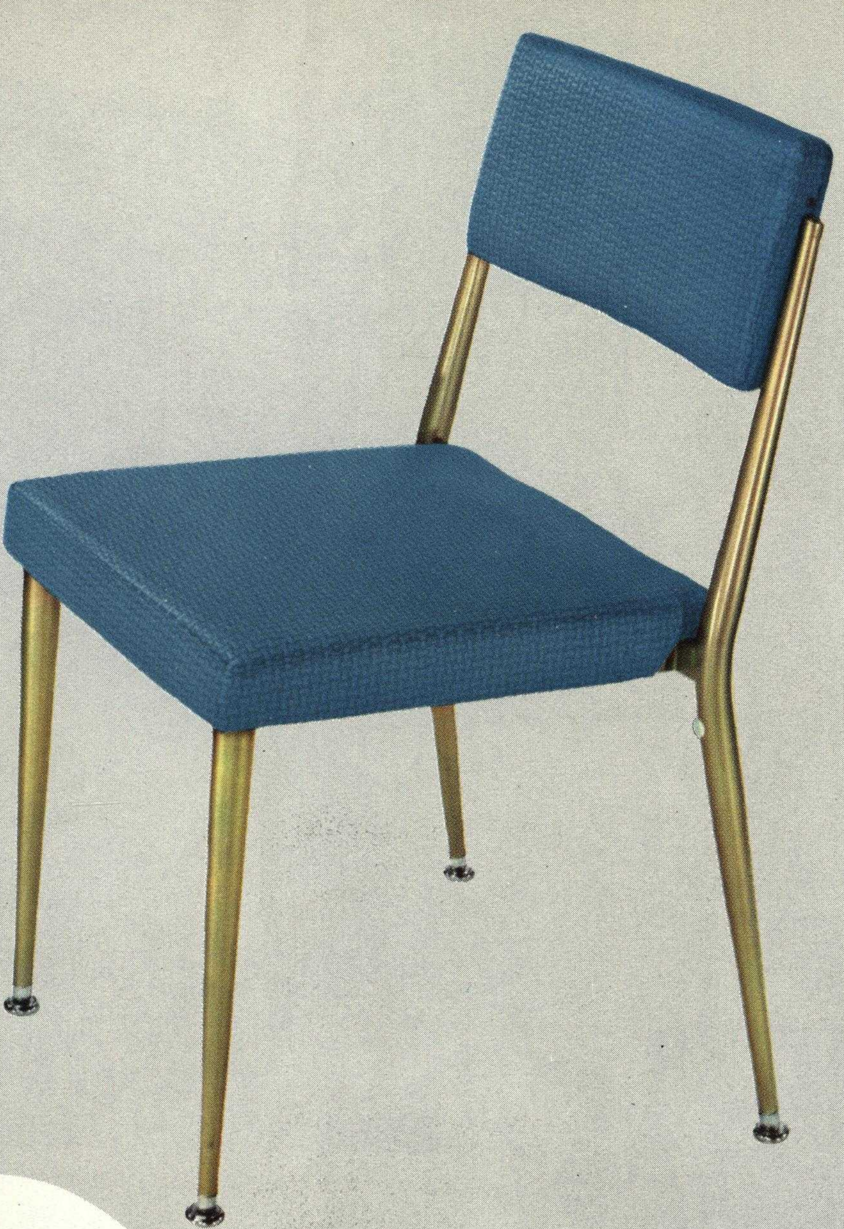
SPECIALISTS IN SEATING AND SEATING ONLY FOR OVER 30 YEARS



HARTER CORPORATION, STURGIS, MICHIGAN

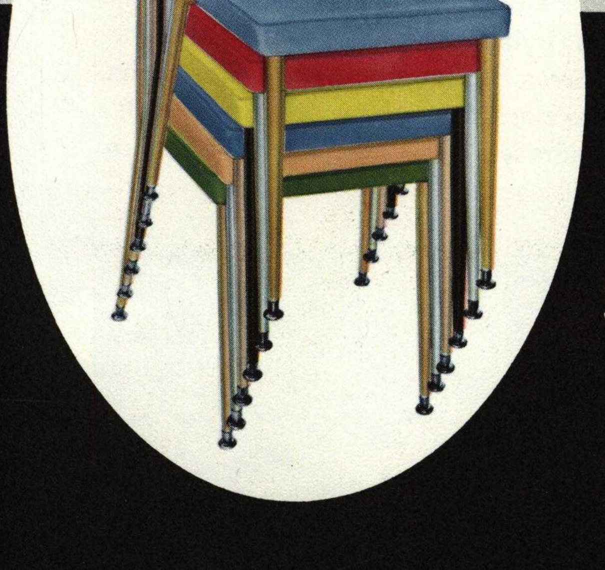
TEMPO Series

THE 670 AND THE 671 SERIES



The one Stack Chair that successfully combines design aesthetics in the modern mode with a degree of seating comfort unapproached even by many more costly side chairs — and still is as kind — or kinder — to the budget than any alternate choice.

HARTER CORPORATION • STURGIS, MICHIGAN



STACK CHAIRS

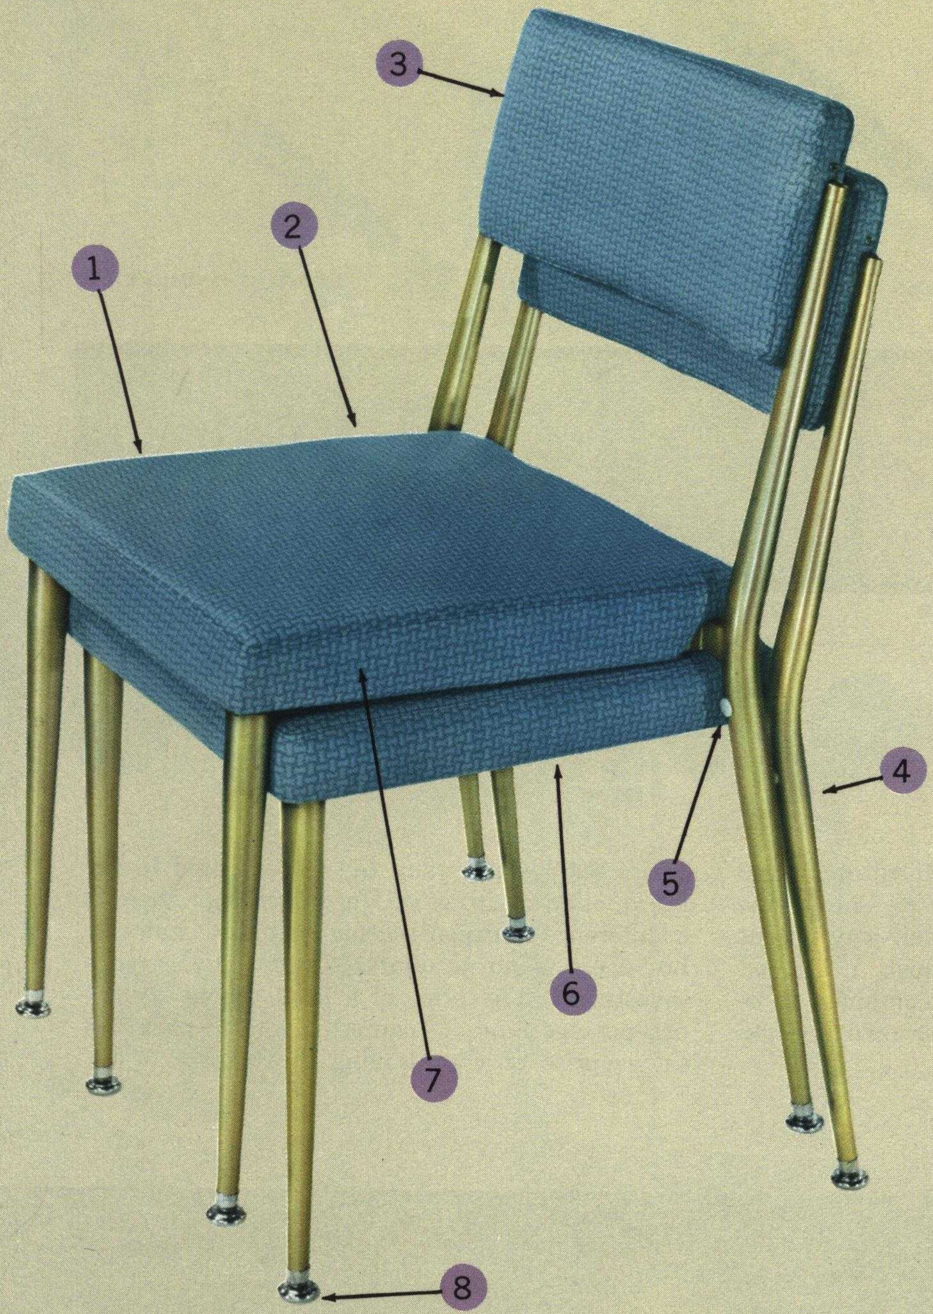
by HARTER

a complement of 500.... compliments the decor of FRENCH LICK-SHERATON HOTEL

Dressed for dinner — or for a conference or congress — Convention Hall in beautifully restored Sheraton French Lick Springs (Indiana) wears the modern shimmer of Lustergold and Old Ivory in chic new Harter Series Six-Seventy-One stacking chairs. Handsome side chairs they may *seem* — but stacked to vacate Convention Hall's full floor area, they require less space than the average office.

O. R. Connolly, general manager (center), Charles Bennett, resident manager (left) and Harry Chapman, catering manager, show one stacking arrangement. These chairs are one of the handsome innovations in the full restoration of the famous Southern Indiana spa and playground — and especially gracious convention site.

. . . and they're a pretty compliment to anybody's good judgment for hours-long comfort—and the budget.



Sheer, crisp lines in the silhouette of modern architectural design.

① Tailored matching upholstery in both seat and back — in any Harter fabric or plastic coated fabric — any Harter color. (See page 4.)

② Full 2¼ inches of seating comfort. $1\frac{5}{16}$″ of molded foam rubber plus an inner ¾″ cushion of resilient organic fiber, fully contained in a die-formed one-piece .035 gauge steel pan. Foam rubber lips cover entire depth of front and sides of pan for luxury bulk—to please the guest and protect adjacent furniture.

③ Back is two die-formed, contoured .035 gauge steel pans, front and rear—with generous ½″ resilient fiber pad. Model 670 rear pan enamel finished to match legs and frame — Model 671 upholstered front and rear.

④ Legs of sturdy tapered steel tubing slim away to favor fashion's latest "light look". Lithesome — and bridge-strong. Special multi-coat, double-baked, phosphate-hardened finish takes the scuffs and knocks and stays a-shimmer.

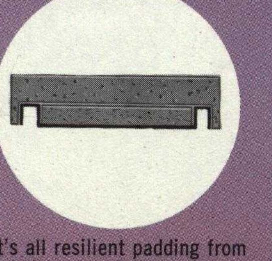
⑤ Nylon bumper eliminates metal to metal contact.

⑥ Clean, smooth, flush seat pan protects next seat pad and upholstery in stacking.

⑦ Stacks to 8-high with no extra over-lift to clear projecting side frames as in some designs.

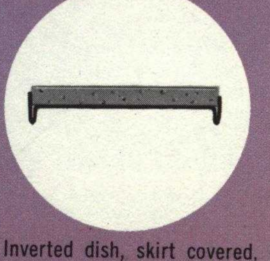
⑧ Large $1\frac{3}{16}$″ hardened steel glides are chrome plated to be kind to floors — full swivel ferrule design with special interlock. They're floor-flat regardless of chair tilt.

this is HARTER COMFORT full depth seat



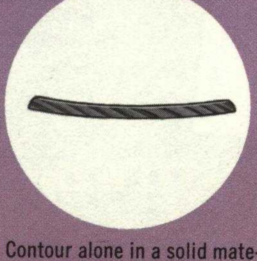
It's all resilient padding from upholstery to full depth pan.

not like this FALSIE concealed shallow seat



Inverted dish, skirt covered, allows only half the padding.

or this BYOP (bring your own pad)

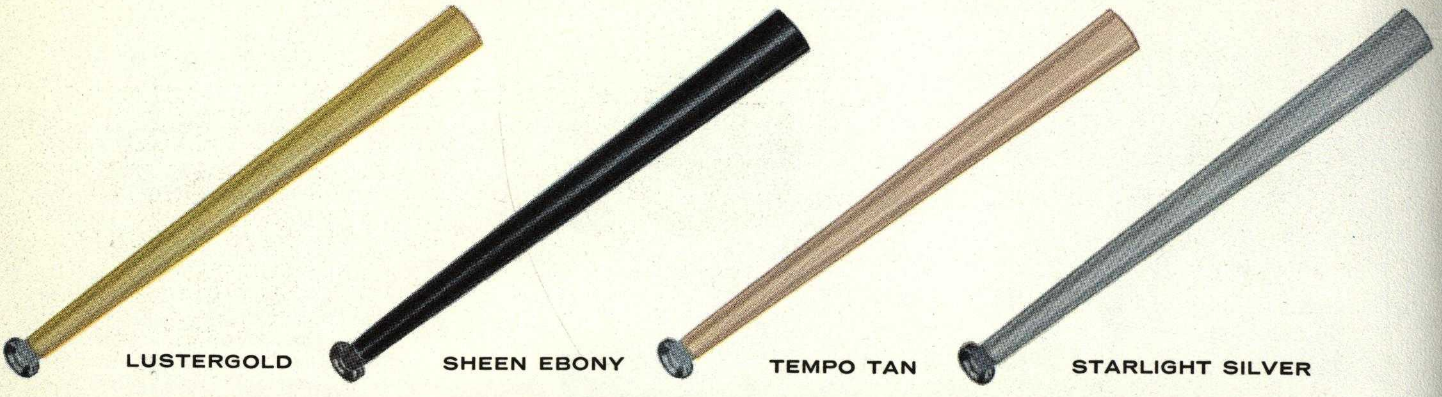


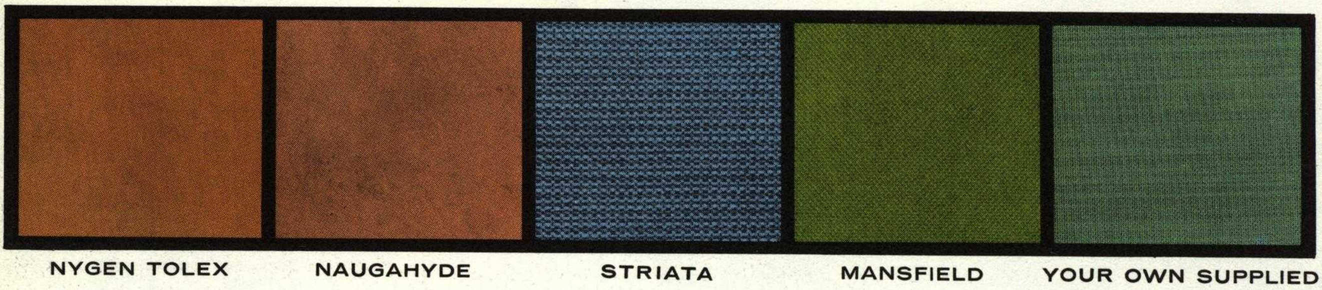
Contour alone in a solid material won't fill the comfort bill.

COLORS

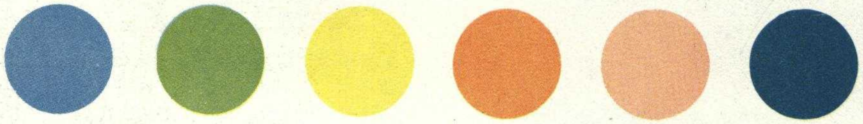
Select a rich ensemble — or a color riot — from Harter's unmatched variety of upholstery and metal combinations. As you like it — at no price penalty.

ANY COMBINATION OF UPHOLSTERY MATERIAL—IN DEEP TONES OR PASTELS—PLUS FOUR COLOR CHOICES FOR METAL





. . . or these Powder Pastels



Only Harter presents such a fine-furniture choice of fabrics and plastics in upholstery — in so wide a selection of colors — plus a four-way accent gleam in ever-shimmer metal finish. . . . And there's no price penalty in any combination — including the application of your own selected and supplied material.

Series Six-Seventy (and 671) is executed in the full quality tradition of Harter *seating*. There *is* a difference between seating and just chairs — but there is no accountable difference in your investment. The price of a local 'phone call — or a postage stamp — can bring you the pleasantest surprise of your buying career.

PRESENTED BY

SPECIFICATIONS

SEAT — 16″ wide, 16½″ deep (front to rear), 2¼″ thick

BACK — 16⅜″ wide, 7¾″ high, 1¼″ thick

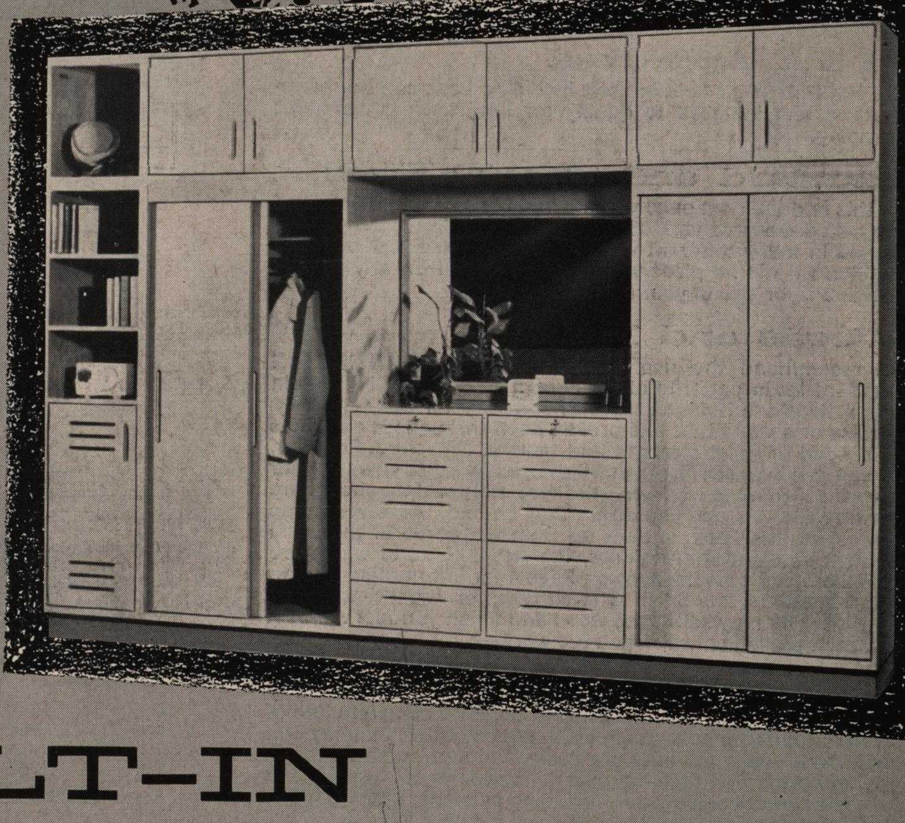
HUNTINGTON FURNITURE



BUILT-IN FURNITURE

pre built and finished at factory

A.I.A. FILE No. 28·A·4

HUNTINGTON

Designed for Today and Tomorrow

HUNTINGTON furniture is built to last. Our first consideration is to give you a product that will look well and wear well under hard everyday use. In addition our designers have created in all HUNTINGTON patterns a tailored appearance and dignity of design that will be good for "Today and Tomorrow".

Outstanding Construction and Installation Features

Some line drawings appear on pages 2 and 3 and partial specifications on Page 4. Complete specifications and detail drawings are available upon request. The most important construction features are: 5 ply tops and sides with solid lumber core for greater strength; desk and chest tops are surfaced with plastic and underneath side is sealed with balanced plastic backing sheet for greater protection; sides are covered with thick 1/20″ face and back veneers; trouble-free recessed pulls are used on all drawers and doors; every drawer has strong fully dovetailed joints; all cases are completely dust proofed between drawers; best construction is used—all joints are dovetailed, mortised and tenon and/or tenoned and grooved; baked-on highly durable plastic finish is applied over all exposed surfaces; maintenance free aluminum track with 8 nylon rollers is used to house sliding doors on wardrobes. Because all parts are precision made in our highly mechanized factory and all doors and drawers are properly hand-fitted by cabinet makers, HUNTINGTON built-in furniture can be installed with much less adjusting and far less time than mill work units.

HHFA Approved

ALL HUNTINGTON built-in units including beds can be manufactured and installed to qualify for long term government financing.

Standard and Special Sizes

On this and the next page you will find typical installations and suggested sizes of various type units. The latter can be arranged in many different ways to fit your particular need. In addition we will be pleased to work with you on any special design and/or size of your own.

Woods and Finish

We recommend the use of Hardwoods. All HUNTINGTON standard loose patterns of furniture and many of its built-in installations are manufactured of Appalachian Oak—the best species of a wood that has proven itself throughout centuries as a wood of great strength and beauty. If desired, however, we can, have and will be pleased to use any other wood of your choosing. Whereas we have attractive standard finishes, here again any other color you desire may be had. Whatever shade you select, the finish is built up from the pores of the wood through an eight step process, the last 2 coats of which are baked on. See specifications on Page 4 for information on how highly resistant this finish is to all types of abuses. With this flexibility you may select the wood and finish you feel will best suit each project on which you are working.

A Complete Line

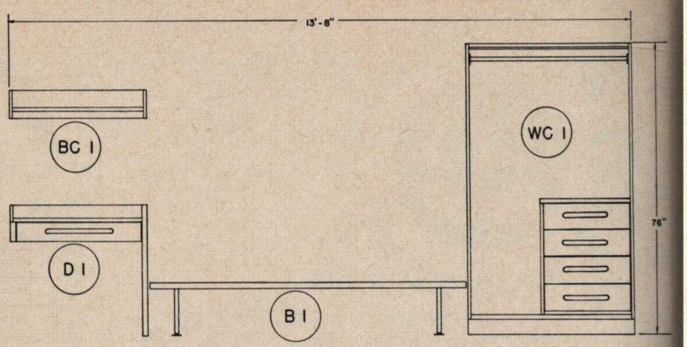
HUNTINGTON also manufactures a long and complete line of loose furniture for all areas in every type of public building and institution. These patterns are designed to harmonize and coordinate with our built-in units in appearance, woods and finishes. Complete literature including catalogs, specifications and detail drawings are available upon request.

Planning Service

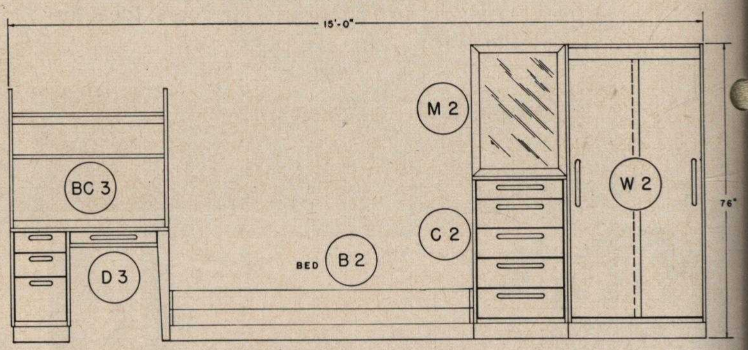
Our experienced Special Products Department stands ready to assist you, as it has architects throughout the country, in planning your next project. We will be pleased to prepare sketches, detail drawings, specifications and/or layouts for your approval if you are interested in a quality product. Write us today so that you can specify HUNTINGTON furniture tomorrow.

Typical Installations

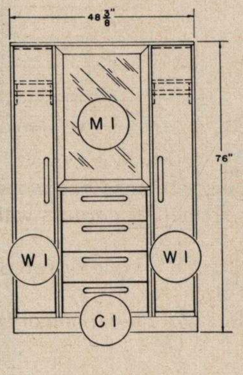
scale 1/4″=1′-0″



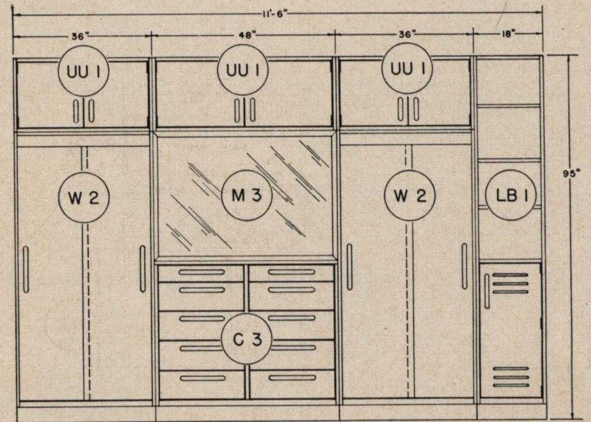
For those institutions who have a budget problem but still want to buy quality. Runs from wall to wall for one student.



For those institutions who have more to spend we recommend the above. Runs from wall to wall for one student.



Excellent for use in semi-private hospital patient rooms. Set in wall. One wardrobe and two drawers per patient.



The above is storage for two students and runs from wall to wall and floor to ceiling. It costs more than the other two installations shown above. However, every other structural wall can be eliminated and two of these may be backed up with insulation between.

HUNTINGTON Built-in furniture

Suggested Specifications: The following specification is abridged but since it refers to the complete specification it can be safely used on any job. Some architects may feel that the paragraph under "general" is sufficient. Others will prefer to include this entire abridged specification to give the contractor a better idea of the quality of furniture desired. Still other architects will write to Huntington for complete specifications and use them in their entirety.

GENERAL:
All built-in furniture shall be fabricated and completely finished by a company regularly engaged in the manufacture of high quality institutional furniture and shall in all respects be manufactured according to the latest specifications of the Huntington Furniture Corporation. The successful bidder shall furnish, upon request by the owner, a complete sample of each type unit for his approval. Such samples may be retained by the owner for comparison purposes until the building is completed.

Shop drawings shall be submitted for approval of the owner and architect before fabrication is started. Shop drawings shall show all details of construction at large scale.

The bidder shall include transportation charges to the job site and complete installation costs.

All units shall be delivered to the job completely assembled and pre-finished and ready for installation together with all necessary trim (pre-finished to match units.)

MATERIALS:
Appalachian Red Oak plain sawn shall be used for all exposed parts. It shall be selected for clarity of color and uniformity of grain. Unexposed parts shall be sound and free of all defects which would in any way impair the quality or strength of the finished product. All lumber used shall be kiln dried to not less than 6% nor more than 8% moisture.

Veneer—All exposed veneers which include interiors of wardrobes, drawer bottoms, back panels of wardrobes, upper units and lavatory units shall be Natural Grain Appalachian Red Oak. They shall be selected and matched for color and uniformity of grain. To minimize warping and increase strength, face and back veneers shall be 1/20″ thick. Cross banding shall be poplar, also 1/20″ thick.

Glue—For assembly joints, glue blocks and built-up stock; animal hide glue, hot, made fresh daily and having a jelly strength of 331-362 grams shall be used. For hot and cold pressing and electronic jigs and presses; urea formaldehyde resin liquid type glue containing 67% to 70% solids mixed with a catalyst giving a waterproof mixture shall be used.

Laminated Plastic Sheets—For tops of chests, desk and lavatory back splash and shall be applied over 3 ply lumber core constructed stock with 1/20″ poplar cross band and 4/4 poplar lumber core and compensating backing. Top plastic shall finish 1/16″ thick and backing shall be .045″ in thickness and meet all NEMA standards as manufactured by Formica, Micarta or equal.

CONSTRUCTION:
As per latest specifications of the Huntington Furniture Corporation, all units shall utilize the best cabinet making practices and construction. All joints shall be mortised and tenoned or grooved and tenoned, doweled and securely glued and blocked.

Five ply lumber core shall be manufactured with 1/20″ face and back Appalachian Red Oak veneer and crossbanded with 1/20″ poplar and with core stock of 4/4 poplar core.

FINISH:
Materials shall be made by a reliable manufacturer. The finish for all exposed portions shall be entirely resistant to fingernail polish, fingernail polish remover, alcohol and certain other agents commonly known to blemish furniture finishes. After one hour under a watch glass, finish shall react as follows using reagents that are included in the Veterans Administration Specifications for furniture:

Phosphoric Acid 75%	Softened slightly
Acetic Acid 98%	Blistered after ½ hour
Ammonium Hydroxide	No effect
Formaldehyde 40%	No effect
Hydrogen Peroxide	No effect
Phenol 85%	No effect
Methyl Alcohol	Slight ring
Ethyl Alcohol	No effect
Ethyl Acetate	No effect
Ethyl Ether	No effect
Acetone	Blistered after 15 minutes
Chloroform	No effect
Xylol	No effect
Carbon Tetrachloride	No effect

A light rubbing and polishing should eliminate all defects apparent from these tests. In addition the finish shall react as follows to the tests shown below:

(1) Cold Check Test—The finish shall not be broken after twenty-five (25) cycles consisting of subjecting a finished panel to one (1) hour at 120 degrees F. and one (1) hour at minus 8 degrees F.

(2) Falling Ball Test—Consists of dropping a one (1) pound ball from a height of 36″ onto a finished panel surface without fracturing the finished surface.

(3) Print Test—Subjecting two (2) pound pressure to the square inch at the temperature of 130 degrees F. The results show less marking than in most standard finishes.

The interior of wardrobes and upper units shall be finished by toning or staining to get the selected color effect and then sealed, sanded and waxed.

Drawer interiors shall be sealed and waxed only.

Installation—all units including sub-bases where shown shall be delivered and installed; workmanship shall be first class in all respects.

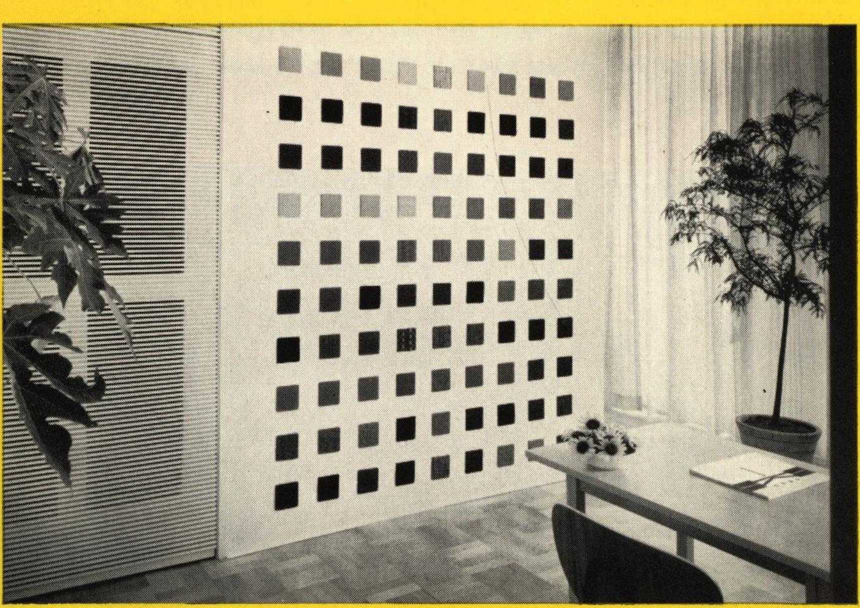
Knoll textiles



Fabric wall, Knoll showroom
Dallas, Texas

Knoll textiles are planned for specific roles to meet specific needs. The Knoll collection presents a whole new range of upholstery and drapery fabrics of infinite variety and color, weave and design using both natural and man-made materials, to meet the varying requirements of home, office or institutional use.—Decorator samples on memorandum and swatches are available upon request. Write for Knoll Textile price list.

Knoll Textile Ring—A complete swatch presentation of all fabrics, with the exception of prints, in the Knoll International Textile Collection. Swatches of all fabric additions are mailed to the ring holders, ensuring the usefulness of the Knoll Textile Ring as a permanent and up to date index of the Knoll Textile collection.—[The purchase price of $10.00 will be refunded against aggregate orders of $500.00 in cut yardage.]

Knoll Fabric Wheel—Knoll Print Package—The Knoll Fabric Wheel is a permanent display unit of 6" x 6" swatches of all upholstery and multi-purpose Knoll fabrics.—The Knoll Print and Drapery package consists of 1 yard by ⅓ width samples of all Knoll Print and Drapery fabrics. Each sample is flagged to present the complete color range in each fabric.

Please write for descriptive literature giving complete details.

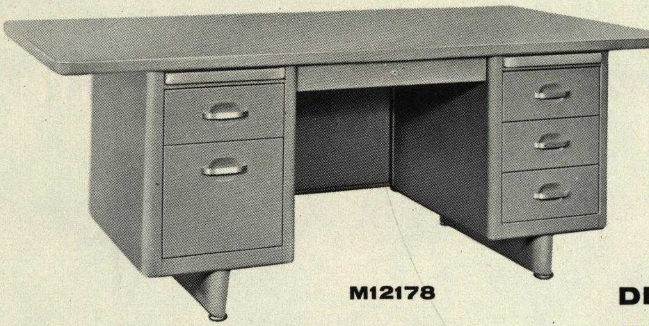
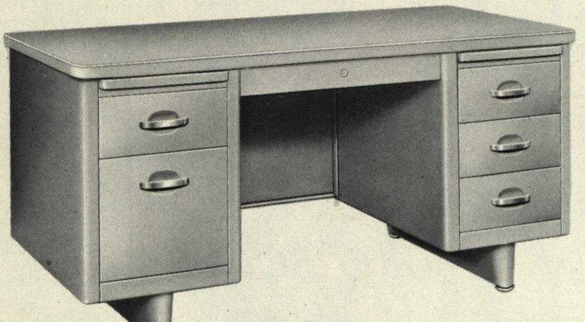
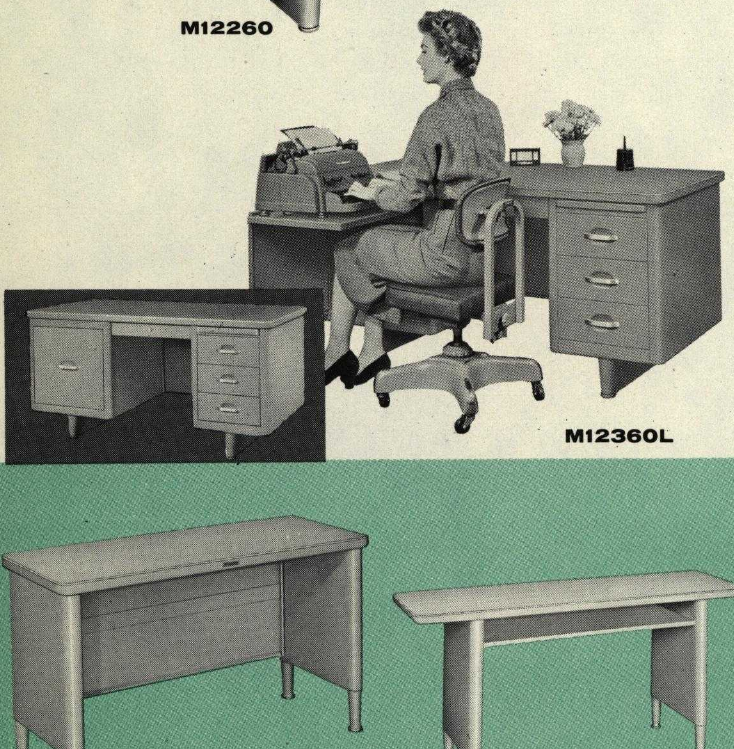
ARISTOCRAT Executive and Clerical Desks



M12178



M12260



M12360L

DESKS

M12178: Executive Desk, 78"x38". Impressive in appearance. Spacious oversize top with 9″ overhang at both ends and rear. Affords comfortable seating and writing space for participants in conference.

Standard drawer arrangement: One file drawer, four box drawers, and center drawer. File drawer can be interchanged with any two box drawers.

M12160: Executive Desk, 60"x36". Same as No. 12178 above, except with 7″ overhang at back only.

M12260: Flat Top Desk, 60"x30". Designed for department heads and general office use; the 30″ depth saves valuable space in the modern office and still provides ample working area.

Standard drawer arrangement: Same as in No. 12178 above.

M12255: Same as No. 12260 above, except size 55″ x 30″. For additional space-saving in office layouts, especially for clerical use.

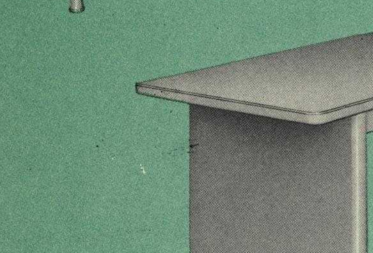
M12360L: Secretarial Desk, 60"x30", with typewriter mechanism in left pedestal.

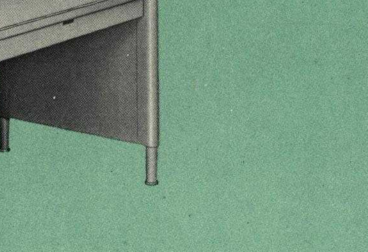
An ideal desk for combining typing and clerical work. Mechanism is equipped with special spring adjustment to equalize tension of spring to weights of different typewriters including electric. Platform locks firmly into door panel to add to the rigidity and reduce vibration.

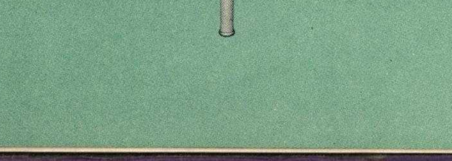
Standard drawer arrangement: Three box drawers in right pedestal with slope pocket stationery tray included in top drawer. Center drawer has utility tray and lock that controls all drawers.

M12360R: Same as above, with typewriter platform in right pedestal.

Ask for the Remington Rand "Dream Office" Catalog – FF211.







TABLES

Tables range in size from the Modular 45″ x 19¾″ to the conference table 120″ x 42″. Shown below are a few of the sizes.

M12060 – 60″ long, 30″ wide, 29″ high.

MODULAR TABLES

(Ordered by individual part Cat. No.)

Top – T20-45
End Panels (2) – EP18-26
Back Panel – BP39
45⅜″ long, 19¾″ wide, 26″ high

Top – T20-61
End Panels (2) – EP18-29
Shelf – S39
61¼″ long, 19¾″ wide, 29″ high
6-1/16″ overhang
4″ opening above shelf

ARISTOCRAT Modular Furniture

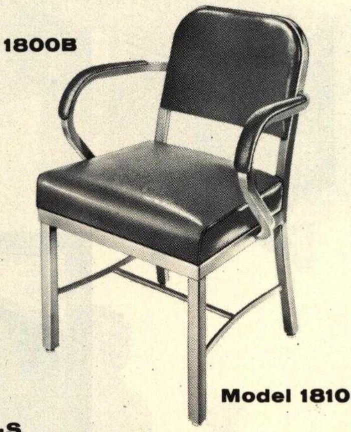
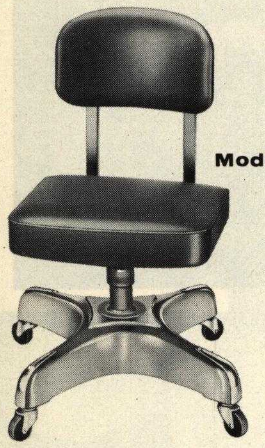
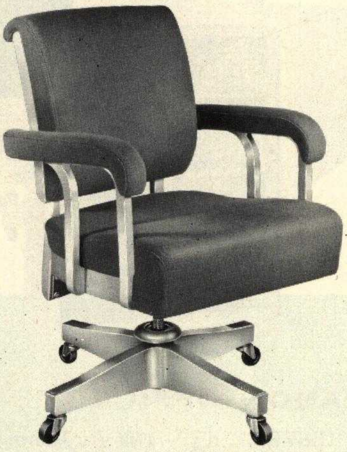
Model 1800B



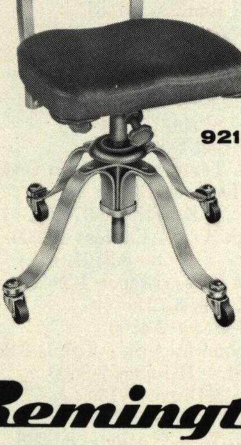
Model 1810B



Model 57-S



9507SB Executive Chair



9219 Chair

CHAIRS — STEEL

Illustrated are a few of the many chair designs available from the Remington Rand Steel Chair Group. There is also a wide selection of finish colors and upholstery materials. Ask for the Remington Rand Steel Chair Catalog — FF229.

Model 65 — Executive Posture Chair. A fine posture chair with precise adjustments to fit it exactly to you. Has classic big-chair beauty and luxury.

Model 1800B — Fills the need for quality steel office chairs at economy prices. Heavy gauge cold-rolled square steel tubing is used in the arc-welded frame and yet prices are only slightly more than the cheapest chairs with less permanent construction. The 1800B line exceeds the severe strength tests of the General Services Administration.

Model 1810B — Side Armchair

Model 57-S — Deep, molded foam rubber seat cushion gives superb comfort. Seat height adjusts from 17½ to 21¾ inches. The heavily embossed steel seat pan provides extra strength and finished appearance. Comfortable formed steel back is padded with foam rubber. Back support has spring action with adjustable tension. Base has sturdy, one-piece formed steel construction. Ball-bearing casters have 2-inch soft rubber tread.

Specifications.
Seat: 16¼″ wide, 14″ deep, 3½″ thick.
Back: 13½″ wide, 8¾″ high, 1″ thick.

CHAIRS — ALUMINUM

Illustrated are a few of the many chair designs available from the Remington Rand Aluminum Chair Group. The satin aluminum finish has a surface hardness that resists scratches and marring. A wide selection of attractive upholstery materials is available. Ask for the Remington Rand Chair Catalog FF203.1.

Zephyr® Aluminum Posture Chairs

For the President or Top Executive — The guiding head of a business is often at his desk endless hours. His is about the toughest job in all business. Here is a chair that reflects a specialized requirement — the utmost in comfort, the final word in styling, a distinguished result from the viewpoint of appearance.

9507SB Executive Chair	Inches
Height of top of back from seat	18-19
Height of seat from floor	18¾-20⅝
Width of seat	21½
Depth of seat	20½
Width between arms	20

Shown upholstered in Bedford Cord.
Deep molded foam rubber seat and back cushion.

For Secretaries

Cushioner® Lifetime Seating Luxury—"Give" is built in, in the new, sleek, handsomely designed spring base. Legs are made of tempered spring steel. These act as shock absorbers as they provide a firm yet gently yielding action. In addition, all four legs of the spring base automatically adjust to uneven floors — a condition often existing even in modern buildings. These features are exclusive with Remington Rand Cushioner Chairs.

This chair, for secretaries, typists and office machine operators, recognizes the great difference in seating requirements for those who work with machines and those who do not. Its many adjustable features are especially designed for the woman worker. The correct posture it promotes is a great factor in building general productiveness.

9219 Chair	Inches
Height of top of back from seat	12-15¼
Size of back rest	11¾-7
Height of seat from floor	17⅛-20⅛
Width of seat	15½
Depth of seat	14

Shown upholstered in Plastic-Coated Fabric over foam rubber.

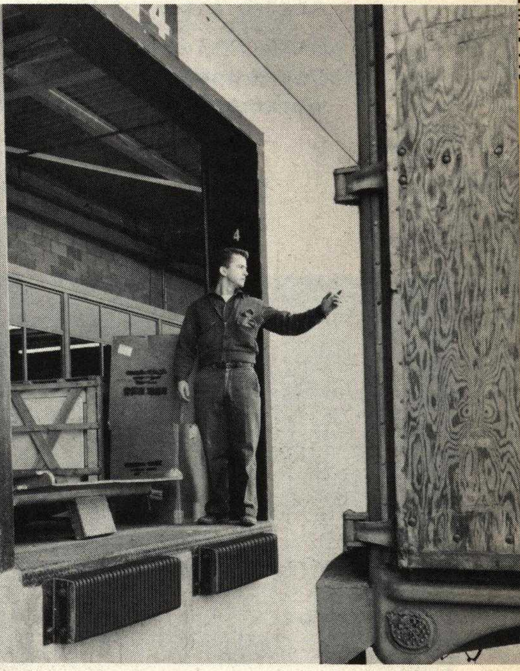
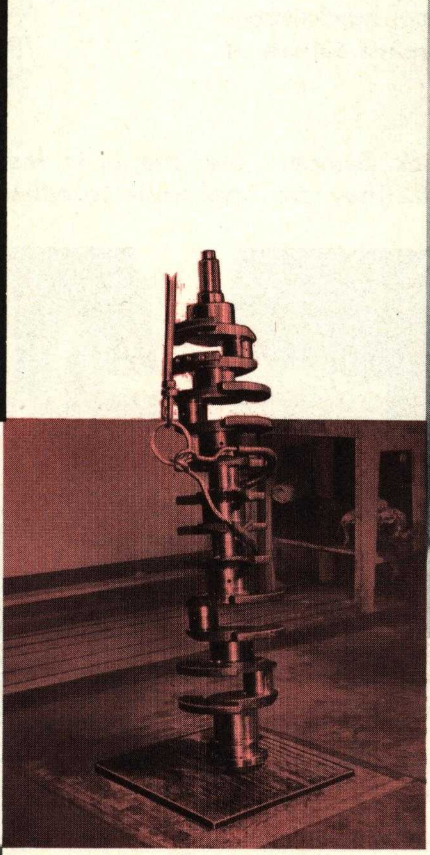
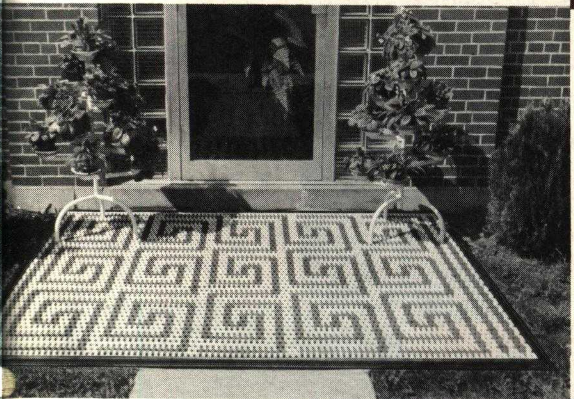
DURABLE

LOADING DOCK BUMPERS





FLOOR PADS



FLOOR MATS

DURABLE MAT COMPANY

NORWALK, OHIO
SANTA CLARA, CALIF.

DURABLE MAT COMPANY.....

loading dock bumpers

Durable Loading-Dock Bumpers should be a functional part of all institution and industrial building planning.

- Modern in design and application.
- Applicable to any type construction.
- Made of resilient rubber and cord for protection of docks and trucks.
- Eliminate dock repair.
- Absorb shock of impact.
- Have long life under normal hard usage.
- **Guaranteed five years against failure of workmanship or material.**

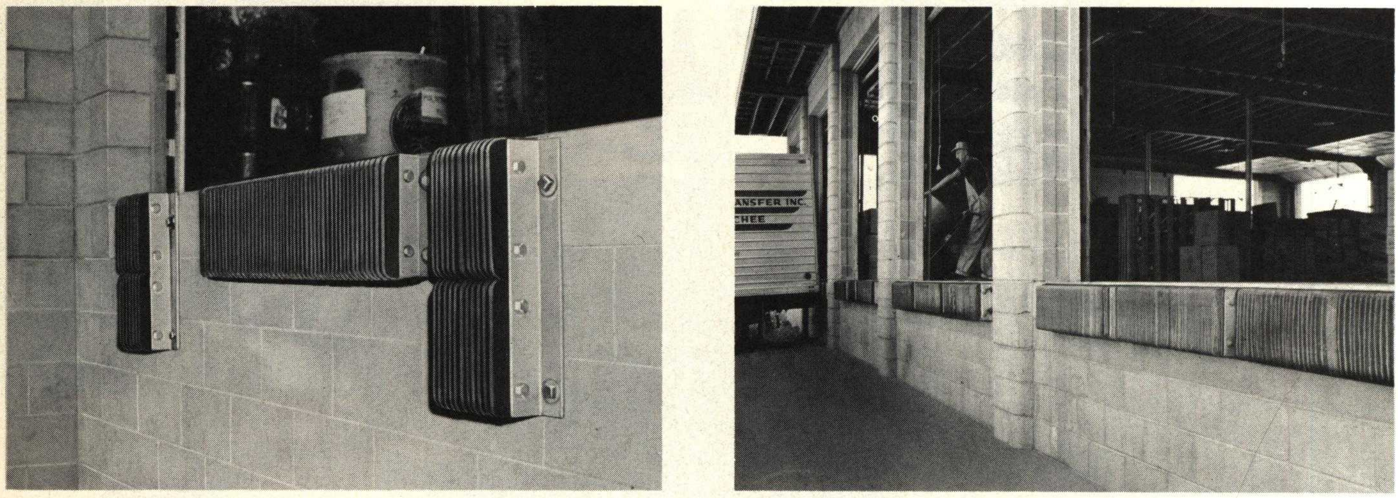
Durable Loading Dock Bumpers save their entire cost in a short time.

A West Coast Truck Line is using Durable Loading Dock Bumpers as standard equipment in *seven* terminals.

- Original installation in 1950.
- Repeat orders—Six additional terminals equipped with a total of 306 bumpers.
- Complete satisfaction—No repairs—no replacements—no truck or freight damage—maintenance costs cut.

Easy to install

Durable Loading Dock Bumpers are simple to install on any type dock. (See drawings at the right). They are applicable to either surface or recess mounting.

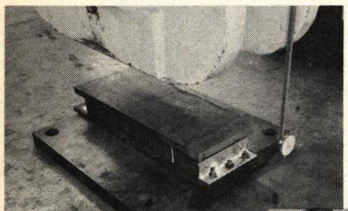


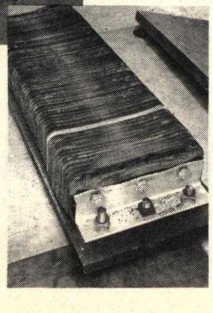
Installations of vertical and horizontal bumpers are effecting substantial savings for dock owners, truck owners, industrial plants, and shippers.

TESTS PROVE DURABLE LOADING DOCK BUMPERS ARE BUILT TO TAKE IT . . .

they absorb tremendous shock and pressure

Destructive tests were performed on Durable Loading Dock Bumpers in the Technical Center of National Malleable and Steel Castings Company, Cleveland, Ohio.

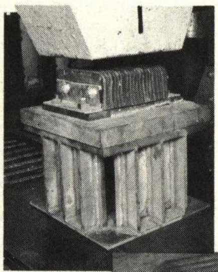




STATIC FORCE TEST

1. A 4½" x 12" x 36" bumper before test.
2. The same bumper after 650,000 pounds of static pressure was applied. An energy input of 28,000 foot pounds.

These tests show that Durable Loading Dock Bumpers will absorb up to 81% of any impact force.
That's **real** protection for docks, trucks, and fragile freight.

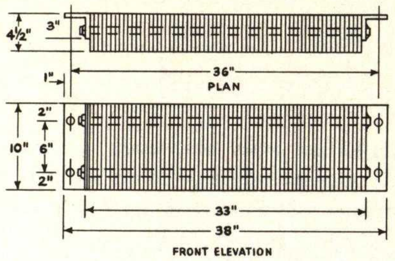


DYNAMIC FORCE TEST

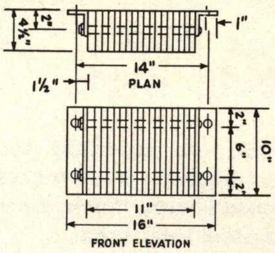
1. A 4½" x 10" x 14" bumper before test.
2. The same bumper after a dynamic force of 3,780 foot pounds was applied in free fall.

bumper details

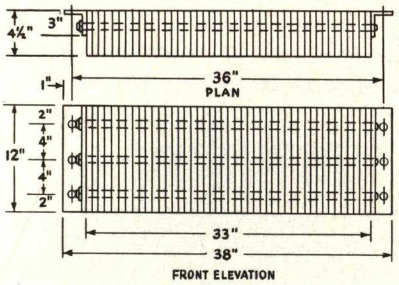
10" x 36" type – Model B410



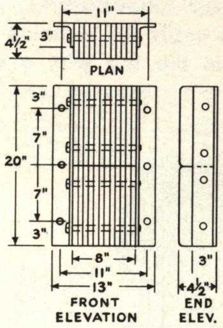
10" x 14" type – Model B414



12" x 36" type – Model B412



20" x 11" vertical type – Model VB420



Vertical bumpers
are also available
in 24" depth **(VB424)**
and 36" depth **(VB436)**.

standard sizes

sizes	rubber surface	anchor bolt hole center dimensions	overall length	weight	number of ¾" rods	angle sizes (¼")
4½"x10"x14"	10"x11"	14"	16"	30#	2	3"x2½"x10"
4½"x10"x36"	10"x33"	36"	38"	75#	2	3"x2½"x10"
4½"x12"x36"	12"x33"	36"	38"	90#	3	3"x2½"x12"
4½"x20"x11"	20"x 8"	11"	13"	46#	4	3"x2½"x20"

Bumpers with special mounting hole centers (lengths) may be specified and will be fabricated, but it is suggested that they do not exceed 36". Special designs for special applications can be produced.

architects bumper specifications

Furnish Rubber Dock Bumpers as manufactured by Durable Mat Company, Norwalk, Ohio and Santa Clara, California.

Resilient rubber material of bumpers must be Rubberized-Fabric Truck Tires cut to uniform size pads, either 4½" x 10" or 4½" x 12", and punched to receive ¾" supporting rods.

All Bumpers must be 4½" thick (stand-out from dock) and closed with two 3" x 2½" x ¼" structural angles under approximately 1,500 pounds pressure. Angles must be welded to ¾" rods at one end and closed with threaded rod and nut at the other end. Anchor leg of angle must extend 2½" beyond rubber surface at either end and contain either two or three 13/16" anchor bolt holes. (See drawings above).

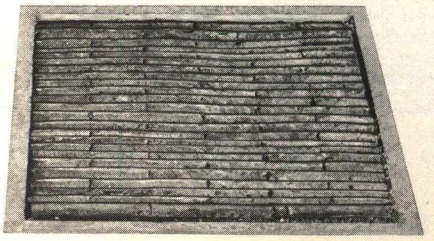
floor pads

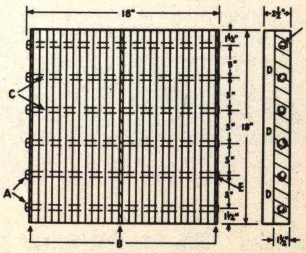
24" x 24" x 2½" and 18" x 18" x 2½"



floor pad specifications

Durable shock resisting Floor Pads permit removal of heavy finished parts from machines without damage to parts or floors. Floor Pads are made of Rubberized-Fabric Truck Tires cut to uniform size pads 2½" x 3" or 2½" x 6" and punched to receive ½" rods. Pads are held by three 1½" x ¼" plates—two on the sides and one through the center—and supported with ½" rods, welded to plate at one end and closed with nuts at the other end.

floor pad details



DURABLE MATS.....

There are two types of Durable mats, each designed for a distinctive type of service

rubberized-fabric mats

Durable rubberized-fabric mats are especially recommended for the hard usage required at entrances of public buildings, stores, apartment houses, hotels, theatres, schools, industries, and in industrial work areas.

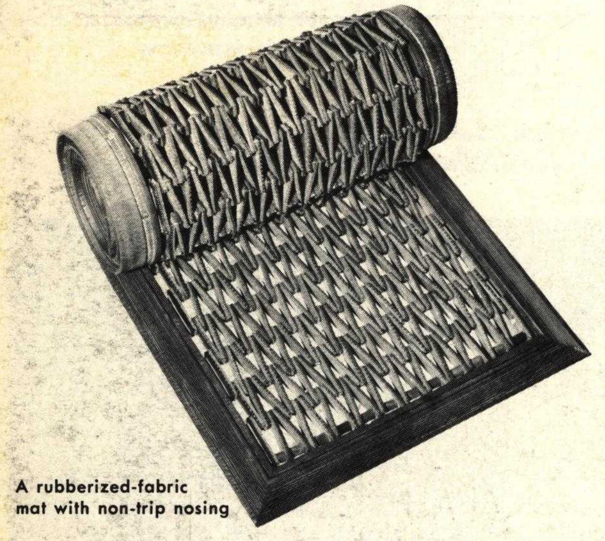
Durable rubberized-fabric mats thoroughly clean shoes, provide non-slip footing in wet or dry weather, reduce accidents and liability risks, and relieve worker fatigue in production areas. They roll easily for cleaning underneath or can be cleaned from the top with a vacuum cleaner.

rubberlink mats

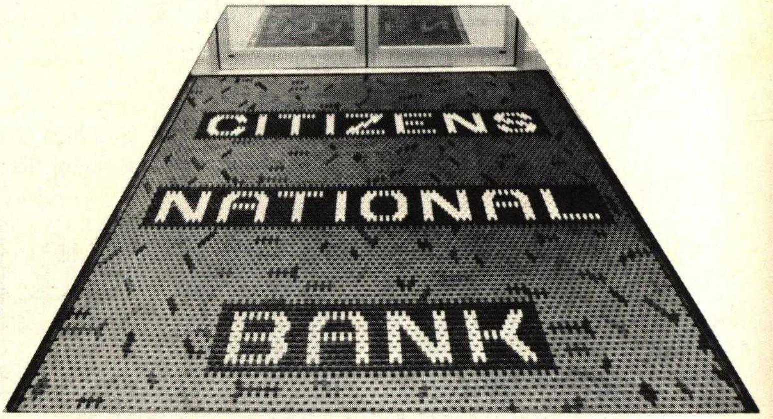
Durable rubberlink mats are made of extruded rubber blocks in a complete selection of colors to harmonize with the decorations of entrances and lobbies of modern buildings. They trap dirt under the mat from moving traffic and thus protect fine floors throughout the building.

Names, letters, or trade marks can be included in the design.

All Durable mats can be made in any length and in widths up to 8′ to fit any specifications.



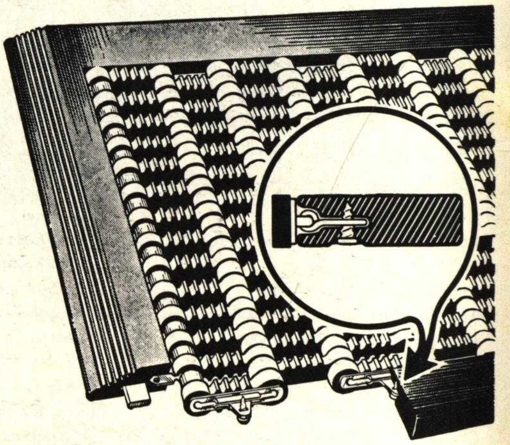
A rubberized-fabric mat with non-trip nosing



A rubberlink mat in the lobby of a bank building

mat nosing

Beveled or square nosing can be supplied on all mats. Square nosing, between two mats and in recesses, insures flush joints and correct fit. Beveled, non-trip nosing also improves mat appearance and is recommended for all surface mats. Nosing is available in black only. Nosings are securely attached with special clips and sheet metal screws and reinforced with spring steel bar parallel to the wires of the mat. Corners are mitered, vulcanized, and steel reinforced.



mat specifications for architects.....

Durable Rubberized-fabric mats

Furnish fabric-impregnated rubber mats with links 9/16″ thick x 2½″ overall length, woven in V-shaped construction (or straight weave) on 12-gauge galvanized spring steel wire, 1⅞″ centers. Black 2″ beveled nosing (or 1½″ square nosing), attached to all edges with sheet metal screws and special fasteners. Nosing, parallel to the wires of the mat, to be reinforced with spring steel bar ⅛″ x ½″, and all corners with corner irons.

Durable Rubberlink mats in colors

Furnish extruded, all-rubber mats with links ½″ thick x ½″ wide x 1⅞″ overall length woven on 12 gauge high carbon, oil tempered wires, 1⅜″ centers. Black 2″ beveled nosing (or 1½″ square nosing), attached to all edges with sheet metal screws and special fasteners. Nosings, parallel to the wires of the mat, to be reinforced with spring steel bar ⅛″ x ½″, and all corners with corner irons. Colors and design in accordance with detail sketch.

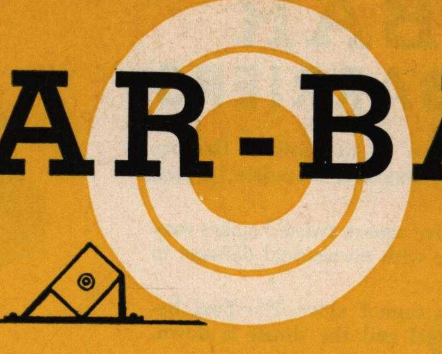
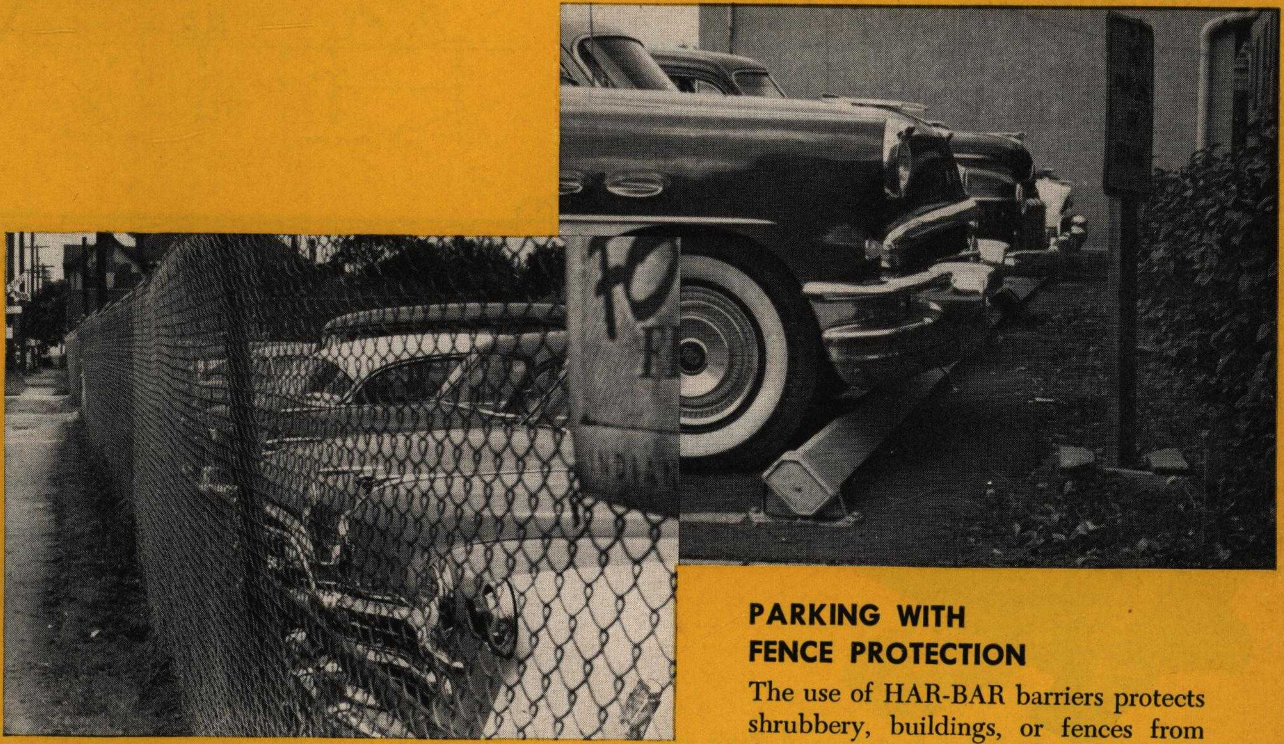
HAR-BAR



PARKING BARRIERS



PARKING WITH FENCE PROTECTION

The use of HAR-BAR barriers protects shrubbery, buildings, or fences from damage by improper parking.

PARKING WITHOUT FENCE PROTECTION

Without fence protection, cars can be parked against the fence causing bent posts and damaged wire.

HARRIS BARRIER, INC.

Indianapolis, Indiana

HAR-BAR
PARKING BARRIERS

Easy Installation . . . just drive in the spikes. Har-Bar holds to any surface; black top, concrete, macadam, gravel, sand or cinders.

Portable . . . Har-Bar's exclusive square twisted spikes may be removed and used elsewhere with no residual damage to the parking lot surface.

Performance . . . automobiles cannot move Har-Bars because they engage the car wheel and the thrust is down. There is no shear.

Durable . . . cast alloy saddles are maintenance-free. All timbers supplied by Har-Bar are treated with Pentachlorophenol for water repellency and have a penetrating stain for long life with no maintenance.

Attractive . . . stained wood timbers look good in any setting. They may be painted to match or contrast with surroundings.

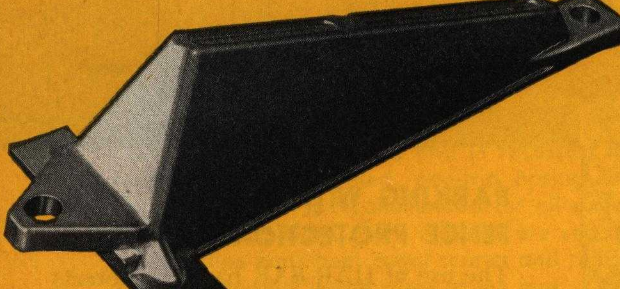
Convenience . . . Har-Bars always stop cars against the tire, preventing shock, and they are low enough to clear bumper guards.

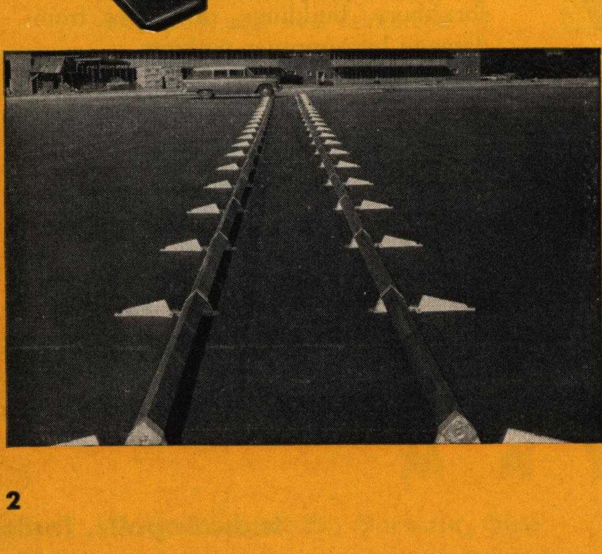
Uses . . . wherever orderly parking is desired, with or without attendants or meters. Can be used for all types of parking lots, at airports, drive-in restaurants, industry, business, municipal or private.

Planning Service . . . Har-Bar engineers study each proposed lot individually and plan the most efficient parking arrangement possible. Inquiries are always welcome. Send us your parking problems for recommended layouts, type of barriers, and parking specifications.

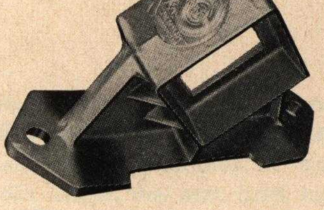
space marker

Harris Barrier space markers will hold firmly to the ground or any parking lot surface. They are efficient parking guides where the parking lot surface will not permit striping. Space markers are simple to install and can be easily moved to permit revision of parking arrangement at any time. They are made of durable cast alloy; finished in traffic yellow for maximum visibility.





model 44



Model 44 is the most popular for passenger car parking. Sturdy cast alloy brackets are designed with ribs under the lateral to give additional strength. The extra wide shoes provide natural balance. These barriers can be used to prevent car bumpers from extending over sidewalks, where they would inconvenience pedestrians, yet every car can be parked near the building entrance.

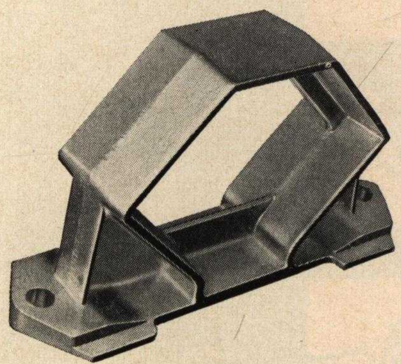
model 66



For passenger cars and medium weight trucks. Model 66 is ideal for commercial use where both cars and small trucks are parked. It is used with a 6" x 6" milled timber that is low enough to clear car bumpers, yet rugged enough for parking medium-weight trucks safely.

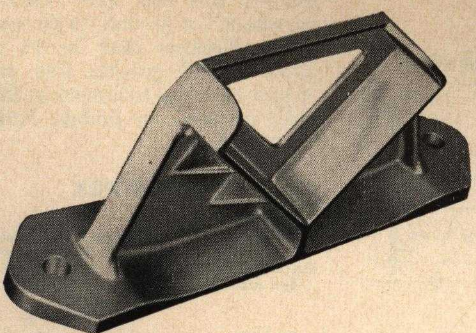
model 44SU



This versatile single unit parking barrier is excellent for drive-ins, super markets and other lots that require open aisles between cars. Model 44SU may be placed at any angle to permit workable nested parking on lots too narrow for right angle parking. Two wheel engagement of every car helps maintain orderly rows.

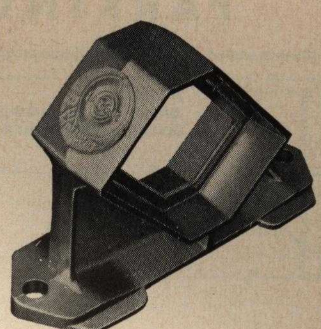
model 46



Har-Bar Model 46 with a 4" x 6" timber provides a convenient guide to parking plus dependable protection for sidewalks. The raised bar is easy to clean around and under —an important factor in parking lot maintenance. Model 46 will serve cars and light trucks at a competitive price. It can be combined with other models for an attractive, easily accessible parking lot.

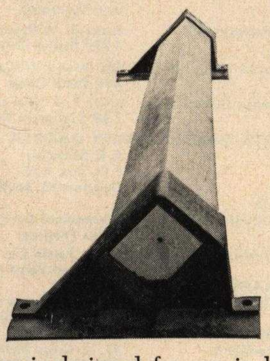
model 79



This rugged barrier is designed for use in bus or truck parking areas. The cast, semi-steel brackets support 7" x 9" timbers, both made to withstand hard use and extra long wear. Barriers may be moved whenever necessary with no expense or damage to the lot surface.

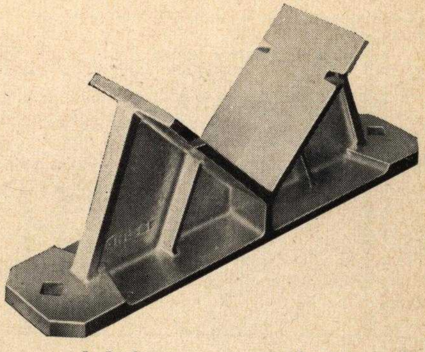
model 880T



Model 880T is recommended for use at truck terminals, parks, or wherever maximum strength is needed. The sturdy open saddle will hold any size timber 6" x 6" or larger. Round poles, notched for saddles, may be used to blend in with surroundings.
